We would like to assemble a manual of all of the things that have been tried around the country. We are trying to assemble this. But we are able to do it now by only one judge in Michigan, Eugene Moore, trying to put it together on his own, with his own staff. Obviously, an impossible burden for any degree of completeness.

We are looking for funds to do that. I think we will find them. It is a question of getting the job done and making available to each of us the successes of the others. And, I would quickly add, also making available to each of us the things that did not work, so the others don't have to follow and make the same mistake.

We would like to assemble data, caseloads, salaries, the various bits of information that are so useful to operating any kind of an organization such as our courts.

We need a placement service. Right now, I am looking for a director of Court Services and I can only go on whom do you know and whom can I call up and ask. This is not a very scientific basis, there is no personnel service, the N.C.C.D. has kind of a want ad section in its publication, but other than that there is no effective place for service.

We would like to look at the architecture of juvenile court. Right now we usually inherit a building designed for an adult court and if they fit the particular needs of a juvenile hearing, it is a coincidence and a very rare coincidence. We would like to design the court around the impact it would have on the child, rather than forcing the child to fit into the architecture.

Lastly, we are trying to set up some standards to judge ourselves so a judge can look at his court and say, "I am good at this, and bad at that," based on objectively measurable national standards.

Judge White from Chicago is trying to work out some of that without any outside funds; using only our funds.

The third big thrust of the National Council of Juvenile Court Judges is research. It is nonexistent on some of the way-out frontier areas. We are trying to put together a project in Pittsburgh right now, and I think we are going to be successful. Judge Cahill is looking for about a half a million for a few years demonstration until we can get this thing self-supporting. It looks like foundations in Pittsburgh will assist us. We have not asked for public funds nor Government funds of any kind for this project. We hope it can be financed without tax funds.

Let me then describe some of the programs in Hennepin County. Minneapolis is the center of the county. Minnesota has a population of almost 1 million people. The juvenile court holds about 14,000 hear-

ings a year involving basically maybe 5,000 children. On FBI figures, I think our crime rate is well below the national average per capita basis, for whatever reason.

Our juvenile court operates on two basic premises. The first, of course, is to rehabilitate children. We are not interested in punishing them for what they did in the past because we don't think it will do any good. We are trying to rehabilitate, to find why the child did this, to try to correct the causes so far as the court is able to marshall the resources to do that. If we can rehabilitate the child, if we can eliminate the causes, then we can eliminate the crime far more effectively, I think, than just using prisons and fear psychosis. We will use disciplinary approaches where it is indicated, and we do, but we are trying to rehabilitate a child; we are not trying to punish for the past. We are trying to look to the future.

Our second premise is diversion. We want to keep kids out of court if we can. We urge the police to screen kids out of the court. If they can take a child home and the home will take care of the situation, there is no need to bring them to court. If nothing else, it wastes the taxpayers' money.

If the police can take him to a youth service bureau and this will accomplish the purpose, we urge the police to take him there. The police say they divert from us somewhere around two-thirds of the cases. We think this is healthy.

We urge other organizations around the community to provide for children without coming to court. We have, of course, the usual organizations which operate very effectively: the Boy Scouts, the YMCA, the organizations that are well-known.

The YMCA and the Boys' Club have developed an activity called "Detached Workers," street workers if you will. They are a rather horrendous group of people to look at because they dress like the counterculture, with the long hair and costumes, and so forth, like that. They are very effective at getting to the turned-off kids and we think they do a remarkable job of getting at these people, out of court, without the need for the court; probably better than the court could ever do because they are getting at the child immediately, right in his own bailiwick; they are not using the threat of court to get at them.

We have our own intake division in the juvenile court. Every case that comes to us, whether from the parents which are one of our main sources, or the police or the schools, are all screened by the intake division. They do not apply treatment, because they become involved before there has been due process. Instead they refer the child out to a treatment program or they send the child back home or they send him to the family psychiatrist, if there is one. Sixty percent of what comes to the court is screened out by the court's own intake division. The court doesn't see these people. As well as you can ever measure such things, only 8 percent of the kids screened out by intake came back into court, which is a remarkable rate of return.

We have a standard for the intake division: If the child can and will be rehabilitated elsewhere, the case should not come to court. It should come to court only if authority is needed. If the child is unwilling, or the family is unwilling, or if there is nothing available to them without the court, then the case is to come to court. This is the method we use to screen out some 60 percent of the kids.

We have developed some other local programs. One is called Operation De Novo program. Its mission is to pick up the hard-core kids before they get to court, sometimes for the upteenth time.

Operation De Novo picks up these kids that are outside the regular culture, the kids that are rebelling if you will, the kids that are on the edge of militancy. So far it has a remarkable rate of reaching these kids on a highly intensive basis, often using people who have been through the mill themselves. It is a good program.

Our adult court has developed a program of getting people out of jail by screening the people coming into jail, and releasing everyone they possibly can without bail, those who are going to come back without the bail. Our jail population has gone down rather radically because of the program. It is good.

When people do come to court, we have various resources available to us. The one we are proudest of is the right of speedy trial. The child—or an adult—who comes to our court has had his first court appearance within 2 or 3 days; within 2 or 3 days more he has had his arraignment appearance; his trial would normally come in 2 or 3 weeks. If he wants it sooner we will provide it sooner. If he is found guilty or pleads guilty and is in jail, we have the sentencing in 2 weeks. We are trying to obviate the need for our jails, trying to cut down the jail population, which is such a stagnant place to put a human being.

Obviously, in all courts, we rely heavily on probation, one-to-one counseling. One officer talking to one child, or one officer talking to one parent. This is the backbone, I guess, of any service. This, I am sure, the committee is quite familiar with. We do have supportive things that go with this. On one hand, the disciplinary approaches for the child for whom it might go in one ear and out of the other, who says all I got was probation. He gave me a lecture and that is it. To get his attention we have to do something stronger: Take the kid's driver's license away if he is middle or upper middle class. We may tell him to go out and work for free a few hours a week. It is useful in some cases.

Conversely, we have some activity programs. One, the "flying" program involves a group of pilots who came to us, private pilots, and said, could we take some of your kids and we will teach them aerial navigation, take them up in our planes and fly them around and show them how to navigate. The kids they took, obviously, began to realize it is important to know how to read, it is important to know how to do mathematics, it is important to know how to work in a team. The final examination is to plot a triangular, three-city course. The pilot says, "I'll follow your results unless it looks like fatal results could occur." It is quite a successful program; it has been going on for quite a few years.

We increasingly do group work; an LEAA grant started us on this, but we are doing more and more. Groups of kids and parents, groups of kids, groups of parents, encounter groups, as well as the normal discussive type of group work.

We have various foster homes, and never have enough. We have some group homes, treatment group homes, six of them in Hennepin County, are called "Home Away," developed around the same encounter group. They go to their regular school or job. When they are

not in school or on the job they are back at the home where they have their group work by way of helping themselves, getting the strength that can come from the group.

We have a "PORT" project, which Mr. Schoen indicated is about to start. They took a building I had planned on using for my court and my referees. Now it is going to be a PORT authority and I think it has a better use for that than the court.

Necessarily, we have institutions. Mr. Schoen alluded to the three State institutions. There are also two county institutions. I think it should be made clear, for the record, that there are quite a few other institutions in the State besides the State and the county ones which we use. There are private institutions operated by various religious orders or operated under other charitable structures, for the emotionally disturbed child, but most of those children have come through court as a delinquent or a status-offense type of child. It would be unfair statistically to say we only have the three State institutions and the two county.

Our institutions, once more, every one I have seen, and I tried to visit them regularly, are definitely not warehousing institutions, not the juvenile jails. We have shifted. Now we build a mix: The child comes out and in a couple of weeks he works out his own negotiated treatment plan with the social worker, and they both kind of contract. The social worker promises to be accountable for providing it and the child promises to accept the program. We are trying to provide them with so many options we can individualize the treatment plan for the particular child.

We had a meeting last week to begin the first stages of consolidating the programs of the two largest counties with the State services to consolidate programs, close institutions if they are not needed, or use the resources to better advantage, possibly get less use of the private institutions since their per diem cost is higher.

We have heavy reliance on volunteers, both in our institutions and our programs. About 4 years ago, somebody came and said, "Let's try volunteers," and I was dead against it. How could you bring in volunteers: We need professionals. We have just passed the 400th volunteer and are still going. I favor the volunteer program very strongly. If the volunteer is properly trained—and that is a big "if"—and if the volunteer is properly supervised—and that is another big "if"—then the volunteer can do wonderful work, actually rehabilitating and helping kids.

I hope I haven't overtalked my time.

Chairman PEPPER. Mr. Lynch.

Mr. LYNCH. Judge Arthur, you now have served approximately 12 years as a juvenile division judge. Based on that experience, and in your capacity as the president of the National Council of Juvenile Court Judges, could you describe for us what effect the *Gault* case has had on your operations and the operations of the juvenile courts in general?

Judge ARTHUR. I guess that depends on which juvenile court judge you ask. In my case, I almost had the feeling the U.S. Supreme Court came to my court, looked at it, and said, "All of the rest of the country should do the same thing." It had no impact on my particular

court except to make it possible to get more public defenders and one more court reporter.

A lot of judges resist it. The judge feels, "I am a lawyer, I can protect the child's rights while he is in my court." I would say in the smaller jurisdictions, this is the general feeling.

One of the difficulties a juvenile court faces is that it is very hard to appeal our decision. The kids haven't got any money to appeal; the parents are less than interested most of the time in appealing; LEAA does not supply appeal money that I am aware of; our country doesn't want to supply it. I know my decision is final in all too many cases.

I wish we could find a way to appeal; then maybe we could bring in the better impact of *Gault*. However, in defense, may I urge that a juvenile court proceeding is in two parts. One is adjudication: is the child guilty or not guilty. This is *Gault*, and this is full due process, and this I believe in very thoroughly. A child is entitled to all rights of an adult. But the juvenile court proceeding is something more than that. It is always a disposition act, and the U.S. Supreme Court has said to us, "Due process does not apply at the dispositional level." All we insist on is a fair hearing and I think we give them a fair hearing. *Gault* applies to a small number of our cases because so many plead guilty and don't go to trial. I think the impact of *Gault* is greatly overrated.

Mr. LYNCH. How many judges did you say?

Judge ARTHUR. Myself and five referees, who are subject to my appointment. I like it this way. I like the referee system. We are consistent. We may be consistently wrong but we are consistent.

Mr. LYNCH. What do they do, sir?

Judge ARTHUR. They take any case I assign to them. In fact, they take every case, except that I take all sensitive cases or cases that might be appealed, or cases where the public is worried, or where there is a difficult point of law. I try to take everything tricky, hard, and interesting.

Mr. LYNCH. The referees to whom you assign cases, I assume when you say you assign cases to them, they have them from start to finish. Are they attorneys?

Judge ARTHUR. They don't have them from start to finish. They rotate calendars considerably. He may have an arraignment calendar. It is too complicated in a mass production count to follow a case. Two of them are attorneys and three of them are not. The two who are attorneys handle most of the *Gault* aspects—the trials, the arraignments, this type of thing. The two who are not—ex-probation officers—specialize in the dispositional aspects of the court. The other man is basically for administrative purposes. He is the business manager of the court.

Mr. LYNCH. How do you track or followup the juvenile who has appeared before you and whom you have committed to an institution, or to probation, or whatever? How do you know, as a judge, whether or not your sentence, your treatment, has been effective?

Judge ARTHUR. Every time we make a disposition we order a progress report. It may be in a week, it may be a month, 3 months, 6 months. It has to be in at least a year. That progress report must come in writing to us, unless we refer the child to the State, at which point our authority ceases and the youth commission takes over.

Mr. LYNCH. You get no feedback on that?

Judge ARTHUR. There is no feedback. We are told sometimes several years later he has just been discharged, and that is about all we hear.

Mr. LYNCH. Would you like to have feedback on children who have appeared before you and have been committed to the State Department?

Judge ARTHUR. Yes, very much. And what we started last week, the three metropolitan counties working closer with the State, can develop that. I think the State would not be adverse to this.

Mr. LYNCH. Would it be useful on a national basis to have all juvenile court judges receive data on children who have appeared before them to find out what has happened to those kids?

Judge ARTHUR. I sincerely think so. The judge needs to know that. When I use this type of a program or that type of program, these succeed or those didn't. If nothing else, this may guide the judge in his future dispositions.

Mr. LYNCH. I guess it would be a good training device for the city magistrate or judge. Is this something that any juvenile court judge that you know of has applied to LEAA for funding for?

Judge ARTHUR. There are several answers to that, Mr. Lynch. The city of St. Louis, as I understand, is trying to develop a kind of social profile of children. The last I heard, they developed about 485 different profiles and then they were trying to compare the disposition and the recidivism with the profile and try to say that if you get profile No. 379, probation is apt to work, but an institution won't; that type of thing. St. Louis is underway. We had a program like that in Hennepin County, we applied for a LEAA grant, we received the grant on a tentative basis the day before they went from discretionary funds to State block funds and our grant got lost in the shuffle. I don't know of any place that is doing a computerized analysis as thoroughly as I think it should be done.

Mr. LYNCH. But your testimony is it would be desirable this would be done?

Judge ARTHUR. This is the type of thing we would like to get out of our Pittsburgh project. We would like to know an awful lot more about what works and what doesn't work, and what are these kids about. We resist answering on the basis of what do you do with a murderer or rapist. We are trying to say what do you do with a child who comes from a broken home and can't read and is a minority. Let's take the factors that force them into delinquency—or don't keep him away from it—instead of looking at outward symbols such as type of offense.

Mr. LYNCH. Was it your earlier testimony, on new programs, innovative programs, desirable programs, that more or less you and your colleagues who are juvenile judges hear about those inadvertently: there is no organized, comprehensive system for the dissemination of information?

Judge ARTHUR. That is correct. We do have the "bull session." I guess that is one of the best things we have. We have our annual conventions. A lot of time will be spent around the beer table. This is where I will learn a great deal. My own State also has State judges meetings. The bull session is obviously one of the valuable parts of it.

Mr. LYNCH. I would infer from what you are saying, it would be desirable that there be a clearinghouse.

Judge ARTHUR. Perhaps.

Mr. LYNCH. Perhaps, a national clearinghouse describing and evaluating programs in this field.

Judge ARTHUR. We have applied to LEAA for a grant for that, but we have been told not to get our hopes up at all.

Mr. LYNCH. Why were you told that, do you know?

Judge ARTHUR. We applied for all kinds of grants, and I think they kind of said you are only entitled to this much and some of the others get higher priority. I am just guessing.

Mr. LYNCH. You say "we"?

Judge ARTHUR. Meaning the National Council of Juvenile Court Judges.

Mr. LYNCH. Judge, during your opening remarks you said that you viewed it as your task, or your goal, to correct causes of delinquency insofar as the court is able to marshal the resources to do that. Do you have those resources in Hennepin County?

Judge ARTHUR. I think we have them. I think we have them more than most counties. Our taxpayers have been very liberal and I thank them publicly for it. We do not have what we need on several programs. Part is just the basic research of knowing why the child is doing this and I think the behavioral scientist at the university needs some grant projects. This again is our Pittsburgh problem—let's do research further on the child. But we need the programs.

Chairman PEPPER. I am sorry to have to interrupt you. There is a quorum call on the floor and we have to run over and vote. We will just take a brief recess.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please. You may proceed, Judge.

Mr. LYNCH. Judge, just before the recess, I had asked you about your statement that juvenile courts try to correct causes insofar as possible with the resources at hand. Then I had asked you, in fact, what resources you have at hand for referring young people in trouble, for treatment, or whatever. I wonder if you could describe for us, very briefly, what kind of agencies are available, and to what extent you and your referees make use of those agencies.

Judge ARTHUR. The basic agency we use first for diagnosis is the probation officer. We allow him 2 or 3 weeks to make a diagnosis of the child, to talk to the child, the parents, the school, and so forth. Then he prepares a report, a diagnosis, a prognosis, for us, which is the basic document on which we make our decision—even though we may or may not follow his recommendation. He has accessible to him a psychologist and psychiatrist, if he needs them. We would like to have a little more of that type of service, but we are managing. He has available a mental health clinic, if that will be of some value to him.

So as far as the resources of the court allow, in deciding what we should do, we use heavily the 1-to-1 probation approach. We have a county home school and that has a varied approach; fortunately, underused because of community resources.

Mr. LYNCH. I wonder if you could venture an opinion, in your capacity as president of your association, as to whether or not juvenile court judges on a national basis have an adequate number of resources, in your term, subsidiary resources, both public and private to whom

they can refer young people who may not need incarceration but who desperately need treatment of some kind. How do judges do that? How do they find out about those agencies that are public or private and can serve? Is that done in a systematic way? Are there referral handbooks? How does the judge get that information?

Judge ARTHUR. That is kind of a funny thing. I think the honest answer is that each judge will develop his own chain of resources and sometimes won't tell anybody else because that would fill up the beds that are available. But I have nightmares, thinking I have a child who needs a bed in a particular type of institution, and I know there must be some institution somewhere around the United States and I don't know it exists, and in the meantime it may be going bankrupt because there are not enough kids coming into its particular type of service.

One of the things we would like is kind of a national computer service on beds available for children, for treatment around the United States. This is for the emotionally disturbed child, among other things. Very specific types of treatment are available, but we don't know what they are. I know what they are in my area, you would know what they are in your area, but we have no way of knowing what they are around the United States.

Mr. LYNCH. That information could be put in a data bank?

Judge ARTHUR. Yes.

Mr. LYNCH. Again, I infer from what you are saying that it would be desirable if we did have such a data bank, with that kind of data in it.

Judge ARTHUR. Very much so.

Mr. LYNCH. Which would be made generally known to judges, especially juvenile court judges, and other people within the criminal justice system.

Judge ARTHUR. It would be an expensive thing because it is obsolete the day it is done. So many things are coming up and other things are dying down and the emphasis is changing. So it would be an expensive thing to put it together and keep it current, keep it disseminated. It should be done.

Mr. LYNCH. I understand on a national basis it might be expensive. There is at least one State that I know of that keeps a looseleaf referral handbook which is updated every 3 to 6 months, and supplies it to literally thousands of people within the juvenile and adult criminal justice system.

You testified, Judge, that you handle 14,000 cases per annum, roughly.

Judge ARTHUR. Hearings.

Mr. LYNCH. Hearings. What is the difference between a hearing and a case?

Judge ARTHUR. Well, this is not 14,000 different children. A child may have a detention hearing and an arraignment hearing, a trial, disposition, or redisposition.

Mr. LYNCH. Approximately how many individual juveniles does your court see in a given year?

Judge ARTHUR. In the deliquency area, I would estimate around 5,000.

Mr. Lynch. Of that 5,000, how many are people who, if they were not juveniles, we could otherwise characterize as real criminals?

Judge Arthur. You mean the status offenders?

Mr. Lynch. Yes.

Judge Arthur. For girls I would estimate that probably about half, maybe a little more than half of the girls are here for status offenses: the boys, it would be somewhere around, I would guess, again, around 15 or 20 percent are in court for status offenses.

Mr. Lynch. These are children who have, in fact, committed common law or statutory crimes. About 15 or 20 percent, if I understand you correctly, have stolen automobiles——

Judge Arthur. I was putting it the other way. As for boys, I would say 15 percent of the boys are in court on status offenses. About 80 percent for offenses which would be criminal for adults. But for girls, it is about half and half.

Mr. Lynch. To what extent do you see the 80 percent of the young men who come before you who have, in fact, committed crimes or seriously delinquent acts; to what extent can you determine whether or not they are what we would otherwise characterize as first offenders?

Judge Arthur. It is hard to say, particularly in the system I was describing, because they may have been before the police and the police may have released them. So, if they do come back, they are already second offenders. They may have been before our intake and intake may have released them. They may have been before our court. We do not carry adequate data. I have a very strong feeling that recidivism is a very badly used term. It is too easy to say the child was before us in 1969 for an offense and before us in 1973 for an offense, so he is a recidivist. These are police-style figures, they are not ours.

Mr. Lynch. Does the police department, does the intake division or unit, keep records of the fact the youngster had appeared before them and was summarily discharged?

Judge Arthur. Not summarily, but at least released. Yes, we do have the figures. We are trying to feed them into the county's computer, but it is not functioning very well yet.

Mr. Lynch. You do not, as a matter of course, get that information. The young man appears before you. He may have had five previous contacts with the police?

Judge Arthur. Well, as an individual child I would have most of that before me at the time I see him. Not necessarily all of the police releases, but I would have all of the things for which he has been referred to the court.

Mr. Lynch. On a typical young man who appears before you for auto theft, for breaking and entering, for that kind of crime, do those people frequently have lengthy prior records of any kind?

Judge Arthur. The word "lengthy" could be misleading. They do have prior records. I would say that, as a guess—I wasn't prepared for the question but I should have been—not more than five or six priors. After this point we may begin sending them to the State.

Mr. Lynch. That would be five or six prior incidents which did not result in appearance before you or another juvenile judge?

Judge Arthur. I am sorry, I may have missed your previous question. We keep them in court possibly, as a rough figure, for maybe five

or six offenses before we refer them to the State facility. The kids whom we see, yes, some of them have been to intake, we know some have been released by the police, we know some we have seen ourselves previously. I am only aware of the ones that have been to court previously.

Mr. LYNCH. Let me give you a hypothetical case. A young man, 16, 17 years old, who appears before you and the charge is, let's say, burglary. The same charge could also be grand larceny. He has no prior record of any kind. You make a determination that he has not before been seen by the police, has not been through any kind of juvenile division intake proceeding. How do you handle a matter like that?

Judge ARTHUR. We almost disregard the fact it is burglary or grand larceny. What we try to find out is why did he burgle or steal, what got him into the situation. Was he having trouble at home, which is so predominant? Is he having trouble in school; is he having trouble reading? We try to find out the causation, what got him into the mess, so we can correct that.

Mr. LYNCH. Based on your extensive experience in this area, is there a typical causation factor involved? Is there one that crops up more than others?

Judge ARTHUR. This is a funny response to that. It is everything, from television on down the line. It is very hard to generalize. I would not, other than to say that frequently it is a problem inside the family, and I don't mean by this the parents are always at fault, this kind of thing. Another thing is axiomatic: Juvenile delinquents have a reading problem. Maybe this is a cause, maybe it is a symptom.

Mr. LYNCH. What does your court do about that?

Judge ARTHUR. In our county home school we have about 12 teachers—which is one of the reasons per diems go way up when you put a child into an institution—you have to provide teachers. About 11 are reading teachers.

Mr. LYNCH. When you have the youngster, boy or girl, before you charged with a serious offense, and you make a determination that there is a serious problem in the family, what authority do you have seeing to it that that youngster gets counseling; what authority do you have to also see to it that the family participates in that counseling?

Judge ARTHUR. The Minnesota statute, which is a little bit unique in this, says if I put a child on probation I can make reasonable rules for his conduct and his parents' conduct. So, riding a truck through that loophole, the "reasonable rules for his parents' conduct," I can do quite a few things.

Mr. LYNCH. Do you as par for the course require the parents to participate in counseling and/or other kinds of treatment?

Judge ARTHUR. On various occasions we put the parents on probation, not the child.

Mr. LYNCH. How does that work?

Judge ARTHUR. They don't like it.

Mr. LYNCH. Do they generally follow your probationary rules?

Judge ARTHUR. Yes, they do. This amounts to the fact the probation officer will see the parents every 2 weeks and try to work with the parents on how come Johnny is in this situation? What have you done or what can you do?

We have a program called the family education center, which meets on Saturday mornings. This is where parents and kids come together as a group, sometimes 100 or so of them. It is rather carefully structured without appearing to be, and we order the parents to go to three of those sessions. You can keep going after that if you want to. There are various family counseling services in our area, as I am sure there are in others. The parents may be given the option to go pick up a private social worker, they can afford it.

Yes, we do require the parents to use whatever resource we have available, if we think it is useful.

Mr. LYNCH. Have they been evaluated?

Judge ARTHUR. The family education center has been evaluated and we think it is quite effective. The others: It is the same problem, how do you evaluate a program, find out its effectiveness. I don't know. Until we develop better figures on recidivism, we won't know.

Mr. LYNCH. Doubtless you have juveniles in trouble before you who have been picked up by police in the early hours or late hours in the evening, as the case may be. I assume you see those youngsters after what, after the intake proceeding?

Judge ARTHUR. If the kid is picked up and put in our detention area he must come to court within 1 court day, within 6 business hours after the arrest; if this is what you mean.

Mr. LYNCH. Are there mental health or other social services operating in your metropolitan area that do not close their doors at 5 p.m.?

Judge ARTHUR. In our detention center itself, there is the intake officer, a master of social work. He is there all night long, 24 hours a day, the man who makes the decision on whether to hold or not, whether to send them to the general hospital for mental, and who makes the basic decision of the first impact on the court's authority.

Mr. LYNCH. How adequate are those staff resources? Do you have enough people?

Judge ARTHUR. In Hennepin County as of today, yes. I shouldn't say that. I should be an empire builder; but, yes, as of today, we are adequately staffed.

Mr. LYNCH. Why do you predicate "as of today"?

Judge ARTHUR. Because a year ago we weren't, and I don't know about next year. Our county board is beginning to pull in its horns a bit.

Mr. LYNCH. Are you seeing more juveniles than you did, for instance, 2 or 3 years ago?

Judge ARTHUR. No. I think our caseload is going down as we press more and more of this intake screening, of diverting kids away, as facilities such as Home Away get going, kids go there without going to court. I think the diversion is cutting our caseload down.

Mr. LYNCH. Does your diversionary unit send youngsters to private as well as public agencies for treatment of various kinds?

Judge ARTHUR. Frequently, if the family has money or some kind of health insurance. Most health insurance policies, as I understand it, will pay for psychiatric or social work therapy.

Mr. LYNCH. No further questions.

Chairman PEPPER. Mr. McDonald, do you have any questions?

Mr. MCDONALD. Yes, Mr. Chairman. Thank you.

Judge, from your position as president of the National Council on Juvenile Court Judges, obviously, you have an overview of the nationwide quality of juvenile court judges. First of all, what is the quality; do you think it is good or it needs to be improved; and, if so, is it being improved?

Judge ARTHUR. I think I would answer, Mr. McDonald, on a population basis. If you go to a county such as some we have in Minnesota, with 3,000 or 4,000 total population, the juvenile court judge may see a case or two in the course of a year and he has no special expertise, and you probably are not going to get him to get any expert training. He may be just a guy dedicated, but not skilled, in the business. If you go up to the larger cities you are going to get people who make their life work out of it and they are anxious to go out and get the extra training. I would say, in my mind, the criterion of a good judge is just how much expert training he has received in his particular forte.

Mr. MCDONALD. Obviously, in Minnesota, you have a large urban population, but if you go into some of the smaller States, rural States, do you have youth coming before persons serving as juvenile court judges who actually have no training?

Judge ARTHUR. Yes. Again, in the smaller communities, there is another factor that works against us. In many States, if not most, the juvenile court is a court of lower jurisdiction rather than a court of general jurisdiction. In Minnesota, except in the two major counties, it is a court of tertiary level and if any of those judges become expert and they are offered a job on the court of general jurisdiction, the salary is enough higher they are going to take it and we lose them in the juvenile field.

One of the outstanding examples is Judge Tilman from Atlanta, who moved from a lower court into a higher court. He loved the juvenile field and was trying to make his lifework out of it. But when he was offered $5,000 or $10,000 more a year he couldn't turn it down.

We would like to become a branch of the general jurisdiction, carrying the prestige of that court, the salary of that court, and I would go on and say we would also like combat pay.

Mr. MCDONALD. You alluded to various approaches, rehabilitation, disciplinary. Can you tell us if there is a place for discipline in the juvenile court system?

Judge ARTHUR. I think so. The story on that may be like the farmer out in Missouri, who observed his neighbor hitting a mule over the head with a 2 by 4 and said, "That's a terrible thing you do to your mule. Talk to him, rub him behind the ear and be nice to him and he will do what you want him to."

The farmer hit him once more and said, "I'll do that as soon as I get his attention."

I think with some of the kids we see, first we have to get their attention, and there is nothing more attention-getting than telling a middle or upper middle-class suburban kid that you need his driver's license for a month or so. It takes them 2 or 3 minutes to get that license across the table to you.

Mr. MCDONALD. That is discipline, not locking them up in jail?

Judge ARTHUR. We don't lock them up in jail. We do not use the detention center as a dispositional method.

Mr. MCDONALD. I have no further questions.

Chairman PEPPER. Do you use in any case the jury system with regard to the juvenile offender?

Judge ARTHUR. We do not in Minnesota. Under the Supreme Court ruling, I guess we could if we wanted to, but it says in our statute, specifically, no jury in juvenile.

Chairman PEPPER. And you haven't had any trouble with the Federal courts on that?

Judge ARTHUR. No, sir. No one ever asked for a jury in my court that I am aware of. I have had no request for it. As I understand, in the States where jury trial is available in juvenile court, it is rarely asked for.

Chairman PEPPER. What Federal funds, so far as you know, Judge, are available for use in this juvenile field, either juvenile deliquency or juvenile court system, or correctional system, or any aspects dealing with youthful offenders?

Judge ARTHUR. Our National Council receives—and I am guessing now, I should know it—somewhere around $200,000 a year, in various smaller grants that would total about that amount, going into our various programs. My own court has about $150,000 a year coming out of our local State crime funds for various things.

Chairman PEPPER. LEAA money?

Judge ARTHUR. LEAA money; yes, sir. The money is available.

Chairman PEPPER. Is that sort of money being made available to juvenile courts all over the country?

Judge ARTHUR. Not as much as we would think appropriate, Mr. Chairman. I think, as the previous witness indicated, a lot of it has gone into police hardware and I think it would be better if more would go into the judiciary field.

Chairman PEPPER. Do you know any other Federal funds available for any aspects of the youth program?

Judge ARTHUR. Apparently, some HEW funds may be available in the noncorrectional aspect, such as for the neglected child, that type of thing, or into educative programs, to the tutoring programs. We have not been able to tap those successfully, although we understand they are available.

Chairman PEPPER. You heard me ask Mr. Schoen whether he thought it best, in order to induce the States to put into effect the most innovative programs for juvenile offenders they can discover, to have Federal funds. What do you say about that and, if so, what percentage of the cost of an innovative program should be borne by the Federal Government?

Judge ARTHUR. That is quite a question, Mr. Chairman.

Yes, I think Federal funds should be used as an inducement to move the States into the rehabilitative-type program rather than the warehousing-type programs that have been used in the past, the Charles Dickens type of approach. I would urge that it be done in such a way that you don't phase the old out until you have the new phasing in, so you don't have to take some child who is a very dangerous person and do nothing with him because you have neither the new nor old.

Chairman PEPPER. You know Mr. James, no doubt, who made a survey for the Christian Science Monitor of juvenile correction institutions over the country?

Judge ARTHUR. Yes, sir.

Chairman PEPPER. And the film he directed is going to be presented here before this committee later this week. He gave me the horrifying information that, I believe he said, 15 to 20 percent of the girls that were in these institutions generally were there because they were runaways and they were runaways from home because they were sexually assaulted by their stepfathers or fathers. Have you found any material frequency of that sort of offense?

Judge ARTHUR. We get some incest cases and, curiously, they came to the juvenile court because the girl would not testify against her father in a felony case. Why, I don't know. They come in as contributing to the delinquency of a minor, which comes to juvenile court. I get maybe one a year of such cases, which is not a substantial number.

Chairman PEPPER. And you can't do anything to the father because the girl is unwilling to testify against him?

Judge ARTHUR. No, sir; I have a case on appeal right now where a father sexually assaulted all three of his girls on a regular basis and the mother stood by. She was asked, "How come you let this go on?" And she said, "He might divorce me if I take them away." Finally, she took the children away from him and he was extremely upset and demanded she return the children. And I have this on appeal.

Chairman PEPPER. Was he prosecuted for that offense?

Judge ARTHUR. No, sir; the prosecutor felt the girls' testimony would not stand up. They were very young.

Chairman PEPPER. And the wife will testify for the husband?

Judge ARTHUR. The wife left the State and we are not quite sure where she is.

Chairman PEPPER. Now, Judge, according to your observation, what percentage of the boys and girls who get into your juvenile court later wind up in adult penal institutions?

Judge ARTHUR. I should have anticipated this question, Mr. Chairman. I don't know. I am sorry; I don't know.

Chairman PEPPER. We had testimony from one of the juvenile judges in Florida, Judge Orlando of Fort Lauderdale, and my recollection is his estimate was about 50 percent; and I heard others use some similar figure.

What about school dropouts? What percentage of the boys and girls who come before your court are school dropouts?

Judge ARTHUR. In Minnesota, they can't drop out until they are 16. Prior to that time, the school will bring truancy petitions into the juvenile court. But if you take the status of offenses out of the juvenile court—and there is a national movement to do that—then there will be no enforcement of this at all. You will be repealing the compulsory school attendance laws if you do that. The schools do bring us truancy cases where the child drops out before age 16, and we do what we can.

After 16, the child can drop out, and under the curious law of Minnesota he can drop out whether the school likes it or not and whether the parents like it or not. The child makes his own decision.

Chairman PEPPER. Those who drop out before they graduate from high school, have you any figures as to the percentage of the young people coming into your court who drop out before they get through high school?

Judge ARTHUR. I have no figures and I would hesitate to guess. We do know the kids we see all have an educational problem, basically a reading problem.

Chairman PEPPER. Would it be likely that most of your students that you deal with are dropouts?

Judge ARTHUR. I would question whether it would be most, but it might be close to half. But that is a guess.

Chairman PEPPER. Did you say that they have reading programs: that is, you find that boys and girls have a serious reading problem and you do try to give them some reading instruction?

Judge ARTHUR. First we try to work through the school system to find a reading program that will fit them, with some of the numerous special programs they have. If they don't, we will try to use our own resources, and if we institutionalize a child in our county institution reading is one of the main thrusts of the program.

Chairman PEPPER. I learned in California recently, when we were having hearings out there, in one school, which was in the suburbs of San Francisco, there were two or three classes of students who were in the eighth grade whose reading level was not above the third grade.

Judge ARTHUR. I can believe that, Mr. Chairman.

Chairman PEPPER. We have a shocking reading problem in many of the schools of the country, don't we?

Judge ARTHUR. I had a child before me recently, Mr. Chairman, who was a senior in high school and was listed in the 102d percentile of reading, which implies, the school said, that 102 percent of the children in that school can read better than he can. I questioned their mathematics.

Chairman PEPPER. That is pretty good.

One other thing, in respect to this whole problem of dealing with people who commit crime, what influence do you think incarceration has as a deterrent to the commission of crime?

Judge ARTHUR. Zero, I guess. If the person who is committing the crime knows he would be caught, and they always assume they won't, every criminal I ever questioned in sentencing has felt, in effect, "I was too smart to get caught." Of course he did get caught. But if he knew that he would get caught, then I think incarceration might be a threat. But they dont' expect to be caught.

Chairman PEPPER. As to whether a man gets 20 years, 30 years, 40 years, or 5 years, do you think it makes any difference as a deterrent to the commission of crimes?

Judge ARTHUR. I would support the statement that the longer he is kept in prison the more apt he is to commit a major crime when he leaves.

Chairman PEPPER. That was also testified to here yesterday by Dr. Jerome Miller.

Judge ARTHUR. I would think as to most of these people, instead of holding them for a period of years, the courts should do as we do in our juvenile area: Hold him until he is able to live in society again, however short or long that may be.

Chairman PEPPER. Do you favor judges imposing indeterminate sentences, the release date to be determined by the correctional authorities, or the judge giving a fixed number of years as a sentence?

Judge ARTHUR. I would favor leaving it to the people who get to

know him and see the change in the man's personality as the years go by. In other words, let him be released when he is able to make it in the community, however long it may take.

Chairman PEPPER. I am inclined to agree with you, although some say that has a frustrating influence upon the individual, because he can see no hope. He has got his own destiny in his hands, if he chose rehabilitation.

Judge ARTHUR. We had a program in my county school where they went for 6 weeks and that was it, and we had other programs which were indefinite, and the staff said the kids worked much harder on their problems when it is an indefinite thing because they know they wouldn't get out until they had solved their problems.

Chairman PEPPER. Are you familiar with the legislation proposed by Senator Bayh?

Judge ARTHUR. There are two bills. He is interested in one, S. 5613, and the other is H.R. 45, something of that nature. Yes, sir, I am familiar with them.

Chairman PEPPER. Senator Bayh is going to testify here tomorrow on his legislation, at 10 o'clock in the morning, and we probably, sometime during the week, will also have Representative Railsback, who with the cooperation of this committee has been initiating some juvenile court legislation in the House of Representatives.

Judge ARTHUR. I understood Senator Cook has joined Senator Bayh on that bill that you mentioned.

Chairman PEPPER. Very good.

Judge ARTHUR. And Senator Percy has shown considerable interest in it.

Chairman PEPPER. Judge, how much time do you spend in Washington? Do you spend most of your time at home?

Judge ARTHUR. In my current job as president, Mr. Chairman, I seem to get around the country. I am gone from my State about a day every week. But this will slow down. I do get to Washington four or five times a year.

Chairman PEPPER. When we come to the preparation of our report, if we do so, we want to consult with you to get your advice and counsel on it.

Judge ARTHUR. I would be very honored.

Chairman PEPPER. Thank you.

[Judge Arthur's prepared statement follows:]

PREPARED STATEMENT OF LINDSAY G. ARTHUR, JUDGE, DISTRICT COURT, JUVENILE DIVISION, MINNEAPOLIS, MINN., AND PRESIDENT, NATIONAL COUNCIL OF JUVENILE COURT JUDGES

Mr. Chairman, may I thank you and the Committee for devoting your time and your energy in seeking means of helping America's children in trouble. The need of course is great. But the satisfactions of helping children are greater. New and promising techniques are being tried and proven methods which obviate and complement the Juvenile Courts; new community resources are being developed to open and supplant the institutions. I thank you for the opportunity to describe the activities of one Court and to express the views of the National Council of Juvenile Court Judges of which I have the honor to be President.

I. NATIONAL COUNCIL OF JUVENILE COURT JUDGES

Perhaps I may briefly describe our National Council. We believe that we are the strongest membership organization of judges in the United States. The Courts of our *active* members have jurisdiction over more than seventy-five per cent of the children of the United States. Fifteen years ago our budget was less than a thousand dollars a year, now it is nearly three-quarters of a million, mostly from non-governmental sources, with every promise of substantial further growth as we become more and more recognized as the principal vehicle for improving the juvenile justice system. We have assembled a highly qualified staff. We have fashioned a college for advanced professional training. We have developed publications which up-date our information and concepts, and provide a forum for interchange of ideas. We think we have a place in the future for helping judges to help children, reducing delinquency and crime and broken homes.

A. TRAINING

The principal thrust of our National Council is training: Over two thousand judicial personnel and over one thousand of their staff have been exposed to our instruction and materials, mostly at our college in Reno, but also at institutes and training sessions in and about the country. Our ultimate goal is to provide *every* Judge and Probation Officer with at least two weeks of intensive formal training *before* he becomes involved with his first case, and with at least one week of refresher training every year thereafter. It's an ambitious goal, but it will be met because it must be met. Juvenile justice personnel require and must have access to a specialized expertise if they are fully to realize their potentiality for substantially reducing crime.

B. SUPPORTIVE SERVICES

A second thrust of our Council is to provide services for juvenile court judges. We have an excellent law digest, providing every month, notes on the latest juvenile law cases. We have a quarterly which is used both for issues containing various articles of interest and issues designed as handbooks on a particular subject. We intend to develop further services. On too many of them we are only making a start:

Statistics.—There is a crying need for statistical data. Current crime and delinquency rates are based on police statistics. They include cases that are never referred to court, cases where the defendant is guilty of a lesser charge, or not guilty at all. They treat any second offense as recidivism, however distant in time, dissimilar in nature, or different in seriousness.

Treatment Manual.—There is a great need for a manual of treatment methods so that each judge can profit by the successful . . . and unsuccessful . . . techniques of his conferees. Similarly there is need for a national clearing house of resources, rather than, as now, leaving each court to its own resources which may be too meager, or too duplicative.

Data.—There is need for comparative data on caseloads, salaries, costs.

Placement Service.—There is need for a placement service for staff persons, presently we must rely only on a word-of-mouth, whom-do-you know basis.

Architecture.—There is need for study of court facilities and buildings to determine how to achieve maximum rehabilitative impact, even from furniture and fixtures, fitting the courtroom to the child's needs rather than the child to the judge's comfort.

Accreditation.—There is need for objective standards by which juvenile courts can grade themselves and find and correct their deficiencies. Nothing such now exists. We intend to supply them for our members.

C. RESEARCH

The third thrust of our effort is for basic research. We are currently seeking to assemble private funds in Pittsburgh for a center for this purpose, where various and varying experts can be brought together for intensive and pragmatic consideration of the multitudinous frontiers of knowledge needed to expand the effectiveness of Juvenile Courts in their rehabilitative efforts to protect the public and help the children.

We are a young and strong organization, dedicated to a single purpose, with proven expertise, with ability to help judges help children and reduce crime.

II. JUVENILE COURT FOR HENNEPIN COUNTY, MINNESOTA

I wear another hat today: as Judge of the Juvenile Division of the District Court for Hennepin County, Minnesota, a jurisdiction of almost exactly a million people, a Court which holds about fourteen thousands juvenile hearings each year, hearings which involve about five thousand children. We are in a continuous state of ferment, constantly trying to improve the protection which we try to give to the public and the stamina we try to give to the chairman.

A. DIVERSION

Our guiding principles are rehabilitation rather than punishment and diversion rather than authoritative judicial process. We recognize that the Court is an instrument of authority, which should only be used when authority is necessary. The Court process is expensive, it is traumatic, it may generate more hostilities than it resolves. If a child and his family can and will obtain needed help voluntarily, the help may be more effective. But if the child or the family cannot, or will not, obtain the services which are needed for the child's rehabilitation and the public's protection, then the Court must intervene to require submission to help.

Community Services.—The community in Hennepin County has generated numerous resources which forestall or divert delinquents and potential delinquency. There are various academic options within and without the school system, since reading and educational deficiencies are surely an important cause of crime. There are Youth Service Bureaux and crisis centers and Scouts and church programs and neighborhood centers and minority-oriented activities. Among the most effective in reaching the children who have left our world for drugs and revolt are the Detached Workers of the Boys Clubs and the Y.M.C.A., people who go inside the counter-culture at considerable sacrifice to themselves in order to be needed and available.

Police Diversion.—The police in the area try to resolve what they can within legal and constitutional limits, referring possibly a third of their contacts to parents or to community resources for help. The children they divert, do from time to time become involved in further illegal activity . . . as they do to any other agency.

Court Diversion.—The Court maintains an "Intake Unit" which screens all incoming cases, studying the police reports, conferring with the families, consulting with the prosecutors. They are able to refer some sixty per cent of the cases away from the Court, with a remarkably low return rate. Other cases, both juvenile and adult, are screened by "Operation De Novo" which looks for tough and hard core delinquents. Over the few years of their existence they have developed a considerable skill in reaching those people with whom nobody else has succeeded. Somewhat similar is a screening service by the criminal Court's own staff to release without bail every adult who can be relied on to return; they have gambled heavily on human nature and won, our jails are considerably less populated but few of those released have been absconded.

b. Resources Available to the Court

Speedy Trial.—Both the adult Criminal Division and the Juvenile Division maintain their calendars so that an arrested person is brought to Court within two business days of arrest. If he pleads not guilty, his trial is within three weeks, unless he requests either a longer or shorter time. If he is detained his sentencing is within two weeks of this trial or arraignment. These times are possible only by careful scheduling and considerable cooperation among the judicial personnel.

Individual Counselling and Supportive Services.—While the principal non-institutional method of rehabilitation is and will remain the one-to-one counselling of a skilled Probation Officer with a child or a parent, it is not a panacea, and it often needs supportive services: devices such as unpaid work, driver's license suspension, monetary contribution to charity, to convince the child that the public reacts to violations of its laws; and counselling often needs programs to attract the child's interest and motivate him into useful and instructive activities. As an example, some local pilots have for several years taken on groups of boys, teaching them the glamour of aerial navigation, and incidentally teaching them the need for mathematics and reading and perseverance and teamwork.

Groupwork.—We have also developed and are continually refining groupwork

techniques, working with groups of children on either a discussion or an encounter basis, or working with parents who need skills in raising small or adolescent children or, with much promise, working and counselling with groups of families.

Community Homes.—Children frequently need to be removed from their homes for cooling off periods, for learning to live with others, for care for special needs. There are never enough such homes, except for neglected or abandoned infants. In addition to seeking out regular family style homes, we have developed a few homes for the unskilled, the unmotivated, the fearful-hostile children. Our community has developed a chain of "Home Away" group homes, where children keep their jobs, attend their usual schools, but spend their evenings and weekends in the encounter group milieu, deriving support and understanding from their peers until they have the skill and strength to stand alone. The program has been so successful that we have closed down one-third of our institutional beds. A similar program for young adults, "Port" has been successful in Rochester, Minnesota, and is about to open up in Minneapolis.

Institutions.—There are of course institutions . . . and I believe there always will be: There are some children and adults who won't stay around for help: they must be kept in security to ensure that they receive the treatment they, and the public, need. There are some children and adults whose delinquent attitudes are too infectious to leave them with the innocent. There are some children and adults who are violent, or who are compulsive thieves, or who are just plain lawless, and who must be locked up for public protection.

All institutions should be rehabilitative and not merely warehouses or turnkey operations. We have numerous different approaches in our county and state institutions, we are constantly trying to revamp old and devise new methods, all in an attempt to individualize: to diagnose each child's needs and to put together a treatment package which will meet those needs. The catalog of our county and state institutional methods is long. We think we are at least as effective as others around the country.

Once again, Mr. Chairman, may I thank you and the committee. The rehabilitation of the young is America's best hope for reducing crime and for increasing responsible citizens. I am proud to be a part of the effort. I am proud that my Congress is also involved.

We will take a recess until 2 o'clock this afternoon.

[Whereupon, at 1:05 p.m., the committee recessed, to reconvene at 2 p.m., this same day.]

Afternoon Session

Chairman Pepper. The committee will come to order, please.

We are very much pleased to have with us this afternoon the director of the Florida Division of Youth Services, the Honorable Oliver J. Keller, who has done a magnificent job in Florida and has been commended by many knowledgeable of treatment in this field throughout this country; and of whom we in Florida are very proud. We are very grateful for Mr. Keller for coming and giving us, for the benefit of the Congress and the country, his experience and his counsel in this critical area relative to not only youth crime but crime in general.

Mr. Lynch, will you please present the witness and question him.

Mr. Lynch. Thank you, Mr. Chairman.

Mr. Chairman. Mr. Keller, who is now involved in reforming and modernizing the Florida system, was educated at Williams College, received a master's degree from Northern Illinois University, and is the former chairman of the Illinois Youth Commission. Mr. Keller is an author of the book entitled "Halfway Houses," and as you know, now serves as the director of the Florida Division of Youth Services.

Mr. Keller, I believe you have a prepared statement to present to the committee. Would you do so, please.

STATEMENT OF OLIVER J. KELLER, DIRECTOR, STATE DIVISION OF YOUTH SERVICES, TALLAHASSEE, FLA.

Mr. KELLER. I have submitted a prepared statement. I would prefer to do what Judge Lindsey Arthur did this morning, if I could——

Mr. LYNCH. That is fine. Would you do that.

Mr. KELLER [continuing]. And just talk informally for about 15 minutes, if I may.

[Mr. Keller's prepared statement appears at the end of his testimony.]

Mr. KELLER. I think the Florida youth corrections system is quite unique in the country, in that the Governors of our State, two of them, and the State legislature, have seen fit to develop a unified system of youth corrections, prior to this kind of organization being recommended nationally.

Now, here in Washington, in January, the National Conference on Criminal Justice met. One of their major recommendations was that corrections be a State responsibility rather than a local one. The rationale simply is that corrections as a profession needs to be centralized and unified in a State system, and that the past experience of fragmented county corrections programs has not been successful at all.

So over the course of the last 5½ years, the Florida Division of Youth Services has moved from a program of three training schools to a program which encompasses the whole spectrum. By law, this agency is responsible for the prevention of delinquency. We are also responsible for the intake of all children to Florida's juvenile courts. Thanks to Federal funds of a couple of years ago, matched with general revenue money, the division of youth services was given responsibility for juvenile probation and intake, as well as parole which it had back in 1967.

The agency operates the State training schools. It operates community-based programs which we are particularly proud of, Mr. Chairman: The halfway houses, the group foster homes for delinquent children, the START centers, the TRY centers, which I will explain a little bit later on, and we also contract for service. Comparatively recently, the legislature authorized our moving into the detention field. The bill passed by the Florida Legislature at the 1972 session mandated that, by 1978, detention of children awaiting court action in Florida will be a State responsibility.

I think the kinds of questions that people want answered are: "Does it work? Does it pay off? I think the answer is "Yes." Florida is a boom State; it is one of the fastest growing States in the country. Just in the time I have lived there, the population has increased by a million people. We are over 7 million people now.

Our prison system is in serious trouble as far as overcrowding is concerned. There is a crisis with respect to too many people for the Florida prison system. In contrast, the youth corrections program, thanks to the legislature's putting it all together, actually has empty beds. Our training school populations are the lowest they have been in years and years.

We are actually, through administrative transfer, taking young men from the adult prison system. We are moving people from prisons

into the youth corrections agency administratively. The commitments from the juvenile courts are down because we are diverting children to other resources. The failure of young people on juvenile parole is down.

Some of the things we are doing with intake and probation, I think, are important to recognize. Before there was a consolidated State system, some counties had probation and intake service. Others did not. The poor counties often had nothing. When the judge had a young person before him, he was virtually compelled in some instances to send that youngster to a training school because there was no other resource at hand.

Since the State system of intake and probation went through, every county in Florida, regardless of its wealth, has the same level of intake, probation, and parole service. We are able to divert as many young people as we can from the official system.

I believe they should be kept out of our system wherever possible. We are permitted to do "consent supervision," which means the young person who has been in trouble, and his parents, agree with our intake worker on a course of action that is planned. The parents and child agree to go along with the plan for a limited period of time. The case does not have to go before the court.

We are making considerable use of citizen—what shall I say—citizen labor. These are people who volunteer. They are not paid. We have over 800 people now who simply are adult friends to young people who need that kind of relationship. The volunteer probation program, where we assign a businessman, or a housewife, or a college student, to work on a one-to-one basis with young people in trouble has been notably successful.

I think that in treating kids with problems with the law, we have to recognize, Mr. Chairman, the need for a variety of programs. That we now have in Florida. For young people who cannot live satisfactory on probation, we are placing more and more of them in group foster homes.

I would like to point out that you can find good people, reputable people, who are willing to take somebody's problem child into their home, if you look hard enough, if you screen them carefully, and if you pay them enough so they do not lose financially themselves.

One of the things that Florida is known for nowadays, of course, is community-based programs such as the halfway houses. A halfway house is simply a large residence, with 20 or 25 young people living in what may have been a motel, or former nursing home, or an apartment building. They attend public school; they hold jobs; they live a relatively normal life; and it works.

We don't have to put many of these serious delinquents into institutions. They can be treated less expensively, and I believe more effectively, in community programs.

I mentioned that we have a program called the start center and a program called a try center. These are names taken from the State of New York—from the New York Division for Youth. The start center is simply a halfway house which has its own educational component, its own classrooms. These programs are for young people who are so far behind in the public school system they need a special catchup effort.

So we have a school program in the start centers. The try center, another name taken from the State of New York, is a program where kids still live at home, but appear early in the morning at the treatment center. They are there all day, either undergoing group treatment, which I will get into a bit later, or they are working, or they are going to school.

I should emphasize that community based corrections truly work. We have 25 of these programs now going in Florida. Initially, the reaction of the neighbors to the establishment of a halfway house or start center was negative. People are highly anxious. They are afraid their property values will be destroyed and that hoodlums will be released in their midst. It doesn't work out that way.

The programs have been sufficiently effective—and I knock on wood as I say it—that many neighbors who were previously hostile are now our biggest boosters. I will give you an example.

At Fernandina Beach, a small town north of Jacksonville, the people were extremely frightened when they heard we were starting a program for delinquent boys. Within the period of a year, the townspeople became so close and so fond of these young people, that, at the town's expense, they built a one-room school building for our boys on State property, gave it to the State. It was a very generous gesture from people in that community.

Now, let me point to the cost. The cost per day in a community-based program in Florida is considerably below that of an institution. We are able to serve young people for $13 or $14 a day in a halfway house program, as compared to $20 to $30 a day in an institution. We are able to find "white elephant" pieces of property on the real estate market, property that other people don't want. It could be an abandoned church, it could be an apartment building, or old nursing home. We can use it.

So far, all of our programs in the State are distressed pieces of property that we have picked up and renovated and moved into rather quickly. We avoided heavy capital outlay. I think the reason these programs work is because of the quality of staff—young and energetic people that have empathy for kids with problems.

I am a strong believer in groups. Mr. Chairman, this morning during a break in the testimony, you described very well, I thought, the program at the Red Wing School, of Minnesota, where kids help one another in groups. I would be happy to have you substitute Florida for Minnesota if you like. We, too, discovered that delinquent teenagers, if treated with dignity and kindness can respond maturely; can make reasonable, sensible decisions; can face their life situations; and try to reckon with those situations.

I really mean this. We have so-called bad kids in halfway house programs in our State. Thanks to this group approach, where these kids get together for 90 minutes every day, 5 days a week, they are some of the nicest people you will meet. They are open; they are friendly; in the local school system they are looked upon by the school authorities as some of the nicest members of the student body.

You have to see it to believe it. I think that, through this approach, where the kids help one another, friendships develop; young people who have only hurt one another now care for one another; and they can learn to make responsible decisions. I think that correctional ad-

ministrators are fighting a losing game unless they can change the attitudes of the people they work with.

The reason corporal punishment doesn't do any good is that it works only so long as you are watching the individual. As long as you watch him, he may be fearful of being beaten. They used to use straps in our schools in Florida. We don't use the strap at all any more; we don't need it. It is only when you are changing the person's ideas about himself and his attitudes that he is going to change his behavior. Then you don't have to worry about watching him. The trouble with training schools—and I won't belabor this because we have many people I think are excellent employees, working very hard in our training schools—is that our boys' schools are too large. If you are going to change people who are delinquent or criminal, I think the change generally takes place through personal relationships.

If you have a 16-year-old boy who is turned off from the world, who looks upon himself as a loser, and looks upon the world as being rotten, the only way he is ever going to be a reasonable, decent citizen, I think, is if he establishes a relationship with someone he knows cares about him and respects him. Then he can respect himself in turn.

The problem with large institutions is it is difficult to get that kind of personal relationship established. The schools are too big. You don't have time for really knowing what someone is like.

Also, the larger a school is, the more you go by the system. It is the system that becomes important rather than the young people who are in that system. You begin to follow a routine. You go by formal written regulations. This does not help change people.

Recognize, too, that in a large institution, the people with the best training end up as administrators. They are the ones that are in the front office. The people who really are "where the rubber meets the road," who are where the kids are, are often people who are inadequately paid, possibly $5,500 a year or $6,000 a year, such as cottage fathers. Some of these people, I want to point out, are excellent in spite of the terrible pay, but there are other cottage parents in such institutions who could care less about the young people they are supervising.

I think the role of the training schools in our country in the future is that they should be kept small. By that, I mean 100 or 150 young people at the most. They should be reserved only for a very small percentage of young people who demonstrate they cannot live in the community. I believe that 70 to 80 percent of the young people are committed as delinquent kids can "make it" satisfactorily in a community-based program. There are some that bomb out. They run away; steal a car. When the community won't tolerate their presence at that halfway house, you have to move them. But they are a comparatively small percentage.

I would like to see the day when our training schools are truly intensive treatment institutions for a very small percentage of children. Recognize that these institutions, if they are to be intensive treatment experiences, will be expensive. The training school is like a small city. You have residences; you have administrative headquarters; and you generally have a chapel, a school, maintenance shops, and sewage systems. It is like a little village. To keep all of that going, and at the same

time have as good treatment program as it should be, it has to be an expensive operation.

We have an institution, Congressmen, in Florida, which we are proud of. We took a gamble on it. It is called the Howell Lancaster Young Development Center. It is our institution for our "mess-ups," kids that are our worst kids. The only way a young person gets to this place is to fail in another program. But it is a coeducational school, and it is an open school. There are no fences or gun towers. Kids wear their own clothes. In other words, it is not a uniform-type operation.

We have only 16 boys or girls to a cottage. It is one of our best facilities, and yet it is supposed to be for the worst kids we have. Why does it work? Because the kids are treated as human beings, because of the groups, which I think are crucial to changing of delinquent behavior, and because the place is small. The staff and young people all know each other well.

Chairman PEPPER. Are they locked in?

Mr. KELLER. No, they are just there. And we have very few runaways from that facility. Let's address the questions of sex activity, Mr. Chairman, because people say we must be crazy putting delinquent kids, boys and girls, together in the same institution. We have discovered the kids act more like ordinary kids on the outside. We occasionally have some sex problems. I would be lying to you if I told you every now and then we don't have a problem. I don't think we have as many problems as the ordinary public school does, the average high school does.

And through the groups, kids respect one another. There is a feeling of concern and respect for one another which is worth seeing.

On the issue of staff, I am not hung up on the idea of Ph. D.'s and M.S.W. degrees. My own feeling is that correctional administrators should search hard to get people who like other human beings. One of our most successful halfway house superintendents is an ex-alcoholic, whom I met at Sumter Prison.

He wasn't in prison, but he was an AA from the outside, talking to AA convicts at Sumter. This man is a black man with 2 years of college. He is one of our best halfway house superintendents. He not only has great concern for the young people, but they know it. They know he really cares about what happens to them.

Chairman PEPPER. Mr. Keller, may I interrupt you. When I visited Red Wing, Minn., Mr. Olson, who is in charge there, told our committee that when he took over under the new program, I think they let all of the psychologists and psychiatrists go but one, maybe one of each, I don't know. And they did just what you said. They put in charge people that know how to handle boys. It is a boys' school. And they said the best man they had on the campus was the fellow who ran the shoeshop. He could do more with those boys.

You know, we have Art Barker at Fort Lauderdale, who is in charge of Seed, some of our members here visited the Seed, he is a reformed alcoholic. That fellow has a knack of some kind or other for dealing with boys or girls. He is a genius.

Chairman PEPPER. What you are saying is you don't care about their technological qualifications, but you want people who know how to deal with boys and girls.

Mr. KELLER. Mr. Chairman, I say the first thing you look for is warmth for other people. If you can couple that with a college degree, with some knowledge in the behavioral sciences, that is a great big important plus. I am not knocking the professions.

Chairman PEPPER. Of course. I am not, either.

Mr. KELLER. But what I am saying is that I think we can use those people to train group leaders. My own discovery has been that the State simply cannot afford psychiatrists, in numbers, for these training schools. I really don't believe most delinquents need that. I believe young people who really are in bad shape mentally should be treated by a competent psychiatrist through contract. If the young person needs psychiatric help, then contract for it. The administration can employ help from the outside. My own experience with some institutional doctors has not been too good. The State often doesn't pay very well, and, consequently, it gets what it pays for.

I think one of the stumbling blocks correctional administrators run into is—unfortunately, although I would like to employ more people like the man I described at our halfway house in Tallahassee—the tendency of government is not to be flexible. As pay grades and job specifications are set, these are almost invariably tied in with advance degrees. You don't get paid well unless you have a master's in something or other.

That is too bad, I think. I think there needs to be greater flexibility.

Mr. RANGEL. Mr. Chairman?

Chairman PEPPER. Mr. Rangel.

Mr. RANGEL. I share your concerns. I don't know how closely you are related to the drug rehab programs, but most of the communities felt that the victim did not really need full-time psychiatrists and psychologists, or social workers, but rather people that had an understanding of the problem, the result being that many of the programs merely justified they had to be approved because they were staffed by former addicts.

I recognize that you have to have more flexibility in the civil service system, but to get the type of talents that you and the chairman described, to get this type of talent and dedication, what would you think is needed by agencies such as yours?

Mr. KELLER. I think the job specs should be written in such a way that, somehow or other, they would take into account the individual's past experience, what he had to offer. It might include street experience, Congressman, other than academic steps. Very often, you know, coming back to the academic business, there are people that are superbright, who shouldn't be working with human beings. They don't help people.

They can knock off a Ph. D., but they are not helpers. And then there are other people who can move through the academic world, but don't know what the bricks are like. They have never been there. They don't know what the hard life is like. It is ridiculous for this kind of middle-class person to be telling the individual in trouble how it is.

Mr. RANGEL. I know. We have the same type of public servant that just doesn't like people but he has degrees. On the other hand, my problem is that the person that just comes from the street, he is hired by people who come from the street and we really don't know whether

he is a part of the problem, rather than someone who can assist in the solution of it.

The answer is someplace in the middle. I was just wondering if you did have the flexibility that you want.

Mr. KELLER. We are getting less flexible, I am afraid. As the job specs are specifically laid out in our State, it is going to be harder and harder to employ people like the man I described.

Mr. RANGEL. And like Mr. Barker, who the chairman described. Have you had a chance to look at the Seed program?

Mr. KELLER. I know Mr. Barker and I have been to the Seed for a visit. We have quite a few children in that program.

Another stumbling block, if I may move to it, that concerns me in the people-helping field is the requirements of the Federal Wage and Housing Act. These are being enforced very strictly in our State. Obviously, the reason they are there is because people were abused in the past. People were worked fantastic hours, were not compensated for it, and weren't given time off. The sad thing now is that there are people who would like to work with kids, but when their 8-hour day is up, they have to leave. They have to get out. The only way we can avoid that in our State is to get the pay grades at a high enough level so they then become "exempt." Over a certain pay range, the person can work at night or any time. But there are lower echelon people who really enjoy working with kids. They have got to leave at the end of their stint. They may be in the middle of a conversation with a kid. The rule is enforced so rigidly that the people who will question the employees say, "Did you hang around for 10 minutes after working period?"

Mr. RANGEL. Who enforces it; the union? The shop superintendents?

Mr. KELLER. There is a gentleman with the division of personnel whose job it is to go around and find out from people what their working hours are.

Mr. RANGEL. Can't they come back as volunteers?

Mr. KELLER. No; unless it is in a totally different field. For example, a secretary could offer to be a Boy Scout leader, but a house parent cannot. A house parent might want to take kids to a ball game, because he would like to see the ball game himself. But he can't, he is on overtime if he makes that trip.

I am strong for contracting for service. We are doing some of this now in Florida. We have four marine institutes that are under contract. This is where we put boys on boats. Florida doesn't really have any mountains, so we can't have an "outward bound" experience.

Chairman PEPPER. Excuse me. Mr. Keller, I am surprised that you are so uninformed of our geography. We have mountains that tower up into the sky as much as 300 feet.

Mr. KELLER. They are beautiful hills.

The marine institutes are not-for-profit corporations. We contract with them to put boys on these boats, where they learn ship handling, where they learn scuba diving. If they don't know how to swim, they teach them how to swim, obviously. Also repair. When these kids get through with this course they are very much in demand as far as jobs in our State are concerned, because we have so much maritime business.

This is the kind of program that really turns on an adolescent boy. Just being on a boat, going out to sea, for example, on a yawl or ketch.

We also contracted with the Jack and Ruth Eckerd Foundation. This is a not-for-profit foundation, which operates a "wilderness camp." They have two wilderness camps now, the Eckerd Foundation does. The State is going to have a camp created for delinquent boys in west Florida, over near Pensacola, in the Black Water River State Forest. They have from 400 to 700 acres of land. It is really wild land. The central camps consist only of a small administration building and the dining hall, which is known as the Chuck Wagon, and there are some showers and toilets there. But the rest of the camp is all in the wilderness.

There will be a camp of 50 kids, five subunits, with no buildings in the subunits; nothing but tents which the kids make themselves. If it rains, they have to fix it. Half of their meals each week are prepared out there in the wilderness. They cook their own food, plan their own menu, and the other half of the week they come up to the Chuck Wagon. You don't want kids to do nothing but cook and prepare food all of the time.

But it is quite an experience. I have seen kids who failed in everything else really turned on by their wilderness camp experience. They go on canoe trips, pack trips. The school program is related to the camping experience. That is, the boys determine we need to order so much food; let's figure out how much food we need. How many of us are there? How many loaves of bread do we get, and that kind of thing. As far as English is concerned, that would be done in planning for the trip they are going to take. After they have taken the trip—for instance, coming down the Mississippi on a raft—they write up what their experience has been. They write back to the people they met on the trip.

We also have contracts with Florida Atlantic University and the University of West Florida. These universities work with our boys on the training school campus. We actually have branch universities going at our institutions. And, at Okeechobee, just north of the lake, there are 60 young men and women from Florida Atlantic University living in trailers at the boys' school. They go to class right on the grounds of our boys' school.

Twenty hours a week, the university students are devoting themselves to their own academic work. The other 20 hours, they work for us as teacher aides and recreation aides. And I think it serves two purposes: One, these university students are young enough they can really relate to the teenage kids in that training school. There is a difference of maybe 4 to 6 years between the students and the kids in the training school. Then, and most important, we are developing future teachers who have skills in working with delinquent kids, and are not afraid of these behavioral problems when they find them in the public schools.

We need to do a lot of this kind of thing in conjunction with public schools.

The newest program the State has moved into is detention. Mr. Chairman, we in Miami are operating Youth Hall now, and we are also in the Panhandle. The panhandle of Florida runs from Pensacola almost over to Tallahassee.

But the 10 counties in the panhandle are served by only two detention centers. We have a system of open, nonsecure shelter homes, and a system of home detention, which allows kids to go back to their own homes under intense supervision. This is a program that was started by a gentleman named Paul Keve, who used to work for Judge Lindsay Arthur.

This program in Florida follows a State plan worked out by the John Howard Association. Mr. Rowan, of course, will testify later. What Rowan is saying to the State of Florida is:

> You don't have to build any more lockups. You don't need it. Use the existing two secure detention centers that the counties have, and, instead of building any more lockups, use open, foster-type homes for kids who don't need to be locked up.

Then, also, send kids home, but make sure they are closely supervised by home detention workers.

Here is how that works. You don't look for a guy with a fancy degree. You find somebody whose references check out okay; maybe just a guy with a grade school or high school education; that's all. You give him the responsibility for making sure that five boys, who have to come before the court, stay out of trouble until their court date.

Now, it makes sense, considering the adult system. In the adult courts a really bad hoodlum can be bonded out until his court date simply because he can come up with bail bond. He can pay the dough. Doesn't it make sense in the juvenile field to do something better? Let the delinquent kid—or you think he is a delinquent kid because he is coming up before the court—go home, but have him supervised every day by an individual who isn't paid a big fat salary, but whose job it is to be sure his five kids keep the court date, and stay out of trouble.

The cost of this State detention system, according to Mr. Rowan, is going to be just about what the counties that are presently operating detention centers are now spending. Remember, there are 20 counties out of 67 counties in Florida that have detention centers. These are lockups. What the counties are presently spending to keep kids in those 20 lockups is what the John Howard Association believes the State of Florida can spend to operate an entire State system where you minimize lockup; you allow kids to be under home detention, or in open shelter homes.

Mr. RANGEL. Mr. Keller, what happens to those people who are employed under the present system?

Mr. KELLER. Congressman, they transfer to the State system. This is what happened when the title IV–A moneys and LEAA moneys of 2 years ago were matched with State general revenue, when we took over what had been the county responsibility of intake and probation. The State operates all of that in Florida. Those people came over to the State system. On the whole, they worked out well.

Believe it or not, we only dismissed one individual on a morals charge. Some are better than others, obviously, but we recognized when we moved into that area that we weren't going to fire people. We actually couldn't. They gave us a 6-months' period when we could

unload people if they were bad, but we found most people were pretty decent.

Mr. RANGEL. But you are talking of hiring a different type of person, say, for the custodial care, to insure that the alleged juvenile delinquent gets back to court.

Mr. KELLER. That is right.

Mr. RANGEL. You wouldn't have any civil service status job for someone like that?

Mr. KELLER. You see, what has existed so far, and this is true throughout our country, is just lockup care. We are going to continue to operate most of those security detention centers, or lockups, and the people who are working there will continue to work there. What we are saying, in other words, is that we agree with Mr. Rowan of the John Howard Association. We don't have to build a lot of lockups elsewhere.

What we are going to do, instead, is to pay Mr. and Mrs. McDonald to take three to five kids into their home, shelter cases, until their court date. We will pay McDonald $7 or $8 a day per child. Also, Mr. Lynch, who has been recruited now as a home detention worker would have the responsibility of just making sure the five kids stay out of trouble.

So these programs obviously are far less costly than lockup care. Lockup care costs about $27 a day per child. You have to have 24-hour supervision and 8-hour shifts, and so on. This other nonsecure way costs us about $7 per day per child.

The next area that I am concerned about, and want you to hear about, is that staff training efforts for agencies of our type are often neglected. It is very hard to sell legislatures on giving money for staff training. A lot of people don't understand it. We are asking for a little bit more than 1 percent of our budget for staff development. I think that staff training is crucial, if we are going to do the job right, because we are a big agency now in Florida.

We have 3,000 persons working for this agency. We process 110,000 kids a year through intake. We have 16,000 children on probation or parole. It is crucial that the people who work with this agency understand the philosophy of the agency, and that they are motivated, and feel they are a part of a growing, vital, energetic system. Staff training is crucial, I think.

Also, the whole business of public education. What we are doing right now and what this committee is doing are crucial. The public really needs to hear what your deliberations result in, because so many people still think the iron fist is the way to deal with troublemakers. They don't realize the traditional method of dealing with offenders produces a more dangerous offender.

You Congressmen have heard firsthand the testimony about what happens to people in prisons and large institutions. You know that when those people come out of that kind of a prison experience they may be truly vicious. I have talked to convicts who said they would kill a guy for a pack of cigarettes, if a person got in their way. They had gotten to the point that other people's lives just didn't amount to that much.

I think we have a public education job to do, which is to make clear to the public why people do become offenders, what steps should

be taken to correct them, and then emphasize the importance of citizen involvement. I am a former broadcaster who didn't get into this field as a so-called professional until I was 37. I used to work as a volunteer with kids that were in trouble. I know I helped some kids.

I did it, because they knew I cared about them as people. There are people willing to work with kids all over this country if they are recruited and plugged in. There are all kinds of such people.

One of the most effective volunteers we have in Florida is a police officer in the Clearwater area who not only took charge of a 13-year-old boy who was getting in trouble, but ended up being a substitute father for all of the children in that family. This sounds like one of those soap opera things, but it is really true.

The mother of these children died of a hideous cancer. She was deserted by her husband. She had five children. Before she died, she wrote the local chief of police—and it appeared in the newspaper—a letter about what this policeman had done for her and her children by substituting for the father that wasn't there.

Agencies like ours, if they are ever to do anything except slam the door when the horse is gone, must do more in public relations. We need to work closely with public education. I am an old school board member. I am about to slam the public schools, since I was a part of the public education system for 6 years. The school systems contribute heavily to the delinquency.

I saw a newspaper cartoon which was based on the Mad Queen in Alice in Wonderland. It showed the queen with her crazy hat on, and she was saying, "If you don't go to school, I'll kick you out." Which, of course, is what we do in this country. If the kid is a truant, we send him from school. Kids are driven further and further away from the system and more and more toward the criminal setup.

We need to do a lot of work with the schools.

Finally, the legislators in our State asked me: "How good are your programs." This year, for the first time, we did come up with some very gross information, just gross facts: that is, commitments are down; failure rate is down; and so on. But, as far as any real hard evaluation of programs is concerned, that is another thing that is tough to get money for it.

We even made it our No. 1 budget priority a couple of years ago. We said we really needed to get a few people in the research bureau so we could actually demonstrate whether we were doing a good job or not. But it is hard to sell people on that. You can get money for a new sewage system in an institution, or for new roofs, or halfway houses, too, because our legislators believe in that, but things like staff development, or educating the public as to their responsibility in the whole delinquency scene, or evaluation of programs, it is tough to get money for those.

Just to conclude: We were using title IV–A money until recently—title IV–A of the Social Security Act. It was great while it lasted. We had $10 million coming from title IV–A, which we were using because so many of our young people are the children of families on public assistance. The intake-probation program, which is now a State operation, and which guarantees service to kids no matter where they live in our State, would not have been possible if it had not been for the Federal money.

The thing that upsets people like myself is that the money has dried up. Title IV–A is almost a lost cause, and the stuff you have to go through to get any of it now bogs you down in paper.

Congressman, I am concerned that they changed the rules in the middle of our game, which is our fiscal year. Under the old guidelines our program of counseling kids on probation and parole was eligible. We were receiving the money. Then they changed the rules and decided the old guidelines would no longer continue. That really throws State agencies a curve, because then you are right in the middle of the fiscal year. What are you going to do?

There is a crisis now in Florida with regard to the social service agencies. People say: "Well, after all, the State has some money over here. Why don't they use that?" One reason is that, obviously, different people in the State have ideas as to where the money should go. The great thing about the IV–A money, while it lasted, was that it was money earmarked for social security programs. We were able to use that money for a period of time.

I think the two pressing issues that have bothered the American public have been the war, which is now behind us, or I guess it is behind us: and the other issue has been crime in our country.

If crime is now the No. 1 concern to the public, which I think it is, I would ask that Congress think very seriously about the kind of money needed to do the job properly. We need to do so much in the prevention area.

Mr. LYNCH. Mr. Keller, you were talking about title IV–A money. That money was in fact a limited fund, isn't that correct; the way it formerly worked it was on a matching basis, dollar for dollar, no ceiling?

Mr. KELLER. There was no ceiling. And I am not saying there should not be a ceiling on it. I think all of a sudden the Office of Management and Budget realized there was an open faucet.

Mr. LYNCH. How much money did your department receive?

Mr. KELLER. We got $10 million from that source in 1 year. All sorts of good things happened. Now, of course, with that dried up, we have tried to reach here and there and to get the State legislature to keep the programs afloat.

Mr. LYNCH. You mentioned that it is difficult to get the public to think about, or the public is unaware that, programs such as community based programs are more successful, are less expensive, than institutionalizing in prison kinds of settings.

To what extent do you, as a correctional administrator, advertise that fact?

Mr. KELLER. Well, Mr. Lynch, I talk it up all the time. Any time I get interviewed, or have a chance to speak to a group, I am generally carrying the same message.

We have a bureau of community services which is supposed to be responsible for the whole State as far as prevention efforts are concerned. It has five people in it. They do a whale of a job with five people.

They are the ones that got the volunteer program going in conjunction with our probation-parole people. They are out there recruiting public interest and public participation. I think the more and more people we can work into the system, such as the university students

who now have firsthand knowledge of what delinquents are like, you realize the delinquent is generally not an ogre. He is generally a kid who looks upon himself as a failure. A kid who doesn't like himself.

Mr. LYNCH. The reason I asked that question is this morning the chairman of this committee indicated he was somewhat perplexed by the fact that during this week of hearings, when we were talking of juvenile corrections and about new approaches, more successful ones, a very small number of gentlemen from the press showed up, whereas last week when we were talking about police programs, the room was relatively crowded. I take it, in a sense, you are saying the same thing.

Is it, in your judgment, the fact this is not newsworthy or it is not exciting enough for the public to be interested?

Mr. KELLER. Mr. Lynch, I am the son of an old newspaperman, so I am going to stick up for the press. I really think the press generally finds corrections a field of real interest. They give us good coverage in Florida. And it isn't something we are seeking for. We will get telephone calls from AP and UPI about our programs, and from Martin Dyckman, who has done tremendous things in corrections in Florida. We have a number of newspaper people who realize people do read about corrections.

Before I got into this business, I found the whole business of prisons, training schools, and jails kind of morbidly exciting. There is press copy there.

Mr. RANGEL. Is this reflected in the legislative priorities? I served in the New York State Legislature and it is my opinion that U.S. Congressmen are politically insulated from direct voter reaction on national priorities, since our jurisdiction is so broad. I would hate to see what would happen to correctional programs in New York State where we have the rural areas controlling the political influence on priorities. And unless Florida is a different kind of State, the major problem we have, whether we are dealing with powerless children, or powerless people, or powerless prisoners, or powerless senior citizens, is what you pointed out; that is, legislators relating to the priorities set by those that are politically powerful. So notwithstanding the interest indicated by the press in Florida, what effect does this have on your State legislative body when they determine their budgetary priorities?

Mr. KELLER. I agree with that. I think the press is important, but I think the reason things have happened in Florida is because—this sounds like "butter"—we really have a first-class legislature, on the whole. We do have people in that legislature who want something to happen. There have been a few key legislators who have made it their particular crusade to improve the corrections picture. That is their bag. And they happen to be powerful legislators.

One, specifically, is State Senator Louis de la Parte from Tampa, who has been chairman of the senate health and rehabilitative services committee, chairman of the senate ways and means committee, and is now president pro tem of the Florida Senate. He is not only respected by his colleagues, but he is very persuasive. And, if you have a few people in the legislature that want change to come, it will come.

You have to have a champion; that is true.

Mr. RANGEL. Assuming that your Governor doesn't impound. Assuming you have no impoundment power problems in Florida from the executive branch——

Mr. KELLER. Frankly, the Governor has been for the detention program. When the State detention bill was passed a year ago, and we thought Federal funds would be available, there didn't seem to be any problem.

The Governor feels there is now a problem about expanding detention over where it presently stands, which is in Dade County and the 10 counties in the Panhandle. That money was authorized a year ago. He is wanting to hold the money at that stage. But Senator de la Parte is saying: "We are going to go ahead and have it now." He is pushing it. The senator is pushing to go ahead anyway.

Mr. LYNCH. Senator de la Parte's bill would, in effect, do away with correctional institutions by 1978?

Mr. KELLER. No; first of all, the legislature passed a bill authorizing State assumption of responsibility for juvenile detention to be completed by 1978. De la Parte has introduced two bills, the first to prohibit the placement of any young person in jail after December 31, and concomitant with that is the other bill, which says, effective on December 31, 1973, the counties are out of the detention business.

The State will operate a network of detention facilities tied together with automobiles. It will consist of those things we talked about: the existing lockups, shelter-type care, and home detention care.

Mr. LYNCH. Do you support the concepts of those bills?

Mr. KELLER. Absolutely, I sure do.

Mr. LYNCH. You indicated, Mr. Keller, that your department processed on an intake basis 110,000 youngsters a year. Will you explain what you mean by that? What is intake?

Mr. KELLER. The policeman takes the child who has been arrested, and the school authority takes the child who is creating problems in school, to somebody. Parents take their problem child to somebody. The problem child, himself, might even walk in to somebody. That somebody is an intake worker, who has a very heavy responsibility to decide whether the matter can be handled informally, or whether a petition needs to be filed.

If a petition is filed, if the intake worker feels a petition should be filed, it goes to the State's attorney's office, which would move ahead, and bring it before the court.

Mr. LYNCH. So the 110,000 are not all people who have been referred by any element of the criminal justice system? It could be family, friends, schools, what have you, at that stage?

Mr. KELLER. Most all our referrals, frankly, are by the police. I recall this, because I presented the charts to the appropriations committees the other day. About 70 to 80 percent of our referrals are police referrals.

Mr. LYNCH. You also indicated that you have approximately 16,000 juveniles under probation or parole.

Mr. KELLER. That is right.

Mr. LYNCH. What happens to the difference between the 110,000 and the 16,000?

Mr. KELLER. Well, many of them are handled informally or dismissed.

Mr. LYNCH. What would an informal handling include?

Mr. KELLER. Well, possibly consent supervision, which means the young person and the parents agree they will make restitution, or the

child will behave. Suppose he has been bothering a neighbor. That was the reason for the arrest. They agree he won't go there anymore. He will leave those people alone. And it can be handled that simply.

We want to keep as many young people as possible out of the official system.

Mr. LYNCH. Mr. Keller, you also indicated that one of the reasons that these new small groups worked so well, is because of the influence that the kids exert upon one another, peer pressure of some kind, peer confrontation and what have you.

I suppose it is a commonly held view one reason a lot of kids get into a lot of trouble is the same reason?

Mr. KELLER. That is right.

Mr. LYNCH. As someone with expertise in this field, how do you explain that? What happens? Why is there the change?

Mr. KELLER. Well, starting one of these halfway houses from scratch is tough, because the group leader, who is the adult, has to take a group which is delinquent, and in trouble. He has to turn them around so that they no longer are interested in stealing, using drugs, and so on.

But the good group leader can do it. Once he gets the group turned around, and has this nucleus that has changed, then he can feed in more delinquents. Not all at once. It is a controlled process. You had better feed in only one or two kids a week into a halfway house program because it is important to maintain the "culture," which is the expression they use.

If you have a halfway house program with a positive, healthy culture, the delinquent kid comes into it, and his first attitude is he has got himself an "easy go." He didn't get sent away to a training school, and he figures he is going to con his way through the program.

But the other kids won't let him con his way. They are like him. They have been there, too. When he begins to lie and blame other people for everything, they say, "Wait a minute man. We are not going to accept that."

Mr. LYNCH. So a healthy adult model acts as something of a catalyst?

Mr. KELLER. That is right. When we began Criswell House, our first halfway house program, it was tough to get the culture going. But when it got going—and it has been going for years—it became well accepted in the community. The kids are part of Tallahassee's life. They are active in the community and go to school there. When we start a new program we may take a kid from Criswell House and add him to the staff. He helps to start the new program.

We call them "seeders." You take some kids that really have changed. They convince other delinquents they can change.

Mr. LYNCH. How do you actually go about selecting the appropriate kind of person to be a group leader, a foster parent? What criteria do you really use?

Mr. KELLER. The Congressman asked me questions somewhat like that a few minutes ago. Here is my chance to answer it.

I think what you do is get the right guy for what I call the bureau chief. Congressman, you are from New York, are you not?

Mr. RANGEL. Yes, sir.

Mr. KELLER. We raided your State. Your State has been wonderful to us. Milton Luger, who is a personal friend of mine, and, I think, one of the great people in the corrections field, helped us get started

in Florida by allowing me to raid your system and take Richard Rachin from your Shepherd House program in Manhattan. Rachin, in my book, is one of the top people in the country in doing groups. Rachin knows whom to pick. He knows who it is that relates with kids. It can be an exconvict. It doesn't have to be. It could be an exconvict, an MSW, a psychologist, an alcoholic. You build a team.

Mr. LYNCH. There is no objective test, in other words.

Mr. KELLER. That is right. There is no objective test. Maybe there will be someday, although I have yet to see the objective test you can count on that much.

Mr. LYNCH. Your marine institutes it seems to me are counterparts of our outward bound programs.

Mr. KELLER. Right.

Mr. LYNCH. What kind of kids do you send into that program?

Mr. KELLER. Serious delinquents. Our halfway house programs take kids, just like the ones that go into the institutions, and this is true of the marine institutes program, too.

Mr. LYNCH. When you say serious delinquents, these would be children——

Mr. KELLER. Robbery, breaking and entering, car theft, assault.

Mr. LYNCH. How many children do you have in Florida who are incarcerated?

Mr. KELLER. In institutions now, we have about 1,100. We have 300 in halfway house programs. That will raise to 500 by this fiscal year. We have 50 young people in group foster homes, which we need to expand. Foster care really works. It is one of the least expensive of the residential programs.

Mr. LYNCH. And the institutions in which the 1,100 young people are incarcerated, is it appropriate to call that incarceration, or are these holding institutions?

Mr. KELLER. I won't play with words. We don't like the word "incarcerated," because I think that if you were to visit the programs, they wouldn't give you that feeling. They look like regular school campuses. There aren't any fences or anything.

Mr. LYNCH. Is it your intention to maintain those institutions?

Mr. KELLER. What I would like to do is gradually reduce the training schools so that eventually Florida may have only one or two institutions. These institutions would have small populations of 100 to 150. I think the legislature in Florida will have to recognize it will be costly in such programs, because if you are really going to operate an institution that has special vocational training and has a connection with the University of Florida's J. Hillis Miller Medical Center, it is a lot more expensive than a community program.

Mr. LYNCH. Have you comparable data on recidivism rates, institutions as opposed to halfway houses?

Mr. KELLER. We discovered at the halfway houses that they do as well as at the institutions. Where the halfway house shows benefits is that the cost per day is less. Also, there is virtually no capital construction. You simply rent a place, or buy it far cheaper than you could build something nowadays. Young people then move through the program quicker than in a training school. Our average length of stay in an institution is 7 to 8 months. The average length of stay in the halfway house program is only 4 months.

Let me speak, if I may, about the issue of recidivism. The judge earlier mentioned that recidivism, of course, is going to continue to be one of the chief measures of judging a correctional program. In some ways it is unfair. I told Mr. Pepper that I have seen kids leave one of our halfway house programs who really wanted to do right. The guy had really a new set of values, but if he has nothing to return to except the same rotten situation he had come from, he returns to delinquency. We couldn't put him somewhere else. The time was up for him to leave, so back he went to a ghetto in St. Petersburg, or Miami, or Jacksonville, or Tampa. He was exposed to all of the old forces again. Maybe he still got hassled. The policeman who may have been his enemy before is again on him. Maybe when he tried to go back to school, the attitude there was: "We don't want you here." That is why it is so important to get the public educated. For example, if people look upon the marine institutes as coddling kids—"My kid doesn't get out on a boat, and have all that fun and so forth"—if people see it that way, I think they are mistaken.

Because, if I can take a kid who is turned off of the world, and turn him around so that he sees himself in a new light, so that he has some positive things he can be proud of, then the cost is worth it.

And the success rate, by the way, for the marine institutes is still excellent. Their kids really do seem to stay out of trouble.

Mr. LYNCH. Better than the halfway houses?

Mr. KELLER. They are somewhat more selective in the kids that go into them—certain intelligence level, and so on.

Mr. LYNCH. It is more difficult to be placed in the marine institutes; is that what you are saying?

Mr. KELLER. There are only four of them. Boys also have to live in that area. They are not residential programs. There is one near Ft. Lauderdale. You have to live around Ft. Lauderdale to get in that program. Boys live at home and go to the institute during the day.

Mr. LYNCH. Are they under your auspices through private contractors?

Mr. KELLER. It is an outfit known as the Florida Marine Institute. We have a contract with them.

Mr. LYNCH. How about the success rate in the wilderness camps?

Mr. KELLER. We are just beginning that program. The reason we did it was that the Eckerd people earlier took kids into their camp without any payment from us. They were our probationers. The Eckerd Foundation accepted them into the camp just to be nice. We don't find that very often.

We don't find very many private outfits that want to handle delinquent kids. They are scared of them. The Eckerd people are not.

We said, "Look, you are doing a good job with our kids, and you are actually taking them 'for free.' Suppose we create a camp for you in west Florida, and we will pay you to run it."

Mr. LYNCH. What does it cost you?

Mr. HELLER. About the same thing as a halfway house, about $13 a day.

Mr. LYNCH. Which is still approximately half, or less than half, the cost of institutionalizing the child?

Mr. KELLER. That is right.

Mr. LYNCH. No further questions.

Chairman PEPPER. Mr. McDonald.

Mr. MCDONALD. Thank you, Mr. Chairman.

Mr. Keller, you mentioned there were 1,100 juveniles in institutions, 300 in halfway houses, and 50 in group foster homes. Is that the total amount of juveniles in your DYS jurisdiction, approximately 1,450?

Mr. KELLER. Don't forget the 16,000 on probation and parole.

Mr. MCDONALD. I am sorry. What is the upper age limit under DYS?

Mr. KELLER. 21.

Mr. MCDONALD. How many juveniles between the ages of 17 and 21 are committed in adult prisons in Florida?

Mr. KELLER. Mr. McDonald, I don't have a figure on that. In our State, if you are over 17 and you commit a crime, you are in the adult system.

Now, we do have 17-year-olds who were sent to the prison system. I mentioned the Florida administrative transfer. If the prison system feels this young person ought to be out of prison, because of what can happen to a person of that age in prison, they send him to us administratively. We get together and arrange transfers which go on all the time.

There is talk of changing the age of juvenile court jurisdiction to 18; to move it up a year. I am in favor of that. That is going to have an impact on us in sheer numbers. That 17-year-old group is a major part of the people in difficulty. It is a high commitment age. We are interested in taking these. Also, I am in favor of the youthful offender bill, which would allow us to even take people up to the age of 21.

Mr. MCDONALD. But as it stands now in Florida, you can't initiate bringing that youthful offender from an adult prison to, say, Criswell House?

Mr. KELLER. The director of the prison system and I work pretty closely. He told us he would give us the names of all 17-year-olds he had in the system. We could interview those boys. If we thought we could work with them, he would be glad to hand them over to us.

Our prison system is overcrowded.

Mr. MCDONALD. Is Criswell rated as one of the best halfway homes in Florida?

Mr. KELLER. I think it is.

Mr. MCDONALD. It occurred to me when I toured it, people mention it every day, every week, many people are being brought through Criswell House. Is Criswell House the best because it is in Tallahassee? Are there other houses throughout the State that equal Criswell House?

Mr. KELLER. Yes. Criswell House was put there deliberately. I needed a place in the capital, where I could take legislators, and have them see it work.

For Congressmen who haven't seen one of these programs, you really have to see it; it is the only way you will be convinced yourself.

Here is a totally open program with kids about as open, responsive, and friendly as young people, as you would meet any place. I think they discard a lot of the defenses you find with average adolescents in high school. Our kids at Criswell House don't bother with that non-

sense. They come forward, tell you who they are, and ask if they can help you. They are nice kids.

Mr. McDonald. Why would Criswell House be so effective as opposed to others in the State?

Mr. Keller. I think they are about on the same level. It isn't that Criswell House is so unusual—for instance, Jim, when you came to Florida, it was very convenient to take you right from the airport to Criswell House.

Mr. McDonald. One of the young people had come from another group home and said it just didn't work. He was happy to be at Criswell House. My question is, do they get more funding at Criswell House?

Mr. Keller. No. A good thing about a halfway house program is that, if a guy isn't making it at Hillsborough House because he doesn't like the guys there, we move him where he can find some friends.

I can remember when I was a kid, my folks sent me to boarding school. I wish I had been out of that school and someplace else. Sometimes you don't fit in a particular place.

The same thing is true in a halfway house. You may get in Pinellas House, and run into a bunch of guys you don't click with. If we move you over to Tampa to Hillsborough House, you might find some buddies over there.

Mr. McDonald. Thank you. I have no further questions.

Chairman Pepper. Mr. Keller, how is Criswell House operated.

Mr. Keller. How do you mean, Mr. Chairman?

Chairman Pepper. It is operated under the direction of youth services?

Mr. Keller. Yes, sir.

Chairman Pepper. You own the house?

Mr. Keller. The State owns the house.

Chairman Pepper. Did you build it or rent it?

Mr. Keller. Again, we haven't built anything. All of our programs are things we have purchased. It was a white elephant on the real estate market in Tallahassee. It was used as the Florida Sheriffs Association's training academy. When the Florida Sheriffs' Association went out of that particular business, and turned that job over to the department of law enforcement, the building stood empty, which was good for us.

Chairman Pepper. How many boys does it house?

Mr. Keller. About 25. We also have a graduate program. Florida State University gave us a house they didn't need. We moved it to our grounds. For some of the boys who have no place to go home when they finish Criswell House, they can move into the graduate program, where they have to support themselves.

Chairman Pepper. What would be a typical day in the life of those boys?

Mr. Keller. Get up about 6:30, with all of those chores to do in a place like that. They have breakfast about 7; catch a schoolbus, which comes right to the house; and then they engage in the regular school program at Godby High School. When they return in the afternoon to Criswell House, there are chores to be done. The place has to be neat. Boys get different assignments. One guy takes care of the bath-

room; somebody else helps out with the cooking. After supper, they go into the groups.

The groups are the big thing. Nothing interferes with that. The kids realize the groups are the focus of the program.

Chairman PEPPER. They rap together, they have discussions, movies?

Mr. KELLER. No movies. It is just talk. It is the kind of thing you saw at Red Wing, exactly.

Chairman PEPPER. What Federal funds are you receiving in Florida for the group services?

Mr. KELLER. We find LEAA has been a lifesaver for us. That is important money. There has been a pitiful amount of money from YDDPA, the Youth Development and Delinquency Prevention Administration, amounting to $100,000 a year per State. That was never funded, really. Congress never put any money into it.

Chairman PEPPER. Do you recall how much you are getting from LEAA?

Mr. KELLER. Yes; we will get about $1.2 million from LEAA this year. Compared to the former title IV–A money LEAA was a poor relation. IV–A was great, while it lasted.

Chairman PEPPER. Mr. Keller, from your experience, if you were designated by the President and the Congress of the United States to curb crime in America, or be responsible for curbing crime anyway you could, what would you do to carry out that mandate?

Mr. KELLER. Mr. Chairman, I would change some of our national priorities. I think I would put heavy emphasis on the whole criminal justice problem. I am convinced—my viewpoint is biased, because I am in this business—it is the No. 1 problem of this Nation.

I think that the people in any kind of power position must realize we sort of reap what has been done before. We pick people up after they should have been helped earlier. I favor programs that would improve the living conditions in this country.

I am really talking about spending big money. I can recollect what it was like living in Chicago and seeing the slums of that city. They are horrendous slums. They are scary. You see them as breeding grounds for delinquents and criminals. It is a fearful way of life.

I lived on the South Side by the university near scary neighborhoods. Those are pockets in our rich society that are just producing criminals.

I think major efforts need to be made to change conditions like those. I think major efforts need to be made to improve schools. The schools must have programs that are relevant to kids' needs.

I feel sorry for the school people. They have so much to do. More and more things are being given to the schools to do. But if it isn't done at the school level the kids are going to end up with me, and that shouldn't be.

All that time the young person is in school is when he really needs the help, not when he is 14 or 15 and has become a "bomb-out" and turned off of society. These kids get more and more alienated and hostile. They fail at home; the police arrest them; they get kicked out of school; they begin to experiment with drugs as a method of escape.

By the time we get them it is not too late, but it is sad that it's that way.

The great thing about kids, or about people, is that you can see people change if they are placed in circumstances where they get some kind of opportunity and some kind of respect, and have a chance to make it.

I am very strong, by the way, on participatory management. I believe correctional administrators ought to listen to the people they are serving. We had a conference, Congressmen, a year ago, in St. Petersburg, where we brought staff and kids together for a day and a half.

The staff was from different levels of our agency. We had administrative types like myself, and we had houseparents, probation and parole officers, intake workers, and group leaders. We also had about 25 kids. The staff, frankly, outnumbered the kids 2 to 1, but that was because I was trying to train the staff.

The kids will level with you and tell you whether your programs are any good or not. If a kid doesn't see a program as helping him, then it is not helping him. If he thinks it is a lousy, stinking program and it isn't any good, then it isn't any good for him.

The reason I say that is because I sort of know which of our programs are better than others. After all, I live with this agency. When you have a good treatment program or vocational program which is really teaching kids something, they will tell you it is great. "I am really learning something in this program. I am really being helped."

The honesty of kids is one of the things that attracts me to kids, because they will tell you how they think.

Chairman Pepper. May I ask you a question? In that position, if you were asked the question, "Do you think crime would be more effectively curbed by improving all our correctional institutions in this country, the correctional program for youth and adults, and improving the court system of the country and giving summer jobs, recreational opportunities to children, particularly disadvantaged children as to whether that or reimposing the death sentence for the committing of violent crime or heinous character would be more effective in curbing crime," what would your answer be?

Mr. Keller. Mr. Chairman, I don't think the death penalty stops crime at all. Let me be candid on that. There are crimes committed, such as the Manson murders and the Speck murders. My first reaction is to eliminate such murderers immediately. I would like to wipe them out.

But that doesn't deter people from committing crimes of that type. The people who commit those crimes are sick individuals, twisted individuals, who come from generally rotten situations.

I read the case histories of the kids that come to this agency I am responsible for—the life situations of these people are often hideous. You mentioned the girls who have been molested by their own relatives. I have known kids that have been brutally beaten over and over again. You don't live through something like that without having it affect you.

If I could make an analogy: People seem to understand how a guy going through the Vietnam war can come out acting a little funny. They say, "Gee, consider what that guy went through. He was over there in the Hue campaign for 3 months." Now the delinquent: Think of the campaign he has been going through for 15 years. That is why he is like he is.

The death penalty just does not deter people if they feel like killing people. I would like to see people like Charlie Manson done away with. But, the way our system has worked, the only people who get done away with are the poor. If you have the money, or if you have a celebrated case, you will get an outstanding attorney who will generally keep you away from the chair.

Chairman PEPPER. I understand your answer to be that we could do more to curb crime, including heinous crime, by these things we are talking about now—improving the school system so as to make the school program more stimulating to the students and improving our correctional institutions, programs for juveniles and adults, and other programs—to make life more meaningful and significant to individuals.

Mr. KELLER. Mr. Chairman, the answer to that is yes.

What you are really talking about is restructuring the Nation's priorities; where you put your money.

Chairman PEPPER. You know, what you and these other gentlemen who told us about these innovative programs are really doing is offering opportunity to live more or less a normal life for a lot of people who haven't had that opportunity.

There was a young lady here yesterday, pregnant by a young man she was living with, who seems to have found herself under a new program. She wants to be a counselor in one of these youth program institutions. She didn't have any family problem, apparently. She didn't have any estrangement between her mother or father or any poverty or turmoil in the home, that seemed to disturb her.

But for some strange reason when she was about 13 years old she began to run away. I guess there are those peculiar manifestations on the part of individuals. By and large, these students that come into these juvenile court programs and into your program are students that ordinarily haven't had an opportunity for such as your wilderness program or had respect and dignity, and had not the type of environment or stimulating life they found in your halfway houses and the like.

You are really offering them something that is a new experience. They come out of the ghetto; they come out of environments which are discouraging, frustrating, and disappointing; and into contact with people who are stimulating and inspiring and the like. You are really offering them privileges that they have not actually enjoyed, if they have enjoyed any at all in their former life before they came there. That I think is one of the basic reasons for the success you have had in influencing the future lives of these individuals.

Would you see some elements of truth in that?

Mr. KELLER. I would.

Chairman PEPPER. One other thing. This committee held six hearings last year on drugs in the schools, starting in New York, then Miami, Chicago, San Francisco, Kansas City, Kans., and Los Angeles. We discovered the serious nature of the drug problems in the schools. In general have you observed that the tendency on the part of the school authorities has been to kick them out?

We have been talking about the Federal Government assisting these schools that have a financial crisis, helping them to put in these programs you told about, to make the school life more stimulating.

I remember we had a school supervisor in, I believe it was, San Francisco. He said his objective was to make each of his students experience one interesting thing every day. Well, now, you are not going to get so many dropouts if you have that kind of a school program, are you?

Mr. KELLER. That is right.

Chairman PEPPER. I wish you could counsel the schools and help them to devise a program that would keep more students coming to you.

Mr. KELLER. Let me grab that one for just a moment. We can, and the law in Florida says we should. Our problem is that when the money is divided up, legislatures generally don't see the importance of prevention. They have been very good to us with regard to improving correctional programs, community-based programs, and so on. But, if the groups work with these so-called bad kids in halfway houses and training schools, they will surely work in the public schools.

A number of our field services people, on their own initiative, are working with teachers to teach them how to "do groups." Instead of throwing kids out of school, get them together, and get them to talk the way they do in our institutions.

Let me be very specific about the results we have seen in our training schools. In the Florida institutions, in 1967, the way they kept control of the kids was to beat them. I have a leather strap in my office from the old days. That isn't necessary when you get people to talk things out.

Our runaways are way below what they used to be. We don't have the sexual attacks, the gang rapes that used to take place—which is what used to happen in the old days. We don't have the terrible racial problems we used to have. Our schools were torn apart at one time by racial conflict, because we were about 50–50. The kids now relate to each other as people. You never hear anybody talking about the black-white friction at these schools anymore. If that can happen in State reform schools, where the groups, frankly, are not as intense as they are in the community-based programs. These intense discussions can help the public school systems.

Chairman PEPPER. That is stimulating. This committee hopes we can make recommendations that will be helpful to you people who do have a vision of the future, a vision of what can be done.

The Federal Government can help the State and local communities in putting in these innovative programs. We are just proud we have a man like you in Florida.

Mr. Mann?

Mr. MANN. I would like to inquire further about the group foster home. How does that work?

Mr. KELLER. Right behind me, you will find Mr. Joseph Rowan. He is a walking encyclopedia on foster homes. It is simply a matter of good recruitment. You can advertise; you can put an ad in the paper telling people you are willing to pay them $8 a day to take care of someone's youngster.

If you take six of these kids into your home, in the course of a year's time, you will make $14,000. You need to check the references of foster parents closely because you have all kinds of people who will answer ads of that type. But you will find, if you do careful screening and

background checking, you can get excellent people who really like children.

The tragedy of so many of our foster home programs is that we haven't paid them enough so they can at least break even. A lot of people don't want to take a child into their home, with that terrific responsibility, if they are actually going to lose money on the deal. On $8 a day you don't lose. It is worth your time. Obviously one's social life is going to be inhibited considerably if you have five or six kids with problems in your home. Although you are going to be pretty much of a homebody, this would not prevent you from working. You could still go to work. The kids would be at school. You and your wife would have the pleasure of having these youngsters with you in the evening.

Mr. MANN. I guess to a large degree it depends on the home?

Mr. KELLER. It does.

Mr. MANN. How do you arrive at the best number of youths in the home?

Mr. KELLER. Well, there certainly isn't any hard research on it. We are going for six kids per home for this reason. The rationale is there are a lot of teenage kids who don't want to be the only kid in somebody's home. One child might find it difficult to accept you and your wife as substitute parents. But when you put five other kids there, who have also had problems, there develops a certain "we-ness." You have a group of kids. They do not feel alone, and you don't pretend to be their parents. You are the people who are in charge. You are kind, and so on. Again, it is the peer situation which is so important to teenagers. Mr. Lynch pointed out that a lot of kids get in trouble because they belong to a group, peer pressure, "Come on, man, you are afraid to go. You are chicken." The peer group pressure can get a kid turned around if the motivation is right.

Chairman PEPPER. Mr. Rangel?

Mr. RANGEL. No questions.

Chairman PEPPER. Mr. Nolde?

Mr. NOLDE. Do you agree with Mr. Schoen's view expressed this morning that juvenile programs such as we have heard about today can just as easily be transferable to adult centers?

Mr. KELLER. Yes.

Mr. NOLDE. Could you elaborate on that?

Mr. KELLER. I think in some ways the adult offender might be easier to work with than kids. Most adults are conscious of what life calls for. They may not know how to cope with life, but when you get somebody in his twenties, he is beginning to think about what he is going to be, or whether he is going to get married, and whether he is going to hold a job.

A 14-year-old doesn't care about that at all. A 14-year-old, in being a kid, is interested in having a good time. So, I think in a group that involves adults, you are more likely to get serious, responsible thinking about problems and what they are doing with their lives.

As I told Mr. Pepper a while ago, just from having known many offenders personally, I have been lucky because I haven't known many I considered vicious. I have known a lot of people in trouble, and a lot in institutions, but only a few I would describe as vicious people. They have done some bad things, but the reason they have is that most of

these people are very inadequate. They don't know how to cope with life. They don't know how to manage their finances; they are impulsive. They want something so they go out and buy it on time. When the payments become due they can't meet the payments and they become frantic. The "man" is there to take the furniture away or repossess the car. They don't have a job that will pay money to make those payments. So they do something.

Mr. NOLDE. What about the many offenders who have shown such a vicious pattern of criminality by the time they reach adulthood?

Mr. KELLER. Well, I am afraid at that stage you are dealing with people who must be put away and behind bars—if they really are that dangerous as individuals.

So here comes the youthful program administrator, putting in a special plug for his programs: I think, if you are going to reach people in trouble, you must reach them early and try to change the crime pattern.

If you can get a young person turned around, so the boy of 14 or 15 doesn't look upon himself as a criminal, then you have done something. Crime can become a lifestyle for some guys. By the time they get to be in their 20's or 30's, and have done a lot of institutional time, the people in the institutions are their friends, not those on the outside.

You may have read a book called "The Joint," by a man named Jim Blake, which is about Raiford. Blake said that after a while a confirmed criminal is more comfortable in prison than out because all of his friends are in prison.

Mr. NOLDE. Could you give us an estimate of how many offenders really need to be locked up, both juveniles and adults?

Mr. KELLER. I will throw out the same figure I did before. I think 70 to 80 percent of the delinquents I work with can be treated very successfully in community programs, which would leave 20–30 percent for institutionalization.

Mr. NOLDE. Do you have an estimate for adults?

Mr. KELLER. This is just a wild flyer. I would say maybe the same. I don't work in the adult field, so I shouldn't try to pass myself off as knowledgeable about a field where I haven't been. But my hunch is that a great many of those now in secure institutions could do fine in a more open program.

Mr. NOLDE. Thank you, Mr. Keller, for your excellent testimony. I have no further questions, Mr. Chairman.

Chairman PEPPER. Mr. Keller, we thank you very much. I know you came here at great sacrifice and out of consideration for this committee and what it is trying to do. We want you to know we are very grateful to you for doing it.

Mr. KELLER. I appreciate being asked to be here, Mr. Chairman. Thank you very much.

[Mr. Keller's prepared statement follows:]

PREPARED STATEMENT OF OLIVER J. KELLER, DIRECTOR, STATE DIVISION OF YOUTH SERVICE, TALLAHASSEE, FLA.

Thanks to two governors and legislators who have considered youth corrections primarily a state, rather than local, responsibility, the Florida Division of Youth Services represents very closely the model recommended by the National Conference on Criminal Justice only three months ago here in Washington. It is a unified system, with responsibility in one state agency for delinquency

prevention, citizen involvement, juvenile intake to the courts, probation and parole, training schools, community-based programs, and contractual service, such as foster homes. Just a year ago, legislation was passed, whereby responsibility for the detention of children before the courts will be shifted from the counties by 1978. If legislation, introduced by one of the Division's chief supporters, Senator Louis de la Parte of Tampa, passes this year, the entire process will be accelerated, with the transition taking place in the 6-months from this July to December, and guaranteeing that no child will be held in any jail by the end of 1973.

The pay-off from this unified system is already evident. In a state where the population has climbed by a million new residents in the last 5 years, and where the state prison system is bursting at the seams, the Division of Youth Services has empty beds in its training schools, is actually reaching for young offenders from the adult system, and has reduced both the number of court commitments and its own failure rate. This is significant in that the rate of juvenile population growth in Florida is higher than the over-all population rate.

The single state-operated intake, probation, and parole program assures every county in Florida the same level of service, regardless of the county's financial situation. Wherever possible, children are diverted from the official courts and corrections process, with parents and child given the option of non-official "consent supervision." Working with professional staff is a growing army of volunteers, people of all ages and backgrounds willing to work on a one-to-one basis with children needing adult friends. The impact of these unpaid citizens in helping children with family and school problems has been phenomenal.

A major premise of the division is that delinquent children, and those "in need of supervision", have a variety of problems. Hence, the Division must offer a variety of programs to meet these needs. With 11 group foster homes now authorized by the legislature, the Division has discovered that children with serious problems can be rehabilitated in private homes, provided the foster parents are carefully selected, and provided they are paid a reasonable sum to take somebody else's problem child into their home.

For children with more serious problems, the Division is gradually expanding its network of staff-operated group treatment homes, halfway houses, START centers, and TRY centers. The group treatment home, serving up to seven younger delinquents, is a conventional residence, but manned by a trained husband-wife team and a relief houseparent, rather than by foster parents. The halfway house may be a small apartment building, an old motel or nursing home, or a converted church. It houses from 20 to 25 typical delinquents, all of whom attend public schools or hold jobs in the local community. The START center (using terminology borrowed from New York's Division for Youth) is much the same as a halfway house, but it has an educational program to serve delinquent children too far behind academically to fit comfortably into a conventional school. The TRY center is also within the community, with a program comparable to that of a halfway house, but it lacks the residential component. The young people live at home, coming to the TRY center for all-day programs of treatment, school, or work.

With 25 state-operated community-based programs now in existence, the Division of Youth Services has proven that serious delinquents can be treated successfully in open, non-secure buildings fitting in with the structures around them. Although neighborhood anxiety has initially been high in some areas, the good conduct of the young people has, in every case, turned the majority of doubters into supporters. Local people have been extremely generous, inviting the young people into their homes, sponsoring recreation trips, and even donating funds and labor to build a one-room school building at one START center.

The key to the success of Florida's community-based programs has been the combination of intelligent, energetic staff with a form of treatment known as reality therapy or guided group interaction. Very simply, a "guided group," bring delinquent children together every day five days a week for 90 minutes of intense discussion. In these discussions, no holds are barred. Young people can pour out their anxiety and hatreds under the guidance of a staff member who says comparatively little, letting the young people deal with one another, who keeps the conversation ontarget, and who divert the discussion if a particular young person needs temporary relief. These guided groups demonstrate that teen-age children in trouble can be made to examine what they are doing to their lives and can learn to act in more responsible fashion. In so doing, the group members develop strong friendships and invariably become more open and

friendly in dealing with other people. Where they attend public high schools, the so-called "bad kids" of Florida have been praised by school officials as among the most courteous and friendly in the student body.

The "groups," as they are known in Florida, have also changed the atmosphere of the training schools. A few years ago the most difficult children were controlled in Florida's open, unfenced institutions through severe beatings with leather straps. Corporal punishment now plays no part in the institutional programs. Once young people are given the opportunity to talk honestly about whatever bothers them, run-aways go down, assaults on staff and one another diminish, and destruction of state property hits a new low. As the young people change, even old-line staff soften, confessing they no longer favor "the strap." When the atmosphere within a training school changes from one of repression, it then becomes possible to motivate young people with academic and vocational programs teen-agers recognize as relevant.

The major problem with too many training schools in our country, and this certainly holds true of Florida's two institutions for delinquent boys, is that they are too large. Changing anti-social or even criminal individuals to "good citizens" depends in large measure on the relationships established with staff and with each other. The larger the institution, the less likely a genuine treatment relationship will develop. The larger the institution, the more likely the system will become the primary consideration, rather than the welfare of the young people in it. Large institutions are often characterized by routine and written regulations, with little flexibility possible to meet individual circumstances

In large training schools, the best-trained personnel are the administrators who rarely have the opportunity for close, personal contact with individual young people. In truth, the persons with the greatest influence on delinquent children in most training schools are those at the bottom of the status ladder, poorly paid, and possessing only a bare-bones education. While some excellent employees function at this level, others are shallow, rigid personalities with little interest in adolescents. Under these circumstances, rather than confronting his problems, the institutionalized delinquent wants merely to "do his time and get out of this place."

Considering the present state of knowledge, training school for delinquent children will still have a role to play for a good many years to come. While 70 to 80 per cent of young people in trouble with the law can be successfully treated in community-based programs, some simply refuse to stay there. They run away occasionally stealing cars or committing other acts that arouse communities. Until our human sciences reach higher level than is now the case, such children must be removed and placed in training schools. But these institutions should be small, not more than 150 children, and with ample staff to do the job. In Florida, for example, where the institution for the most difficult youthful offenders has a population of only 150, the young people are housed with no use of barbed wire fences, guard dogs, and gun-towers. In fact, the Howell Lancaster Youth Development Center is an open institution, co-educational, and with only sixteen young people to a cottage. The secret of its success is the group program, plus sufficient staff to provide close supervision.

In discussing staff, the PhD and the MSW are not the first essentials. What is essential is an individual with genuine affection and understanding for young people, willing to work long hard hours. Naturally, if he has a good background in the behavioral sciences, he is that much more attractive to the recruiter. But it is the person, not the degree, that should come first. Some brilliant people, able to earn the very highest degrees universities can offer, should never work with human beings. They simply have no concern or empathy for other people.

Part of the tragedy of governmental systems is the inflexibility of state personnel requirements, where adequate pay levels are tied to advanced degrees, with little or no consideration given to other qualifications. Another sore point is the federal wage and hour requirements which force people ready to work with young people beyond an eight hour day to leave the institution grounds, either because overtime has not been authorized in advance by some superior, or because the institution budget is too limited to allow for overtime payment. The present situations, of course, are the products of previous abuses, where totally unqualified persons were given jobs for political reasons, and where employees were worked 70 hours or more per week, with no time to themselves. Still, from the point of view of the young delinquent who needs to talk with a

trusted employee, it is hard to understand why the conversation must be abruptly terminated at 4:00 p.m., and postponed until the next day.

In Florida, the goal is to gradually reduce the training school populations, ending with one or two small, intensive treatment institutions, serving only that small core of delinquents who are consistent failures in community programs. Legislators must understand that for this select group of young people, the cost per day per child will be high—as much as $30 a day. Close supervision and high quality academic, vocational and treatment programs are crucial. As for psychiatric staff, the very best assistance should be obtained on a contractual basis for the comparatively limited number of delinquent children requiring such help.

The Division of Youth Services is making ever wider use of contractual services in broadening its range of programs for young people committed by the courts. In order to provide a masculine, demanding experience to adolescent delinquents, the Division has contracted with the Florida Marine Institutes. In four areas of the state, this not-for-profit corporation places boys on boats, where they learn ship-handling, marine maintenance, fundamentals of oceanography and ecology, and, at the same time, develop self confidence, based on their ability to swim, to scuba-dive, and to face the open sea in a yawl or ketch. For somewhat younger children, a similar program to improve self-concepts has been developed in conjunction with the Jack and Ruth Eckerd Foundation. Fifty young people live in a "wilderness camp," which consists of smaller units at considerable distance from one another, scattered over several hundred acres of wild terrain. In each subcamp live no more than ten children under the direction of two college-age counsellors. The 10 to 14 year old children build their own tents, fashion many utensils and other items from their surroundings, prepare at least half the week's meals over open fires or in clay ovens, and undergo an "adventure trails" experience through pack trips, canoe expeditions, and constant contact with the outdoors. Children unreached by any other programs begin to show dramatic improvement in the "wilderness camp."

The Division holds the view that much more work must be done with troubled young people while still in the public schools. Suspensions and expulsions are not the answer. In addition to working on a limited basis with a few public school systems to give teachers and administrators greater confidence in handling behavior problems, the Division has contracted with both the University of West Florida and Florida Atlantic University to operate "branch campuses" on the grounds of the two large boys' training schools. At Okeechobee, 60 young men and women from Florida Atlantic live on the training school campus, attend classes in the institution, and work half-time as teacher aides and recreation aides. A somewhat similar program exists for twenty-five West Florida students at Marianna. In addition, both universities place an equal number of students in the Division's probation and parole offices. Here, too, the university students are valued assistants. Not only does the age of the university students make for easy rapport with the delinquent boys, but the FAU and West Florida students are learning how to deal with boys most teachers shy away from. Upon graduation, they will be able to work either for the Division of Youth Services or in school systems where many teachers feel totally unsuited for coping with problem behavior.

The most recent Division progress has been in the field of juvenile detention. As state funds have been provided, and with the financial cooperation of county governments, the Division is now operating detention service in the greater Miami area and in the ten counties composing Florida's Panhandle. Based on a state plan prepared by the nationally known John Howard Association, the Division hopes to build no more secure lock-ups for children. Instead, by using existing county facilities, by placing "detention cases" in open homes, and by allowing young people to return home under the extremely close supervision of a "home detention" program, the Division believes it can avoid placing many young people behind thick walls or steel while awaiting court appearances. Furthermore, the state plan points out that, when the system is fully operating and tied together by a transportation unit, the total cost for the state of Florida will be approximately the same sum now spent by the 20 counties (out of 67) offering secure detention care other than the county jail.

Relatively neglected areas in Florida at present are staff development and public education. As the state agency has grown larger, it is increasingly important that employees share a common philosophy and skills in dealing with young people in trouble. Not only must Division personnel learn from one another, but

they must also know how young people feel about the Division's programs. Participatory management sessions must be more frequent, permitting employees from various levels within the agency to come together with the young people committed to state care. Division personnel must hear from them whether or not the agency is perceived as hurtful or helpful. Only if the young people perceive what is happening as relevant to their needs will Florida have a youth corrections system worthy of the name.

In the area of public education, the average citizen, and notably the schools, must understand their roles in creating delinquents and in their reformation. Very often a young person will leave a Division facility with a genuine desire to "turn over a new leaf." Unfortunately, nothing in the home community may have altered. He may still be looked upon as a thief and an outcast. Under such rejection, the young person can soon return to his old ways. The public must understand that relief from crime of any kind can take place only when there is understanding of why people get into difficulty, and acceptance of new methods of treating offenders. If a marine institute program is looked upon as "coddling criminals," no progress will be made. If community-based programs are resisted with venom and threats, the country will continue to live with its old institutions so frequently productive only of more dangerous offenders.

The most serious threat to correctional improvements in the juvenile field has been the drastic cut-backs this year in federal funds. For example, under the old guidelines, the Division of Youth Services was using $10 million a year in Title IV–A funds of the Social Security Act. Traditionally, state youth corrections agencies deal with the children of the poor. A large percentage of the Division's young people come from families that are either present or potential recipients of public assistance. The Title IV–A funds, coupled with state general revenue dollars, made possible the consolidation of intake and probation with the already existing juvenile parole system. The consolidated system then made possible services where little or nothing had previously existed, and permitted the Division to reduce commitments and failures.

In the middle of the 1972–73 fiscal year, however, the "rules of the game" were suddenly altered drastically, causing all of Florida's social service agencies to find themselves in a severe financial crisis. Had the Social Security funds been permitted to continue under the old guidelines, the combination of federal and state dollars would have accomplished many objectives previously out of the question—genuine delinquency prevention efforts in cooperation with the schools, a vastly expanded program of citizen volunteers and public education, a staff development program able to train and motivate 3000 employees, and a research and evaluation unit to provide the sort of data legislators request, but seldom obtain on correctional programs.

The worst aspect of the federal cut-back, certainly, is that states do not know whether or not they can count on federal funds. Instead of coinciding with the state fiscal year, federal guidelines are apparently subject to change at any time. When the last change occurred in the Title IV–A regulations, chaos ensued in state agency budgets, including the Division of Youth Services.

I appreciate having had this opportunity to be heard.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Mr. Lynch, will you proceed.

Mr. LYNCH. Thank you, Mr. Chairman.

Mr. Chairman, the next witness is Mr. Joseph Rowan, the executive director of the John Howard Association.

Mr. Rowan was formerly the chairman of the Minnesota Youth Conservation Commission and prior to that the director and consultant to the National Council on Crime and Delinquency. He holds a B.A. in criminology, a master's degree in correctional administration, and a master's degree in social work.

The John Howard Association, under his direction, has been conducting an intensive study and evaluation of juvenile programs in Florida, Wisconsin, Michigan, Maryland, and several other States.

Mr. Rowan, I wonder if you could address a few referatory remarks to the committee at this time.

Chairman PEPPER. Mr. Rowan, we are very pleased to have you here. We know the splendid record of the John Howard Association and what you are doing is certainly in the public interest. We are very grateful to you for being here with us.

STATEMENT OF JOSEPH R. ROWAN, EXECUTIVE DIRECTOR, JOHN HOWARD ASSOCIATION, CHICAGO, ILL.

Mr. ROWAN. Thank you very much, Mr. Chairman.

Mr. Keller covered very capably what has been developing in Florida over the past several years, and I would only like to touch upon a few points.

Florida was the 16th State in the country to adopt an overall comprehensive, continuous program for the handling of juveniles, in which everything from detention all the way through probation, institutions, aftercare, including many other adjunct services, are all operated, administered, and financed, by the State.

One of the sad situations which we have in this country is right today, while we are sitting here, juveniles are not getting as good probation services as adults, nationally. One of the major reasons is the unified development of statewide probation standards and a program for financing.

We have 37 States that administer and finance adult probation. We only have 16 States which administer and finance juvenile probation.

We are very happy to say that in Illinois, all of the dissident groups during the past year and a half have been a part in helping pull together and have agreed upon the package of legislation which went into the hopper last week to develop a State-administered, financed probation system.

Judges are supporting it, probation people are supporting it. So are legislators, and we feel it will go. So Illinois, hopefully, will be No. 17 to follow this approach for juveniles and No. 38 for adults.

Mr. Keller talked about the effects of guided groups interaction, or positive peer culture in Florida, and you witnessed the program in Minnesota—Red Wing. I was meeting with some top house and senate leaders of Virginia just the other day, Thursday of last week, and one of their senators was commenting the same way about his impressions about the guided group interaction program in Florida.

He visited the Marianna Institution. What Mr. Keller talked about from the standpoint of reducing racial tensions is very true not only in Florida but in Minnesota, and Michigan where the guided group interaction or reality-based-concept approach is being developed.

I had the opportunity of talking with some people in the panhandle of Florida, the public school system, and they told about how they saw the reality-based counseling program working so effectively with delinquents that they asked the fieldworkers if they could sneak in a few nondelinquents.

So after a while, the program, the staff that Mr. Keller was responsible for, started working with nondelinquents. The testimony from the teachers in the public school system has been a real tribute to the program of the division of youth services because this real delinquency prevention has not only been able to help calm down the schools from

the standpoint of problems caused by delinquents but this has extended into the nondelinquent category, which is going to have to be done in a lot more places in this country.

Mr. Keller touched upon the concept of home detention. St. Louis is where this concept was developed in September of 1971. Under home detention you take those youngsters who have been determined by intake and by the judge at the detention hearing, within 24 hours, that are not good risks. You put them back out into the community under intensive supervision, three eyeball contacts a day. One with the youth, one with the parents, one with the schoolteacher or employer. I would like to back up a minute.

Mr. Keller and others talk about intake. When the police arrest a youngster, he comes to the detention home where they should have intake workers on 24 hours a day, or at least as Florida has developed, the only State in the Union I know of that has 24-hour intake services around the clock throughout the entire State.

Now, all of this intake is not onsite. But I can assure you, and we have developed a major 5-year master plan study in Florida, if they can't afford and don't have the business for an onsite worker, he gets up at 2 in the morning, dresses, goes down to the jail and talks to the youngster, eyeball to eyeball.

The practice was started several months ago. This has had a drastic effect on reduced rate of detention there, approximately half in Miami and approximately half in Jacksonville.

Getting back to St. Louis, where they have got some serious problems, crime and delinquency: they have some serious ghetto problems and problems of financing juvenile and criminal justice programs. This home detention concept is the best one that I have seen since I started in the business many years ago. It has been the best thing since the wheel, so to speak, in our field.

First, the police bring the youngster into the detention home. If intake feels he is not a safe risk to be released back to the community, he stays. Then the next day the judge reviews the case and he makes a second determination of whether he should be released back to the community. It is after intake and the judge have determined that this youngster is not a safe risk to be released to the community that he is released under home detention, under intensive supervision. At least one contact a day with a streetworker, and these streetworkers, some cannot read or write, have to give a verbal report There are no educational requirements. They are paid the same salary as the child-care worker at the detention home.

The job which they are doing can be verified by talking with law enforcement and other people in the community, as we have done.

In St. Louis, with 308 unsafe risks released to the community, not one ran away over 13 months. While at the same time 10 youngsters escaped from the secure detention home where they were behind lock and key. There are a lot of morals to the story, which gets into what Mr. Schoen, Judge Arthur, and Mr. Keller talked about earlier. The volunteers get 10 days of training, minimal wages and some of these are on welfare. There are good people in the ghettos that don't have the degrees, but they can render a "we care" service. The most important ingredient as far as I am concerned from the time I have been in the

business—I have a few masters degrees to defend that statement and that is the only reason I mention it—is "we care."

When a youngster, regardless of how difficult he is, gets "we care" service, he responds. They do screen out murderers and the real serious cases with long records, but remember, the home detention cases are cases that are not determined to be good risks by intake and the judge during two previous screening contacts.

So just think what this would do by extending this concept of home detention to the probation field. In Minnesota, when I was there, from 1962 to 1967, we had caseloads of 35, a well-disciplined system, but time studies showed that with these caseloads per probation officer they cannot give any more than 50 minutes a month to both the youngster and his family. But under home detention, they get an hour or so a day.

Talking about probation: In California today, they are using probation in 84 percent of their dispositions. This is on the adult level. When you get down into the juvenile level, which your committee is more interested in this week, California is committing 30 percent of the kids to State training schools.

But you have to discuss both of these at the same time to put them into perspective. California has doubled the use of adult probation in the last 6 to 7 years. They have reduced the commitments down to 30 percent for juveniles.

All during this time, with the rising crime rates in many States, California has been able to reduce the crime increase from 22 percent down to less than 5 percent. We predict it is going to level off.

It must be kept in mind that California still has some major problems of population—but they are progressing.

Chairman PEPPER. In crime generally or in the juvenile area?

Mr. ROWAN. The crime rate across the board. They don't know whether it is adult or juvenile. That is the reason why you really have to discuss both at the same time. It is part juvenile, it is part adult. I was in California in March 1972 for a 3-day conference with law enforcement and research people, and some of the get tough boys were saying: "We are using probation too much. Look what has happened, our rising crime rate." But if they got out the FBI Uniform Crime Report, which they helped fill in as far as these statistics are concerned, they would see that the crime rate in California has dropped from 22 percent 7 years ago to less than 5 percent.

In Wisconsin, considering all convicted persons, they have 91.5 percent of all of the offenders in the State on probation, after care and parole in the adult level. Only 8.5 percent are in institutions. Here again it is a combined system like Minnesota. Wisconsin has an extremely low rate of institutionalized offenders. I want to cite another example of what I talked about earlier.

Wisconsin has the best adult probation system in the country. Both the National Council on Crime and Delinquency and we, have expressed comment on this publicly. And yet in Wisconsin we just finished a survey and they have one of the most undeveloped juvenile probation systems. Adult probation is operated, administered, financed by the State, and juvenile probation is a hodge podge. Some of it by the State on a free gratis basis, really. Some by welfare operated by the State;

some by welfare operated by the counties; some by the county courts themselves. It is basically a county system.

Ten out of 10 judges in Wisconsin said: "We have better probation services for adults in my county than we do for juveniles." So the moral of the story is, basically, in this country, they say the government is best which governs closest; but it really doesn't hold true in corrections.

State administered and financed probation has worked best for adults; basically it works best for juveniles in the States as we have shown.

Mr. Keller and others talked about group homes. We are very happy to say Wisconsin has 45 family-operated group homes. Florida has developed approximately a dozen in the past 6 months. Ramsey County, St. Paul, Minn., has 32. In 1962, they had zero.

Welfare departments said you can't find any group homes for delinquents. Minnesota, overall, how has 57, a number of them operated by the State, by Mr. Schoen's programs of 1957. Benton Harbor-St. Joseph, Mich., has developed seven family-operated group homes since last September.

In this country many of the corrections departments, unfortunately, have gone too professional. They have paid a lot of money, up to $14,000 a year, to take care of a youngster in a staff group operated group home or halfway house. About 85 percent of our delinquents, and the most difficult ones in the system, can be cared for in well selected, trained, and staffed family-operated group homes. Good, healthy, average American parents.

Two hundred dollars per child a month and a high success rate, Wisconsin has a 4-year research project. The worst delinquents in the system, over a 65-percent social deterioration compared to 15–16 percent social deterioration, where the kids went back to their own homes, and yet 28 percent fewer kids that were in the family-operated group homes went back to institutions and delinquency compared to the better kids that went back to their own homes. This is 4 years of research. No rent, no real estate, no petitions to keep halfway houses and State-owned and State-operated facilities from existing.

Getting back into another area, my first testimony before a congressional committee was basically regarding Cook County Jail, which got worldwide attention about 5 years ago. I testified before two congressional committees on it. National media carried stories on it. Electric refrigerators in cells of Mafia members. About 18 to 20 people unaccounted for from the standpoint of why they died inside that jail in 1967. They had eight suicides in 1970. We are very happy to say, and on a positive tone, in these presentations this week that they have had two suicides in Cook County Jail in approximately the past 2 years and 3 months. That is a far cry from 8 deaths in 1 year, 20 deaths in 1 year, most of them unaccounted for.

Cook County Jail does take care of youngsters 14 years of age and up that cannot be handled in the juvenile detention home. This is why I brought up this positive development—and it really is one.

As far as citizen volunteers are concerned. I strongly recommend Lafayette, Ind., if it hasn't been called to your attention. It would be good to have one of two women who got that program started, with the help of Howard James from the Christian Science Monitor, to

testify here. They asked Howard James to testify, or to talk in town, and he said, "I am not going to talk in town unless you can get 100 people agreeing basically, and unless you are going to do something about it."

In the last 2 years they have gotten 23 priorities accomplished and it is phenomenal what they have been able to do in mobilizing that community, a pattern which we feel needs to be extended all over the country. They have a youth service bureau started, a 30-bed private treatment institution volunteers in probation started which has existed in many places throughout the country. They have tutoring programs and minority studies in the schools. They have tax reforms brought about for special education programs, and I could go on and on for about 18 more priorities.

This was done through volunteer citizen effort.

In Minnesota, we took the worst 18 delinquents we could find in Minnesota in 1965 and when I proposed this idea to the commissioner, he said, "You are going to have to get a majority of the officials in this community to support it because I think it's risky."

So I met with the two sheriffs, the two judges, the two chiefs of police, and two county attorneys or their top representatives. We got six of the eight officials to support it. Two said they wouldn't support it publicly but they wouldn't criticize us publicly if it failed.

The idea was, if we could help 2 or 3 out of these 18 and stop them from crime, we could work with any youngsters less sophisticated.

All of these youngsters had two prior institutionalizations: one had nine. These youngsters came right off the streets, within 30 days, from Minneapolis and St. Paul, for offenses including armed robbery and serious assault. None of the eight officials vetoed our plan.

This program was research in 1972, 5½ years later. Of these 18 cases, the worst in the system, 15 never went into the adult field. They stopped as juveniles. Only three are presently in the adult system.

The six that were discharged at the end of the 6-month intensive reality-based group counseling program never violated later. This pioneering project laid the foundation for the guided group interaction concept that followed later.

Another aspect of that program—we had the parents of these delinquents meet every 2 weeks. The first request in Minneapolis, the second request in St. Paul, was "We want to meet weekly because we are getting help out of these sessions." During this 6 months, one or both parents attended every one of the group counseling sessions. Only one youth missed a session.

So I do not buy what a lot of people say is fact: That parents don't care. No parent wants to be a poor parent from the standpoint of raising delinquents. If we offer the help they will take it up and accept it.

The upcoming Juvenile Court Act by the National Council on Crime and Delinquency is going to remove truancy, incorrigibility, and runaway from the juvenile court, and we are long overdue on this. You asked a question earlier, Mr. Chairman, about the first thing I would do. I think the greatest impact in this country will be when truancy, incorrigibility, and runaway are removed from the juvenile court. We have propelled many youngsters into the prison systems that we have today. Half of the kids in Florida, half of the kids in most other

States, that are in training schools, reform schools for delinquents, are not delinquent.

They have been incorrigible and truant. Louis Wille, Pulitzer Prize winner for the Chicago Daily News, pointed out, right down the middle of the ghettos we have a high dropout rate in one school district, a low dropout rate in another school district, and from our standpoint we have been beating parents too long in this business, and from my standpoint and a lot of other professionals in my business, about half of the problem in the delinquency stems from inadequate educational systems.

When we remove either compulsory education laws or remove truancy from the criminal end of the juvenile court we are going to make major advances in this field.

As far as LEAA is concerned in this field, there is a tremendous lack of research. We are very happy to see research being developed in Florida, Wisconsin, Minnesota, Washington State, California, and a few other States. But basically, there isn't much research in this country of hard-fact nature with control groups and so on. Major amounts of money have been given out in this country. Wisconsin is a prime example. We are starting in a week or so the first major research project with LEAA funding in that State. Other States are the same way—they're just starting—awful late.

A lot of moneys have been spent, but no research to really know what we are doing. As far as long-range planning is concerned I can cite Maryland, Florida, Michigan, Kansas, Virginia; five States where we have been involved. Really, the only five States I know of that have had comprehensive long-range master plans developed which had outside professional involvement.

Sure, every State has to have a 5-year plan, but they are not comprehensive. They are not really detailed. They don't involve subjects in the system as Mr. Keller talked about, and we have seen a million dollars poured down one vocational training program and nobody ever asked the blacks whether they wanted to go into the tailoring business. They have since closed that business. Why? The black said, "This is a woman's job." And if you studied black culture this is true—this is the way they feel. So you have to involve subjects in the business.

As far as staff training is concerned we are very happy to say Minnesota and Washington State are spending at least 10 percent of their budgets on staff training. Over a million dollars in Minnesota, and yet in some States, Maryland, where we made a long-range study, $70,000 was being spent on training, for comparable budget, comparable staff, $70,000 versus a million dollars.

The last item, and then I will be glad to open up to any questions. We have got to involve the subjects in the system a lot more. I have been involved in about 500 studies of institutions and programs since 1955, and never once have I seen youngsters or adults lie on a pattern basis. I will say for the record here, having been in the survey business since 1955, inmates have been more truthful than staff as to how the programs are from the standpoint of caliber, qualitatively and quantitatively.

Mr. LYNCH. Mr. Rowan, I was remiss in not asking you to do this earlier. Would you very briefly describe what the John Howard Association is, how it got into the corrections business?

Mr. ROWAN. Thank you very much.

John Howard Association was founded in this country in 1901, patterned after the English John Howard Society in 1726, extended into Canada, the British Empire, and so on. We spent our first 50 years studying prisons and jails, trying to upgrade them, found out it was a pretty fruitless job.

You have to get started earlier, so most of our work is concentrated in the juvenile field, including prevention, upgrading the educational system, and getting started earlier in the community.

Mr. LYNCH. Under the former office of juvenile delinquency and youth development in the Department of Health, Education, and Welfare, moneys were made available for juvenile justice planning. Can you give us your judgment as to how effective those plans were and could you tell us whether or not they have been implemented on a nationwide basis?

Mr. ROWAN. Unfortunately, most of these have been in-house plans, and with in-house plans you can develop good results; but, also, they are mainly operational in nature, not involving strategic and tactical versus planning.

Mr. LYNCH. What do you mean by "in-house plans"?

Mr. ROWAN. Developed primarily by top administration in these various programs. And I say to you an outside consultant, including our agency, cannot go into a State and develop a long-range plan and hand it to you on a silver platter. There has got to be a combination of both the inside and outside. Like Maryland, we helped train the top 21 staffs for 25 hours on long-range planning. We believe in talking ourselves out of business by training the staff in these States to do long-range planning, to keep the plan current, so they don't have to call us back in.

Mr. LYNCH. Have you had an occasion, has John Howard Association had occasion to examine the State law enforcement plans, which, as you know, are required under LEAA for Federal moneys? Have you done a survey of the plans of all of these 35 States and jurisdictions?

Mr. ROWAN. No, we haven't. We have worked in various States: Michigan, Florida, Kentucky, Wisconsin, and Illinois. Those are basically the States we worked in the last several years.

Mr. LYNCH. When you indicated there were five States you knew of, you did not mean to indicate that that was the result of comprehensive surveys that you had done?

Mr. ROWAN. No; but from discussions with other national agencies, those are about the only five that are in existence as far as we know.

Mr. LYNCH. I would commend to you the State plan from New Hampshire, Mr. Rowan, which is very long range and very involved with juvenile programs.

What, in your judgment, is the state of juvenile corrections on a nationwide basis? We heard some remarkable programs yesterday from Massachusetts, today from Florida. Are these people on the frontier or is this a common thing across the country? What is the national status?

Mr. Rowan. Probationwise, as I mentioned earlier, adult probation is better than juvenile probation nationally in most States, quality and quantity. As far as other programs are concerned, basically, as I testified before other committees earlier in my life, we have had more brutality in juvenile institutions than adult institutions and it is probably true today.

Mr. Lynch. The question really was. Are we to regard the programs we have heard described from Massachusetts and Florida as at the forefront of the juvenile correction field? Are they leaders?

Mr. Rowan. Yes, definitely. Those five or six States that have been mentioned, are.

Mr. Lynch. You mentioned, I think you said 16 States had statewide juvenile probation systems. Why is it desirable to have a State system?

Mr. Rowan. It is easier to develop corrections in one system than 102 counties like Illinois, or 70-some in Virginia, and 67 or 66 in Florida. Continuity, coordination, developing minimum standards, staff training, recruitment, and keeping politics out of the system. Those are the major reasons why local systems are not developed.

Mr. Lynch. It goes to an issue of quality as well as efficiency?

Mr. Rowan. Right, both.

Mr. Lynch. Your association, I believe, has been doing an evaluation of programs in Florida. Is that correct?

Mr. Rowan. Yes; we have.

Mr. Lynch. What programs have you looked at in Florida?

Mr. Rowan. We made a statewide study and rendered the report on the 15th of February regarding juvenile detention and related programs. Earlier, our first study was for the House committee on criminal justice regarding the adult area, and that study compelled us to go back to the House committee and say, "If we are going to study the adult area, we feel we had better study the juvenile area," which we did, and that is when juvenile probation and intake became State functions. That was our No. 1 recommendation.

Chairman Pepper. House of Representatives of the Congress?

Mr. Rowan. House committee on criminal justice in Florida.

Mr. Lynch. What were the salient findings and recommendations in that study? If you could, relate them to us.

Mr. Rowan. The No. 1 study was that if prisons were to be stopped from the standpoint of admissions, you would have to start back in the juvenile area. While we were hired to make a study of the prison and probation and parole situation adultwise in Florida, in 1971, after the riot at Raiford, after a month and a half of study, we said we should concentrate on the juvenile area.

Chairman Pepper. Mr. Rowan, I am sorry, we have to take a 10-minute recess to go over and vote.

[A brief recess was taken.]

Chairman Pepper. The committee will come to order. Please proceed, Mr. Lynch.

Mr. Lynch. Mr. Rowan, before the recess, we were discussing the state of corrections on a national basis. I wonder if you could summarize that testimony for us in regard to what level of progress is being made in the several States in improving the juvenile correctional system. Do we have a reason to hope?

Mr. Rowan. Basically, in response to your question, the answer is "Yes"; the States that have been represented here, in Florida and Minnesota. We have talked about developments in Washington State, California, and Massachusetts. These are the cream of the crop, so to speak. This is not the picture throughout the country. And in many areas we have adult corrections which are far better than juvenile. Probation is the main one.

Institutions alike, as far as the lack of brutality. So in the juvenile field, they stuck to tradition to such a great extent; namely, institutions, institution, institutions; but I was happy to hear the tenor of discussions here today. A small percentage of the youngsters ever need be cared for in institutions. And even the worst ones, as we saw in that offender project involving 18 youths in Minnesota, do a lot better in the community.

Mr. Lynch. Is that the view of the John Howard Association, that that is a correct posture, that only a very small percentage of juveniles need to be incarcerated?

Mr. Rowan. Juveniles and adults both. Only a small percentage. I forgot to mention, Michigan, where we are involved in an overall master plan study for the legislature there. We are very happy to say, like in Pontiac and Ann Arbor, less than 10 percent of the kids are kept in juvenile detention pending a court hearing. Less than one-half of 1 percent of the kids are committed to State institutions, and that is the lowest we have run across in the country.

Chairman Pepper. Where is that?

Mr. Rowan. Michigan. Michigan has got some very good pockets, metro-urban communities, where they are using diversion to a great extent, more than any I have ever seen in the 18 years I have been in the survey business. One-half of 1 percent of the kids arrested get committed to State institutions. Less than 10 percent of them are detained, pending disposition by the court. Most places will run 20, 30, 40 percent.

Mr. Lynch. But it is your testimony that is not the case in the majority of the States?

Mr. Rowan. No. Kids are kept in jails in the majority of the States. The high rate of detention which will run 20 to 40 percent in most places I have studied since 1955. Probation, 90–95 percent of the use of the probation is the one-to-one counseling approach that merits about 10 to 20 minutes a month per kid, instead of 20 hours a month through the group process, group counseling, like goes on in Florida and Minnesota. There are only a handful of States that are using that approach.

So in the juvenile field, they just really have gotten going with these concepts that have been discussed here today.

Mr. Lynch. Based on your experience as a professional in the correctional field, and your many years of doing surveys, would it be your judgment that in the larger number of cases that incarceration is harmful rather than helpful for juveniles?

Mr. Rowan. Absolutely. The kids come out worse than they went in. They are criminalized.

Mr. Lynch. Can you venture, Mr. Rowan, an opinion—it seems to me this is a commonly held view in the correctional world now, that

perhaps a small body of professionals who work in this field generally agree on this issue—as to why it is that the States are not moving in this direction? Why do we still have juvenile prisons, as it were?

Mr. Rowan. Public attitudes prevail, right or wrong, and the greatest single need in this entire field of delinquency and crime handling is for better informed and involved public, which will then support sound policies and provide the tools to do the job properly.

Four out of five administrators in our business do not tell their story to the public about the good things as well as the bad. This is a major problem in this country. Corrections is 15 to 20 years behind mental health as far as public understanding is concerned. That is why I am very happy to see the committee doing what it is doing and getting the word out to the public.

Mr. Lynch. Who should bring to the public the knowledge that you have been discussing, Mr. Rowan; whose function is that?

Mr. Rowan. Correctional administrators need training very badly in public and citizen involvement, informing and educating the public, both the problems and needs, as well as the positive aspects of their programs. Through the LEAA programs it has been recommended by our agency that no grants be given unless representative citizen advisory committees work with them on the State as well as the local basis. But they really exist symbolically only, not real involvement by agriculture, business, industry, labor, laws, and news media. So it is a combination that is necessary.

LEAA, I think, needs to take more leadership and have some requirements with grants. No major grants without research components being built in. No major grants without a strong representative citizen advisory committee being built into the project.

Mr. Lynch. You would strongly advocate that juvenile justice programs, I take it, be designed with the assistance of, in fact, juvenile delinquents?

Mr. Rowan. Absolutely. Again, no long-range or short-range planning should be carried out without full involvement of the subjects.

Mr. Lynch. Mr. Rowan, we had a very thoughtful and articulate young policeman from Kansas City the other day, who in response to a question told us that the problem as he saw it was not one of solutions, it was one, in fact, of understanding what the problems were. Do we understand what the problems are in juvenile corrections?

Mr. Rowan. Not very well from the standpoint that I mentioned earlier. I only know five States, and you mentioned New Hampshire as the sixth State, with real in-depth, comprehensive, long-range planning. In order to have that you have to start with a determination of missions and goals. Most planning starts with operational planning, budgets, year-to-year.

So determining mission and goals first, which is strategic planning, tactical planning, which means determining objectives and then you determine programs to implement objectives and goals. Basically, we don't have that except in a handful of States. We don't know, really, what the goals and objectives should be.

Mr. Lynch. There are juvenile justice or juvenile help programs in a myriad of Federal agencies. Do you think that the Federal Government has fulfilled its responsibility to provide guidelines and goals, priorities, in the juvenile justice system?

Mr. Rowan. I feel that the same lack has existed in the Safe States Street Act as in the OEO. There weren't enough long-range planners around with any background in this business. We sort of trained them in our field—not in colleges and universities. It has only been within the last year or so I have really seen more emphasis on the long-range planning, and encouragement to States to get in independent bodies to do this on a teamwork basis, involving subjects in the system, involving staff, and not just administrators.

Mr. Lynch. Thank you, Mr. Rowan.

I have no further questions, Mr. Chairman.

Chairman Pepper. Mr. McDonald, do you have any questions?

Mr. McDonald. Thank you, Mr. Chairman. I have just one question for Mr. Rowan.

As you know, this week we are emphasizing the positive programs throughout the country, what is being done, what innovative programs are being implemented throughout the country. From your position with the John Howard Association, you have an overview. Can you give the committee an idea of what States would benefit most by reading the testimony being heard in these hearings?

In other words, what States are far behind? Can you elaborate on that, if you would.

Mr. Rowan. Yes. If you obtain from the National Education Association their study, which I think is 1970, of the number of ninth graders who eventually graduate from high school and start from the bottom and work out, that will be a pretty good correlation with developments that we have in the juvenile correction field.

Minnesota, which was represented here today, has the highest number of youngsters that graduate from high school and the lowest number of dropouts. Iowa ranks second, California ranks third. California is the largest State with the lowest number of dropouts. They really pump moneys into the educational system there.

Illinois, Michigan, Florida, Maryland, where we have worked, are down the list too far. And not to pick out regions, but you will find a concentration of the power States, the Southern States, with very high dropout rates: a low rate as far as completion of high school. Unfortunately, many kids that don't finish high school end up in reform schools, training schools—a better name, they are still reform schools. Many of them end up in prisons after that.

Mr. McDonald. What is the status in those Southern States and perhaps Texas? What is the status of juvenile correctional institutions?

Mr. Rowan. In Texas, 254 counties, each operate their own probation department. Basically, there is no State juvenile probation system. The high rate of commitment is to the Gatesville Boys' School, which is made up of about eight institutions. I had the opportunity of studying it a couple of years ago very briefly. You can go on and on and on, and I would say probably 40 States would fit into this category. Heavy, heavy use of institutions and underdeveloped juvenile probation.

Mr. McDonald. Is there a high incidence of brutality in those States?

Mr. Rowan. Yes, we encountered in this Gatesville Boys' School use of radiator brushes, use of corporal punishment. And I wanted to state earlier, which I think indicates some of the predicaments we are in, if you talk with many professionals, they say you can't believe kids, but I strongly support what Mr. Keller said and I will repeat.

In all of these studies, around 500 studies I have been involved in in institutions and other programs since 1955, I have never yet seen kids lie on a pattern basis. The Federal courts upheld the kids in Indiana on that appeal regarding brutality there. One of the Eastern States, one of the smaller ones, the attorney general's office ran polygraph tests. When we use a lie detector test, inmates and kids will be telling the truth when staff aren't.

Mr. McDonald. What is the problem in those States? Why are they lagging so far behind?

Mr. Rowan. The public demand is for punishment—lock them up, throw the key away. We were beating the people in the mental health business. We beat the devil out of them. It was the way of curing mentally sick people many years ago. Thank God, we have gotten away from that, but we are still doing it in the delinquency field in too many places.

One of our studies—I am not going to mention the State because we haven't verified it—showed they are beating kids in juvenile detention. We exposed this in Chicago in February with our report on Audy Home and our next report, issued soon, we will show that the beating has stopped. We put the spotlight of attention on Audy Home in Chicago, as we did several years ago. They have made improvement there.

Mr. McDonald. Thank you very much.

I have no further questions, Mr. Chairman.

Chairman Pepper. Mr. Mann?

Mr. Mann. No questions.

Chairman Pepper. Mr. Rowan, just a few questions. What would you, if you were a member of this committee, do with your knowledge of the importance of this juvenile problem in the country and its relation to crime? What would you recommend to the Congress and the country that the Federal Government do? And we can also make recommendations as to what the States should do. What sort of recommendation would you make?

Mr. Rowan. None of the Safe Streets moneys should be put into programs which do not have a research component built into them before the grant is given. The research component has got to come in with the grant application.

Secondly, representative citizen advisory committees of at least 15 citizens from a distribution of agriculture, business, industry, labor, law, and news media.

The third factor would be that administrators in this business have got to be trained. They are not doing it anywhere in the country. We are going to start with help from the Johnson Wax Foundation, the first training program in this country for correctional administrators I know of, on citizen involvement and public education. That is going to be a five-State pilot program, at Wing Spread, in Racine, Wis.

We recommended this to LEAA several years ago but they never followed up on it. None of the States I know of have ever trained administrators on public involvement, how to work with the news media, and so on. Until we do that, we are going to be talking to ourselves.

Chairman Pepper. There are no programs now for the training of juvenile administrators?

Mr. Rowan. Not on how to work with the public, how to work with newspapers, how to develop citizen advisory committees. I never got it in school and I don't know of any universities that are training in this area at all. We have public communications schools, sure. We have journalism schools. But they are not training correctional people.

So, in LEAA, the best dollar investment could be to train all of the 50 State administrators in how to work with the public. Do what Mr. Keller is doing. He came from the news media field. He knows.

The legislature—and I saw the legislature in Florida—reacted to his program. They believe him. He knows how to get the story out. He doesn't lie; he tells the bad along with the good; and he doesn't pull any punches. But few administrators, 9 out of 10, don't know how to do this. Even when they have a lot of good things to tell the public they don't go out and tell the public.

Chairman Pepper. Everybody, including the President, the Congress, and the legislators, proclaims they are very much concerned about crime and they want to do something to curb crime. How important in the curbing of crime do you consider this juvenile justice program that we have been talking about?

Mr. Rowan. It is urgent.

The juvenile delinquency and dereliction we have in the country is the most urgent problem. I agree with Mr. Keller, it is the No. 1 public problem, domestically, we have in this country. It is the most urgent because it affects our system of values, it affects our future as far as the adult crime picture is concerned, and the eroding of our value system. So I say it is No. 1 in this country.

Chairman Pepper. Would you include in such a program an effort to try to reduce the number of school dropouts?

Mr. Rowan. Yes. I think that the urgent need is to support the new Standard Juvenile Court Act, which the National Council on Crime and Delinquency will soon issue. There is going to be a lot of opposition to it. Judge Arthur alluded to it today. If that one single act is supported, that could be the greatest stroke for juvenile justice in this country.

Then it would force educational systems—and here again we are talking about the public—to put the spotlight an educational systems, to make them more imaginative. One principal said, "I work with the best and forget the rest." Well, this is what many educators feel. So, along with inadequate home situations has to be placed inadequate educational systems, as Pulitzer Prize Winner Louis Wille from the Chicago Daily News pointed out.

Chairman Pepper. Who will be proposing that act?

Mr. Rowan. The National Council on Crime and Delinquency which is the biggest national standard setting agency in this country, founded in 1906. I worked with them for 7 years. They are one of our competitors.

Chairman Pepper. A private agency?

Mr. Rowan. Private agency. They will be coming out with a Standard New Juvenile Court Act removing truancy from the juvenile court.

Chairman Pepper. When will that act be available?

Mr. Rowan. It is supposed to be 1973, within the next several months.

Chairman PEPPER. We certainly hope to see it as soon as it comes out. I would be very much interested in it.

Mr. ROWAN. Mr. Milton Rector is the executive director.

Chairman PEPPER. He is going to be testifying before this committee on Thursday.

Mr. ROWAN. Excellent.

Chairman PEPPER. So we will be able to get advance information on that from Mr. Rector.

Mr. ROWAN. Right.

Chairman PEPPER. Have you any figures you could give us that show the significance of the necessity of proper treatment of juvenile delinquents or the juvenile perpetrators of crime, to the overall crime problem? Would you say most of the people who are in the penal institutions for adults are people who have juvenile crime experience? How can you relate the one to the other?

Mr. ROWAN. There isn't any hard research to back this up, but from our studies of prisons, where we interviewed prisoners, the majority of people in adult institutions started out as juvenile delinquents. Eighty percent of our crimes are committed by repeaters, and so it is an endless cycle. It goes from dependency and neglect to delinquency, to crime. It is a well-worn path.

Chairman PEPPER. Do we assume from what you said that relatively few people commit most of the crimes?

Mr. ROWAN. Yes; 90 percent of our problems will come from 10 percent of the people, basically.

In the Bradley Buell study many years ago, when you look across, like in St. Paul, Minn., and I forgot where the other cities were, welfare, mental health, corrections, all of the way across, 90 percent of the problems from all of those agencies come from less than 10 percent of the people.

Chairman PEPPER. When I come to fully grasp the significance of it, that, to me, is a fact of enormous importance. It gives us place to concentrate instead of scattering our shots everywhere; if we can just concentrate on that problem of trying to prevent the recidivism we now have it would enormously reduce crime in the country; wouldn't it?

Mr. ROWAN. It would, and I think Milt Rector, when he testifies Thursday, will cite a study in Michigan—I haven't read it yet—but kids that are not brought into the juvenile justice system, even though they commit a delinquent act, were found by, I think, professors at the University of Michigan in a research project, to be better off than kids that were brought in the system. So getting caught is the first start of difficulty with many kids. They are brought into a system by well-intentioned people and they end up in prison, eventually.

We talk—and it is a paradox—about developing services for early detention, early referral, early diagnosis, early treatment. Yes and no, we have to evaluate it. In this country, according to the latest statistics, 45 percent of the kids nationally reported to HEW from the 50 States are still handled formally by judges. Our feeling, our agency recommends, at least 75 percent of the kids that come into intake, referred by the police, never need to go to the judge.

I was glad to hear Judge Arthur today say he feels as many kids as possible should not come into the juvenile court. Now, he has changed

his mind more toward my thinking in the last 5 years, since I haven't seen him that long.

Chairman PEPPER. How do we get them into the youth services authority without them going through the court?

Mr. ROWAN. Well, what is happening in Florida today, is Mr. Keller's staff interviews the youngster right away and talks with him and they see if they can give him help without formally going through the court system. So in Florida they are screening about two-thirds of the kids.

Chairman PEPPER. How do they know of the arrest of the child?

Mr. ROWAN. The police will arrest them and bring them down to the detention home and intake staff will interview them and the intake staff will screen them out and the judge will only see those that end up down here after the funneling process.

Chairman PEPPER. But does the judge refer them to the youth services administration?

Mr. ROWAN. The judge doesn't get at them until later. In other words, the police arrest them tonight; they are taken to the detention home; they are screened within 24 hours by the intake staff in Florida, which is the only State I know that has it statewide; and if that youngster is referred to a private agency or goes back to school, the intake staff may make some contact with the family. The judge never sees them. The judge has no involvement.

Chairman PEPPER. What is the authority of the youth services administration to do that?

Mr. ROWAN. The State law. The State laws allow this in most States. The legislature has passed the laws in Florida and other States saying that cases can be diverted at intake without going formally into the court. So 55 percent are handled this way nationally now.

Chairman PEPPER. By the way, what is the nature of the institution for youth at Marianna, Fla.? That used to be the main home for youth care? What sort of institution is it now?

Mr. ROWAN. It is a big institution, but you would have to really go there to see and feel this climate of the guided group interaction program.

Chairman PEPPER. Are they required to stay there by force?

Mr. ROWAN. Yes. It is an open institution, but the interesting thing is when we were in Florida this summer they went for several weeks with zero runaways from most institutions.

Chairman PEPPER. It is not a security institution now?

Mr. ROWAN. It is still the institution as before, but no kids are running away from it.

Chairman PEPPER. But they are not locked in? They are not confined now?

Mr. ROWAN. As you develop the guided group interaction program, doors are unlocked as they were at Red Wing. In other words, better staff and that group counseling, the peer pressures, take the place of the locks and the keys.

Chairman PEPPER. That is very good. I am pleased to hear that.

Mr. ROWAN. That is the same thing that happened in St. Louis under the home detention program that I mentioned earlier, which may have been lost in the discussion. But 10 kids escaped from the security

detention home with the lock and key, while of 308 kids out in the community not one ran away.

Chairman PEPPER. You said you need training programs for youth services administrators in certain areas. Do we need training programs for juvenile judges in the country?

Mr. ROWAN. Yes. Judge Arthur couldn't speak as frankly as I can. He is the president of the National Council of Juvenile Court Judges and one of the best in the business. What he was saying does not contradict what I say. They are woefully inadequate. The training is direly needed for juvenile court judges throughout the country. Nobody wants to be a juvenile court judge.

I am overemphasizing to get across the point. But judges rotate on the juvenile bench. They don't rotate other places. Nobody wants to be a juvenile court judge, and I say that from years of experience in the business and talking with juvenile court judges.

It is too hard on them. The Saturday Evening Post, about 15 years ago, ran a special article on "Why Judges Don't Sleep." But if they had training they could sleep better.

Chairman PEPPER. In Florida, we just have two kinds of courts for the trial of cases. One is the county court and the other is the circuit court, which is a court of general jurisdiction.

Mr. ROWAN. Yes.

Chairman PEPPER. For the major civil and major criminal cases. So the county judges perform juvenile judge functions. They have to be lawyers and qualified as judges. And the circuit judges may also dispense that sort of justice.

We do have a training program for circuit judges, trial judges, in New Mexico, I believe it is. So we ought to have training programs for juvenile judges.

Mr. ROWAN. Very much so. It is direly needed. There is training in other areas, but in the juvenile court area, not much. Maryland just formed a juvenile court judges association on our recommendation. That was one of our recommendations and they organized that in December or January.

Chairman PEPPER. The last question is. What in your opinion would be desirable for the Federal Government to do in respect to the provisions of funds? You say that will be set out in the bill that is coming from the National Council of Juvenile Delinquency and Crime?

Mr. ROWAN. Yes.

Chairman PEPPER. If you didn't hear it, you heard some of us say that Dr. Miller yesterday spoke about using the $2 million LEAA grant to get the new system inaugurated in Massachusetts. Other witnesses have indicated the States would need some empirical help from the Federal Government to transform the system from the old to the new.

Would you recommend Federal financing as highly necessary or desirable?

Mr. ROWAN. The National Council on Crime and Delinquency and our organization both support the concept for the time being, until community-based programs are developed, that no more moneys be put into new institutions, adult or juvenile. Sure, we have some terrible institutions throughout the country, but much more terrible community-based programs or not at all. So I support the same approach

that the National Council does, that LEAA moneys for the next several years should not go into bricks and mortar.

Chairman PEPPER. But you don't apply that prohibition to programs such as Mr. Keller described?

Mr. ROWAN. right.

Chairman PEPPER. Essentially, as they have in Massachusetts?

Mr. ROWAN. Staff and institutions, yes, and moneys in community-based programs; but no bricks and mortar moneys for the next 5 years. It will take at least that long to develop programs in institutions, which will mean staff and then community-based programs.

Chairman PEPPER. The prohibition of any funds, State or Federal, to build any huge State incarceration institutions, such as the things we have at Attica, and Raiford, Fla. I said publicly the best thing that could happen to those institutions would be to burn down.

Mr. ROWAN. Right. Bulldozed.

Chairman PEPPER. Bulldoze them so we can start anew. I wonder if it wouldn't be desirable for the Federal Government to propose to States that they would pay half of the cost of building these small institutions—I am talking about for adults now, the ones that need to be incarcerated in the security institution—not to exceed 300 population; and put them in the cities where the inmates come from, so they can see their families there and get jobs there when they become eligible for employment and the like.

Would you say that is desirable from the viewpoint of adult institutions?

Mr. ROWAN. Yes. The Federal Government can best help from the standpoint of setting standards and guides, and providing special services which States cannot provide. That is the major role the Federal Government should be doing. And here, again, we and the National Council agree that the Federal Bureau of Prisons really should get out of the prison-building business.

I know I will inherit some more enemies from this discussion, but the Federal Government, we feel—and by "we," I mean the National Council on Crime and Delinquency, Mr. Rector can speak for himself—oppose the development of the Federal Detention Center in Chicago; also Miami, they are going to build one; New York, also.

We feel the Federal Government can best use its money in local facilities and get out of the business of building Federal prisons in places like California, where they have closed six institutions or parts of them, and yet the Federal Government is building Federal prisons out there.

Chairman PEPPER. Do you recommend the Federal Government use the local facilities?

Mr. ROWAN. Right. Definitely. I think the Federal Bureau of Prisons should get out of the prison-building-and-management business and lend support from the standpoint of standards and practices and guidelines and all the rest along that line—none for mortar and brick.

Chairman PEPPER. And the Federal Government would pay the local authorities for the handling of their personnel?

Mr. ROWAN. Right. It would be a lot better. I know their argument Norman Carlson spoke before the board of directors and wanted to rebut the director of N.C.C.D., who spoke earlier and said the State

programs don't meet standards; we don't want to put Federal prisoners in them. That is the chicken and the egg argument. The Federal Government can put money in the programs and develop them so they will be good enough for all prisoners. State as well as Federal.

Chairman PEPPER. That is a good idea. It is a good way to induce the Federal Government to do it. It certainly is.

Mr. ROWAN. The same with juveniles. The Federal Government doesn't prosecute many juveniles because they don't want to get into that type of institutional program. They can do the same for adults, get out of that area.

Chairman PEPPER. Mr. Rowan, we may be calling on you to help us with our report.

Mr. ROWAN. We would be very happy. I feel there would be no better time that I can spend than in that area.

Chairman PEPPER. We certainly thank you for the contribution you made here today.

The committee will adjourn until 10 o'clock tomorrow morning.

Mr. ROWAN. Thank you.

[Whereupon, at 5:40 p.m., the committee adjourned, to reconvene at 10 a.m., on Wednesday, April 18, 1973.]

STREET CRIME IN AMERICA

(Corrections Approaches)

WEDNESDAY, APRIL 18, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:10 a.m., in room 311, Cannon House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Rangel, Wiggins, Winn, and Sandman.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; James McDonald, assistant counsel; and Leroy Bedell, hearing officer.

Chairman PEPPER. The committee will come to order, please.

We would appreciate it if the witness, Dr. Sarri, will come forward.

Mr. Lynch, will you proceed, please.

Mr. LYNCH. Yes. Thank you, Mr. Chairman.

Mr. Chairman, Dr. Sarri, with the University of Michigan, is the codirector of a project called "National Assessment of Juvenile Corrections." She also teaches in the School of Social Work at the University of Michigan, and holds a Ph. D. in sociology. Paul Isenstadt, who is accompanying her this morning, is the senior field director for the National Assessment of Juvenile Corrections at the University of Michigan.

Chairman PEPPER. Thank you. You may proceed.

STATEMENT OF DR. ROSEMARY SARRI, CODIRECTOR, NATIONAL ASSESSMENT OF JUVENILE CORRECTIONS, UNIVERSITY OF MICHIGAN, ANN ARBOR, MICH., ACCOMPANIED BY PAUL ISENSTADT, SENIOR FIELD DIRECTOR

It is obvious to nearly everyone that the juvenile justice system is falling short of its dual objections: Serving the best interests of individual youth while contributing to public safety by controlling and reducing youthful crime. The reports about substantial increases in crime among juveniles has resulted in mounting pressures on law enforcement, judicial, and correctional personnel to do something about adolescent lawbreakers. Just what the public wants done, however, is not clear for two contradictory demands are heard. On the one hand, those who officially deal with delinquents—police, juvenile court judges, probation and parole workers, and correctional officers—

95-158—73—pt. 2——12

are told to get tough, to remove law violators from the community, and to punish in order to teach wayward youth a lesson, and to deter potential violators from committing delinquent acts. Simultaneously, they are also told to reform the delinquent, to treat him with humaneness, fairness, and justice, and to remove him from the community only as a last resort. Because the punishment message from the public has been stronger than rehabilitation message, and partly because juvenile courts have punished while intending to reform, official responses to delinquency most often have resulted in stigmatization, locking-out, punitive coercion, and education in crime. Instead the emphasis must be on increased opportunity for legitimate success, development of personal resources and the inculcation of pro-legal identifications, images, and associations. The most visible manifestation of such patterns is institutionalization of a juvenile in a public training school, often by means of questionable legal or quasi-legal procedures and often for acts that would not be violations of the law if they had been committed by an adult.

It is frequently asserted that children are the most valuable resource of this society, but with millions processed through the juvenile justice system in ways which inhibit their ability to function effectively in the society, one inevitably questions how this resource is treated. Necessary as the efforts are to strengthen and broaden law enforcement, drastic improvements are needed in education, employment, housing, race relations, and opportunities for youth to participate meaningfully in the society if we are to ameliorate the conditions that generate pressures toward crime. Apprehension and physical removal of the lawbreaker from the community may eliminate his or her ability to commit crimes, but these efforts are not likely to have any permanent positive impact unless societal conditions associated with crime are modified. The policy implication is that prevention of delinquency or criminal behavior must be the primary target for change. Until now we have focussed almost all effort on delinquents who are already apprehended and processed through the system, while recognizing that they commit only a small proportion of the total amount of juvenile crime.

The winds of change, however, are apparent in juvenile corrections due to the convergence of several factors: Discontent among juvenile correctional personnel with the relative ineffectiveness of their efforts thus far; advancements in knowledge about new approaches to correctional rehabilitation; high and rapidly increasing costs of incarcerating—public institutional care as high as $36,000 per child per year in some States—and last but not least, more widespread concern about justice, due process, and protection of the rights of juveniles in the justice system processing. One of the significant constraints on innovation and change is the lack of readily available knowledge about the operations of the system as well as a lack of systematic and ongoing research evaluation of programs.

The national assessment of juvenile corrections is a research effort supported by a grant from the National Institute of Law Enforcement and Criminal Justice of the Law Enforcement Assistance Administration. Its objective is to complete a systematic assessment of existing organizational patterns and service delivery, of legal provisions, of alternative programs, and of general offender career patterns. As policy-related research it aims to point out contradictory values and to

increase public awareness that attempts to pursue rehabilitative and punishment goals simultaneously often become self-defeating. Within this context, the project is attempting to identify the range and variety of policies and programs, their relative effectiveness, and how specific, more effective changes can be brought about. The principal policy issues related to dispositional alternatives that are being studied include:

1. What are the relative merits of different traditional and innovative correctional programs for (a) developing positive change in juveniles during their participation in the program, (b) protecting the community in the short run, (c) providing humane living conditions, and (d) enhancing subsequent nonviolative behavior in the community.

2. Under what conditions—type of offense, characteristics of offender, type of community, type of State—should different dispositional alternatives be employed?

3. What kinds of results can be expected from varying levels of expenditure among alternative programs?

To formulate a better defined basis for categorization and study, we have developed a typology of the major functions performed by different agencies within juvenile justice systems—a typology that can be substantiated or modified by empirical observations. Organizations are distinguished in terms of their primary functions: Prevention and social control, for example, youth service bureaus and community diversion units; identifying and nominating youth as offenders, for example, police and school referral units; processing and referring offenders, for example, court intake, diagnostic services; adjudicating offenders, for example, juvenile courts; containing and controlling offenders, for example, detention facilities, jails, custodial institutions, some probation and parole services; treating offenders, for example, some probation services, community-based programs, some rehabilitative institutions; and, reentry for offenders, for example, some parole services, work release, job placement, some ex-offender organizations. This typology facilitates differentiation between units having the same general labels, but who may employ contrasting technologies or whose intended purposes are clearly different.

TRENDS IN JUVENILE CORRECTIONS: STATUTORY CHANGE

The first trend that we wish to call to your attention today is of particular interest to legislators—that is, State statutes which govern the processing of juveniles into, through, and out of the juvenile justice system. One of the first activities undertaken when the national assessment of juvenile corrections began was an investigation of juvenile law in the 50 States and District of Columbia as it pertained to the definition, processing, disposition, and rehabilitation of juveniles. We needed to be better informed about juvenile statutory provisions governing courts and correctional units in order to design methodologies, procedures, and instruments for the assessment of service units in the various States. A second reason for the study was to determine the extent to which statutes changed in response to the requirements formulated by the Supreme Court in the *Gault* decision of 1967. We learned that between 1968 and 1972 a total of 33 States made major changes in the juvenile codes; many of these changes pertained to due process provisions to court structures and to age definitions.

The juvenile court was created primarily to serve the interests of the child by invoking protective power of the State and by providing treatment and rehabilitation rather than punishment. In theory, the juvenile court was to intervene for rehabilitative rather than punitive purposes, to avoid stigmatizing labels, and to seek to treat each child in an individually helpful way. We surveyed the statutes to determine the extent to which they actually reflect this societal mandate for without it one could not expect consistency in the types of programs provided and in the processing procedures. Our findings from examination of statutes of the 50 States and the District of Columbia indicate that there is great variation among the States in most of the major dimensions that we studied: jurisdiction of the juvenile court, definitions of delinquency, prescribed and proscribed procedures for legal processing of juveniles from initial arraignment through post-dispositional decisions; court structure and staffing; detention; specification of offenders' rights and due process provisions; disposition alternatives, and the limits of discretion. These variations extend within the States in several instances where there are variable provisions and structures in different counties.

Decisions of the U.S. Supreme Court have left to the States to decide the crucial question of who is a child and therefore who can be denied full constitutional protections and who cannot. It is not surprising that federalism has produced dramatic differences. Here we can only discuss a few of these differences. For example, which children will be processed in the juvenile court and which will go through the criminal system as adults is basically the function of three statutory variables: age, seriousness of offense, and grounds for transfer to the criminal system. In 34 States and the District of Columbia the maximum age for children is 17; in 10 States it is 16, and in the remaining 6 it is 15 years. But age is only one aspect of the definition. Some States retain sex differences even though they are now of questionable legality; others have complex and elaborate stipulations governing transfer procedures; others exclude certain serious offenses from the court's jurisdiction. Very few States have clear and unambiguous provisions necessary for the effective administration of justice in courts which are overwhelmed by large numbers of referrals and limited staff resources.

Another area that highlights some of the problems in juvenile statutes in the States today are the provisions governing the detention of youth. Most statutes recommend against placement of juveniles in jail, but in only five States is there an airtight prohibition. The kind of facility in which a juvenile is detained is determined, in large part, by State statutes, so if the State places strict prohibitions on the placement of juveniles in jails or lockups, counties will be forced to provide alternative detention facilities or not detain children at all.

The majority of States have statutes that permit the detention and/or jailing of juveniles although they recommend against overuse of such provision. Because of the loopholes and broad provisions, it is not surprising that nearly half a million children are held in detention within a year in the United States and more than 100,000 spend time in jail. In fact, in a number of States children may even be sentenced to jail as a disposition. Few juvenile codes contain provisions guaranteeing that a detention hearing must be held within a specified period of time after detention or that probable cause or likelihood of court appearance are to be the primary factors in determining whether

or not a juvenile is held. Thus, it is not surprising that in many States research has shown that status offenders, especially females, are detained more often and for a longer period of time than are males or juveniles who are charged with property offenses or crimes against persons. Obviously, if justice is to be administered equitably and under conditions where accountability is to be maintained, statutes must be more explicit and delimited in the discretion that is permitted.

Perhaps the juvenile code provisions that result in the greatest miscarriage of justice are those which define the areas of behavior that the juvenile court may regulate. All 51 jurisdictions bring into the purview of the court conduct which, if engaged in by an adult, would bring legal action. But, in addition, all the States also permit the court to intervene with behavior that is not illegal for adults—i.e., truancy, incorrigibility, running away, immorality, disobedience, promiscuity, or even just "idling." While all States have status offenses, as these latter behaviors are usually termed, there is considerable variation as to how they are treated legally. Recently, many States have adopted special legislation governing the processing of these "children in need of supervision" (CINS). Twenty-six States now have special categories for these juveniles, many of which require that they be referred for service outside the juvenile justice system—i.e., the State social services department. It is debatable, however, whether these provisions are sufficient to divert youth from the system for there is often some way of transforming them from a status offender to a delinquent after the second or third misbehavior. In one State with a separate category for status offender, 80 percent of the institutionalized girls were truants, runaways, or ungovernables. In another nearly 70 percent of all institutionalized girls were status offenders. Furthermore, it was not unusual to observe that females had longer periods of institutionalization than male juveniles who had committed more serious offenses

In 41 jurisdictions there is no requirement that there be separation of dependent and neglected children from delinquent children in the detention facility. At disposition 17 States allow delinquents and dependent and neglected children to be housed together. Because of vague provisions in the definition of who is a delinquent and governing the separation (of delinquents) from other children with social problems such as dependency and neglect, it is not surprising that they are found together not only in detention facilities and jails but also in private institutions and training schools. In several States large numbers of mentally retarded children were observed in the same institution with delinquent youth, with little or no variation in their program experience.

The most glaring feature of the juvenile codes is their ambiguity and deliberate grants of unlimited discretion. This permits gross inconsistency in the administration of justice. Although well-drawn statutes cannot insure the appropriate processing of juveniles in the justice system, it is unlikely that improper practices will be eliminated on a consistent basis without explicit statutory requirements. Many of the definitions and provisions contained in the recently introduced S. 821, the Juvenile Justice and Delinquency Prevention Act of 1972, are of the order of specificity to constrain inconsistent practices and the overuse of criminal sanctions.

Overreach of the law and overuse of criminal sanctions continue in many States despite their relative ineffectiveness in achieving the goals desired and in spite of the fact that they tend to have negative sec-

ondary and tertiary consequences. Many years ago, Roscoe Pound expressed grave reservations over the extent to which the education, health, and morals of youth have come under the jurisdiction of the juvenile court. When these problems are written into statutes as a basis for State intervention, parents, neighbors, schools, and social agencies are encouraged to avoid or refer their problems rather than to try to solve them.

Many students of juvenile justice have also recommended decriminalization not only of status offenses, but also of victimless crimes. In few States, however, have we observed any concerted drive in this direction for juveniles. In fact, there is some evidence that far more is being accomplished in decriminalization of behavior for adults than juveniles when a convincing argument could be made that decriminalization is even more urgently needed for juveniles. The objective of the system must be to minimize negative labeling, overuse of criminal sanctions, and intensification of State intervention.

INSTITUTIONALIZATION

A second trend, which is readily observed in some States and frequently discussed in most, is the reduction in institutional commitment, particularly commitment to public State facilities. Our research is concentrated on 16 States which were selected probabilistically, taking into consideration changes in admissions to State institutions in 1966 and 1971, along with several other factors. Admission rates were selected as criteria because we assumed that they provided the best indicators of statewide practices. Moreover, changes in these rates encourage attention to questions of diversion from the justice system and alternatives to incarceration.

It is generally thought that there has been in recent years and continues to be a substantial reduction in the institutionalization of juveniles. Fortunately, data about admissions to State institutions were available from the U.S. Children's Bureau for 1966 and from a LEAA-sponsored study for 1971. Admission rates were obtained by computing the numbers of admissions as a proportion of the juvenile population 5 to 17 years in each State. Findings from this analysis revealed marked variations among the States. The total number of admissions in 1966 varied from 9,158 youth in one State to 60 in another State. By 1971 that State with the largest number of admissions had dropped to 8,751, and the State with the lowest number admitted 50 youth. When rates (per 10,000 youths 5 to 17 years of age) were calculated, we observed a variation for 1966 between 2.71 and 30.90 in the lowest and highest States. The corresponding statistics for 1971 were 2.45 and 39.66. Thus, the lower end showed relative stability, but there was a substantial increase in admissions in the highest rate State.

States were then arrayed to ascertain the national pattern and difference scores were calculated. Rate changes in admission were found to vary from an increase of 15.96 to a decrease of 12.14 per 10,000 youth in the highest and lowest States. These rate changes indicated the direction and velocity of change in the 5-year period. In ranking the States to determine increasing or decreasing rates of admission to State institutions, certain arbitrary points were established since we wished to differentiate those States which were relatively stable with respect to admission. Thus, those which had rate change from +1.5 to —1.5 were considered "neutral" or stable, while those with

positive change (greater than +1.5) were increasing and those with negative change (below −1.5) were considered as decreasing in admissions. The final ranking indicated that 15 States had increasing rates of admissions; 15 States remained the same; and 20 States had decreasing rates of admissions to State institutions. Thus, the national picture is one of decreasing institutionalization, but the change is neither radical nor precipitous. Our field observations indicate that there continues to be a reduction in admissions in many States, but others are reporting increases, so it is probable that the pattern would be essentially the same if it were duplicated today.

It must be emphasized that these changes in admission patterns apply only to public State institutions. There is widespread use of local public institutions and of private institutions, so we cannot state for certain that there has been a reduction in the total amount of institutionalization of juveniles. The patterns suggest that there is a shift to the use of local facilities that permit families to remain in closer contact with their children and make it possible for the program to be more closely related to the culture and interests of the youth who are served in such agencies. Large congregate facilities in rural areas far from the homes of most of the institution's juveniles increasingly are being eliminated as dysfunctional for the rehabilitation of urban youth.

DIVERSION

A third trend, which we have observed in all regions of the country, is an increase in programing directed toward diversion from the juvenile justice system or "minimization of penetration" into the juvenile's life. Such efforts to direct youth from the criminal justice system reflect growing recognition that stringent intervention into the lives of youth will only stigmatize and further entangle them into deviant identities and associations. In several States that have agencies with broad mandates to deal with social control of juveniles the following tripartite plans have been designed: (1) Delinquency prevention programs aimed at the entire risk-prone adolescent population; (2) diversion services for predelinquent youth and status offenders; and (3) rehabilitation programs for those adjudicated for law violations.

We have just completed some research that examined diversionary effort after initial court contact and prior to adjudication. We recognized that the bulk of diversion has been and will continue to be by police because they select out for further processing only a small proportion of the juveniles with whom they have contact. Their utilization of counseling, informal recording of juvenile contacts, direct intervention with families, and ignoring of incidents results in the identification only a small proportion of juveniles for any further intervention.

Our examination of diversion activity began at the point of court contact because that is a crucial threshold with long-term consequences. Two characteristics stood out in the several communities in one State in which this study was completed, and we have no reason to believe that these findings were unique to that State. Diversion is an ambiguous and ill-defined term whose meaning not only varies between States, but within States and within communities. In the communities in which our observations were made rarely did even a minority of the probation officers within a unit agree as to what diversion is all about. Some referred to it as exclusively in the intake process; others defined

it as occurring anytime up to adjudication, and still others referred to diversion in conjunction with disposition. Some interpreted referral to an ancillary community resource as representing a failure on the part of their court's services. All agreed that intake officers exercised great discretion in the choice of diversion "tracks"—home, school, social agency, police, and so forth.

Ideally, diversion means referral out of the system to a person, group or organization that can provide services needed and desired by the youth. But many communities lack alternative service programs; intake officers are not knowledgeable about community resources; therefore, the usual pattern of response is "Counseled, Warned, and Released."

Our research, although incomplete, indicates that there is a pressing need for the study of careers of juveniles who are diverted. Information is woefully lacking about the similarities and differences between youth who are held and those who are diverted. If diversion is generally quicker, cheaper, and more humane, why does traditional processing of youth continue at the same level in so many communities? Local agencies we observed kept no records about those who were diverted; thus, any information about outcomes or recidivision were sheer guesses.

The faddist nature of diversion has resulted in a proliferation of diversion units within and without the juvenile court. But, no one has taken a close look at whether or not the juvenile subject to this effort is receiving a better deal. Participating personnel merely may have revamped terminology and procedures without seriously altering what happens to a juvenile.

In communities where the youth service bureaus and similar agencies are linked closely to the juvenile court, the linkage mechanism may lead to the involvement of many youth in a quasi-legal experience for behavior which would not have been acted upon in this manner had this interorganizational arrangement not existed. If diversion is going to accomplish the objective of referral out of the juvenile justice system, then it is probable that there must be a clear separation of the agencies providing diversionary services from the court. Our research also indicated the frequent use of informal probation for predelinquent behavior. It was achieved through an informal type of plea bargaining whereby the youth and/or his parents agreed to certain service requirements in return for not being formally processed. However, the utilization of informal probation lacked any adherence to the rights of youth and instead implied an adjudication of delinquency without any formal adjudication procedure. In fact, the original charge was held in abeyance contingent upon the juvenile meeting the often varied expectations of probation staff. Expectations ranged from tight controls inherent in formal probation supervision to noninvolvement with the juvenile unless he became engaged in deviant behavior. Court staff showed little concern about the rights of these youth or about the long-term consequences of this decision should the youth subsequently get into further difficulty.

COMMUNITY-BASED INTERVENTION

Disenchantment with institutionalization of juveniles in training schools is widespread, as we pointed out earlier, and has led to substantial reduction in institutional population in a number of States. This

disenchantment has led to a less than critical acceptance of noninstitutional alternatives as more effective despite the lack of evidence about community treatment programs. Much more needs to be known about the comparative outcomes of different models under different community conditions and with different types of offenders. We are seeking to meet this need at least partially by carrying out comparative studies of the nature, operation, and impact of a variety of community-based programs.

The concept community-based treatment is also ambiguous and means different things in different locations. Community treatment has been applied to probation, which is, in fact, the type of service program in which are found the largest numbers of adjudicated juvenile offenders in all of the States. Also included under the community treatment umbrella are aftercare and parole programs which bridge the gap between the institution and return to one's role in the community. However, probation and aftercare, often replete with large caseloads, continue to utilize fairly traditional approaches to working with offenders.

Community treatment has also become semantic trivia for locally based residential programs whose philosophies and treatment technology are representative of the traditional training school-institutional model, but whose physical location is in an urban community, the sole determinant in identifying the program as community based.

Within the past decade, there has been considerable innovation in what we are calling local intensive intervention programing. Both residential and nonresidential day treatment programs would fall in this category, including units referred to as group homes, halfway houses, community residential treatment, day care, group foster care, and semi-institutional or open cottage living. The essential defining characteristic is that there be frequent and continuing interaction with elements of community life appropriate for the particular age group in the unit.

We are now at the halfway point in the study of a sample of local intensive community programs, and have completed a census of the programs in the 16 sample States where extensive field data are being collected. Because these States were selected probabilistically, we have reason to believe that their programs are representative of the 50 States. Ultimately, we expect to prepare a census of the programs throughout the United States. Our research indicates, first of all, information about these programs is lacking within and between States, despite their popularity at the present time. Second, community-based programs are not randomly distributed throughout the States. We have identified a total of 288 local intensive intervention units for juvenile offenders in the 16 States. Of these 43 are day treatment, nonresidential programs, and 245 are group or foster homes and various types of residential treatment, with the former the larger number of the two types of residential units. Although there appears to be a notion that local community programs are small and relatively intimate, our information indicates that they vary widely in size. Day treatment units varied between 10 and 85 youth per unit with a mean size of 25. Residential programs (probably because they were dominated by group and foster homes) are slightly smaller with a mean size of 6 and a range from 3–54. These community programs

are concentrated in a few States, for in the sample of 16 States, there were 9 States which did not have any day care programs and 1 which did not have a residential community program. The average number of day treatment programs was just under 3 per State, whereas the average number of residential programs was slightly over 15, but the range was from none in 1 State to 55 in another State.

Great variation exists in the type of program and in the auspices under which they operate. The foster group home and the group home, as previously noted, normally represent the smaller residential facility. The foster group home may house one to four individuals, while the group home accommodates a population normally not exceeding eight residents. (The exact size is primarily determined by State licensing statutes.) The philosophy of the group home or foster home is often designed to create "a stable family life setting" supportive to individual residents, and permitting them to engage in varied community activities, that is, school, job training, employment, and recreation. Although States may operate numerous group home and foster group home programs under a uniform legislative mandate, the treatment philosophies, custodial philosophies, and utilization of community resources in reality are not uniform.

The group home or group foster home, by nature of minimal program design, minimal staffing needs, and minimal financial allocations, appears to be the first program design initiated by States with no existing community-based programs for juveniles. Since many foster group homes and group homes are located in rural areas and suburban areas, and most delinquents are from urban areas physically and culturally distant from the placement, ties with family, relatives, and significant others are widened. With the termination of legal jurisdiction, the juvenile is often forced to leave the foster or group home, and return to his home and associations without any preparation for reentry. For the urban minority youth, who compose a disproportionate number of our juvenile justice system, the lifestyle is often incongruous and only makes reintegration into the urban world more difficult. Race or ethnic origin often prevent the urban youth from remaining in the location of his placement after discharge since minimal educational or vocational opportunities exist there. It is increasingly important that group foster homes and group homes be located in urban areas when placement in the juvenile's own home is not feasible. Obstacles such as zoning limitations, neighborhood concerns, and school resistance must be dealt with. The utilization of neighborhood personnel in the planning and operation of group homes, as is the case in model cities programs, is a developing trend which openly breaks down community resistance.

The community treatment facility with the most publicized historical precedent is the halfway house or group care facility. The halfway house or group care facility normally will accommodate 8–30 youths. Although initially conceived as "stepping stone" between the institution and the community, a recent trend has evolved which identifies it as a diversification program for individuals who normally would be committed to a traditional State training school program, but who are felt capable of being maintained in the community. Strong involvement with community services, that is, school, work, and recreation are often coupled with programs within the residential facility utilizing various treatment technologies.

Halfway houses and group care facilities operate under State, local, and private auspices. Federal matching grants, such as title I, Omnibus Crime Control and Safe Streets Act, become a source of initial revenue, although State, local or private bodies must eventually assume total fiscal responsibility for program operation. The initial growth of both proprietary programs, as well as nonprofit corporate facilities, exists disproportionately in States which are able to purchase services for juveniles identified as State wards.

Group care facilities and halfway houses are more often located in urban and suburban metropolitan areas. Depending on budget allocation, the treatment program may range from a loose, unstructured program whose major emphasis is facilitating youth movement into school, work, or other legitimate roles, to highly structured, residential programs with treatment technologies so structured that admission criteria often are highly selective. Often excluded are aggressive or mentally retarded youth who, by lack of alternative placements, are committed to traditional training school programs ill-equipped to deal with their behavior. It also appears that group care or halfway house facilities are primarily located in States which emphasize a strong community orientation to juvenile corrections, and who openly recognize the limitations of the traditional State training school concept.

The semiinstitutional or open cottage living program often represents the largest community-based program, possibly numbering as many as 50 residents. It is this program which often develops an ancillary day treatment program for juveniles who are able to function at home, but whose behavioral problems often relate to school, or vocational, performance. The philosophy of avoiding the depersonalization of any residential placement for youth who can be maintained in his home is a basic premise in the operation of these and other day treatment facilities.

There is much discussion about the feasibility of an agency operating both residential and nonresidential programs under the same administrative structure. Staff effort and program impact are often directed primarily toward the residential population, with the result that the day treatment participants are labeled as second-class citizens. Separation of day treatment programs from residential programs seems desirable if greater impact is to be made in program planning for the particular needs of these youth. The fact that 9 of the 16 sample States have no day treatment programs indicates that this type of intervention is greatly underdeveloped; yet, it is relatively inexpensive when compared with residential programs and provides the opportunity to deal continuously with the problems which have contributed to the delinquent behavior.

Community-based programs, residential and nonresidential, are developing rapidly, but only in a limited number of States. Moreover, in no case, are they sufficient in number at the present time to handle all of the juveniles who are available for referral to such programs. Many States and communities have encountered considerable public hostility about community-based programs. They need knowledge about strategies and techniques for overcoming resistance and securing community support.

The fifth trend pertains to the design and organization of juvenile justice programs at the State level. As a foundation for assessment of the effectiveness of all types of correctional programs for juvenile offenders, we have obtained extensive information from and about all States' juvenile justice systems, codes, trends, programs, and the like, under both State or local government and private auspices. We have also conducted reconnaissance or State-level field visits to 25–30 States to meet with senior State officials—and citizens—responsible for juvenile justice in those jurisdictions. A reservoir of comparative information that exists nowhere else has been developed, but our understanding of these matters is far from complete, partly because of major gaps in official and other information within every State, and partly because of difficulties in making comparisons across States, which differ in so many respects, including their fiscal reporting systems.

Our experience and preliminary findings to this date, however, allow some forecasting of what the full findings may eventually reveal. Some of the main lines of these findings are relevant to the concerns of this committee:

1. To a very large extent among most States, juvenile justice is basically localized, and is only partially guided by State policy directives or administered and financed directly through State agencies and revenue funds. No State has yet moved to a truly comprehensive State-administered or supervised system for juvenile justice. There are some notable exceptions but it appears that about one-third of the States are performing their juvenile justice responsibilities essentially through decentralized and largely autonomous local agencies, while in the remaining two-thirds many crucial components of juvenile justice are subject to varying degrees of State policy and administration.

We are not yet ready to offer any concrete recommendations about the kinds or degrees of State centralization and consolidation that would be desirable. But our evidence indicates the extent to which juvenile justice is essentially marginal to all but a very few State governments * * * in the level of resources allocated to service programs, in accountability to regulatory requirements and State statutes, and in priorities for State planning. Some argue that policies and decisionmaking about youth in trouble ought to be made locally by those closest to these youths, as in public school districts. But this comparison is questionable for at least two reasons: Youth in trouble have few, if any, parent organizations or other concerned groups supporting their needs, interests and rights; and a not insignificant proportion of youths in trouble are committed to State facilities, thus simultaneously sending them away from their home locales and incurring high per diem charges against State funds.

2. The diversity of States in their population, economic, cultural and geographic characteristics led us to expect significant differences in their governmental arrangements pertaining to juvenile justice. But not as broad and diversified as we have actually found. States that are very similar in other respects demonstrate major variations with regard to statutory provisions, administrative structures, and policy di-

rections. And these variations appear as much the result of tradition or happenstance—or the occasional leadership of State officials—as of any other factors. Underneath these obvious differences, however, almost all States reveal a high fragmentation in services to young offenders, and awkward relations between governmental units among which these responsibilities are divided. Given the rather low level of concern about these matters in many States, they seem to find it extremely difficult to mesh or coordinate policymaking and program planning or service delivery for youth in trouble among State agencies, State and country or local governmental jurisdictions, as well as those concerned with broader services for children and youth. The State planning agencies that are mandatory under LEAA funding requirements are potential vehicles for bringing greater coherence, consistency and standards into planning programs for juvenile offenders, as are movements in many States toward consolidation of State agencies into larger administrative units. But the planning agencies are frequently preoccupied with law enforcement or criminal justice priorities that minimize the young offender populations, and amalgamation of State agencies does not necessarily result in greater cooperation or coherence.

3. Again with notable exceptions, the States generally evidence serious deficiencies in the extent and quality of basic information needed for sound juvenile justice policy planning and service administration. The lack of reliable State-level information is partly due to the marginality of these services, and partly to the tradition of localism, as we have noted. But even where very large State revenue funds are involved, few States have yet developed comprehensive information systems that can provide them with reliable data for monitoring programs (especially at the local level), for maintaining standards and quality control, for charting trends, and for forecasting. The relative absence of adequate information, of course, encourages polemical argumentation about "philosophies" of juvenile corrections and impedes rational policy development. Comparative information about other States—particularly those which States select for reference purposes—is even more deficient. State officials may hear about promising developments or trends elsewhere, but personal visits seem to be the only way that they can obtain first-hand knowledge for use in addressing their own situations. A number of States are very much concerned about their information problems and are working toward new systems. Unfortunately, these are unlikely to be compatible with those in other States, and there seems little that States can do alone to build better bridges between themselves.

4. We are searching very hard to discover fundamental juvenile justice (or corrections) trends that might be considered as broadly characteristic of the Nation as a whole. The differences and diversities we have already reported, however, appear at least as great as the similarities. We must be very cautious at this point in our research, but believe that we have identified some lines of movement appearing in enough States to suggest that they may eventually characterize much of the Nation. We will cite these as best we understand them, keeping in mind that there are numerous exceptions among the States:

One—there appears to be more and more concern about high cost programs for young offenders, particularly those involving substan-

tial capital investments. Despite the evidence that some States have not plateaued their rates of commitment of young offenders to State facilities, much information indicates that costly new facilities are being met with growing skepticism;

Two—more and more of the committed youths are being handled in programs other than the large, geographically isolated State "training schools," once the keystone of State juvenile corrections. Some of these facilities are still being built or are on the drawing boards, but more and more youths are being handled through an increasingly broad array of diversified programs;

Three—the range and varieties of noninstitutional programs for young offenders is growing rapidly, but the States themselves show time lags in their acknowledgement of the emerging variety of these newer programs, and have difficulty keeping track of them;

Four—although the States have less than complete knowledge about the full range of noninstitutional correctional programs now emerging—including halfway houses, innovative probation services, group home, et cetera—they do know with confidence that they are more economical or more effective than are parallel institutional facilities. To the best of our present knowledge, no State has developed reliable bases for predicting which types of programs will prove most effective with their total offender youth populations * * * although all are understandably reluctant to assign the most serious or experienced older youths to the low security programs.

Five—an increasing number of States are attempting to "normalize" the social environment of their correctional facilities. One evidence of this is the increasing number of coeducational programs in nearly all areas of the country. Other manifestations include innovations in education, in program foci, in the involvement of family, and in the participation in decisionmaking by offenders and exoffenders.

FEDERAL ROLES IN JUVENILE JUSTICE

Thus far we have confined our efforts to State and local level issues and characteristics. Obviously the Federal Government has a number of crucial roles to play if effective juvenile correctional programs are to be developed and to continue in many States. Among these roles are several in which it appears that the Federal Government has unique or special responsibility:

(1) Comparative evaluation research on both organizational processes and outcomes is urgently needed to provide bases for policy change and development, for program planning, and for engineering new technologies. The National Institute of Law Enforcement and Criminal Justice has supported significant research of this type, but it has been limited by the resources available to it. Many of the problems requiring research and demonstration transcend State boundaries; thus, they will have to be done with Federal support if they are to be done at all.

(2) Technical assistance must be provided to States in policy and program development, in the selection of technologies, in evaluation, and in the design and implementation of effective information systems. All of these are generally not available in juvenile corrections.

(3) Dissemination of objective, reliable, comparative information for policy and program planning is also needed. To be useful, such

information must be obtained and analyzed nationally and then disseminated to the States and regions. The U.S. Bureau of the Census provides one model of a critical national agency whose products are essential to social planning in many sectors.

(4) Training of correctional manpower is another priority need. Our impressions to date indicate that the training of personnel for juvenile justice has a very low priority. Moreover, where there are training programs, they often tend to be very parochial and reinforcing of the organizational practices in operation in that State. Thus, inadvertently, policies and practices that need to be changed are reinforced through training.

(5) Innovation in corrections is very evident in many States and communities, but far too often these innovations tend to be faddish, not well planned or implemented, and seldom are they evaluated effectively. Both evaluation and innovation must be encouraged and supported for they are long overdue in almost all areas of corrections. But, these activities must be supported in ways that add to knowledge development for juvenile justice throughout the United States.

Mr. LYNCH. Thank you, Dr. Sarri.

I wonder if you could tell us how your project is organized, how much money you received from the National Institute of Law Enforcement and Criminal Justice, what your staff complement is, and how you go about the task of doing this survey in the several States.

Dr. SARRI. We have a staff complement of approximately 20 persons, who are largely located at the University of Michigan, with our field staff going out from there to the various parts of the country.

We have a grant with a plan for continuing support for 5 years, dependent upon the usual renewal procedures. We are funded at the rate of approximately $400,000 per year, which covers most of the major activities of the research effort.

Mr. LYNCH. You have a 5-year commitment for funding?

Dr. SARRI. We have a 5-year plan for the completion of the research and an informal commitment that this will be supported, but it is contingent on renewal of grant applications.

Mr. ISENSTADT. The field aspect of the project itself will be completed within a 3-year period of time, that is evaluation of correctional units in the field.

Mr. LYNCH. If something should continue for 5 years, is it your intent to follow juveniles who have graduated from various programs in order to adjudge the effectiveness of these programs?

Dr. SARRI. Yes, we are anticipating following juveniles in some of the programs where we have already done field investigations.

Mr. LYNCH. Mr. Isenstadt, I understand, is your senior field director, is that correct?

Dr. SARRI. Yes.

Mr. LYNCH. I wonder if you could tell us, Mr. Isenstadt, what do you do when you go into a State, who goes with you, what kind of people are on your staff, what do you look at?

Mr. ISENSTADT. Our levels of entry into a State are variously faceted. In our 16 sample States that were discussed, we are also looking at and conducting probability samples regarding community-based, or the

LII unit, as well as the institutions, as well as subsequently juvenile courts and probation services, detention services. At the present time our policy has been to enter the States with the juvenile justice agency within that State, the juvenile correctional agency that the State operates, for meetings with State officials regarding the overall program within that State.

We then, with the permission of State officials, when the program is a State program, will conduct what we refer to as advance evaluations of sample selected units, either community-based or institutions, at which time we will develop a contract with that unit for ongoing field evaluation. Subsequently then, we send a field team. Our field team is made up of staff at the University of Michigan who are experienced in the area of juvenile corrections. They conduct a multiphased field effort directed at use of the staff, organizational patterns, fiscal dates, and major program issues within each particular unit.

Mr. Lynch. How much time do you spend in a given State?

Mr. Isenstadt. The initial entry into the State itself is 3 to 4 days, although in some States, by nature of size, we spend a longer period of time. The advance is a process of approximately a day and the intensive field evaluation has ranged from 3 days in small units to an entire week in the larger programs. Especially in the institutions, we anticipate spending approximately 7 days in each institution to get a full picture of the entire lifestyle of youths in that program, not just during the traditional working-hour day, but during the evening and weekend periods.

Mr. Lynch. How many man-days would that represent? How many people would you take with you?

Mr. Isenstadt. We will take a minimum on each team of three personnel: for large institutional programs, we anticipate five or more. The total man-days will average 10 for the small units and 35 for the large units.

Mr. Lynch. Are you limited to 16 States, or is this sort of the first go-round, or what does the number 16 represent?

Mr. Isenstadt. The number 16 was selected through our probability sample. Yes, for the full evaluation we are limited to units within the community based and institutions within the 16 States.

Dr. Sarri. I might point out, we also have, in addition, selected 100 counties of the United States. Again, on a probablistic basis for obtaining information about the operation of the juvenile courts. So we have a whole series of samples in order to permit us to get at different aspects of the programs. We knew we couldn't do a comprehensive research evaluation study in all 50 States, so we have developed different kinds of samples for the different types of programs we want to look at.

Mr. Lynch. I understand that from a statistical point of view, but would it not be desirable for a completely comprehensive analysis, if you had your choice, wouldn't you be doing this in every State in the Union?

Dr. Sarri. If we had our choice?

Mr. Lynch. If you had your choice. Or was this your choice to pick 16 States?

Dr. SARRI. It was our choice to focus on a sample of 16 States, which were carefully selected to represent the country. I think we felt it was important to do an indepth intensive study rather than a study of 50 States. We were interested in doing more intensive work and felt it was better concentrated, and if States were selected randomly with certain kinds of controls, we could generalize to the country as a whole.

We are doing a census of all programs in all 50 States. We analyzed the statute in all 50 States. We are doing a sample of courts. So by various means it will permit us to say something about the entire country.

Mr. LYNCH. But your judgment would be, the programs you are subjecting to field evaluation, research, would represent programs from all of the 50 States?

Dr. SARRI. Yes.

Mr. LYNCH. Could you enumerate the 16 States for us? Do you have that information available?

Dr. SARRI. Georgia, New Hampshire, Ohio, Pennsylvania, Tennessee, Wisconsin, Florida, North Carolina, California, Colorado, Massachusetts, Maryland, Montana, New York, Nebraska and Oklahoma.

Mr. LYNCH. Have you to date reached any conclusions about programs in the States of Florida and/or Massachusetts?

Dr. SARRI. No. We have not reached any conclusions about the programs in any of the States. We did complete in one State a study of diversionary programs.

Mr. LYNCH. Could you tell us what you have done to date in the States of Florida and Massachusetts?

Dr. SARRI. In the State of Florida we have recently completed the State-level entry and the interviewing of the various State officials in Tallahassee. We also completed the advance preliminary research in several local units?

Mr. ISENSTADT. There are seven units in Florida.

Dr. SARRI. They are located in all different parts of the State.

Mr. ISENSTADT. Both State and private units.

Mr. LYNCH. What do you mean by "unit," when you use it in that sense?

Mr. ISENSTADT. I am referring to a specific field unit, either a community-based program entity or institutional entity.

Dr. SARRI. There are seven of those in the State of Florida, and those all have had the preliminary onsite research. We are now engaged in the actual collecting of the intensive field data in Florida. In the State of Massachusetts we have not done any fieldwork thus far.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Mr. MCDONALD. Dr. Sarri, from your list of 16 States, you did not mention any from the deep South, other than Florida.

Mr. ISENSTADT. Georgia and North Carolina.

Mr. MCDONALD. I missed that. How about Texas? Have you had any dealings with Texas?

Dr. SARRI. We have done reconnaissance work in Texas. It is not a State that is in our sample. In a number of other States, approximately 25, we have actually been in for purposes of the field visits, but not for a systematic data collection.

Mr. MCDONALD. Mr. Isenstadt, when you go into a State, basically, they know you are doing a survey of their juvenile correctional pro-

gram. Do they cooperate with your teams or does that depend on their relative status or stage of advancement, whether they are moving along the line toward community-based programs or whether they are still back in the Dark Ages, so to speak?

Mr. ISENSTADT. I think our process is such and has been standardized that we deal in various echelon levels with entry into a State which consists initially of phone calls, of communication, and very clear delineation about our policies, our grantor relationship, the issues regarding feedback, the issues regarding confidentiality. These important types of foundations we lay before we even physically arrive in the State itself. So we have had ongoing correspondence with all States involved in our sample extensively before we even send our first team into the State. They are very clear as to all their moves and steps and whoever we will be talking to in the State. And as such it has worked out very well for us.

Mr. MCDONALD. But in some States I am sure you expect to be critical of some of the programs you are going to look at. In those States do you anticipate problems in evaluating their programs?

Mr. ISENSTADT. I think certainly we are there to, in a sense, be critical. They are cooperative as far as access. So far as we have had no difficulty in regard to direct approach of State officials. It becomes very much our position and our professional scope to analyze and identify all issues, both overt and latent in the programs themselves, and, as such, we attempt to study the programs thoroughly enough to see this. But in terms of initial access and availability, we have had no difficulty.

Mr. MCDONALD. Dr. Sarri, I am sure you are aware of Senator Bayh's bill, S. 821, where the age for juvenile delinquency is lowered from 18 to 16. Can we have your comments on that aspect of lowering the age from 18 to 16?

Dr. SARRI. Well, I suppose one has to say it is a mixed blessing. There are certain obvious kinds of advantages because of the denial of certain due process procedures that are inherent in most of the juvenile statutes, so the 16-year-old would have the advantage of certain kinds of due process benefits he would not have otherwise.

I think, however, there are some potential disadvantages, and I would suggest, particularly if we think about the population of juvenile delinquents, the bulk of juvenile delinquents are poor, disadvantaged, jeopardized youth. If the processing into the adult system means that the consequences are further disadvantagement at an earlier age, then I think this would be unfortunate. I think this seems to be happening in some of the States where they have lowered their age limits. A 16-year-old sent to an adult maximum security prison—and this is happening—cannot benefit from that experience.

In those States that have the benefit of having programs for each age group, certainly then the handicap is far less. But many States do not have that and it means juveniles will end up in programs with adults. So it has to be seen as a dilemma.

Mr. MCDONALD. You stated before that it seems only the grapevine is the mechanism for communicating new programs and new ideas in juvenile correction. What do you see as an alternative or solution to the grapevine?

Dr. SARRI. I think, first of all, what we need to have is much more adequate information systems. There is relatively little accountability and relatively little formal communication. One often can find out how many delinquents are in a system in a given State. With regard to institutionalization, one of the important facts is to know how many juveniles are incarcerated in all kinds of programs—public, private, lockups, detention facilities, et cetera—and for how long, and with what kinds of consequences. The communication of this kind of information is essential and it needs to be formalized through some type of State and Federal mechanisms so there is some way to inform people of what has taken place.

In the past, I think, the Children's Bureau frequently did communicate with the various States and communities about different types of programs. There has been less of this in the past decade, perhaps, and I think there needs to be more formal communication. Most of the States have little way of knowing except, as I mentioned, the grapevine, journals, magazines, et cetera. No systematic input exists as to what is going on from other areas.

Staff are eager to learn. I think that does characterize many people in juvenile corrections today. They are willing to change. Most staff are dissatisfied with the state of affairs in their programs and want to have new ideas, new suggestions, but often don't know where to get them.

Mr. ISENSTADT. We have found this so in our movement into States, much interest into what we are finding out nationally, and a desire to obtain results.

Mr. MCDONALD. You stated juvenile programs have normally very, very low priority in the various States you visited. Juvenile delinquency has been in the public attention for many years. How do you attribute it still rates very low priority in the various States?

Dr. SARRI. That is a difficult question to answer. I think it is probably again a dilemma of the United States that we consider children one of our most valuable resources, and yet we seem to be unwilling to provide children the opportunity to grow up in a way in which they can become well-educated, mature, responsible adults. I think there is a notion that somehow it is more important to spend money on adult programing than on juvenile programing because the problem is more serious, there is a greater threat to society, et cetera. Perhaps we think that if we just sort of ignore the juvenile problem it may go away, despite the headlines it gets.

So we have a dilemma in this society. We talk about children being important, a youth-oriented society, and yet in education, in medical care; for example, one of the things that really stands out in my visiting of many correctional programs is the gross lack of medical care, health care. These are children being jeopardized by lack of medical care. If the commissioner submits a request to the State legislature for additional money in this area, it is frequently turned down.

Mr. LYNCH. When did you begin to study? How long have you been at it?

Dr. SARRI. Nearly 2 years, about 18 months.

Mr. LYNCH. Based on what you have done so far, what is your overall view of juvenile corrections in the United States? What kind of shape are we in?

Dr. Sarri. I would say that there are two trends that are evident and I certainly hope the one doesn't overcome the other. There is a strong effort toward rehabilitation, innovation, community programing, and that effort in many States, I am sure, will go forward regardless of what happens. In others there is at the same time a rather deliberate law and order effort which many States are having difficult in dealing with—public requests to "get tough." "teach them a lesson," particularly because of the violence of the crime of certain juveniles. That effort then is working toward punishment. So the two efforts exist side by side.

I think many States will not move away from their basic thrust toward a rehabilitation-treatment strategy. I think other States which have not had a strong emphasis in this area may have difficulty really getting that effort under way now, unless they get a lot of help, support, and encouragement. In many cases there is little encouragement to be rehabilitative. Look at State budgets in terms of how much money is spent—I recently examined data from one State in terms of the institutional programs. Approximately 75 percent of all of the money spent in the institutions went for salaries; and of that, 65 percent went for maintenance and custodial staff. So you had 10 percent to spend on the whole treatment-rehabilitation effort. That means not much can be accomplished when that is occurring.

Mr. Lynch. I take it the two trends you mentioned, the former is the professional trend of people who work in or who are on the fringes of the system; the second is more in the nature of a political problem, would that be accurate?

Dr. Sarri. No, I don't think the latter is just a political problem. I do think most people, the lay public at large, value their children greatly. Nearly everybody somehow wants juvenile delinquents rehabilitated.

Mr. Lynch. What I am asking: Is there any quarrel in the professional correctional world over the rehabilitation model?

Dr. Sarri. Rehabilitation is widely accepted as the goal.

Mr. Lynch. Who are the proponents of the model which you characterized as a law and order model?

Dr. Sarri. I think some of the law enforcement personnel, I think it comes from certain public attitudes which have variously evolved in the past few years. It comes because of a great deal of concern around the street crime and violence in the cities. Out of desperation, the public law enforcement personnel think that if we remove persons who commit these acts from the community, then the community will improve. I think there is a basic fallacy in this.

Mr. Lynch. It may be a basic fallacy. I would ask you, as a person who has been engaged in surveying correctional programs across the country, would you adhere to the view that there is perhaps an underdetermined or given percentage of young people that need to be incarcerated?

Dr. Sarri. I don't think anyone would quarrel with the fact there are young people who need to be incarcerated and need to be incarcerated in institutional programs. We don't have any technology which would say otherwise at the present time. But that does not mean that the kind of incarceration cannot have rehabilitative consequences. It need not be only custodial, as it is in many cases, just a holding opera-

tion. And for the public notion that people are educated for crime, I think this happens because people are just sort of held for long periods of time in wholly unsatisfactory situations.

Mr. LYNCH. You indicated that the cost of incarcerating a youngster can run as high as $36,000 a year. Do you know what State that is? Can you tell us?

Dr. SARRI. I prefer not to, because we have assured the States that during the process of the research we will maintain confidentiality.

Mr. LYNCH. I understand. But your testimony is that costs can run that high?

Dr. SARRI. Right. And that exists in more than one State.

Mr. LYNCH. $36,000 in more than one State?

Dr. SARRI. Right.

Mr. LYNCH. You also indicated a high proportion, especially of females, in the juvenile justice system end up being detained through what you refer to as "status offenses." I trust you mean by that, things which if they were not children would not be crimes?

Dr. SARRI. Yes.

Mr. LYNCH. What implications does that have for their future lives? What happens to those children?

Dr. SARRI. Well, particularly with regard to females, most of these problems center in relationships with their families, because most of female crime is interpersonal crime and the difficulty centers around family situations and family interpersonal relationships. If they are institutionalized and away from their family, and oftentimes hundreds of miles away from their families for months and years, it is very unlikely the problems which existed in that family are going to be solved through that particular technique. So the problem has to be dealt with directly.

Obviously, the other alternative is to see that this is a problem for other types of agencies, not the criminal justice system.

Mr. LYNCH. Is this a common situation in the States you have examined?

Dr. SARRI. Yes. The institutionalization of female offenders for status offenses is a relatively common practice.

Mr. LYNCH. What kind of alternative would you recommend?

Dr. SARRI. Well, I would think that certainly no one should be institutionalized, incarcerated in the criminal justice system for an act which if committed by an adult or a male juvenile would not be a violation. Females are incarcerated for promiscuity, but boys of the same age who apparently also engage in the same behavior are not incarcerated. It seems to me with regard to status offenses there is really very little validity for incarcerating such individuals in the criminal justice system. They may need help and very often need service, but it should be provided through child welfare agencies, mental health agencies, family service agencies, rather than defining such individuals as delinquents because of their behavior.

Mr. LYNCH. On Monday, Dr. Jerome Miller, who is now in Illinois, but was the commissioner in Massachusetts, and the deputy director of the department of youth services, testified about the Massachusetts system of, in effect, closing or at least not using old existing institutions and of going to group homes and foster homes, to handle youngsters

who are delinquent, who have in fact committed crimes. What is your view of that? Is that the direction in which States ought to be moving?

Dr. SARRI. The total elimination of institutions?

Mr. LYNCH. Yes.

Dr. SARRI. I don't see it as possible.

Mr. LYNCH. Well, that is not the question. The question is, Is that the direction in which we ought to be moving, whether it is possible or not?

Dr. SARRI. I would say no, not total elimination, but rather substantial reduction. I think we are going to have some institutional treatment for juveniles.

Mr. LYNCH. For what kind of juveniles?

Dr. SARRI. For those juveniles particularly who commit serious crimes against persons. I think we do not have any effective technology at the present time which would indicate that none would not need to be institutionalized.

Mr. LYNCH. If we could discount the young lad who is a serious offender, who committed rape, murder, heinous crimes, eliminate those and the obviously mentally deranged, should we be putting into jail other juveniles for less serious offenses?

Dr. SARRI. No. I think one has to have a very serious reservation about any convictions under which a juvenile should be placed in jail.

Mr. LYNCH. As you know, Massachusetts does reserve the right and still is, in fact, incarcerating very serious juvenile offenders. So I guess the real question is, Is putting those people aside, putting them away so they cannot harm society, is Massachusetts heading in the right direction, in your judgment?

Dr. SARRI. I think that the trend toward movement away from institutionalization is evident in a number of States, and it certainly is highly desirable. Also, the trend is evident in Massachusetts in the development of a wide variety of different types of programs which permit adaption to different cultures, different community conditions, and so on. It is evident in many States, and certainly seems desirable in terms of the data we have in terms of effectiveness.

Mr. LYNCH. Has any State gone as far as Massachusetts in that direction?

Dr. SARRI. We don't really know. The data we need regarding Massachusetts pertains to the total number of children that are incarcerated. There are children being held in county training facilities.

Mr. LYNCH. I believe it is 60.

Dr. SARRI. There are private institutions, local training schools, and detention facilities in Massachusetts. I suspect, although I don't have the data on Massachusetts, that it would be surprising if the total number incarcerated were as low as 60.

Mr. LYNCH. When I say 60, I mean delinquents who have in fact been sentenced to incarceration, not delinquents who are being detained for a week or overnight awaiting adjudication.

Mr. ISENSTADT. But the possibility of delinquents being placed in private residential facilities still would exist under service agreements, which would not be indicated in that figure.

Mr. LYNCH. You would advocate a complete centralized State-run department of youth, services, or youth bureau, or whatever you want to call it?

Dr. SARRI. I would not advocate a single model of State organization of youth services. I think there needs to be much more direction, support, and assistance at the State level, and in some cases greater centralization than presently exists. I suspect what we are going to find, after the research is completed, is that there are a series of different models which, given certain kinds of cultural conditions, organizational development, and certain economics, the findings will indicate that one model is preferable to another model. I think, by and large, there is more localism at the present time than is desirable, if you really want to have an effective system in a society where there is a great deal of mobility. If from one county to the next, the juvenile court in fact, operates under different statutory provisions, and the programs are entirely different, and yet youngsters and families move back and forth across the county boundaries, it becomes a very difficult system under which to socialize young people. We have run across counties where the laws are really quite different and the law enforcement procedures are quite different and juveniles have a great deal of difficulty in adapting to these differences.

Mr. LYNCH. Would it not therefore be desirable to have a central youth services board, bureau, department—whatever you want to call it—with overriding authority, but a good deal of flexibility?

Dr. SARRI. I think that would be desirable.

Mr. LYNCH. Are States doing that now?

Dr. SARRI. Some States are centralizing. On the other hand, you have a State like California, with a probation subsidy plan that is well known. California for a long time had considerable centralization, and has moved to a form of decentralization which is appropriate for its circumstances, and the kind of program development it has.

Mr. LYNCH. It is my understanding a central State authority still maintains an overriding control of that. They can track people in the program; can they not?

Dr. SARRI. Not any longer in California. They cannot because of the discretion that operates at the county level. They are only responsible for those who actually become wards of the youth authority. But the bulk of funding now in California is going to the probation subsidy to the counties, and there the State does not follow and have the same degree of control over the program.

Mr. LYNCH. I infer from what you have been saying that in going to a given State it is very difficult for you, as field researchers, evaluators, to even make a judgment as to how many children in the State are serving in various institutions or are under various probation or parole authorities. Is that correct?

Dr. SARRI. That is very difficult, and therefore we have been developing some techniques. Whereby we can get an accurate picture of at least the major programs that have youngsters. There are things like lockups and so on which are very, very difficult to study. These may be the places in which the most problematic experiences are had by juveniles.

Mr. ISENSTADT. Local jails and lockup facilities.

Mr. LYNCH. Mr. Isenstadt, in selecting States, did you utilize comprehensive law enforcement plans that are required under LEAA legislation?

Mr. ISENSTADT. Yes, we have; and we have received copies from all of the 50 States.

Mr. LYNCH. How many States include comprehensive juvenile justice descriptions and programs within those comprehensive State plans?

Mr. ISENSTADT. That would be difficult to say.

Dr. SARRI. A very small proportion.

Mr. ISENSTADT. We said approximately 10 to 11 percent of funding under the block grants that we have seen so far in these States has been allocated for juvenile-type services.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Mr. Wiggins.

Mr. WIGGINS. Thank you, Mr. Chairman.

What is the objective of the National Assessment of Juvenile Corrections?

Dr. SARRI. Our objective ultimately is to develop empirical criteria, which can be used as standards for the assessment of a variety of different types of juvenile correctional programs. The secondary objective is to characterize and to assess programs which are operative in the various States of the country at the present time.

We are attempting to be able to assess and characterize the whole range of programs, not merely the innovative or the new programs, so we have a picture of what the juvenile justice system is.

Mr. WIGGINS. What are you going to do with the report?

Dr. SARRI. We are already in the process of disseminating reports. We have adopted the strategy that would be desirable to get information out about different segments of the research, as soon as it is prepared. So two of the reports have been and are being widely dispersed at the present time, and others will be coming out sequentially throughout the research period. There will be prepared at the end of the research a comprehensive report which will be submitted to the Federal Government, and we assume will be printed as a comprehensive overall report.

Mr. WIGGINS. That report will be an assessment of the effectiveness of existing juvenile programs in the States which you have selected. Will they receive a copy of the report?

Dr. SARRI. Yes: in establishing the contract with the various States which are engaging with us in the field research, we have assured them of feedback of information about the work we are doing in the State. For example, a State like Florida, which has seven units in the study, will get direct feedback information about those different programs as well as generalized summary information about the country.

Mr. WIGGINS. Do you propose to recommend to these States a model for them that they might wish to adopt?

Dr. SARRI. I think we will make recommendations. I doubt we will recommend a single model, but again, multiple models that seem more appropriate. I don't think there is a single effective model. There are many models which are appropriate to achieve the ends that are desired. The choice is depending upon do you want to pay, you can achieve a level of effectiveness. Ultimately it comes to be a political or administrative decision rather than a research decision.

Mr. WIGGINS. If anything comes out of this study, it will be because of the willingness of the States to adopt your recommendations?

Dr. SARRI. Yes.

Mr. WIGGINS. Would you think that the Federal Government ought to use its powers to compel the States to adopt suggested models?

Dr. SARRI. No; at least personally, I think it would be much wiser to support the States where they need additional resources, to move ahead in this direction. I think it is our observation thus far that, in the overwhelming majority of the States, there is a very sincere desire and considerable effort to wish to develop more effective programs. They lack resources, they lack support, they lack training and know-how. This kind of help can be provided. I would be skeptical about the value of compelling conformity in this regard.

Mr. ISENSTADT. But providing them with various models based on the specifics of that particular State socioeconomic, geographic, urban-rural makeup, and such.

Mr. WIGGINS. That would be providing them with information upon which they could act if they wished to.

Let's assume the Federal Government wishes to provide financial support to juvenile programs within each State. What vehicle do you suggest to accomplish that?

Dr. SARRI. Well, there are certain advantages in terms of the State planning agencies for certain types of funding. I think also those States which have State youth service or youth authorities, child welfare agencies of various types, in which the juvenile correction program is located, could receive funding support for extension of their programs.

It seems to me one of the things that the Federal Government might do would be through the use of grants to encourage the development of certain kinds of programs. For example, a State that might not have an extensive development for private and local community resources, and this kind of effort could be developed through the provision of grants that might be administered through the State agency.

I think if it was solely just the funding of State-level agencies we might not get the kind of innovation and change we wanted. So the use of the grant device does provide some flexibility and encouragement of innovation in the ways where just outright support to the agency, without any stipulations, might not achieve that result.

Mr. WIGGINS. Let's suppose that we agreed with your suggestion and created a system of categorical grants to States that submitted plans which held some promise. What agency of the Federal Government should evaluate it?

Is it a Justice function?

Dr. SARRI. It depends upon which aspect of the juvenile justice system we are talking about.

Mr. WIGGINS. I can't answer that, because that would be dependent upon——

Dr. SARRI. If you are talking about the correctional program, the provision of services, it seems to me that it's much more appropriately lodged in one of the agencies of the Department of Health, Education, and Welfare rather than a Justice function. If we are talking about certain operations of the juvenile courts with respect to due process and adherence to legal statutes, then, in those areas there may be a Justice Department responsibility for evaluation, or an interdisciplinary committee, such as exists at the Federal level where it is necessary

in a problem like juvenile delinquency to have interdepartmental arrangements for handling problems that transcend departmental lines.

Mr. Wiggins. Well, there has been a suggestion in some legislation that there ought to be a new Federal agency that focuses primarily upon the problems of juveniles and all of its interrelated problems, and that agency be funded with the power to provide grants upon submission of applications by appropriate agencies. How does that idea strike your fancy?

Dr. Sarri. Well, I haven't thought about it for some time. There was, a number of years ago, a proposal for that. I think it has certain kinds of advantages. I am not sure at the Federal level if we want to extract children from their families. That is why some of the values with the Department of Health, Education, and Welfare permit you to handle the problem of the youths and handle also the problem of the family and the community. So I think there are some advantages.

However, I think it is a potentially mixed blessing in that you would need to have certain kinds of linking mechanisms to other departments that also are concerned indirectly with the problems of youth. So just by having the Department of Youth you can't center all of the problems of children and youth in one particular location.

Mr. Isenstadt. We see that on the State level. There is still a high degree of localism in the fact the State system does not know where many of the youth are located, and I am concerned about that, too.

Mr. Wiggins. If the Federal role is a funding role, the mechanism for supervising that funding is a complicated problem because of the mixed nature of the problem. It is not just a criminal problem, obviously. It is a social problem; it involves family consideration; and the Federal Government is not presently structured to look at that total problem, at least through one set of eyes.

Let's go to another problem. A youngster, who either has a problem or who is involved in one not of his own making, is brought to the attention of government in a variety of ways, as you know. It may be that a youngster is initially brought to the attention of a policeman. It might be that he is referred from a doctor. It might be that a social welfare agency or institution sees a problem.

Most of the people involved in this field have felt that government should respond in a variety of ways, based upon the individual needs of that youngster. A few would disagree with that. Government should have the capability, at least, to reponding in accordance with the individual problems.

That requires the intervention of considerable discretion. My question is: Who should exercise that discretion, given the multiple ways in which the problem is brought to the attention of government?

Let's take specific cases. If a policeman observes misconduct which may or may not be a crime if committed by an adult, should that policeman have the discretion to refer the youngster into the appropriate channel which would be able to respond to that child's problem as perceived by the policeman, or should there be some other agency which makes that judgment?

Dr. Sarri. I certainly think the policeman should respond, as many people in the community should respond. Let's say, for example, the school truant. It seems to me rather than taking the school truant

to the juvenile court, where he may even be held—some juvenile courts hold in detention facilities as many as 40 percent of the children for truancy. Rather than taking the juvenile to court, processing through that system, there needs to be a mechanism in the school system to respond to that particular problem, or a modification—if society is changing with regard to compulsory school attendance—of the law in that regard. But the problem is relating to the school, the social institution of the school. It seems to me handling it through the criminal justice system is likely to aggravate the problem rather than to solve it.

Mr. WIGGINS. I can understand that, and agree with at least the objectives here.

But let's suppose the child does not wish to respond to this offer of alternative treatment. Don't you find often that there has to be some compulsion involved to move this child into the direction in which society thinks is in his best interest?

Dr. SARRI. Well, I suspect that is true in some cases, but I think in many cases we have moved almost immediately to the compulsion, rather than trying to facilitate the movement of the person back in the school. I happen to have done a great deal of research on school dropouts and tracking careers of children through secondary schools and found that many of those children who drop out subsequently get into delinquency—are very often the children who have been suspended and who have had a great deal of difficulty in school. The problem is not only this reluctance and hostility with regard to the school, he also may be a "pushout."

I think you are correct in what you say in some cases, but I also think that we often intervene too stringently with some compulsory techniques rather than offering to assist, and to focus on reintegration of the person back into viable roles. Granted, that if offers of help are not received favorably and this effort continues, and it is a violation of the statute, then there is only one alternative. But I think greater effort is needed toward the whole diversionary strategy at the present time. A whole series of other alternatives are available, so that the problem does not have to enter the criminal justice system.

Mr. WIGGINS. These other alternatives would have to be agreed to by the child, because if we are going to compel that child to surrender a portion of his liberty, his freedom to go some other direction, then we are going to have to accord that child some due process.

Dr. SARRI. Yes.

Mr. WIGGINS. And I speculate it is going to take the court to accord them.

Now, we may call that court part of the criminal justice system, if you wish, or we can call it something else. But the fact is, it is a judicial proceeding.

Dr. SARRI. Yes, but I do think we have examples in other countries. In England, in Scandinavian countries, they have developed community committees where there have been attempts to get community people to focus together on the problem of, if you will, status type offenses in the community and to insure due process through a quasi-legal procedure, if you will, and focus on reintegration of the juvenile back into the normal life of the community.

Mr. WIGGINS. They did not have judgment to adopt a constitution like ours, and accordingly we are not in a position to assure due proc-

ess through a community organization in this country. If a youngster asserts a denial of due process through such an ad hoc committee, he is going to have a judicial review of his claim.

Dr. SARRI. Right, and then it is going to have to go to the juvenile court. All I am suggesting is there are probably a series of earlier alternatives which could be explored and developed far more fully, rather than immediately saying the first alternative is to say we will have a formal hearing, a formal processing.

Mr. WIGGINS. I understand that, and I am sympathetic with the goals. But as in all things in life, there are many contradictions here. We would like to provide the maximum flexibility in dealing with the youngster, but society's judgment must be brought to bear against that youngster for his own best interest, as society sees it. It may take the intervention of some formal body, which will be, in fact, a court. It doesn't have to be known as the juvenile court, it doesn't have to have criminal jurisdiction necessarily, so that it possesses a stigma of an instrument of the criminal justice system.

But my guess is that the youngsters on the street still call it juvenile court and they will possess that social stigma, whether we wish to so label that court or not.

I don't have great solutions to these difficult problems, but it just seems to me that judgment has to be exercised, discretion has to be exercised, for the benefit of the child who is in trouble, or who has been catapulted into trouble by perhaps his parents. And in the nature of things, I suspect that that judgment is best exercised by a court, call it what you will, a hearing officer, but part of the justice system rather than a bunch of well-intentioned individuals—without government direction and supervision—seeking to impose their will upon children.

Dr. SARRI. I don't have any quarrel with you. What we are suggesting is what needs providing are more service alternatives to help the people. By and large the system of intervention we have at the present time tends to result in overfocus on detention, punishment, control, rather than provision of mechanisms whereby the person can be reintegrated.

The only other concern I might mention is with regard to discretion. I think discretion in many areas needs to be optimized with the due process potentials. However, when we know, for example, that discretion in certain areas inevitably leads to continuing abuse—for example, the fact that more than 100,000 children are jailed each year in this country—it seems to me there is a need in the statute to have far less discretion about the use of jails, because they become an easy alternative when you can't think of anything else.

Mr. WIGGINS. I would suggest, Doctor, the answer is not to limit the option of jail because there will always be, as you state it, a youngster who ought to be institutionalized in a confined environment; but rather to give the court exercising that discretion greater alternatives and to make them viable options.

Dr. SARRI. Yes.

Mr. WIGGINS. But I still tend to think the person who ought to make that judgment ought to wear a black robe and be a very wise man, rather than a very well-intentioned community worker.

Mr. Isenstadt. We are even seeing in the case of some court practices related to informal probation where individuals are in fact in a quasi-court role, where they have not been formally adjudicated, they in a sense are maintained on a quasi-probation status with the idea being if they violate they will then go before the court on a petition. This is a problem in that it is not fully encompassed under the court's authority, but the youth is often made to feel it is the court's authority.

Mr. Wiggins. Somebody is going to attack that one of these days and disrupt the whole system.

Mr. Isenstadt. It has the plea-bargaining concept of the adult system wrapped into it.

Mr. Wiggins. Thank you, Mr. Chairman.

Chairman Pepper. It is obvious that in this area, as in so many others, we have to balance interests, one against the other, to try to determine what course we will pursue when we do evaluate different interests or even conflicting interests. In latter years the courts have quite properly taken recognition of the fact that young people are citizens, that they are entitled to the protection of their constitutional rights, and that the fact they don't know enough to ask for the protection of those rights doesn't necessarily mean they don't have them and they should not be given an awareness of the fact they do have them. Adults are given the information to the effect they have such rights they may claim.

However, I share the view that in general these programs must be under the jurisdiction of the courts, because when you take the custody of an American individual and transfer that individual from his lawful parent or parents, or lawful guardian, into the authority of some other person who has the power to affect the physical disposition and the fears of that individual, there has to be, obviously, either knowledgeable consent, or there has to be the imposition of sufficient public authority.

However, it should be an administrative duty for the courts to try to work informally as much as possible, too.

It might well be all of these referrals to a State youth service agency, for example, should come through the court, whether there be a record made or not. The court should actually see that individual and consent or acquiesce to the referral of that individual to the supervisory agency. The court, of course, if told to do so, could relegate the individual to a court of general jurisdiction, where the individual would be tried for the commission of a serious crime as an adult; or the court could simply say, "I think this is a case where we should try to rehabilitate the individual and see if we can do something in that direction."

But the important thing is that we should give to these young people who have fallen into crime some sort of care, some sort of attention, and some sort of help that will aid them into taking a course in life that will lead them away from the commission of crime, instead of making them hardened criminals.

I find in these programs, such as are being administered in Massachusetts and Florida, and I understand in California, the provision of assistance to young people that they didn't otherwise have. For example, you take a boy out of a ghetto home, that kind of an environment, who turns to crime because of parental neglect, because of bad

conditions that prevail there, bad conditions he has among his associates, and then a wise judge, as my colleague said, permits him to be referred to an able, adequately funded, and knowledgeable service program for youths. That boy in a little while might be enjoying recreational opportunities, a new kind of environment, new associations, a new inspiration that he never knew before. He has access to a world of which he has not been a part.

We heard yesterday from Florida's youth services director, Mr. Keller. He told about some of these plans. They have "Operation Wilderness" where a lot of these boys go into a wild area, and camp, boat, and they talk and do one thing and another. They have an interesting and exciting experience, the kind of things boys like to do. It is an adventure for them. It is stimulating them to a new kind of life.

We saw five young individuals, two boys and three girls, here at that table this week, who are in a new Massachusetts program. Those youths were looking at life entirely different. One girl now wants to be a counselor in one of the youth services organizations. A boy, who had been on drugs, had a smile on his face and had quit drugs, and was now going to work and looking forward to going into the Marine Corps. Every one of them said they had gotten a new outlook on life, a new feeling about life, a new sense of its importance to what it could mean to them to live different; a better type of life as we call it.

I know in the Miami area, until relatively recently, we didn't have these progressive programs. Boys and girls were locked up in a dirty jail, crowded in with one or another, or into a youth corps or youth camp, and it was degrading to them rather than uplifting and stimulating.

What I hope you are going to do, Dr. Sarri and Mr. Isenstadt, and all of you who worked together, is to advise the country as to what you find from your inquiries is the best and most effective program. I hope that you recommend that the Federal Government should have a larger share in these programs.

The Massachusetts youth program was made possible by a $2 million grant from LEAA. That is one of the best things I have heard of LEAA doing. I wish they had done more of that, rather than putting a lot of money in brick and mortar or certain kinds of capital equipment as they have done in the past.

But I personally think that we can find—either an agency consisting of personnel from HEW and from Justice—a Federal agency to evaluate the State plans. I personally think that the Federal Government ought to make funds available to the States that submit a program which shows that they are going to improve their situation materially. I don't favor large institutions. I think all large institutions ought to be discontinued. I like the home programs they told us about here, where they put them in private homes, small institutions, and facilities where they pay somebody to look after them and supervise them, rather than building a big building.

You said some States are spending as much as $36,000 per child. Look at what you could do with the $36,000. As one of the witnesses pointed out, you could pay people so much a week in foster homes, you could provide clothes and other things for them.

It seems to me that you can perform a very valuable service, and I am pleased that you had Federal aid in your program. But don't be too hesitant to advise the public what you think is best.

I wonder if you would care to make a general observation, as to what are your conclusions so far, from examining the systems in 16 States. If this were a congressional committee that had authority to give approval to a Federal program, what would you tell us, if you were writing the law you think, in the light of your investigation, would be best?

Dr. Sarri. Our observations would be in agreement with your observations about the value of diverse small-community programs located close to the home and the community of the youngster who is a target of the intervention, so that it can be adapted to the very different cultural needs. If there is a possibility of rebuilding family relationships, school relationships, employment, et cetera, that these can be built when they are contiguous to each other. Certainly, it seems to me, that pattern is to be supported. It certainly looks, from the information we have available, it is viable.

It is also desirable this be encouraged under various types of private as well as public auspices. While we want to be sure the public participates in decisionmaking when we are making status changes so that due process rights of individuals are protected, this does not mean the service cannot be provided through the private, voluntary, and full range of different types of organizational structures and models. I think that is to be encouraged.

Chairman Pepper. Do you also agree it is desirable to have overall authority and supervision by a State agency?

Dr. Sarri. Yes, so there is accountability and there is direction, support, encouragement. I think that is essential.

Mr. Isenstadt. But that a private agency not be in any way penalized by the nature of its auspices in terms of receipt of funds for innovative and new programs?

Chairman Pepper. Certainly not. I think it was the Massachusetts plan where they will pay a private agency and are glad to get them. They say private people will respond if you pay them a reasonable price.

Dr. Sarri. Some of the most innovative programs have taken youngsters who have been in correctional facilities for long periods of time, so-called hardened juvenile delinquents, and have, in very creative ways, worked very effectively with these youngsters in the problems of reintegration. Some of those problems are some of the most difficult. These again have been small-community programs. They have been able to handle the whole operation in ways that were seldom done in the past.

Chairman Pepper. The correctional system we are talking about, whether court or administrative institutions, nevertheless we are taking what society has pushed into them, as it were. They come from the schools, where they have been guilty of derelict conduct; they come from the community, where they were dropouts, where they have been guilty of criminal conduct. In other words, we don't get any chance to keep them from coming there. The correctional system has to take what they can get, like the penal institutions.

Has your study made any inquiry into what you could recommend to keep young people from getting in a career of crime that is not now being done?

Dr. Sarri. We talked a little bit earlier about diversionary programs and I think that this is a way of really stopping the inevitable delinquent career at a very early point. Because what very frequently happens, if there is an apprehension for some kind of mild misbehavior, school truancy, incorrigibility, and so on, the individual is socialized into a delinquent career because of associations he makes. There can be diversion through the provision of services to such youth rather than just judicial processing.

Chairman Pepper. How about the schools? What can the schools do to prevent crimes among young people?

Dr. Sarri. Well, one of the things that can obviously happen, modification of school disciplinary procedures that are operative in some communities whereby, if a youngster is caught smoking, he is suspended from school for a week, and such action starts a kind of problem for him. If there can be ways in which indefinite suspension of 9-, 10-, 11-year-olds from schools can be prohibited, then I think you want to climb that way.

Chairman Pepper. You are saying it would be desirable to have effective programs in the schools to deal with those who begin to indicate tendencies toward delinquency?

Dr. Sarri. Inevitably, a lot of the problems have to be solved in the family and the school sector if we are going to prevent crime. It is not by apprehending criminals or delinquents that we will really reduce the crime, but rather by getting at the problems that exist in the neighborhood and trying to see these kinds of problems are solved.

Chairman Pepper. Take, for example, the boy or girl who is about to become a dropout. Once that boy or girl becomes a school dropout, he is a pretty likely candidate for the juvenile court and correctional system, isn't he?

Dr. Sarri. Yes. The research there is really quite clear. It really indicates that is what really happens to a substantial number.

Mr. Isenstadt. He is continually confined.

Chairman Pepper. There is one of the last chances to save a boy or girl from the criminal system—if you can do something at that time to find out why that boy or girl drops out of school, what is responsible for his not keeping up with the class, why they are not enjoying the school. Is it the curriculum, is it some sort of defeat that they have?

Dr. Sarri. There is one other area which we haven't really looked at in this society, and that is employment opportunity, work opportunity for adolescents. There is a good deal of research that indicates there is a very strong relationship between unemployment and crime, particularly the adolescent.

Chairman Pepper. They would work part time and particularly summer involvement for a lot of the young people. You think that would probably reduce their getting into crime?

Dr. Sarri. It appears so, particularly for those crimes that might be called utilitarian crimes, such as theft. I am not saying violent crime against a person is likely to be prohibted by employment opportunities, but much of the crime is theft and robbery. This could be reduced by more employment opportunities.

Chairman PEPPER. I want to ask you one last question. How do you evaluate the importance of dealing effectivety, if possible, with the problem of juvenile crime or juvenile delinquency in relation to the overall crime problem?

Dr. SARRI. The problem of juvenile crime? I think it is at least as important as the adult crime problem. In many ways more important, because these are young people who are going to live in the society for 40, 50, or 60 years, and we would like to think they can contribute meaningfully to the society.

Chairman PEPPER. Thank you. You have given us very valuable testimony.

Mr. Rangel.

Mr. RANGEL. No questions. Thank you, Mr. Chairman.

Chairman PEPPER. Dr. Sarri, we want to thank you and Mr. Isenstadt very warmly for your coming here today and giving us the benefit of these very valuable studies you made. Thank you very much.

[The following was received for the record from Dr. Sarri:]

[Excerpt from NAJC "Sampling Plans and Reults," March 1973]

SELECTION OF STATES

The discussion of this and all following selection stages is developed in accordance with the topics introduced above, namely, (1) the definition of the population to be sampled, (2) the substantive requirements of the selection procedure, and (3) the computation of the sampling probabilities or the actual sampling strategy.

DEFINITION OF THE POPULATION

All 50 states constitute the population for the selection of states, thereby excluding the District of Columbia and the U.S. territories from the sampling. These are sufficiently different from the rest of the nation as to justify their exclusion at this point in time; if the resources of the project are sufficient, they will be considered at a later phase.

SUBSTANTIVE SELECTION REQUIREMENTS

The following requirements were stipulated by the RDS for the selection of states in accordance with the substantive orientation of the project as a whole:

(1) Select each state proportional to its population 5–17 years of age.

(2) Select at least three states from each census region of the U.S. (because of overspecification in the RDS [p. 69] this criterion had to be relaxed from four to three states).

(3) Organize the states according to their change in admission rates of 5–17 year olds to public institutions for delinquents and select a specified number of states from those with increasing, neutral, and decreasing rates of change (see below).

(4) Classify the states according to their juvenile justice systems and select a specified number from each type.

(5) Sixteen out of the 50 states are to be selected. Requirements (3) and (4) above call for some explanation.

Control for Change in Admission Rates

The reason for employing admission rate changes to public institutions for delinquents for sampling purposes has been elaborated in the RDS and merits repetition at this juncture. Focusing on admission rates has several important advantages:

> It can be drawn from the most reliable data already available; it provides the best single indicator of state-wide practices; and it encourages attention to questions of both *diversion from* the justice system, and *alternatives to* incarceration—both highly salient issues in policy and program planning. Reliance on admission rates avoids the problems associated with using the less reliable and more volatile police arrest or court processing

statistics. State admission rates tend to absorb both state-level and local-level (county or municipal) processes because in all but a few situations state funds are, directly or indirectly, the predominant resource supporting institutionalization costs—including those of most private facilities handling delinquents. Although the delinquent youths committed to institutions typically constitute only a minority of all those involved in juvenile corrections operations, each state's volume of institutional admissions serves both as a constraint on (or stimulus to) prior stages in juvenile processing and as a precondition to most aftercare services. (RDS, p. 66)

The rates of change were computed for the years 1966–1971 and are based on public documents. The admissions during fiscal year 1965–1966 were obtained from the U.S. Children's Bureau publication, *Statistics on Public Institutions for Delinquent Children: 1966* (Washington, D.C.: U.S. Government Printing Office, 1967; admissions during fiscal year 1970–1971 were obtained from prepublication results of the LEAA-sponsored, U.S. Census Bureau study, "Juvenile Detention and Correctional Facilities Census." The same questions as were used in this mailed questionnaire completed by every institution were used in the 1966 Children's Bureau study. As with 1966, separate data were obtained for each institution. The rates were computed per 10,000 youths 5–17 years of age. The significance of this statistic is spelled out in the RDS as follows:

> In states with *increased* institutional commitment rates it would be desirable to find out whether there have been corollary increases in the use of alternative correctional programs, how institutions have been expanded or adapted to accommodate larger numbers, and how the greater costs have been supported. In the states with *decreased* institutional admission rates we will be even more interested in how offenders are being handled through non-institutional programs, whether and how juveniles are being diverted away from the corrections system, whether expenditures have also decreased, and how costs compare with states that have increased admissions. In the states showing *no rate-change*, it would be desirable to examine how the patterns have been stabilized, the consequences for other units within the juvenile justice systems, and how their costs compare with the other categories. Aside from what can be learned about these questions through direct study of sample service units, we will be constrained to rely on state reports and available data since the project has insufficient resources to collect full-scale information about these state patterns. (pp. 67–68.)

These rates were found to vary from +15.96 to −12.14 per 10,000 youths 5–17 years of age over the years 1966 to 1971. Using rates instead of absolute numbers is better in studying the occurrence of an event across different populations because rates are standardized for different sized populations. However, rates of change are a somewhat more complex statistic and hence more open to misinterpretation. These rate changes must be read properly; they do not indicate the absolute frequency of institutionalizing juveniles but only the direction and relative velocity of change during the past five years. Indeed smaller numbers may conceal a more conservative attitude than do larger ones—it all depends upon where a state was in 1967. In order to determine the most appropriate cutting points to form strata of states with decreasing, neutral, and increasing admission rate changes, three different sets of states were formed by choosing ±2.0, ±1.5, and ±1.0 as partition criteria, respectively. Three samples were then selected in order to study the effect of choosing different cutting points.

As soon as these three samples were selected a battery of distributions of relevant variables (sex, race, degree of urbanization, etc.) were run in order to compare the similarity of the three samples with the nation as a whole. *Only* these distributions and *not* the names of the selected states in the three samples were submitted to the senior research staff in order to determine the most appropriate cutting points. On this basis it was decided that ±1.5 would produce the most desirable set of sampling states. Hence states with an admission rate change of +1.5 or larger constitute the stratum with increasing rate changes, those between +1.5 and −1.5 are called neutral, and those with −1.5 or less make up the stratum of states with decreasing rate changes. Table 1 displays the changes in admission rates stratified into increasing, neutral, and decreasing strata. Six, two and eight states were to be selected from the increasing, neutral, and decreasing stratum, respectively.

TABLE 1.—*Rank order of States by changes in rate of admissions to State juvenile correction institutions, 1966–71*

	Rate change
Increasing:	
Alaska	15.96
Delaware	9.81
Rhode Island	5.49
Nevada	4.87
Arkansas	4.49
Mississippi	2.81
Wisconsin	2.76
Tennessee	2.74
Alabama	2.49
Georgia	2.19
Ohio	2.12
New Hampshire	2.12
Maine	2.05
North Dakota	1.67
Pennsylvania	1.61
Neutral:	
Wyoming	1.26
North Carolina	1.25
South Dakota	1.20
Idaho	.77
Michigan	.26
Florida	.22
Connecticut	.17
Kansas	−.29
Vermont	−.65
Missouri	−.67
Indiana	−.77
West Virginia	−1.26
Kentucky	−1.34
Texas	−1.34
Virginia	−1.36
Decreasing:	
California	−2.22
Washington	−2.30
Nebraska	−2.31
New Mexico	−2.82
Iowa	−3.28
Oklahoma	−3.33
New York	−3.36
Arizona	−3.56
Minnesota	−3.79

Control for Justice Systems Types

The need for controlling the sample selection by means of justice system structures becomes apparent as soon as it is realized that these structures and their component units are not similarly distributed or ordered among the states. It is therefore important to examine whether administrative patterns resulting from different structures influence the operations of direct-service units. Extensive literature review suggests that controlling for the degree of consolidation of juvenile justice systems with *other* service agencies (e.g., with agencies for adult offenders or with agencies serving the mentally ill), and for the degree of centralization of probation, would help us to study the effect of this critically important systemic variable.

Centralization of probation and consolidation of the juvenile justice system were defined as follows: Probation services are considered to be centralized if there is a single state agency which is given complete or partial responsibility for administering these services. In most states this is not a clear either-or situation, rather it is by "central tendency" that we code each state in such a dichotomous fashion. On the other hand, a state's institutional and aftercare services are considered to be functionally consolidated if these services for juveniles are administered by an agency that also administers other juvenile services (e.g., Children In Need of Supervision [CHINS] or mentally retarded, etc.) or services for adults or some combination thereof. Consolidation and centralization are by no means the only two criteria available for assessing the administrative patterns of juvenile justice systems, but they are believed to be of importance in studying organizational effectiveness and efficiency. They are not only in the theoretical mainstream of organizational analysis but also lend themselves reasonably well to operationalization and measurement prior to field entry. Table 2 presents the typology of states resulting from crosstabulating consolidation of the juvenile justice system and centralization of probation. It was stipulated that the sample had to be drawn in such a way as to produce at least one state of each type from the above typology. This was accomplished, but recoding after the sample was drawn moved Pennsylvania from cell VIII to cell VII, leaving cell VIII empty.

Given these sampling requirements a sampling strategy had to be chosen that would meet all these requirements and still result in known probabilities. Controlled selection was the obvious choice.

TABLE 2.—DISTRIBUTION OF STATES WITHIN JUVENILE JUSTICE SYSTEM TYPOLOGY

		Consolidation			
	No juvenile plus adult, no juvenile and other	Juvenile and adult, only	Juvenile and other, only	Both juvenile and adult, and juvenile and other	
Centralized probation	I—Alabama, Connecticut, Mississippi, New York, North Carolina.	II—Indiana, Louisiana, Minnesota, New Hampshire, North Dakota, Rhode Island, Tennessee, Vermont, West Virginia, Wyoming.	III—Arkansas, Florida, Georgia, Idaho, Kentucky, Maryland, Oklahoma, Utah, Virginia.	IV—Alaska, Delaware, Maine, Wisconsin.	28
No centralized probation	V—Massachusetts, Missouri, Ohio, South Carolina, Texas.	VI—Arizona, Colorado, Illinois, Montana, Nebraska, New Mexico, South Dakota.	VII—California, Iowa, Kansas, Michigan, Nevada, Oregon, Pennsylvania.	VIII—Hawaii, New Jersey, Washington.	22

SAMPLING STRATEGY

The constraints on the sample outcome were formidable because the three control variables (regional distribution, admission rate change, and juvenile justice system types) generate a 96-cell typology (4 x 3 x 8=96 cells). There are only 50 states to fill this three dimensional typology and only 16 are to be selected. Moreover, each state is to be assigned a probability proportional to its youth population. Finally these proportional probabilities are to be computed for each stratum of admission rate changes in such a way as to assure that 6, 2, and 8 states will be selected from the increasing, neutral, and decreasing stratum of admission rate changes, respectively. States with increasing or decreasing admission rates over the five year period are more densely represented in the sample than states without any significant change in admission rates because we expect to learn more from the former in terms of program planning and policy making. Similarly, states with decreasing admission rate changes appear more informative for NAJC purposes than states with increasing admission rate changes. For this reason the former were favored in the sample composition.

In order to meet all these requirements it was practical to select the states in two steps. The first step took care of the proper distributions across regions and

strata of admission rate changes and produced a set of 40 qualifying states. (Owing to successive subtraction of probability values, 10 states dropped out in the course of this step.) These 40 states were then used as input into the second step which resulted in the selection of the final 16 states properly distributed within the juvenile justice system typology.

This procedure is rather tedious and time-consuming but nevertheless straightforward. An example may be helpful: Each state starts out with a probability proportional to its youth population 5–17 years of age, controlled for its position on the admission rate change variable.[1] North Carolina, for instance, is a "neutral state" (i.e., $<|1.5|$ rate change per 10,000 for 1966–1971) and qualified for the second step. It had a probability of .314 of falling into the final selection. A series of samples—each consisting of 16 states and meeting all constraints—were drawn in such a way that each state appeared in the series as many times as was necessary to account for its entire probability value. Thus North Carolina showed up in .314 samples of the series and failed to do so in .686 samples of the series. But since a state as an indivisible entity at this stage either shows up in a a specific sample or fails to do so, it is necessary to allocate to each sample in the series a probability which would determine its chances of being selected as the final sample. Thus if the first sample of 16 states in the series is given a probability value of, say, .094, all states that belong to this specific sample had their original probability reduced by .094, whereas nothing was discounted from the probabilities of those states that did not appear in that specific sample. If North Carolina fell into the sample, its new probability would then be .314—.094=.220. This process was continued until the probability values of all 40 states reached .000. Thirty-five samples were necessary to use up all original probabilities. And all of these 35 samples met all the requirements specified above. The probabilities of these 35 samples were then used to form a cumulative frequency distribution ranging from .000 to 1.000. Finally a random number between 1 and 1.000 was chosen to determine which of the 35 samples would be chosen as the final selection.[2]

Appropriate officials in all selected states have been contacted and informed about their inclusion in the study in order to gain their full cooperation and participation in the data collection. Also given in Table 3 are the original and the normalized probabilities of each state based on their youth population 5–17 years of age controlled by their position on the admission rate change variable. The probabilities in Table 3 will constitute an ingredient in computing the selection probabilities for the counties and service units to be selected. These probabilities are subsequently used to compute the sampling error, a topic to be discussed later in this paper. Now we turn to the selection of counties—the second sampling stage according to the *Research Design Statement.*

Chairman PEPPER. We will take a 5-minute recess for the reporter.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Mr. Lynch, will you proceed?

Mr. LYNCH. Yes, Mr. Chairman.

Mr. Chairman, the next witness is Dr. Robert Harder, who is the State director of social welfare for the State of Kansas. Dr. Harder holds a doctor of theology degree from Boston University. He was a former member of the Governor's staff in the State of Kansas and served in the State legislature from 1961 to 1967.

Dr. Harder, if you have a statement, would you give it at this time?

---

[1] The probabilities were separately computed for each stratum of admission rate changes by dividing the youth population of that state by the youth population of all the states falling into that stratum and multiplying this value by the number of selections to be made from that stratum. The 1970 population in each state between ages 5–17 was obtained from the U.S. Census publication *General Population Characteristics: Final Report*, PC(1)–B.

[2] For greater detail see Leslie Kish, *Survey Sampling* (New York: John Wiley & Sons, Inc., 1965), pp. 488–495.

STATEMENT OF DR. ROBERT HARDER, DIRECTOR, STATE DEPARTMENT OF SOCIAL WELFARE, TOPEKA, KANS.

Dr. HARDER. Thank you very much for the opportunity of being here this afternoon. I have prepared a statement and I will not read it. I am submitting it as a part of our total report from Kansas.

Chairman PEPPER. Without objection, Dr. Harder's statement will be incorporated in the record.

[Dr. Harder's prepared statement will appear at the end of his testimony.]

Dr. HARDER. What I would like to do is summarize basically what is in that report. Kansas is a small State. We have an overall population of about 2.3 million, so some of these things I am talking about this afternoon related to Kansas would not necessarily be appropriate to many of the other States throughout the country.

Over the last 5 or 6 years, there has been a great deal of concern in Kansas about how you work with the older delinquent.

Chairman PEPPER. Excuse me. You have a good State, although it might be a small State. You certainly have a fine Governor. He is a good friend of mine.

Dr. HARDER. Thank you.

Mr. Chairman, another gentleman you may know is Mr. John Montgomery.

Chairman PEPPER. Yes, sir; a great pleasure. One of the dearest friends I have. You took him away from Florida.

Dr. HARDER. He has made a valuable contribution to our State.

In Kansas over the last 5 or 6 years there has been a great deal of discussion about how you work with 15-, 16-, and 17-year-olds. In many ways the question is not resolved. It is a question not dissimilar from many other States.

In the recent session of the legislature, after a year's study, a legislative interim committee reported out that the State of Kansas, while it had previously embarked on the idea of building 10 regional detention facilities—each facility accommodating approximately 50 boys—was to start immediate construction on 3 of those 10 facilities at an overall cost in excess of $3 billion, the interim committee made a recommendation that construction be held in abeyance. Instructions were given to the State board of social welfare to develop a plan that would emphasize the use of the community-based homes and, additionally, there would be some type of research evaluation program conducted at the same time in the interest of the legislature and the Governor having some material out of which they could make a policy decision.

Chairman PEPPER. I certainly want to commend your State upon that wise decision.

Dr. HARDER. Thank you, sir. I will convey that back to the proper people.

Additionally, when all of this was moving through the legislative mill, at the same time the Governor submitted a reorganization order, the first under a new constitutional amendment, to reorganize the State board of social welfare into a secretary position, and the secretary will have overall responsibility for the programs of vocational re-

habilitation, the social welfare, and hospitals and institutions, which additionally covers the juvenile facilities for delinquent boys and girls.

So that became a second important piece of our overall design, because it opened up the door to general planning.

The third legislative thing that happened was that the legislature and the Governor agreed to State administration and State financing of the welfare program. So this gave us a first opportunity to divide the State of Kansas into regions and operate our welfare program, our social service program, on a basis other than 105 counties.

That is the background against which we are presently operating.

I will be talking with you about really a philosophy we want to promulgate within our State. We hope we can get it transmitted out to all of the regions so we have people thinking along the same lines.

When we turn our attention to the juvenile, we have certain goals in mind. I should add that in Kansas at least some of us think that, while we talk about this kind of a goal or program in relation to the juvenile, we think it is also appropriate to the mentally retarded, and a person with a mental illness.

What we want to do is to insure that: No person is lost in the shuffle; each person achieving to his highest potential; a continuum of care—to which I will return—progressive steps; and hopefully the return of the individual to independence.

In the past there has been too much warehousing of people. When governmental agencies get involved in some of the social problems we face, one solution that often comes up is let's build a building and put the people in a building. The minute you build the building and put the people in, either juveniles, mentally retarded, mentally ill, it also means that society in many ways is excusing itself from that particular problem. The youth population coming up in Kansas and across the Nation is too great, the problems are too severe; we cannot possibly build institutions fast enough to cope with the problem. We are of the opinion an alternative strategy has to be developed.

When we talk about a continuum of care, we mean progressive steps of care leading to independence. We think a lot of this happens now, but it happens on a potluck or a chance basis. With the legislative background we have, we think we now have the door opened to us to really develop a total kind of concept to provide care, not only to the child or youth in trouble, we have a concept here we think will provide care also to the mentally retarded and to the mentally ill.

The earlier witness mentioned at times the mentally retarded get mixed in with the juvenile delinquent. We think under this kind of system there will be an opportunity for the right kind of diagnosis, so if a child is mentally retarded we won't run the risk of that child ending up in a delinquency-type facility.

What we have starting at point A is a "call for help." The call for help may come in a variety of ways. Maybe it is a kid in school that has lost interest in school. We view that as a call for help. A school official would pick up that call. He would get in touch with other people within the community to work with the child at an early age.

From the standpoint of intervention, we would first place emphasis upon support to the family.

We don't think the kid should be jerked out of the home as a first piece of governmental intervention. We think there should be

an effort made to provide support to the family in the interest of trying to keep the child in the home. If you look at it just from an economic standpoint, the cheapest place to rehabilitate people is still within their own home. That is part of the philosophy that is involved here.

If that doesn't work, the next point would be foster care, outpatient care, depending on what kind of problem we had. We think there are many instances when the child simply can't make it in the home. Maybe it is a situation where there are eight kids in the home, perhaps the mother and the father can cope with four of those kids, but they need some relief with the other four. We would see boarding care for the four kids temporarily.

Maybe there are other instances when the kids have to be taken out completely. That would be the next step in our continuum. If that doesn't work, we move to step D, and we talk in terms of small group homes. This is the kind of philosophy that is not new in Kansas. We have used the community-based home for the last 20 to 25 years. We have felt all along that there should be a delicate blend of many kinds of resources, and that there should not be an overemphasis of one against the other. Granted, at one time too much attention was directed toward detention facilities, but at least they are not being built at the present time.

Then step E, if necessary, institutionalization. We think there are boys and girls who have certain kinds of behavioral problems that simply can't be handled with any small group setting of this sort. They would be too disruptive. There is the chance of them being harmed or harming someone else. In those situations we would see them going into what we call in our State the Girls' Industrial School and the Boys' Industrial School; the girls' school, with fewer than a hundred capacity, the boys' school running about 195.

In Kansas we have not had to face the problem of shutting down large institutions, we simply never had them in Kansas. Our problem now is to make sure our services blend together in a continuum, so we get people fitted into the right place at the right time.

Then we would say at point E, after the behavior has stabilized, return the same route; institutionalization, and perhaps into some kind of sheltered living, outpatient care support and then independence. If we are really going to cope with the youthful population, we really have to think in terms of many of these kids getting to some point of independence. We cannot develop a public policy of an increasing number of kids now in some way dependent upon government as their means of existence. It is of critical importance that we keep that idea in mind in the interest of getting the kids out of institutions, out of the community-based homes, and away from even having to have some support from a mental health center or a social worker.

How do we see all of this happening? Another way of diagraming our continuum of care would be as follows: While it looks like a kind of a jumble, we think it is all significant. We start with the home. Perhaps there is some breakdown in the home; there is an entree here to community service programs. There is an entree to the school, because certainly, in all efforts, we would emphasize the importance of staying in school. If the problems get severe, juvenile court and the welfare departments stand ready to provide certain kinds of services.

Perhaps at this point, it is determined they need some additional help; foster parents, group homes, or in some instances, institutional care.

Let me emphasize, in this kind of a concept if it is going to succeed it is going to succeed because we made it work at the community level.

We are interested in the deemphasizing of a State agency. We think a State agency has to have overall responsibility, they have to provide supervision, they have to provide guidelines for the kinds of programs we want to carry out, but we don't think the State department of social welfare in its services to children and youth should be running community-based programs.

Chairman Pepper. How about the division of funds that are made possible in the programs. How much of that is State and how much is local?

Dr. Harder. We think it is important to blend all of the kinds of financial resources available to us. LEAA helps in funding some of our community-based homes. They provide some seed money, some bloc grants, to help purchase a home and to do some early staffing so they can get up and get going.

Then through services to youth in the State welfare department, we start purchasing service on a youth-by-youth basis, so the home can start counting on continued support. We are paying from $310 to $450 a month, depending on the kind of program and the kind of facility.

Additionally, in our services to children and youth, there is a certain part of the money that comes from aid to dependent children for foster care. So the Federal Government is involved in financing that part of it. Also, through title IV–B of the Social Security Act, direct child welfare services, another piece of money is made available, and we use it in purchasing some of the boarding home and group care which we are talking about in this kind of plan.

I brought this map along to indicate to you, while presently we have 105 counties, with the passage of the State administration of the welfare program, we will be dividing the State into six regions, as you see on this particular map. Within each region we will have at least one person on the regional staff who will be a specialist in services to children and youth. His responsibility will be to work with the schools, juvenile courts, and with other agencies that are involved with kids in the interest of developing some kind of a regional concept for providing services within these geographic areas.

In the larger population areas, which would be Wichita, Topeka, Kansas City, or Johnson County, we obviously will have more than one staff person. The function of that regional person will be to coordinate the resources. Additionally, we see with this kind of a concept and with great variances in population, through a regional concept we can blend our resources together.

Under our concept, we would see several counties going together to establish a community-based home or service. Then the kids from those particular counties would have that as a resource; the juvenile judges would have it as a resource; and the social workers would have it as a resource. We think there is merit in this kind of a concept.

With that kind of opening statement, I will stop. If you have questions, I will be glad to answer them.

Mr. LYNCH. Dr. Harder, what in your judgment is the appropriate role of a State government in the area of juvenile delinquency and, indeed, in the larger area of youth services in general?

Dr. HARDER. I think the State government's responsibility is to do overall planning, to do monitoring, to run program surveillance, to stand accountable for actions being taken that are department actions. It has the responsibility for helping communities finance the kind of projects talked about earlier.

I don't think it ought to run community-based homes. I think it has the responsibility to have the backup facilities, the State institutions, the boys' industrial schools, the girls' industrial schools. I don't think that is an individual community responsibility, because it provides a service to all kids regardless of where they are in the State. Anything below that, the State has a supervising and monitoring responsibility.

Mr. LYNCH. The first item that you listed was the responsibility for planning. Do you in the State of Kansas actively engage in long-range planning, vis-a-vis the juvenile justice system? If so, what long-range plans do you have?

Dr. HARDER. It would be misleading for me to say we do long-range planning at the present time. We think the legislation as now passed and with the vehicles available to us through this kind of legislation, have the mechanism for doing some long-range planning. We have a good and close working relationship with the Governor's Committee on Criminal Administration.

Mr. LYNCH. That is the State law enforcement planning agency?

Dr. HARDER. That is right.

Mr. LYNCH. Is your department represented on the governing board of that agency?

Dr. HARDER. We are represented on the committee that deals with juvenile programs. We are not on the governing body.

Mr. LYNCH. But you do have an input on juvenile matters into the State plan itself?

Dr. HARDER. That is correct.

Mr. LYNCH. Could you tell us what in your judgment is the relative cost of providing intensive social services of various kinds to kids in community-based facilities? Is that terribly expensive?

Dr. HARDER. In the homes that we are talking about sometimes we will spend $4,000 to $5,000 a year in maintaining a child in that kind of a facility. In contrast, if the boy or girl finally ends up at the boys' industrial school or girls' industrial school, our expected expenditures there would be between $9,000 or $10,000 a year.

Mr. LYNCH. So it is probably half of the cost of institutionalization?

Dr. HARDER. That is correct. Of course, another phase that we will be emphasizing under our new State administration, will be placing more emphasis upon working with the kids in their home communities, even apart from their getting involved in the community-based home.

Mr. LYNCH. You indicated the cost is approximately half. How about the level of effectiveness? Have you been able to make a judgment as to how well the homes do as compared to institutionalization?

Dr. HARDER. No; we have not done any kind of systematic study in that area. We have asked the legislature for $15,000 to do evaluation on the group home concept. If that is approved, we will have $15,000 to do a systematic job of evaluating a sample of kids in different kinds

of facilities and then reporting back to the Governor and to the legislature our findings.

As I understand it, Achievement Place, who you will hear from this afternoon, has done fairly systematic studies on work in one given facility. We don't have anything at the present time on a statewide basis.

Mr. LYNCH. But it is your intention to get that data eventually?

Dr. HARDER. Yes; we don't think we can go back to the legislature apart from giving them hard information as to cost and effectiveness.

Mr. LYNCH. You also indicated, in describing what the appropriate role of State government was in this area, the task of coordinating, if you will, monitoring programs. In your judgment can a number of public and private agencies perform services for juveniles on a cooperative and effective basis?

Dr. HARDER. Yes. We are not completely happy with the mechanism we have in Kansas at the present time, but in view of the fact we have some 40 homes in operation and these are run by either community groups or by private agencies, we think it is testimony to the fact that it can be done. We don't think it has been planned out well enough. We don't think the linkages have been made as they should have been made; but we think it is possible.

Mr. LYNCH. I find your concept of the continuum of care, which is the term you used to describe it, an interesting one. Is that something that could be easily adapted to other States?

Dr. HARDER. I think it could be adapted to other States if they set their minds to wanting to do it. It can be adapted to different kinds of problems we have to work with in this whole area of social programs. One of the great faults we have had in the past, those of us who have worked in the area of social services, is that we have not put together a good system; and because we haven't, we have been accused of being tenderhearted and softminded. In the plan under discussion, the basic data would be on a computer tape. By this means we can start to keep track of the people who are calling for social services in the State of Kansas.

Our overall goal would be to hook in all of the kinds of services; mental health, mental retardation, the juveniles involved in the juvenile justice system, and the predelinquent. We hope to have the system develop in such a way that when a person—child, youth, adult—comes to make an inquiry at a welfare office or school, a query could be made into a central data bank and a printout made available on that particular individual.

Mr. LYNCH. How many detention facilities does the State presently operate for juveniles?

Dr. HARDER. We presently operate the Boys' Industrial School and Girls' Industrial School. The Boys' Industrial School has a capacity of approximately 195. The Girls' Industrial School has a capacity of approximately 98. We have what we call an "annex" that is actually under the management of the Boys' Industrial School, and it accommodates approximately 80 boys. These are boys that it is deemed there has been enough work with them, that they can participate in the local schools. Additionally, we have a Kansas Children's Receiving Home which accommodates 30. We have 50 beds set aside at two of our hospitals to work with the mentally ill individual. Then at

our vocational rehabilitation center, we have 19 beds. These are devoted to boys who have had some kind of preliminary contact with the juvenile courts. So it is a total of about 475 beds that are actually available.

Mr. LYNCH. Would those 400 juveniles be better served if they were in small group homes located throughout the State?

Dr. HARDER. No; we think that this is the complement to the community-based home. Until we can get the concept I have tried to outline here really functioning in a total way, I would view the necessity of the State to be involved in these kinds of programs on a continuing basis.

As we become more effective in working with kids in their homes, conceivably we might be able to cut down on some of the beds we are listing here. But in the next 2 to 3 years, I don't think it is realistic to eliminate beds. They are necessary as a backup.

Mr. LYNCH. Why do you not want the State to operate the community-based homes?

Dr. HARDER. If the State moves in to operate the community-based homes, we are letting the community off the hook. They will feel the State has assumed that responsibility. The interest and the concern for the kids will lessen. In the overall we will all be put at a disadvantage. The community-based home is going to function only if it is really and genuinely a community facility. It has to have enough acceptance in the community so the kids can go to school in the community. It has to have enough acceptance so the kids can go to the swimming pool, the public library, and the list goes on and on.

I think the minute the State takes on that responsibility you lessen the chance of that kind of acceptance in the community.

Our second important point, is that from the standpoint of the resolution of the problems related to kids, it seems to me the community-based home is one dramatic physical way of saying that we have got some problems in this community related to kids and that is why that home is there. It helps to focus attention on the fact we have some kids in trouble who need the adult help of people within that community.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Mr. McDonald, do you have any questions?

Mr. MCDONALD. Yes, thank you, Mr. Chairman.

Dr. Harder, could you explain to us what kind of programs go on at the industrial schools?

Dr. HARDER. The industrial schools are pretty much self-contained. They have their own separate schools offering a full curriculum, so the boy or the girl, if he stays that long, would have enough credit to graduate from high school. Or, if he is there for a short time, he can take courses in the school and credit can be transferred to another high school in the State of Kansas.

Additionally, there is some effort at both the boys' industrial school and girls' industrial school for vocational-type programs. But this has limited impact.

Mr. MCDONALD. These facilities are secure though? The juveniles can't enter and leave as they please?

Dr. HARDER. No. There are no walls, no fences. There never has been.

Chairman PEPPER. You mean in your State institutions you don't have them boxed in?

Dr. HARDER. No. There is a fence like there is a fence around a farmyard, but there is not a high fence, a retaining fence.

Mr. MCDONALD. What do you do then for people you want to keep locked up? Where do they go?

Dr. HARDER. At the Boys' Industrial School there is a security cottage.

Mr. MCDONALD. Approximately how many youths are there?

Dr. HARDER. I am sorry, I don't recall right off hand.

Mr. MCDONALD. Percentagewise.

Dr. HARDER. I have been in it. My guess is it would be fewer than 25 out of the 195.

Mr. MCDONALD. One more question. At the industrial school, is it an indeterminate sentence there where they just stay there until you feel they are ready to go back down into one of the other programs?

Dr. HARDER. That is correct.

Mr. MCDONALD. I have no further questions, Mr. Chairman.

Chairman PEPPER. Dr. Harder, do you have the juvenile court to refer young people into the system?

Dr. HARDER. Yes. There is a close working relationship, generally between the juvenile court and the whole welfare department. The juvenile code in Kansas is written so the juvenile court has the judicial responsibility. We have the case history and the social workup responsibility. At times there are tensions, understandably so. But I think increasingly we are getting those tensions worked out. I think one of the serious problems in the whole area of juvenile justice is that we have juvenile judges who are not trained as attorneys. Because of that, I think there are times the judges make improper decisions. Additionally, in the past we have not had any kind of a total concept. If the courts, and other social service agencies and community services are going to be used effectively, we have to develop more of a team approach than we have in the past.

Chairman PEPPER. Undoubtedly, your legislature will give consideration as to whether or not juvenile judges should be attorneys.

Dr. HARDER. Yes. I think in the future, as we move to more of a regional concept in the State, this opens the door to have trained attorneys serving as juvenile judges on a regional basis.

Chairman PEPPER. If a youth has committed some crime or serious offense and comes within the jurisdiction of the juvenile judge, does the juvenile judge impose a sentence upon that individual, or refer that individual to the social welfare department and youth service to have custody and to release or recommend a release of that individual when they think it is proper to do so?

Dr. HARDER. It works both ways. They have the option to use either device. We increasingly are saying to them that we can do a better job of working with the kids if we are brought in early and not on the day the sentence is being made. We are making headway in that whole area. In the instances when we are dealing with nonattorneys, they are less apt to see the importance of social or youth services.

Chairman PEPPER. I think you are quite right in emphasizing the importance of the community in the rendition of the service to the individual. How would you divide the expense of the rendition of the service between the State and the county?

Dr. HARDER. Actually, I would divide it three ways. The Federal Government, through the Social Security Act and LEAA, has a certain responsibility; the State government has a certain responsibility; and there should be a certain amount of local tax effort and united fund money available.

The bulk of the financial responsibility in most instances probably rests with some kind of governmental unit, but I think the community fund, or united fund, has a responsibility for helping the program to get started and to pick up those kids that cannot be picked up by the public welfare department or the social service department.

Chairman PEPPER. You do think the Federal part in this program you speak of should relate only to the inauguration of the program, to enable the State and/or local authorities to inaugurate the program, to get it into operation, or should the Federal function extend beyond that and also provide a deposit of funds to the maintenance and operation part of the program?

Dr. HARDER. I think the Federal responsibility should be a limited responsibility. The same thing I said about States not getting involved in community-based homes, and services is even more true with Federal involvement, although there needs to be a Federal commitment of dollars. There is a Federal responsibility to make information available of the kinds of programs going on over the country.

Additionally, there is a certain responsibility to set forth to the State of various models which have worked. The States can pick and choose, without the Federal Government rigidly saying this is the only way we are going to fund a program in your State.

I think another responsibility that could be a Federal task would be some type of overall program evaluation. There is no need to invent the wheel over and over in the separate States. Program evaluation could be a Federal responsibility, federally funded and federally directed.

There are some other vehicles which are readily available. Under the Social Security Act, IV–B, the money authorization has never been met by appropriations.

That is the money available under "Child welfare" for direct child welfare services. The appropriation is $44 million. The authorization is $196 million. Without any additional legislation being put on the books, the Congress can make additional money available, and in most of the States as I understand it, and that is the money that goes to help maintain community-based homes and to buy foster care. This is a significant step which could be taken tomorrow that would aid immensely in making sure these programs get on down the road and are effective.

The second thing, which should happen—and I don't direct this at the Congress alone—but at the Washington level; if we are really concerned about the kids in the United States, one of the important things that ought to happen in Washington right now is that all of the bad mouthing of the program Aid to Dependent Children ought to stop. Because a lot of the kids we are seeing in these community-based homes are kids that are connected to the welfare department through ADC, or what we call ADC foster care. If Washington is really concerned about the kid population in the United States, if it really wants to talk about rehabilitation, if it really wants to keep these kids in school, then

Washington is long overdue in reorienting itself. Washington must quit bad mouthing the ADC program. It is not only a lot of mothers we are talking about, it is a lot of kids we are talking about.

We are doing our country a great disservice as we continue to beat that drum, simply because it seems to be smart politically. It is going to do harm in the long run to the kids that I assume all of us are interested in.

Chairman PEPPER. One last question: What do you see as the role that the schools might pursue which would tend to diminish the numbers of young people who come into the delinquent or correctional program?

Dr. HARDER. There are two important functions a school needs to assume right away. One is the schools need to look at their curriculum in such a way that they start making determinations as to what the kids need and not simply what is comfortable for the teachers to teach.

The second thing is that schools need to be viewed, and the teachers need to view themselves, as one of the first ports of call. When I had the diagram up, I set aside a "call for help"—I think there are kids that call for help in the first grade or at the kindergarten level. They need help; the teachers know it, and we know it. We don't do an adequate job of making sure those kids sending out messages of help actually get wired into some kind or helping system. We must make every effort to save those kids, instead of pushing them out of school and out on the street.

Chairman PEPPER. I participated in a hearing before the Educational Subcommittee of the House Education and Labor Committee, presided over by the able chairman of that committee, Mr. Perkins of Kentucky, in Miami recently. It was reported by school authorities there from several States that at the present time, under the present funding of programs that we have in operation, only about one out of three of the disadvantaged children who are supposed to be the beneficiaries of title I of the educational program are getting any help. There is not enough money to help but one of three of the children that would be in this disadvantaged class.

When I asked these educators what happens to those disadvantaged children who don't get this effort, they said they are primarily school dropouts.

Now, then, I didn't need to ask them what happened to the school dropouts. We heard here, just this morning, we heard time after time, those school dropouts are the best candidates for juvenile crime and juvenile court. Yet, there is a proposal by the administration to reduce those funds further, make less money available instead of more.

So if we really, as you say, want to do something about these problems, if this country and the Government of the United States and the government of the several States really want to do something about crime, they have got to put the money that needs to be put into the school system into home aid programs, into child care programs, and into programs that have to do with those who are delinquent later on and need to be given an opportunity to be rehabilitated. And, of course, into programs that have to do with rehabilitation of adults, as well.

Dr. HARDER. That is right.

Chairman PEPPER. But what we like to do, as was done here a while ago, is to call for the death penalty. That looks like that is a hard line, that is a hard-nosed public official that really wants to do something about crime—recall the death penalty. We had the death penalty in this country for a long time and it didn't stop crime.

These same people that want to restore the death penalty are taking credit for the reduction of crime, and there hasn't been anybody executed in this country for several years.

Then they come out and want to send some drug pusher to the penitentiary for life, or a very long time. If he would be one of the top fellows, I would be willing to do that. Put him under the jail if you can get him under there, for that matter. But I haven't heard any of these people whose hearts are bleeding for the victims of crime in this country that have talked about more money for the school system, more money for our social service programs, more money for community aid programs, more money for correctional programs, and the like.

It is whether you really want to do something about the problem or whether you just want to make a political upheaval.

Dr. HARDER. While I make a plea for more money, I make it on the basis that the States can demonstrate to the people we have to work with that we can do a job. We can work creatively with the kids. We are willing to be accountable for our actions. In the area of accountability in social services, we have been negligent. I am not in opposition to accountability, that whole concept of accountability.

Chairman PEPPER. Neither am I. Congress has never intended there be an abuse in the use of the money we make available. It is primarily, as I understand it, the job of the States to tighten up the administration of the programs. Let's see every dollar get at least a dollar's worth of good service.

Dr. Harder, there is a rollcall and we have to go. I want to thank you very much for coming. Please give my warmest regards to Governor Docking and my good friend John Montgomery.

[The following material was submitted by Dr. Harder:]

PREPARED STATEMENT OF ROBERT C. HARDER, DIRECTOR, STATE DEPARTMENT OF SOCIAL WELFARE, TOPEKA, KANS.

At times, we find it extremely difficult to work with the young person who does not fit into preconceived molds as to how a child ought to act. He gets labeled a troublemaker, a delinquent, a slow learner, retarded, or many other labels which fit our need for pigeonholing but do very little in the interest of helping the youth. Once we get the young person labeled, then he is properly packaged and we are then in a position to cast him out of the immediate society in which he finds himself. Casting out may seem a harsh way of putting it, but when we think in terms of a stay in some type of facility or institution and then refer to his returning to the community, it seems to me that it presupposes there has been a casting out and entrance into an institution. There are occasions when a young person needs to be removed from his home and his community and it should be done. However, this decision must be made in the interest of his own well-being as well as the community's. I am fearful at times that the casting out strategy becomes our only strategy in working with the youth who may be creating a problem within our society.

Don't get me wrong. I am not going to build a case for saying that youth does no wrong. Neither will I align myself on the side of saying anything goes. In fact, I tend to be fairly firm in some of my own concepts as to discipline, order and responsibility on the part of the youth to his family, to his community and to the total society.

We need to view the behavior of children and youth as well as our expectations of them on a continuum. The continuum would have, on the one side, a complete and total permissive atmosphere, anything goes; the other side of the continuum and at the extreme point would be a philosophy of treat them rough—give them little opportunity for speaking out and for participation in their own destiny. From the standpoint of approach and style, I think both extremes are unacceptable. I would break into the middle of that continuum with a concept of high expectation, demands and responsibility, involvement in decision-making and a genuine concern and care for the humanness of adults and youth.

In Kansas there is a statutory provision providing that the State Board is to develop a child welfare service program and shall administer or supervise child welfare activities including the care and protection of dependent, neglected, defective, illegitimate and delinquent children and children in danger of becoming delinquent. The Board shall cooperate with the federal government, through its appropriate agency or instrumentality, in establishing, extending and strengthening such services and undertake other services to children authorized by law. The State Department of Social Welfare is the designee for carrying out those problems related to the implementation of the interstate compact on juveniles. In the amendment of the juvenile code, it provides that the juvenile judge may call upon the county departments of social welfare to do case histories and assessments in relation to those young people who have been brought to he court's attention. In the 1972 session of the legislature, legislation was enacted providing that the State Department of Social Welfare would be the reporting body and follow-up agency on matters related to child abuse.

The state department is involved in the placement of many of the youths going into the various state institutions. Through the vocational rehabilitation program, the department has a tie to a youth adjustment center at the Kansas Vocational Rehabilitation Center. The department is involved in the joint licensing of boarding homes and day care centers. Increasingly, we are finding that our involvement extends beyond those families who are dependent upon public assistance or those children and youth who are connected to our departments as state wards. In many instances, agencies are serving as broad social service agencies. They are finding themselves being called upon to work in this whole area of programs related to children and youth. Increasingly, we are concerned about doing more than ambulance work. We would like to be in a position to give guidance and leadership in developing prevention type plans in the interest of minimizing the need for institutional, out-of-community, out-of-home care.

At the present time, we are involved in an experimental program in Western Kansas covering nine counties called the Wheatlands project. Through this project, there is an effort to provide additional help to the various educational and social institutions and juvenile courts in the counties in the interest of developing alternatives to the young people becoming actively involved in the judicial system. In Wyandotte County, we are presently working to establish an umbrella-type youth agency whose responsibility will be to coordinate the youth services available in the Wyandotte County area. In both instances, the emphasis in these projects is on coordination, problem solving, anticipation of needs and then developing a strategy to make the best use of the available resources. We want to develop strong, creative and concerned programs for the children and youth in these respective communities.

I have given some philosophy and the statutory mandate under which we operate. Philosophy and laws alone don't solve problems related to children and youth.

Our department has to face the social forces which are calling forth new solutions and new strategies.

Our society is faced with an increase in family breakdown resulting in divorces, separations and desertions and, if there are children involved, then a high probability of children needing help. There is an increase in drug usage. There is an increasing number of youthful offenders. There is an increase in the number of dependency and neglect cases.

Lest we focus too much attention on the youth, we need to remember that the adults in our society play a key role in problem developing and problem solving. There are too many adults who would like to warehouse the kids and keep them out of our society. We think there are serious questions to this approach.

To break forth with new ideas and develop new strategies is the real challenge before us. Barriers must be broken down, gone around and overcome.

In a governmental setting, political opposition to new thrusts, altered approaches, a heightened emphasis can be one of the strong barriers to be overcome.

As you can gather from my earlier remarks, our approach is community based. Such an approach means that we are not going to hide the kids. As far as possible, we want the kids to remain with a community setting. The community is the place where the kid will have to learn how to survive. This approach may well mean community opposition.

Adult neglect is another formidable barrier. For many of us, we think that if we can label and pigeonhole, then we have solved the problem at hand. Wouldn't many of us as adults have to admit that we get wrapped up in our own world of work or boating or fishing or some other leisure activity and we fail to take into account that there are kids all around us who need the help and support which only adults can give?

Your interest and mine is in solutions and strategies.

The State Department of Social Welfare is a governmental body. As such, we operate in an executive, legislative, and political framework. We have to work in concert with key executive and legislative leaders to bring about change.

In Kansas, a legislative study committee reporting to the 1973 Legislature indicated that the appropriating of $3.2 million to build state-operated detention facilities should be delayed.

The Committee is of the opinion that the non-institutional approach may have merit and that it would be in the best interest of the state to delay the construction of additional institutions for juvenile offenders until it can be determined which alternative is the most effective in meeting the needs of the state in the delivery of youth services.

The Committee recommends that pilot community-based treatment projects be established. These projects should be initiated in both urban and rural areas. Pursuant to this recommendation, the State Board of Social Welfare should develop detailed pilot project proposals and submit such proposals to the legislature and to this Committee for consideration. Such proposals should include a complete description of the plan, including staffing patterns, necessary funding, administrative structure and evaluation techniques. In order for a judgment to be made about whether a community-based program does indeed represent a viable alternative to the more traditional institutional approach, the plan should be devised so that some comparisons between community-based programs and institutional programs can be made. Comparative costs and effects on recidivism are the two most critical elements to be considered.

The Office of the Governor, on April 2, 1973, made the following recommendation to the Legislature:

"I recommend that this 1973 Legislature include the pilot project as proposed by the State Department of Social Welfare in the omnibus bill. The proposal provides for two community-based homes, intensive work with a select number of young persons, and a program for evaluation. The proposal requires $202,533 in state funds. The amount of state money is based on the assumption that the state can make use of certain federal funds under the social service provision of the Social Security Act."

In Kansas there is significant executive and legislative support for the concept of community-based homes.

In that we have 42 group homes accommodating approximately 335 youth and 18 group homes accommodating approximately 145 youth, we think there is community support for the concept.

The strategy we see is that of continued community concern.

This continuum would envision that each community would have within its structure a mechanism for, first, giving support to families. The best place to develop healthy and sound kids is in the home. This presupposes the home has stability, has concern, and has an interest in humane treatment. These ingredients within the home do not come automatically nor do they come easily. The various kinds of helping agencies at the local level must give support and help to homes. Then, homes can develop in a positive and creative way which, in turn, will support the kids within the home.

If the home breaks down, the next level of community concern would be small group homes within the community which could accommodate six to eight children or youth. In this type of group home, the youth could continue a more or less normal existence in the community in which they were living. The group homes

need the support of the various institutions within the community. They will need the understanding of people within the neighborhoods where the group homes are located. They will need the support of the educational system so the kids can continue their education without any type of stigma.

If the child or youth cannot make it in a group home, the next level would be Boys Industrial School or Girls Industrial School. These are well run programs, but I do not think the state needs to embark on a program of small Boys Industrial Schools over the state. That program would be expensive. It would not match the possibilities of care in local communities.

Through this plan of operation, I hope you can envision with me the concept of *continued community concern*. All three words are important. *Continued*, because we cannot let down in our interest for children and youth. *Community*, because, if we are going to have an effective program, it must be based in the community.

We must get over the feeling that we can pigeonhole and label kids and cast them out of our community. We are duty bound to find solutions and develop strategies so the maximum number of youth are kept within our community. It is within the community that these problems have to be solved. It is within the community that the adults are reminded of their responsibility for the kids within that community.

The third important word is *concern*. Perhaps it is self-evident as to what I mean, but let me underline it. I am fearful that at times our concern is expressed by labeling and in constructing buildings. This is not the concern that I am interested in. I am interested in the kind of concern that says to these young people: "We care about having you within our society. We expect you to perform as responsible citizens. We are interested in you as human beings. We want to enter into conversations with you, so together all of us may help in shaping the future of our communities, our state, and our land." It is this kind of hard-going, demanding, self-giving concern that I am talking about. It is not a concern that is willing to feel the job is done when a person is labeled or when we have him properly placed in some building.

With the passage of a bill permitting state administration of the welfare program in Kansas plus an executive order reorganizing the State Department of Social Welfare, Vocational Rehabilitation and the Division of Institutional Management, we think we have one additional important piece which will help us carry out the proposed strategy.

While in the past we have had to deal with 105 counties, in the future we will be dealing with 6 regional offices under which there will be district offices. Through this plan of operation we will be able to give more specialized services to youth in trouble. We will be in a better position to provide program resources to local community. Through a regional concept we can reach out and serve as a catalyst to draw together the various agencies working in the area of services to children and youth.

Through the vehicle of the executive order, we now have the opportunity to provide a umbrella of social services. Hopefully, we can begin to give a continuum of care to all of our citizens. Our goal is to prevent people from being lost in the shuffle. Our goal is to ensure the development of an individual to his maximum potential.

To get the job done, we will have to follow the lead of the scientists and the technicians: that is, discarding old concepts, the patient building on previous experience, team work, no resorting to fads, experimentation with evaluation, and the pooling together of various resources. The second step we would have to take is a commitment to a certain type of strategy, and I would make a plea for *continued community concern*. Three, as adults, I think we have to examine our own ideas and attitudes related to the children and youth. As adults, I think we must be willing to respect them as children and youth. We must be willing to make demands upon them, but also, we must be willing to work with them. We must be in conversation with them in the interest of molding and shaping a common destiny. Fourth, undergirding our work, there must be an enhancing of self-respect and self-confidence on the part of children and youth as well as the adults.

As one man has said, "There is nothing more difficult to take in hand, more perilous to conduct, or more uncertain in its success than to take the lead in the introduction of a new order of things."

MESSAGE FROM THE GOVERNOR—(MONDAY APR. 2, 1973)

To: The Kansas Senate and House of Representatives.

In my legislative message and budget report to the 1973 legislature, I stated that I would transmit further recommendations regarding services to children and youth in Kansas. This message contains my recommendations to be included in the omnibus bill.

The special Public Health and Welfare Interim Committee appointed by the Legislative Coordinating Council studying the area of juvenile services and facilities recommended to the 1973 legislature that funding for regional juvenile facilities be delayed. The committee, in its report, made this statement:

". . . The cost estimate of $3.26 million for the three facilities is entirely too expensive for the type of program being proposed. Further, there has been developing in various states across the nation a trend toward less regimented non-institutional approaches in working with juvenile offenders. Massachusetts is one state in which this approach has been translated from philosophy into actual practice. In Massachusetts, for all practical purposes, state institutions for juveniles have been closed. California, Florida and Minnesota also are states being cited as leaders in this area.

"The emphasis in the non-institutional movement is on placing the youth in community-based facilities, often group homes, in as nearly a normal environment as is possible. This can be accomplished, in part, by state contracts with private persons or agencies. Proponents of this approach contend that the community-based treatment philosophy can be more successful and less expensive than an institutional program."

The committee recommended that community-based projects be established on a pilot basis. The committee suggested that the State Board of Social Welfare develop detailed pilot project proposals. These proposals have been developed and reviewed by the Governor's Office and by certain members of the legislature.

I recommend that this 1973 legislature include the pilot project as proposed by the State Department of Social Welfare in the omnibus bill. The proposal provides for two community-based homes, intensive work with a select number of young persons, and a program for evaluation. The proposal requires $202,533 in state funds. The amount of state money is based on the assumption that the state can make use of certain federal funds under the social service provision of the Social Security Act.

During the course of the 1973 session, representatives of the United Cerebral Palsy of Kansas organization conferred with members of the legislature and officials of the Department of Social Welfare concerning projects specifically designed for persons who suffer from cerebral palsy. United Cerebral Palsy of Kansas has suggested a $60,000 program to include a select number of cerebral palsy patients in state institutions who could benefit from a deinstitutionalized program. The appropriation for this program should be made to the State Department of Social Welfare so the department can make maximum use of possible federal funds. After observing the operation of this program, the state can determine whether to move more actively in this area.

ROBERT B. DOCKING,
Governor of Kansas.

[EXCERPT FROM GOVERNOR DOCKING'S LEGISLATIVE MESSAGE, JANUARY 1973]

CHILDREN AND YOUTH

In the past several years there has been discussion concerning the state's responsibility for the teenager in trouble—particularly 16 and 17 year olds.

A special interim committee has studied the possibility of building three regional detention facilities at an approximate cost of $1.2 million each. The annual operating cost would be $500,000 per each center. The interim committee has now recommended that the state should hold in abeyance the building of those facilities. I concur with that recommendation.

As an alternative we should consider a statewide plan for establishing community group homes. Achievement Place in Lawrence has received national recognition for its program of greater participation in schools and a lower return rate to the facility.

The concept of Achievement Place is that of a small group—six to eight persons—under the direct supervision of parents who have a responsibility for teaching and guiding the young people into good education and work habits.

I am recommending that serious consideration be given to state encouragement of community-based homes. The capital investment for each facility is $20,000 to $30,000 in contrast to $1.2 million, the cost of a detention facility. The yearly operating cost is approximately $4,000 per individual in comparison to the $10,000 which would be the cost in a good institutional setting.

I am considering a proposal for later submission to the legislature.

Chairman PEPPER. We will recess until 2 o'clock this afternoon.

AFTERNOON SESSION

Chairman PEPPER. The committee will come to order, please.

Our first scheduled witness this afternoon was to be Senator Birch Bayh. Senator Bayh has been unavoidably delayed so we will receive this prepared statement for the record.

[Senator Bayh's prepared statement follows:]

PREPARED STATEMENT OF HON. BIRCH BAYH, A U.S. SENATOR FROM THE STATE OF INDIANA

I want to thank the distinguished Chairman of this Subcommittee, Congressman Pepper, for giving me the opportunity to talk with you about a matter of mutual concern—America's juvenile delinquency problem. As Chairman of the Senate Subcommittee To Investigate Juvenile Delinquency, I care deeply about finding answers to this problem because it seriously threatens the welfare of our children, our greatest national resource.

I am troubled by the continuing rise in juvenile crime in this Nation. The hard facts are that we are facing a problem of extreme seriousness which will not go away by ignoring it. Juvenile delinquency takes an alarming toll every year. It also causes incalculable damage to the quality of life in this country, resulting in both economic and human loss as well as threatening the personal security and well-being of many Americans. According to the latest FBI figures, young people under 25 account for more than three-fourths of the total arrests for serious crimes in this country. During the last ten years, arrests of juveniles for violent crimes increased by 193 percent; arrests, for property crimes such as burglary, larceny, and car theft, jumped 99 percent. Our failure to deal effectively with the spiralling juvenile crime rate is dramatically underscored by the failure of our current system. The recidivism rate for institutionalized delinquents is the highest of any age group—between 74 and 85 percent. Many if not most adult criminals have a juvenile record.

During my two years as Chairman of the Juvenile Delinquency Subcommittee, we have conducted extensive hearings and investigations on juvenile justice and corrections, and the role of the Federal government in the prevention and control of juvenile delinquency. Expert witnesses, including State and local officials, representatives of private agencies, social workers, criminologists, judges, and criminal justice planners have testified at length on all aspects of the existing juvenile justice system. These witnesses have generally agreed that the present juvenile justice system is bankrupt and that the Federal effort to prevent and treat juvenile delinquency is uncoordinated, fragmented, and ineffective.

The Juvenile Justice and Delinquency Prevention Act of 1973, S. 821, is the vitally needed response to this tragic failure. I developed this measure during the 92nd Congress, when it was introduced as S. 3148. After extensive hearings, I joined with my distinguished colleague from Kentucky, Senator Marlow Cook, the ranking minority member of the Subcommittee, in introducing a revised and improved version of the bill last February. We are gratified that the distinguished Chairman of the House Education and Labor Committee, Mr. Perkins, and the Chairman of that Committee's Subcommittee on Equal Opportunities, Mr. Hawkins, have introduced a companion bill, H.R. 6265.

S. 821 and H.R. 6265 provide the structure for national leadership and the commitment of resources necessary to create a powerful partnership of Federal, state and local governments and private agencies to prevent and treat juvenile delinquency and to improve the quality of juvenile justice. The Juvenile Justice

and Delinquency Prevention Act emphasizes the critical need to prevent delinquency: it provides for the development of services and programs that will reach out to children in danger of becoming delinquent and assist them in resolving their difficulties at home, at school, and in the community. The bill also seeks to develop alternatives to the traditional juvenile correctional system, such as shelter care, group homes, and probation subsidy programs. It provides strong incentives to divert children from the juvenile system through community-based diagnostic and rehabilitative services and programs and to work with parents and other family members to retain the juvenile in his own home. My bill recognizes that the primary responsibility and hope for meaningful delinquency prevention and treatment lies with the local community where the child's problems first begin.

The critical need for this legislation is clear. Our hearings have revealed beyond any shadow of doubt that problem children rarely receive the help they need. Instead, these children are incarcerated in antiquated, custodial institutions where they are frequently beaten, neglected, and homosexually assaulted. Witnesses before the Senate Subcommittee repeatedly emphasized that large custodial reformatories or training schools do not rehabilitate juveniles. Instead, these young people may be forced to learn criminal skills to survive inside the institutions. This is doubly tragic when we consider that these children are so often "more sinned against than sinning." Approximately half of the institutionalized juveniles are locked up because they are runaways, truants, or are not wanted at home. These children have not committed a criminal offense; rather, they are the victims of parental and societal neglect of the worst sort.

Our hearings revealed that there are productive ways of handling children in trouble which offer a real chance of ending the cycle of delinquency, incarceration, and more serious criminal activity. S. 821 reflects the consensus of people working in the juvenile delinquency field on the effectiveness of community-based facilities and services for delinquents and neglected, abandoned children and other potential delinquents.

Some State and local governments and private agencies have successfully utilized the community-based treatment techniques outlined in this bill. In the course of hearings on the Juvenile Justice and Delinquency Prevention Act, we learned of states which have developed group homes and residential treatment centers as viable alternatives to incarceration. I understand that you have already heard of the successful experience of the State of Massachusetts in closing down traditional juvenile institutions and placing the juveniles in group homes and other shelter care facilities. Kentucky is another state which is developing alternatives to incarceration like those provided for by S. 821. Kentucky has recently phased out Kentucky Village, a reform school for delinquent youth which contained as many as 700 young people, and has created a variety of alternatives in its place, such as small, decentralized intensive residential treatment centers with a maximum individual capacity of 40 young people. Group homes and halfway houses have also been developed to avoid institutionalization for some juveniles and to assist youth in making the transition from institutional living back to their home communities. "Hard to place" delinquent youth who had been in training schools for as long as five years have been placed in foster and group homes. The recidivism rate during the first year of this new program was a remarkably low ten percent. S. 821 would make it possible for Kentucky to increase its present level of community-based services and to continue towards its goal of further reductions of institutionalization.

Delaware has moved to reform its juvenile corrections system since the conditions in its juvenile institutions became the subject of private and public investigation in 1969. As Mr. Robert Cain, Director of Delaware's Division of Juvenile Corrections, testified before our Subcommittee, "children in the custody of the State for 'rehabilitation' were being exploited, abused, and punished beyond belief." Since that time, progress has been made in developing medical, educational, testing and recreational programs in detention centers; utilizing diagnostic-medical-reception centers in institutions to develop individual treatment plans for juveniles; providing improved academic and vocational education in institutions; and creating meaningful post-institutional aftercare. Prior to 1971, there were no alternatives to incarceration for juveniles in Delaware. Since that time, a few group homes, utilizing available community resources, have been developed as alternatives to institutional care and as post-institutional homes. In spite of these encouraging gains, more than 47 percent of the juveniles in Delaware institutions are there for acts which would not be a crime if they were adults. According to Mr. Cain, to carry out a plan to

move these juveniles into shelter facilities where they belong would require Federal resources and direction as provided in S. 821.

There are other encouraging examples of youth programs designed to give children the support they need in my own State of Indiana. The Youth Advocacy program in South Bend, Indiana, provides a wide range of services for young people, with the primary goal of preventing delinquency. The legal services component, which is working to protect the rights of youth, most recently won a landmark case involving the rights of juveniles locked up in the Indiana Boys' School. Another part of the South Bend program is an alternative school system which provides school programs for drop-outs. The Youth Service Bureau in Peru, Indiana, operates a hot-line and a drop-in center for young people who need immediate help with their problems. The Howard County Youth Service Bureau in Kokomo, Indiana, provides crisis intervention service. Its work is so effective that the juvenile court judge utilizes it in some cases as an alternative to probation.

California has developed a probation subsidy program, which is one of the alternatives to institutionalization encouraged by S. 821. In such a subsidy program, a unit of local government is reimbursed for every juvenile retained at the local level rather than sent to a state correctional institution. The operation of the probation subsidy program in California from 1966 to 1972 resulted in the reduction of commitments to the State by 10,624 juveniles at an estimated savings of $68 million. This worthwhile program benefits the taxpayer, provides assistance to local governments, and encourages treatment of the juvenile in his home community where the possibility of rehabilitation is the greatest.

The Juvenile Justice and Delinquency Prevention Act, S. 821, emphasizes the importance of private agencies in developing and providing youth services. The YMCA has told us of their 50 programs in inner-city facilities which receive referrals from juvenile courts. These youth-residential centers work with young people on a one-to-one basis to solve each child's particular problem whether it be school, job, drugs, or difficulties in the home. The YWCA has also started programs to work with girls who have been identified as having trouble in school or in the community, before the difficulty leads to serious trouble. Dr. Karl Menninger, the noted psychiatrist and criminologist, testified before our Subcommittee about the success of the Villages, a concept of foster group living, which he developed, in caring for neglected and homeless children. Given adequate support and encouragement, these private, voluntary efforts can unquestionably be effectively adapted in other communities.

The Juvenile Justice and Delinquency Prevention Act strongly emphasizes the role of volunteers in delinquency prevention and treatment programs. In hearings on S. 821, we have learned of many encouraging examples of volunteer programs. For example, the National Congress of Parents and Teachers has developed a program in cooperation with the National Council of Juvenile Court Judges called "Volunteers in Court" to train volunteers to work with the court, the family and the child in trouble. The volunteer programs run by Indiana University at the Boys' Training School have been remarkably successful in helping juveniles return to productive, healthy lives in the community. On the national level, Big Brothers of America has recruited more than 75,000 volunteers to work on a one-to-one basis with fatherless boys who need guidance and support. However, even this nationally known program cannot, at present, utilize more volunteers unless additional resources are found for the professional supervision essential to an effective program.

The desperate need throughout the country for demonstrably effective delinquency prevention and treatment programs underscore the urgency of enacting S. 821 into law. S. 821 establishes the structure and provides the resources for the national commitment needed to help our children before they become delinquent and to rehabilitate them if they do get into serious trouble. The Federal effort to prevent and treat delinquency has failed to provide the direction coordination, and resources required to deal with the enormity of the delinquency problem in this country.

Testimony before our Subcommittee by officials of the Department of Health, Education and Welfare and the Law Enforcement Assistance Administration confirmed the sad truth that juvenile delinquency is at the bottom of the Administration's list of crime control priorities. The inadequacy of the Federal performance is further exacerbated by the Administration's efforts to cut back drastically social services for young people and their families.

The hard facts are clear. The issue we are facing today is whether we are going to make the kind of national commitment required to turn the tide of de-

linquency. There can be no half measures, no false economies. Unless we make a total response to the needs of our children, we will be destroying not only their future, but the future of the entire nation.

The Juvenile Justice and Delinquency Prevention Act builds on existing knowledge of the best ways to help children in trouble. Nothing less than this comprehensive bill will provide the resources and leadership commensurate to the size of the delinquency problem. Now it is up to us in Congress to make sure the jobs gets done.

Chairman PEPPER. Mr. Lynch, will you proceed.

Mr. LYNCH. Yes, thank you, Mr. Chairman.

Mr. Chairman, I am happy to present to you and to the members of the committee, Dr. Dean Fixsen. Dr. Fixsen works in the department of human development in the bureau of child research at the University of Kansas. He holds a Ph. D. degree from that university and he is a codirector of the achievement place research project.

Accompanying Dr. Fixsen this afternoon is Dr. Montrast Wolf, who is with the department of human development in the bureau of child research at the University of Kansas. He, too, holds a doctorate from Arizona State University and with Dr. Fixsen, is a codirector of the achievement place research project.

Doctors Wolf and Fixsen will make a presentation to the committee, Mr. Chairman.

Chairman PEPPER. We are happy to have you, Doctors.

Mr. Winn, would you like to say anything by way of presentation?

Mr. WINN. Mr. Chairman, I appreciate the opportunity. I have already visited with our guests. They happen to represent my own home university and come from my congressional district. I think Mr. Lynch has done a very fine job of introducing them.

I think the committee will find the achievement place research program very interesting, and I might say that the community in the Lawrence area, which is a college town, has been very supportive of this program. I believe the committee will find it a very interesting and novel approach.

I want to thank you, Mr. Chairman.

Chairman PEPPER. Dr. Fixsen, we are very glad to have you here.

STATEMENTS OF DR. DEAN FIXSEN, RESEARCH ASSOCIATE, AND DR. MONTROSE M. WOLF, PROFESSOR, ACHIEVEMENT PLACE RESEARCH PROJECT, UNIVERSITY OF KANSAS, LAWRENCE, KANS.

Statement of Dr. Fixsen

Dr. FIXSEN. I would like to begin with a few slides describing the program. Later on we will talk about some evaluation data that will describe the effectiveness of the program in relation to other kinds of programs designed to treat youths. We will also discuss a training program as a means of disseminating the program across the Nation.

The Achievement Place program was begun by a group of interested citizens and organizations in the Lawrence community. The local juvenile court judge and the JayCees were especially active in developing the program. The JayCees wanted to develop an alternative between institutionalization—which is a very serious move, since it removes the child from his community, from his parents, his friends and teachers in the school system—and the only other alter-

native open to the judge at that time was a probation program that had only minimal supervision of the kids. They thought for many kids there should be some third alternative, some medium point between probation and institutionalization.

About a year after the program began, we applied for and were successful in getting a research grant from the National Institute of Mental Health, Center for Studies in Crime and Delinquency, which is directed by Dr. Saleem Shah. From that time on, we have been conducting research on how to develop a model program. We have been supported now with NIMH research grants the last 5 years.

Achievement Place is a community-based, family-style, behavior modification, group home treatment program for delinquent youths in Lawrence, Kans. The goals of Achievement Place are to teach the youths appropriate social skills such as manners and introductions, academic skills such as study and homework behaviors, self-help skills such as meal preparation and personal hygiene, and prevocational skills that are thought to be necessary for them to be successful in the community. The youths who come to Achievement Place have been in trouble with the law and have been court adjudicated. They are typically 12 to 16 years old, in junior high school, and about 3 to 4 years below grade level on academic achievement tests.

When a youth enters Achievement Place he meets the other youths in the program and is given a tour of the house. Then he is introduced to the point system that is used to help motivate the youths to learn new, appropriate behavior. Each youth uses a point card to record his behavior and the number of points he earns and loses. When a youth first enters the program his points are exchanged for privileges each day. After the youth learns the connection between earning points and earning privileges this daily point system is extended to a weekly point system where he exchanges points for privileges only once each week. Eventually, the point system is faded out to a merit system where no points are given or taken away and all privileges are free. The merit system is the last system a youth must progress through before returning to his natural home. However, almost all youths are on the weekly point system for most of their 9- to 12-month stay at Achievement Place. Because there are nearly unlimited opportunities to earn points most of the youths earn all of the privileges most of the time. Once in a while one or two youths will fail to earn enough points to buy all of their privileges and once in a while a youth will earn so many points that he becomes the new "point champion."

The privileges that are available to the youths are basics, which includes the use of the telephone, tools, and the yard; snacks after school and before bedtime, watching TV; and hometime which permits the youths to their natural homes on the weekend or to go downtown. These privileges are naturally available in Achievement Place and add nothing to the cost of the treatment program. Other privileges that can be earned are $1 to $3 allowance each week and bonds which can be accumulated to purchase clothing or other needed items.

A typical day at Achievement Place begins when the manager awakens the boys at about 6:30 in the morning. The boys then wash their faces, brush their teeth, and clean their bathroom and bedrooms. The manager, who is elected by his peers, supervises these morning chores by assigning specific cleaning tasks to his peers, by monitoring

the completion of these tasks, and by providing point consequences for their performances. While some of the boys are cleaning their rooms and bathrooms other boys are helping Elaine prepare breakfast.

After breakfast the boys check their appearance and pick up a daily school note before leaving Achievement Place to attend the local public schools. Since Achievement Place is a community-based facility the boys continue to attend the same schools they had problems with before entering Achievement Place and the teaching parents work closely with the teachers and school administrators to remediate each youth's problems in school. The feedback teachers provide for each youth is systematized by having each teacher fill out a daily report card each day. A teacher can quickly answer a series of questions about the youth's behavior by checking "yes" or "no" on the card. Some youths do not require daily feedback and they carry a weekly school note to class each Monday. In either case the youths return their completed report cards to the teaching parents and they earn or lose points depending upon the teachers' judgment of their inclass performance.

When the boys return to Achievement Place they have their after-school snacks before starting their homework or other point-earning activities. In the late afternoon one or two boys usually volunteer to help Elaine prepare dinner. During the meal or just after the meal the teaching parents and the youths hold a family conference. During a family conference the teaching parents and the youths discuss the events that occurred during the day, evaluate the manager's performance, establish or modify rules, and decide on consequences for any rule violations that were reported to the teaching parents. These self-government behaviors are specifically taught to the youths and they are encouraged to participate in discussions about any aspect of the program.

After the family conference the boys usually listen to records or watch TV before figuring up their point cards for the day and going to bed at about 10:30.

The main emphasis of the program is on teaching the youths the appropriate behaviors they need to be successful participants in the community. We have found that a community-based group home that keeps the youths in daily contact with their community offers many opportunities to observe and modify deviant behaviors and to teach the youths alternative ways to deal with their parents, teachers, and friends. These behaviors are taught by the professional teaching parents who direct and operate the treatment program. The teaching parents live at Achievement Place with their family of six to eight delinquent youths and provide them with 24-hour care and guidance. The teaching parents also work with the youth's parents and teachers to help solve problems that occur at home and at school.

Statement of Dr. Wolf

Dr. Wolf. Although we have evaluated many of the specific procedures the teaching parents have developed to teach appropriate behaviors we have only recently begun to evaluate the overall effectiveness

of the Achievement Place program. Our preliminary data include measures of recidivism, police and court contacts, grades and attendance at school. We have taken measures for 16 youths who were committed to Achievement Place, for 15 youths who were committed to the Kansas Boys School—an institution for about 250 delinquent boys—and for 13 youths placed on formal probation. All 44 youths had been released from treatment for at least 1 year at the time we collected these data and all had been originally adjudicated by the Douglas County Juvenile Court, Lawrence, Kans. All of the youths were potential candidates for Achievement Place when they were adjudicated.

The boys were not randomly assigned to each group. Rather, they were committed to each treatment by the local juvenile court for reasons that we cannot specify. Therefore, any differences among the three groups can be attributed to initial differences among the boys committed to each group or to the effects of each treatment. That is, the differences among the groups may be due to a population effect or to a treatment effect. However, in the past year we have begun randomly selecting youths for admission to Achievement Place. We plan to collect followup data on these youths to provide an experimental evaluation of the long-term effects of the Achievement Place treatment program.

Figure 1 shows the average number of police and court contacts for each youth before, during, and after their respective treatments. As shown in this figure, the Achievement Place youths and boys school youths each had about four contacts with the police and court during the year preceding their formal adjudication while the probation youths each averaged about 2½ contacts. During treatment the probation youths each averaged over one police and court contact while the Achievement Place youths and boys school youths each averaged about one-half contact during treatment. During the first year after treatment the probation youths and boys school youths each averaged about 2½ contacts with the police and court and this decreased to about 1½ contacts during the second year after treatment ended. The Achievement Place youths averaged about one-half contact with the police and court during their first year after treatment and this decreased to zero contacts during the second year.

These data indicate that the Achievement Place youths and boys school youths were similar before and during treatment but were very dissimilar after treatment. The boys school youths once again returned to a fairly high number of police and court contacts while the Achievement Place youths maintained a low number of contacts with the police and court.

Figure 2 shows the percentage of boys in each group who received treatment after their release. These percentages are based on the num-

ber of youths in each group that committed some delinquent act after their release that resulted in them being readjudicated by the court and placed in the boys school, in a State mental hospital, in jail, or sent to adult court for prosecution. As shown in this graph, 5 percent of the Achievement Place youths, 13 percent of the boys school youths. and 31 percent of the probation youths were readjudicated during the first 12 months after their release. By the end of 24 months after their release, a cumulative total of 19 percent of the Achievement Place youths, 53 percent of the boys school youths, and 54 percent of the probation youths had been readjudicated. Thus, it appears that the large number of police and court contacts experienced by the boys school and probation youths resulted in a larger recidivism percentage for these two groups. The Achievement Place youths had a smaller number of police and court contacts and a smaller recidivism percentage.

Although these police and court data reveal substantial differences among the groups they are measures of failure and are not measures of success. It is difficult to argue that lack of failure means success since there are many reasons unrelated to a youth's behavior that may influence whether he is readjudicated or not. For this reason we also took measures of school behavior. Figure 3 shows the percent of nonadjudicated youths in school before, during, and after treatment for each group. For two semesters before treatment about 75 percent of the youths in each group attended public school at least 45 days during each 90-day semester. During treatment 100 percent of the Achievement Place youths, 100 percent of the boys school youths, and 84 percent of the probation youths attended school each semester. During treatment the Achievement Place youths and the probation youths attended the public schools in Lawrence while the boys school youths attended the school provided in the institution. During the first semester after their release 84 percent of the Achievement Place youths, 58 percent of the boys school youths, and 69 percent of the probation youths attended public school. By the third semester after treatment 90 percent of the Achievement Place youths still attended public school while only 9 percent of the boys school youths and only 37 percent of the probation youths were still in school.

Another measure of school behavior was the percent of classes passed by the youths who attended school in each group. These data are shown in figure 4. For 1 year (two semesters) prior to treatment the Achievement Place youths passed (with a "D−" or better) 55 percent of their classes, the boys school youths passed 57 percent of their classes, and the probation youths passed 68 percent of their classes. In addition, about half of the classes passed by the Achievement Place and boys school youths were passed with a grade of "C" or better and the probation youths received a "C" in about two-thirds of the classes they passed. During treatment the Achievement Place youths passed 98 percent of their classes, the boys school youths passed 100 percent of their classes, and the probation youths again passed 68 percent of their

classes. About half of the classes passed by the Achievement Place and probation youths were passed with a "C" or better while almost all—92 percent—of the classes passed by the boys school youths were passed with a "C" or better. It should be noted again that the boys school youths attended school in the institution while the Achievement Place and probation youths continued to attend public school in their community.

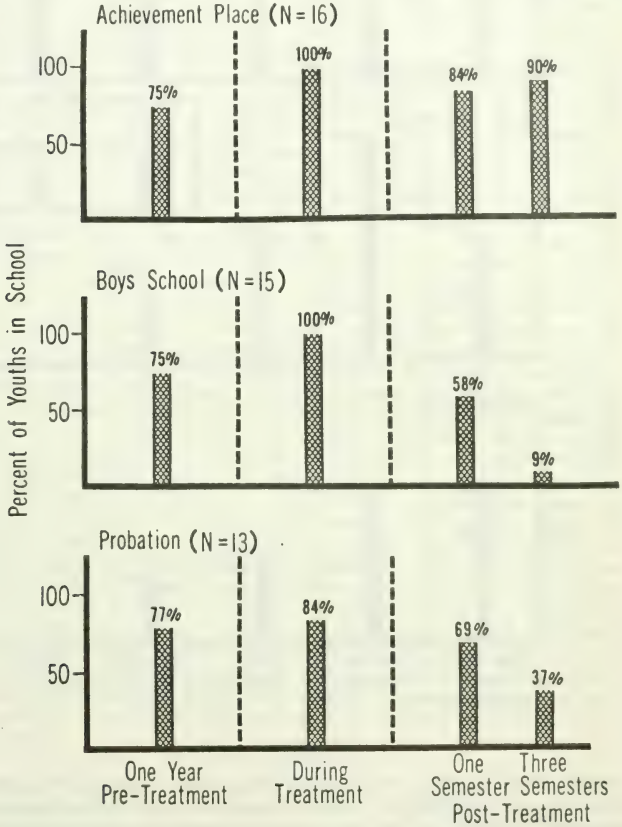

FIGURE 3

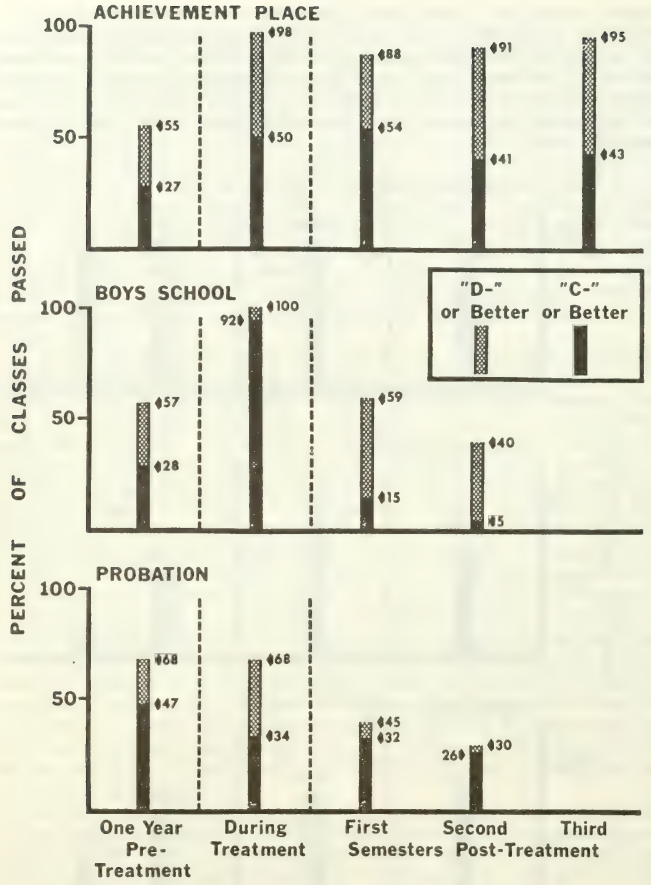

FIGURE 4

After treatment the Achievement Place youths passed 88 percent, 91 percent, and 95 percent of their classes over each of the respective semesters and about half of the classes that were passed each semester were passed with a "C" or better. The boys school youths passed 59 percent and 40 percent of their classes each semester after treatment and they passed only one-fouth or less of these classes with a "C" or better. The probation youths passed 45 percent and 30 percent of their classes each semester after treatment and they passed three-fourths or more of these classes with a "C" or better. Only two semes-

ters followup are shown for the boys school and probation youths in figure 4 because the number of youths still attending school during the third semester was very small—see fig. 3.

These school data indicate that the Achievement Place youths were similar to the youths in the other two groups prior to treatment but after treatment were more successful than the boys school youths or probation youths in terms of staying in school and passing classes. These data indicate that the Achievement Place youths are passing their classes and progressing toward the graduation requirements for junior high and high school.

The police, court, and school data indicate that the Achievement Place youths are progressing much better than their peers who were sent to the boys school or placed on probation. As indicated earlier, these data may reflect a "treatment effect" or a "population effect" attributable to the initial differences among the youths because the youths were not randomly assigned to the groups. However, we plan to collect similar data on a sample of randomly selected youths to provide an experimental evaluation of the long term effects of the Achievement Place treatment program.

However, even if the results of this random selection procedure shows that the Achievement Place youths do no better than youths who were sent to an institution, we would continue to advocate replacing most institutions with group home treatment programs. We would do this for two reasons. First, group home programs are more humane than institutional programs because the youths receive more individual care, they remain in close contact with their community and parents and friends, and programs can be provided to teach them important social, family, and community-living skills. Second, group homes are less expensive to operate. Figure 5 shows that the cost per bed of purchasing, renovating, and furnishing Achievement Place was about one-fourth the cost of building an institution. And, the operating costs per youth for Achievement Place are less than one-half the operating costs for the boys school in Kansas. Thus, to build a boys school for 250 youths and operate it for 1 year would cost about $8 million. To purchase, renovate, and furnish group homes for 250 youths and operate them for 1 year would cost about $2.5 million, a savings to the taxpayer of $5.5 million. If the followup data collected at Achievement Place and at other group homes eventually provide evidence that systematic group home treatment programs are also more effective than institutional programs we can expect a major shift away from institutions and toward community-based programs.

FIG. 5.—COMPARATIVE COSTS

	Achievement place	Institution
Capital investment per youth	$6,000	$20,000 to $30,000.
Yearly operating cost per youth	$4,100	$6,000 to $12,000.

Dr. Fixsen. In 1970 we began attempting to replicate the teaching-family model that had developed at Achievement Place. We were not sure how to go about training new teaching parents but we felt at

that time that the trainees should know about the treatment program and should use the teaching parents at Achievement Place as models of good teaching parent behavior. With these two rather vague training goals in mind we asked the trainees to enroll in a masters degree program at the University of Kansas where they took courses that emphasized the principles of behavior modification, courses in applied research measurement and design, and courses that related directly to the token economy procedures used at Achievement Place. The trainees also participated in a practicum where they visited Achievement Place several hours a day for 3 weeks then had complete responsibility for operating the treatment program for 3 or 4 days. During this practicum the trainees were told to "watch how the teaching parents run the program so you can do the same things in your own group home."

After these trainees completed their course work and practicum—which required 9–12 months—they were hired by group home boards of directors and they began to implement the treatment program in their own group homes. After a few weeks or months it became readily apparent that the training program had failed to produce completely successful teaching parents. After examining these unsuccessful programs for a few months—examining in the sense that we spent a great deal of time at each home trying to improve each program and trying to figure out why things were not working—it soon became apparent that the trainees had learned the principles of behavior modification and they could operate a point system just as we had taught them during the coursework. Our conclusion was that these things alone were not sufficient to produce a successful treatment program. These early failures to replicate the teaching family model forced us to look more carefully at the original, successful treatment program at Achievement Place to discover what important differences there were between the successful and unsuccessful teaching parents. We learned a great deal about the original program from these early failures.

The most important thing we learned was that the successful teaching parents were constantly teaching the youths new skills. The successful teaching parents quickly defined small problem behaviors, provided instructions to the youth on these problems, had the youth practice appropriate alternatives to the problem behavior, gave the youth feedback on his behavior in the practice session, gave the youth points for his cooperation and for learning a new skill, and the teaching parents did all of this in a very pleasant, nonconfronting manner. This was quite a contrast to the challenging, confronting interaction style or the "ignore it and it will go away" interaction style that we found among the unsuccessful teaching parents. Thus, teaching skills became a very important part of our revised training program and we are now convinced that the teaching instructions the trainees carry out with the youths in their program is one of the three most critical features of the treatment program. The other two aspects of the program that we feel are necessary for replication are the self-government system and the motivation system—point system or token economy.

Once we had an idea some of the important differences between the successful and unsuccessful teaching parents we began to look critically at our training program. For our first trainees we had taught psychological principles and concepts and we left it up to them to translate those abstract terms into procedures to follow to change the

behavior of delinquents. Since this was not sufficient we decided to teach the trainees the specific skills they would need and secondarily to provide them with a brief rationale for their use. We also decided to teach the trainees in the same way successful teaching parents teach the youths in their program. That is, we describe the appropriate behavior and give a rationale for it, we have the trainees view videotaped models of the appropriate and inappropriate teaching parent behaviors, we have the trainees practice the appropriate behaviors with each other during a role-playing session and practice with the youths in a teaching-family home during an inhome practice session, we provide specific feedback on their behavior during the practice sessions, and we provide positive social consequences to the trainees when they master the skill.

Thus, our informal analysis of our original failures to replicate the treatment program produced new conceptions of the original treatment program and provided us with a number of specific skills that we felt were required of successful teaching parents.

To achieve the goals of the training program we developed a training sequence that consists of five parts: (1) an initial 5-day workshop where the trainees learn and practice the basic teaching-parent skills and treatment procedures needed to begin a program; (2) a 3-month practicum period where the trainees implement the teaching-family program in a community-based group home and receive frequent consultation from the training staff; (3) an evaluation of the overall treatment program by the training staff by means of questionnaires given to local agencies that have contact with the program, to the youths in the program, and to the youths' parents, as well as an onsite evaluation by a member of the training staff; (4) a second 5-day workshop where the trainees receive feedback from their evaluation and additional training on several aspects of the treatment program; and (5) a followup evaluation period where the trainees' program is reevaluated after 6 months and 12 months and where continuing consultation is provided. Thus, the trainees are considered to be in the training program until after the 12-month evaluation is completed and passed.

The training program was designed in this way to facilitate the trainees learning how to carry out the treatment procedures. The first workshop provides an introduction to the teaching family model and practice on rudimentary teaching-parent skills. However, the most important time for learning is after the trainees begin implementing the program in their own group homes during the 3-month practicum. During this time they are faced with many problems each day that require immediate solutions. Thus, they are motivated to learn how to carry out many of the procedures they may not have seen as important during the first workshop and they learn many of the more subtle teaching techniques. During the practicum the trainees call the teaching-parent trainers several times a day at first to get advice on solving problems. In addition to the daily phone calls there is one weekly phone call of longer duration throughout the 3-month practicum where the progress and problems of the week are reviewed and a plan for the following week developed. Usually, toward the end of the 3-month practicum the number of daily phone calls decreases as fewer problems occur that require consultation. Thus, by the end of the 3-month

practicum the trainees have had a great deal of experience in using at least the basic components of the teaching family model. Because of this experience, during the second workshop they are better prepared to understand some of the more subtle uses of the program and are ready to learn some of the more sophisticated treatment techniques. Of course, after the second workshop the trainees continue to receive consultation from the training staff on specific problems as well as a phone call to review progress once every other week.

At each step in the training program the emphasis is on having the trainees actually carry out the treatment procedures rather than just having the trainees learn about them.

Mr. LYNCH. Dr. Fixsen, what kind of financial support would a community need to establish this kind of program?

Dr. FIXSEN. It takes about $50,000, at least in Kansas, to purchase and renovate a home and to get a home started. We find many communities often are able to come up with a portion of that money themselves through donations. But we find very often that smaller towns or neighborhoods in large cities that are probably most in need of group homes like this are unable to come up with sufficient funds to start programs. So even though the $50,000 per hope startup cost really isn't all that much, it is very difficult to come by presently because there are no alternative sources of funds.

Mr. LYNCH. Your program has been operating for approximately 6 years?

Dr. FIXSEN. That is right.

Mr. LYNCH. Is there additional research needed in your judgment, or could other communities undertake this kind of program at this time?

Dr. FIXSEN. Yes, I think it certainly is possible. The research that is needed right now is the research on training people how to become teaching parents, because it is a very complicated task and involves teaching the teaching parents to interact with a number of people outside of the home as well as the kids themselves. It is a very complex skill. We are not yet sure what all of those skills are, but we feel probably 60 or 70 percent of those skills are identified at this point.

Mr. LYNCH. Assuming other communities and other States wish to adopt the Achievement Place model, how should the programs be operated? Should they be run by the State, by municipalities, private groups? What should your recommendation be?

Dr. FIXSEN. I think any of those are possible. Our recommendation is to make the program as accountable to the community as possible. I think that would involve having the Achievement Place in the community be directed by the people who represent the community, so the group home can get feedback as to what the community people feel about the program. Having that kind of board of directors is very important.

Mr. LYNCH. Your response would be there would be a mix of responsibility as long as there was public community involvement?

Dr. FIXSEN. That is right. Community involvement at the level where the board of directors have to be concerned about the day-to-day policies that govern the home. Now, it may be, for example, that much of the money that supports the kids comes through the department of welfare. In the department of welfare, they have licensing require-

ments that must be met and they have a semiannual review of each licensed home.

That kind of State policy establishes the minimal requirements the program has to meet. But, as far as the State or any agency alone controlling a number of group homes, I think that would be a mistake. That task should be left up to community board of directors.

Dr. WOLF. I might add, there are many advantages to having community-controlled and directed group homes. In that way, you get community support. We have seen States go in to set up a home in the community and communities turn them down because they don't want any outside youths brought into their community. They feel they already have enough problems. But if it is the community's program and they know the people on the board, then it is their program for their problem youths. We haven't met any resistance in these cases.

Mr. LYNCH. Dr. Wolf, how about when the program began? What kind of community neighborhood response did you get?

Dr. WOLF. There was some initial resistance. There were questions. However, what saved the program was the Jaycees. It was their program and it was the judge's program. It wasn't the university's program or the State's program. We are still there at their invitation. We are essentially advisers and consultants, and the nonprofit corporation owns the home and sets the policy and continues to invite us to work with them. Because it was the Jaycees and because it was the judge, they were able to sell the program. If it had been the university or State, I am not sure it would have been possible.

Mr. LYNCH. How many youngsters can a program like this efficiently serve and to serve that number, how many staff are required?

Dr. WOLF. In order to keep the program a family-style program, we find six to eight youths to be an ideal number. If you go about eight youths, the teaching parents are not able to maintain the individual relationships that are necessary. These are six to eight very troubled and troubling youths. This is really a horrendous task for teaching parents, and they can do it because they work with the kids as they come in, one at a time. You have the youths already in the program learning and pretty well trained, and then a new youth comes in and he can be socialized by the group and the teaching parents. A couple of months later, the next youth comes in. If you have six or eight youths in the program, you have a group that functions very well. If you go above that, you start having higher turnover in your personnel and you start having more complaints.

Mr. LYNCH. You would definitely limit it to six or eight?

Dr. WOLF. I would definitely limit the family size. I think if you get much beyond that with these kids, you are not going to have an effective, family-style approach.

Mr. LYNCH. Doctor, if I may, speaking of families, while these youngsters are in Achievement Place or a situation like Achievement Place, what if anything is done for their parents? Are they receiving any kind of counseling, so when the kids return home they will have a different home situation, which may have been part of their problem to begin with?

Dr. WOLF. Yes; it is almost always part of the problem. The youths haven't learned the skills to make it in their families, their school, and community. Their parents have not been able to teach them these skills,

have not been able to guide them in the way in which they need to be guided, and have not been able to supervise them. Many of the families have severe personal problems, alcoholism, and so forth. But with help from a set of teaching parents, the family can make it often. They can learn how to negotiate and compromise with their youth and how to guide him. Even for parents who may have serious problems, the teaching parents can supplement them for several months or years.

Mr. LYNCH. Thank you very much. I have no further questions.

Chairman PEPPER. Mr. McDonald?

Mr. MCDONALD. Thank you Mr. Chairman. Dr. Fixsen, can you tell us basically what kind of offenses have the youths committed that are committed to Achievement Place? What is the spectrum of offenses committed?

Dr. FIXSEN. The only youths not considered for the program are those who have committed violent crime, murder, forcible rape, those kinds of things, where they would clearly be a danger to the other kids in the program, to the children of the teaching parents and to themselves. Those kids are eliminated. From there on down, you have kids who were adjudicated for breaking and entering, nonforcible rapes, extended histories of shoplifting, and so forth. At one time we tabulated the kinds of offenses, and about 70 to 80 percent of the offenses were felony-type offenses.

Mr. MCDONALD. In the past 6 years, have you had any occasions of fights between juveniles, destruction of property at the Achievement Place; and in that context, have you ever been forced to send a juvenile from Achievement Place to some other facility?

Dr. FIXSEN. We have never done that. As long as there is an opportunity to keep the youths in the community, and continue to work with them, that is what we do. We haven't had instances of fights within the home itself, although some of the kids, when they first come into the family, do continue to get into mild difficulty at home or school in the one instance, a boy was taken away from us by the court simply because he committed aggravated assault.

Mr. MCDONALD. He was taken away?

Dr. FIXSEN. He was taken away. But in that case, the teaching parents tried for a couple of weeks to keep the youth in the community and give him one more chance. They felt they could still help the youth if they had one more chance.

Mr. MCDONALD. You have an informal screening process whereby the juveniles that will be admitted to Achievement Place most likely will make it through without committing offenses while in Achievement Place?

Dr. FIXSEN. This is a screening process, but not on that basis. The screening process is carried out in an interagency meeting that consists of representatives from all of the child care agencies in town. When the teaching parents have a vacancy coming up they ask the screening committee who should be brought in next. They usually recommend youths who are having difficulty in school, in their families, and in the community. Usually the youth will be sent to an institution unless something is done like putting him in Achievement Place. That youth will be the number one candidate.

As you saw in the followup data, the kids who have gone to the boy's school look very comparable to the Achievement Place youths 1 year prior to coming in, in terms of offenses and school behaviors.

Mr. McDonald. That is what I was leading up to, whether in fact your statistics are impressive after they were out of Achievement Place. I was wondering whether they were impressive because the kids you take in Achievement Place are better quality overall than those who end up in the industrial school. Therefore, after they get out, chances are they are going to be better.

Dr. Fixsen. An excellent question. What we have been doing for the last 2 years is taking youths on a random basis. The interagency group recommends two or three youths that look to be the best candidates for Achievement Place because if they don't go to Achievement Place they are going to be sent away. Out of that subject pool we will randomly select one youth and follow up on the other youths. Unfortunately we don't have that followup data yet. However, it looks like 70 or 80 percent of the youths we can't take are institutionalized.

Mr. McDonald. One more question on the teaching parent concept. Do you know of any other States instituting this kind of program?

Dr. Wolf. We have been contacted by a number of States and a number of agencies. Right now one of the graduates of our program—an ex-teaching parent, and also a graduate of our graduate program—is setting up a program in North Carolina where he is going to set up a series of these homes. That is the most dramatic example.

Mr. McDonald. At the University of North Carolina?

Dr. Wolf. They are affiliated with Appalachian State University and Western Carolina Center.

Mr. McDonald. As it is now, it is Kansas and North Carolina?

Dr. Wolf. There are also other programs in other States. There is one home in Maryland. We also have other teaching parents in homes from Vermont to California. Now, there are about six teaching family group homes in Kansas and about eight homes outside of Kansas.

Mr. McDonald. Thank you very much. I have no further questions, Mr. Chairman.

Chairman Pepper. Mr. Winn.

Mr. Winn. Thank you, Mr. Chairman. I want to thank you, Dr. Wolf and Dr. Fixsen, for a very fine presentation. I think this is exactly the type of program that the committee has been looking for and I am very anxious to see your material and your graphs incorporated in the final report.

You referred to the point system, which I find sort of comparable to, on a different scale, the Boy Scouts, or Cub Scouting, which I think is very commendable and seems to work well in those two youth programs. How do they, or do they, differentiate the point system from grade cards at school? I imagine most of those young people are not bubbly about school or grade cards, or some are school dropouts, I suppose. I find it hard to visualize that they don't rebel against the point system, because young people like that have rebelled against grade cards.

Mr. Fixsen. The point system is designed in a way to make the points fit the situation. If there is a youth who is showing a small appropriate behavior, you can give him a small number of points. If it is a very important behavior, such as getting all C's on the 9-week report card, then there is a larger number of points. Plus, if the youths have a complaint against the point system, they can bring it up at the family conference and the youths and the teaching parents can discuss the complaint and arrive at a solution.

Mr. WINN. The incentives, too, that you offer are different because the incentives on the grade cards are nil.

Dr. FIXSEN. Unless the parents were telling them, "Gee, you have done a fine job" or "It looks like you are slipping in math, you have to watch out on that." There is always that kind of feedback plus the teaching parents can offer the youths points for doing well at school.

Mr. WINN. Doctor, have most of these kids been on drugs?

Dr. FIXSEN. Some of the kids have. In some of the programs, almost all of the kids have. In Achievement Place, maybe a third to a half have had drug-related types of offenses.

Mr. WINN. Out there mainly it's pot, isn't it?

Dr. FIXSEN. Yes. Mostly marihuana. Some of it is LSD, speed, those kinds of things. To my knowledge, no youths have ever experimented with heroin or other serious hard drugs.

Mr. WINN. I know both of you gentlemen are familiar with the Menninger Cottage concept.

Dr. WOLF. The Village.

Mr. WINN. Yes. The same basic idea, in some places called the "cottage concept." Have these cottages or villages been spread around? The only point, I think you made it very strong, when you get into that type operation, you get into a very expensive operation. But could your program work with home of six to eight people and still have several homes around a community campus type of thing?

Dr. FIXSEN. It probably could, provided each one was community based. A community-based program requires the possibility of frequent contacts with the parents and that the kids continue to go to the various schools when they return. Often the opposite occurs when you have the campus group home kind of concept. They may begin simply and grow to have perhaps 6 homes which each hold 8 kids, which means they have to have 48 kids. They may begin taking kids from outside of the community simply for economic reasons.

Mr. WINN. Then you get a bad situation.

Dr. FIXSEN. That is right especially when you lose contact with the teachers.

Mr. WINN. You get fierce competition, and I suppose even within Lawrence, Douglas County, because of the school situation, as you say, most of them probably know each other and know someone the other one knows. But you would still, if you had three or four houses around the campus concept, you would have maybe competition between those homes that might not be very conducive to the philosophy, which is trying to help the other guy, rather than beat his ears down next door.

Dr. FIXSEN. There is that possibility. For example, in the larger urban areas in Johnson County, the Optimists Club there had one home and now is setting up a second home.

Mr. WINN. What do you call it?

Dr. FIXSEN. Optimists' Home For Boys. The second home is being set up in another neighborhood. There are sufficient numbers of kids in trouble to support two group homes. I don't see any competition developing there.

Mr. WINN. But they are all next door to each other?

Dr. FIXSEN. That is right. Same county.

Mr. WINN. Are they taking their homes to the trouble spots?

Dr. FIXSEN. That is exactly right.

Mr. WINN. In a little different vein, either one of you might answer: I wonder why more universities haven't become involved—and you mentioned North Carolina—in projects like the University of Kansas has. Have you talked to any of the other educators along this line?

Dr. WOLF. There are a number of universities that would like to, but funding is a problem. As Dr. Fixsen pointed out, there is funding for basic research in the social sciences, basic research, laboratory research, survey research, theoretical research, and then there is funding from LEAA for implementation research, but implementation on a broad basis.

Mr. WINN. You don't get any LEAA?

Dr. WOLF. Some of our homes do. Our present program is ready for LEAA support for homes. But for social science generally there has been no support for the intermediate research and development. There has been little research funding between theory and implementation as occurs in engineering. For example, if an airplane manufacturing company is going to build an airplane, they don't go from the theory to widespread sales of airplanes. They build prototypes which crash and turn in the wrong direction on the runway, and have all kinds of problems. They keep doing research and development until they have a model that works. They copy that and that is what they produce.

In the social sciences, we try to go from textbook, generally, into the implementation without the development phase and frequently we fail. We have been very lucky in our Achievement Place program, in that NIMH center for studies of crime and delinquency has supported our program for several years and encouraged us to do the kind of research that brought us to where we are. We have been able to do the applied research necessary.

But for applied social science in general this funding is very limited and other universities are not obtaining funds from many sources for doing the same thing. Another place money needs to be made available is to the States for training and research and evaluation of innovative community-based programs. I think that if money were made available to State universities they would take an interest in applied research programs like Achievement Place.

Mr. WINN. I think you make a good point. Southern Illinois University has been a leader in correctional education. I am wondering along the same line of my original question, what the proper role of the university in juvenile corrections is and how can the Federal Government encourage universities to get involved, because universities get a pretty good chunk of Federal money.

Dr. WOLF. I think that Congress needs to reconsider the priorities. I think it means that rather than money for basic research, more money needs to be given for applied research. In the past, I think there has been an overemphasis in universities on basic research. We now have lots of theory but not much good applied social science research.

Mr. WINN. You started out with research?

Dr. Wolf. Yes; basic research.

Mr. Winn. So somebody had to do it to create your program?

Dr. Wolf. Absolutely; very important.

Mr. Winn. Then you put your research into a practical solution. It sounds very good. Now we are trying to find out how you get money, you and other similar programs around the country, to use what they found out in basic research all of these years. How you separate it financially from the university, would be the real tough one.

Dr. Fixsen. I am not sure how you would go about that, but to form the basic research and the development of principles, you still have to work out the method of application like in the airplane experiment Dr. Wolf was describing. When you try to implement it, you probably fail the first time or two. You need to be able to use that failure as feedback about the parts of the program that need to be changed. It is at this level of applied research that we need money for university research. It is going to cost money to convert the results of basic research into effective programs and no one seems to understand that.

Mr. Winn. I don't know how you do it either. I am familiar with KU's operation, I am familiar with a lot of funding they get. I didn't mean to separate the university from your program. I meant separate money you would get not just for research in the educational part, but from the practical operation of your program, and that might be kind of hard to sell back to the Federal Government by the university.

Dr. Wolf. That isn't so much a problem. The LEAA funding and the Department of Social Welfare, these are tied into our programs and we are connected with them. They are the ones who implement the programs. The Federal research money has allowed us to do basic and applied research.

Mr. Winn. LEAA is Federal money.

Dr. Wolf. That is right. It isn't university money. The communities in Kansas apply for those funds from the State. Then the communities come to us and say, "OK, would you help us set up a program and train teaching parents and help us evaluate them," and so forth.

Mr. Winn. I am sure the chairman has some questions.

Chairman Pepper. Go right ahead.

Mr. Winn. I have one more question.

How many teaching-parent teams have you trained, and how many are now in training?

Dr. Fixsen. There has been a total of 18 couples who have gone through the training program, and 15 of those couples are still teaching parents.

Chairman Pepper. How many are you educating now? It is ongoing, isn't it?

Dr. Fixsen. Yes; it is a small program at present. As Dr. Wolf suggested, we have asked for a training grant from NIMH and if the funds are forthcoming, we will be able to take 15 or 20 couples every year.

Mr. Winn. If you mentioned that, I missed it, and maybe we had better underline it when the final report comes out.

Dr. FIXSEN. That is right. Our application for a training program is now under review by NIMH.

Mr. WINN. I hope your program sounds as good to them and deserves the merit I think it does.

By the way, I have never been there, but I would like to come by.

Dr. WOLF. Please do; visit the boys' and girls' home and the Optimist Home, in Kansas City.

Mr. WINN. I have heard of it. I didn't know it was the same type of operation.

Thank you very much.

Chairman PEPPER. I was very much interested in what you said about the availability and nonavailability of Federal funds for these teaching programs, which you call "teacher parent." The teacher parent is primarily the person who runs the home?

Dr. FIXSEN. Exactly.

Chairman PEPPER. There are no Federal funds generally available for that type thing available through LEAA?

Mr. WOLF. It is a new concept.

Chairman PEPPER. LEAA has been helping?

Mr. WOLF. Yes.

Chairman PEPPER. Largely through capital for building?

Mr. WOLF. Right.

Dr. FIXSEN. The money that is missing from LEAA is money for research and evaluation of those programs, especially now while it is still in the experimental stage, to see if other communities can set up similar programs and if they can be as successful as achievement place. What is missing at this point is the money to followup on the kids who leave these new programs.

Chairman PEPPER. What was the LEAA money used for with respect to Achievement Place?

Dr. FIXSEN. With respect to Achievement Place, we have none immediately involved. Other programs in Kansas and other States have used the LEAA money partially for the startup costs and for some of the salaries for the teaching parents for the first year.

Chairman PEPPER. This would be a good time to aks the question we are very much interested in. What Federal financial assistance have you asked for any aspect of the program dealing with the treatment and attempted rehabilitation of delinquent youth, youth who commit crimes and who are brought in to some sort of restraint and custody? What do you suggest this committee recommend to the Congress as something that we should do from the Federal level in respect to this problem of juvenile crime and delinquency?

Dr. FIXSEN. I can start answering that. I would think one thing that is needed is the money for startup costs. Some of this is available through LEAA. Some communities, particularly poor inner-city communities, have no real means of getting the money other than from outside sources. No foundations or benefactors in their community. I think in urban communities particularly, you are going to need some full funding of the startup cost programs.

Another thing needed along with that legislation is the requirement those programs be evaluated.

Chairman PEPPER. You think that would be a proper Federal function, sort of in the nature of guidelines?

Dr. FIXSEN. Exactly. Kind of like licensing requirements of group homes. In terms of the Federal money, I think they require some kind of accountability, some kind of evaluation of the consumers' satisfaction with the program.

Chairman PEPPER. Teacher training program would be another?

Dr. FIXSEN. Yes. If we get our NIMH grant, we will have a training program in Kansas. But in other States interested in having a training program like ours, they will want to send people to be trained by us initially and then to go out and set up similar training programs. They will need funds to do that.

Chairman PEPPER. Do you think Federal funds will be needed for the operation of these innovative programs for the treatment and rehabilitation of delinquent youth?

Dr. FIXSEN. Yes, I think particularly in terms of the startup costs, evaluation costs, and training costs.

Chairman PEPPER. But do you think that will be necessary as continuing in effect?

Dr. FIXSEN. It looks to me right now that it will be.

Chairman PEPPER. What about the cost of keeping the young people in the home in the teacher facility? As Dr. Harder mentioned this morning, right now a considerable amount of money is being used through the aid to dependent children foster care—money which comes through the State, partially Federal, partially State.

What would be the most likely approach Congress would adopt, if they adopt one at all; would it be to advise that funds be available for nearly all of the different categories of aid in the innovation, and frequently with the basic programs for deliquent youth, but probably conditioned upon the States and/or local communities giving satisfactory assurance they can operate a much safer setup. Wouldn't you think that would be most likely the Federal approach?

Dr. FIXSEN. I think that will be a good approach for initial legislation, but that for those innovative programs already in existence, then there needs to be additional money available to try that program out in other communities in urban areas, in rural areas, with other kinds of kids, to make sure this is really something that would be applicable on a national scale. It is again the intermediate step we referred to.

Chairman PEPPER. How do you evaluate the need for effective programs in dealing with delinquents or criminal justice, or youths that commit crimes in respect to the overall crime problem? How important is this area?

Dr. FIXSEN. I think it is probably critical. I think from successful programs we will learn how to develop prevention programs. For ex-

ample, as you identify ways of working with the parents of the kids in a treatment program, you may work out ways of working with other parents and other siblings in the home.

Chairman PEPPER. I like all aspects, but I was particularly attracted by one provision of your State social welfare program, that before you do anything, even take the boy or girl out of the home, you see if you can't save the home.

Dr. WOLF. That is right.

Chairman PEPPER. Save the family. Help that family a little bit. It may be if wise social counseling went into that home they might be able to identify the estrangement of the parents, help one or the other or both of the parents get a job, they might be able to do enough to save the child; then if that child is falling behind in school and is likely to become a dropout they might arrange for some extra tutoring, extra assistance for that boy or girl. That is the kind of need. There are so many families that don't have our good fortune of being able to meet the needs in general of our environment, and they are struggling to try to survive. It is a very different environmental problem, the situation that they have. If a little help, and particularly a little care, a little concern, is exhibited by somebody it may save not only a family but a child in the family.

Dr. FIXSEN. Exactly right. Very important.

Chairman PEPPER. So the conclusion you reach is the money we wisely spend in this area is likely to be money saved from people that will be spared from becoming victims of crime.

Dr. FIXSEN. Plus the initial savings.

Chairman PEPPER. In addition to that, maintaining them in some sort of correctional institution after they committed more serious and objectional crime.

Dr. FIXSEN. Plus the benefits we are now having.

Chairman PEPPER. Plus saving boys and girls for constructive lives, rather than destructive lives.

Dr. FIXSEN. Exactly.

Chairman PEPPER. Gentlemen, I want to commend my colleagues here and all of you for the very forward look, the imaginative and innovative concepts that you are entertaining in Kansas and the very fine work you are doing in this area. When we had our hearings in Kansas City, Kans., I was very much impressed there by many things I observed. You have a very fine program underway. We want to commend the university for what it has done.

Thank you very much.

Dr. FIXSEN. We really appreciate the invitation to be here.

[The following material was received from Dr. Fixsen:]

THE ACHIEVEMENT PLACE MODEL

Background

Juvenile delinquency is a serious problem in Lawrence, Kansas and nationally. Many attempts have been made to find a solution to the problem. Some show promise. The Achievement Place model is proving to be an example for other programs intended to re-educate delinquent youths. Numerous psychologists, psychiatrists, social workers, teachers and citizens have written for information about Achievement Place. This publication is designed to provide general information about the program. In addition, a film, **Achievement Place**, has been produced to show a day in the lives of the boys in the program. The film is available on loan for a nominal handling and mailing fee from the University of Kansas Audio-Visual Center, 5 Bailey Hall, University of Kansas, Lawrence, Kansas 66044. Other homes, one for girls, have been established in Kansas. Other communities across the nation are also establishing homes based on the Achievement Place model.

Introduction

Achievement Place is a residential treatment facility for delinquent or dependent-neglected boys in Lawrence, Kansas. After more than three years of research and planning, the teaching-parents and staff at Achievement Place have developed a model treatment program to improve the academic, social and self-care behaviors of youths who are (or are about to be) suspended from school, who are in trouble in the community, and who are thought by their parents to be "uncontrollable." In a cooperative effort involving the Juvenile Court, the County Department of Social Welfare, school officials, and teaching-parents, boys who have been adjudicated by the Juvenile Court are sent to Achievement Place for an indefinite period of time.

Community Responsibility

The treatment program is community-controlled and is thus responsive to the unique characteristics of the community or neighborhood it serves. This responsiveness is ensured by placing the responsibility for the physical facility and its financial matters in the hands of a local Board of Directors. The Board of Directors, in cooperation with the teaching-parents, local school officials, Juvenile Court officials, representatives of local church groups, and other interested citizens, select the specific goals of the treatment program. The Board of Directors is represented on the Candidate Selection Committee. The committee also includes a school official, a Juvenile Court official, a social worker from the welfare department, and the teaching-parents. This committee selects candidates who are most in need of treatment, boys who are the greatest threat to the community, the schools, and the homes. The Board of Directors is also responsible for periodically evaluating the treatment program and recommending changes. Thus, through the Board of Directors, the community has control of (and responsibility for) the entire program.

Community-Based Program

The treatment program is community-based. Each boy's problems are dealt with in his community, in his school, in his home, and in his peer group. When a boy enters the program he continues to attend his own school. Thus the teaching-parents, in cooperation with the boy's teachers, can help solve his problems in that setting. Weekend home visits are encouraged and teaching-parents have frequent discussions with the boy's parents concerning problems and improvements. Furthermore, Achievement Place provides a new peer group. Each boy who enters the program comes under the influence of a peer group already working toward the goals of the program. Thus, both the peers and the teaching-parents serve as examples of appropriate behavior. Even after a boy leaves the program he can remain a member of the Achievement Place peer group and continue to visit the home, eat an occasional meal there, or spend the night. The continuing support the youth receives from his peers is an important aspect of the treatment program at Achievement Place. Another advantage of having a community-based program is that persons in the community can see the changes in behavior. This often leads to further improvements in behavior because persons who were once critical begin to treat the boys more warmly.

Family-Style Living

The program offers family-style but professional treatment. In the original Achievement Place, and in other programs based on this model, professional teaching-parents live in the facility 24-hours a day with a "family" of six to eight boys or girls between 11 and 16 years of age. Having a small group allows the teaching parents to interact extensively with each youth and thus produce the greatest amount of change in the shortest period of time. The teaching-parents and the youths come to know each other quite well and there is ample opportunity for social behaviors which occur only in small family groups. One further advantage of a family-style treatment program is that it can be used by communities of any size. Small rural communities may require only one treatment facility. Urban settings may require facilities scattered throughout the community. In larger communities, some treatment facilities may "specialize" and take boys (or girls) who are having a specific type of difficulty in school or in the community. Even in larger communities, however, each family-style, community-based facility should be controlled by the citizens of the immediate area. This ensures community cooperation and accountability.

Professional Teaching-Parents

The treatment program is directed by a pair of professionally trained teaching-parents. Their explicit duty is to educate the youths in academic, social, and self-help skills. Academic training (an M.A. program in human development with a specialization for teaching-parents) aids the teaching-parents in their educational duties. Their college training includes behavior modification procedures, remedial education techniques, juvenile law, and community relations.

Systematic Treatment Program

The Achievement Place Model also emphasizes individual behavioral treatment in a group setting. Since no two youths have identical backgrounds or identical problems, the treatment is individualized. The treatment program and specific behavioral goals for each youth are based on behaviors that members of his family, his school, his community, and the teaching-parents believe should be changed. The motivation system is uniquely suited to changing the individual behaviors of the delinquent or dependent-neglected boy or girl.

Program Evaluation

The treatment program is based on a motivational system which provides constant feedback to the teaching-parents concerning the daily progress of each youth. The overall treatment is also evaluated by routinely following the progress of each youth after he leaves the program. Modifications in the program are made on the basis of what particular difficulties the youth encounters after he leaves the program. In addition, specific procedures for changing behaviors are evaluated by the teaching-parents who observe and record the effects of various procedures under controlled conditions. Evaluation at all three levels (individual progress, overall program, and specific procedure) is necessary in order to refine the treatment program and improve its efficiency.

Application of Treatment

The overall treatment program and the specific procedures contained within it are designed to produce desired changes in the goal behaviors and yet to be sufficiently practical to allow application by teaching-parents. Researchers have too often developed programs which can be used only by other similarly trained researchers. To guard against that, the Achievement Place research staff has concentrated on developing procedures which can be effectively used by the professional teaching-parents. For example, the teaching-parents learn to use the youths themselves as "peer-trainers." They also seek help from untrained volunteers in the community to help carry out the treatment program.

The Achievement Place model is sufficiently developed to allow general application by other communities. There are still a number of needed refinements, goal behaviors which need to be better defined, and treatment procedures which need evaluation. Nevertheless, the program is ready for replication. Thus, the staff, in cooperation with the University of Kansas, conducts an experimental training program for professional teaching-parents. The training program takes about a year. It involves course work and extensive supervised practical experience in an Achievement Place style setting. Successful completion of the training program results in a certificate (for persons without college degrees) or an M.A. degree in Human Development.

Cost Compared to Traditional Treatment

The cost of an Achievement Place style program is substantial. However, it is much less expensive than traditional programs in large state institutions. In 1971, the operating costs were approximately $3,600 per year for each youth in an Achievement Place style setting with six youths. This compares with operating costs of between $8,500 and $9,000 per boy per year at the Kansas Boys Industrial School.

Initial costs are also much greater for institutional programs. It costs between $20,000 and $30,000 per bed to construct a state institution. It costs between $6,000 and $8,000 per bed to purchase and renovate an existing older home in a community.

THE ACHIEVEMENT PLACE TREATMENT PROGRAM

Purpose

The primary goal of the Achievement Place program is to help youths who are having difficulty with their environment. The first preference is to keep the youths with their original family if possible. Community agency personnel such as social workers, probation officers and school counselors, aid parents in correcting home conditions prior to the youth's referral to Achievement Place. Achievement Place gains custody of the child only after community service workers have done all they can and have suggested that the Juvenile Court remove the child from his home.

When the child is removed from his original home he is placed in the custody of the teaching parents at Achievement Place. The goal of Achievement Place is to help the youths become secure, well-adjusted, and useful citizens by providing a home-style, family environment in which sincere affection and understanding are combined with fair and consistent discipline, instruction, and feedback.

Affection and understanding, as important as they are, do not by themselves guarantee that a child will stop coming to the attention of the Juvenile Court. Nor can affection and understanding by themselves be expected to always lead to the development of acceptable behaviors in troubled youths. Normal youths learn appropriate behavior through many years of close and pleasant association combined with instruction and discipline from a father and mother. Most troubled youths have not had that experience.

At Achievement Place, teaching-parents modify undesirable and anti-social behavior whi' developing new and appropriate behavior patterns. At the same time they build a strong psychological foundation with which the child can face the difficulties he will encounter during and following adolescence. This difficult task requires a special type of care, instruction and discipline.

Why Spare the Rod?

It is not unusual for parents to discipline children using methods detrimental to the behavior change desired. For example, if a youngster is to be home from school by 4:00, but does not make it home until 7:00, a highly probable consequence would be a spanking, a reduction in privileges, a severe bawling out, and a cold shoulder for a short but unpleasant period of time.

This type of interaction usually gets the job done (has the youth home on time) but it has many drawbacks.

1. If the punishment is upheld it leaves no room for reconciliation. That is, if the punishment is final, what the child does between the onset of the punishment and its completion may obscure the reason for the punishment and result in misbehaviors. Thus, the child may make no attempt to get along but may rather torment his parents with additional but minor infractions of rules. On the other hand, the parent may spoil the discipline by permitting the youth to have a "restricted" privilege, rationalizing that "it won't hurt this time."

2. It withdraws adult attention when it may be most needed. The adult's reasons for administering the punishment and the youth's questions and reactions to the punishment may never be discussed because the parent feels it is necessary to be angry and unfriendly to make the punishment effective.

3. The level of punishment can seldom be matched to the magnitude of the misbehavior. There is a limited number of events and privileges parents may manipulate for disciplinary purposes. Thus, a small rule infraction may receive the same punishment as a larger infraction because no alternatives are available.

4. There is little opportunity to give rewards, other than praise, because other events which are rewarding to the child are not always available. If the system permits more powerful types of rewards to be employed, the desired behavior will occur more often.

5. If the punitive action is too severe, there is no way to take the punishment back. There may still be rare occasions when physical restraint is needed in order to protect persons or property; however, punishment is not the answer to most behavior problems.

The Token Reinforcement System

It is best if discipline can be maintained without reducing the quality of social interaction and instruction which is required if the child is to achieve stable and normal behavioral adjustment. He must be able to describe and discuss his own reactions and to understand the reasoning of others regarding rules and discipline. In order to accomplish this task, a token economy is used in Achievement Place to aid and speed up the job of re-socialization. The token economy (or the point system as the boys call it) may be used for discipline while the social relationship between the parent and child goes undamaged. The point system is also used to strengthen appropriate behavior to insure that it will occur more often.

If a youth on the point system returns late he knows the penalty before walking in the door. Almost all behaviors which earn or lose points are formalized and advertised on a bulletin board. Thus, there is no argument over the youth's behavior. The fine is delivered but it is not necessary for anger to be expressed. Normal relationships never need to be interrupted. The teaching-parent may have his arm around the boy's shoulder and be discussing how the boy can earn back the lost points at the same time discipline is being delivered. If a specific fine is too large, it can simply be reduced. It is difficult to do that if harsh words or spankings enter into the discipline.

How the System Works

The point system allows the boys at Achievement Place to earn points for appropriate behavior and to lose points for inappropriate behavior.

Points earned can be exchanged for items and events available in the home. Access to these privileges is obtained on a weekly (or daily) basis. At the end of each week (day) the boys trade the points for privileges during the next week (day).

The point system is designed to provide immediate feedback to a boy immediately upon entering the program. Then, as his skills and self-control develop, the highly structured point system is gradually withdrawn and replaced by a more natural set of feedback conditions. The training is designed to teach the boys to be productive and responsible under the natural feedback conditions of most homes, schools and jobs. When a boy earns his way out of the point system and into an honor system he must be ready to accept a great deal of freedom along with many

Some Behaviors Which Earn Points

- Watching TV news or reading the newspaper
- Cleaning and maintaining a neat room
- Keeping personally neat and clean
- Reading appropriate books
- Aiding teaching-parents in household tasks
- Doing dishes
- Being well-dressed for the evening meal or special occasion
- Performing homework
- Obtaining desirable grades on school report cards
- Turning lights out when not in use

Some Behaviors Which Lose Points

- Failing grades on report cards
- Speaking aggressively
- Forgetting to wash hands before meals
- Arguing
- Disobeying
- Being late
- Displaying poor manners
- Engaging in poor posture
- Using poor grammar
- Stealing, lying, or cheating

Privileges Which May Be Earned Each Week With Points

- Allowance
- Bicycle
- Television
- Games
- Snacks
- Permission to go downtown or visit natural home
- Permission to stay up past bedtime
- Permission to come home late after school

responsibilities. If his behavior indicates that he needs more experience with the support of the point system he loses his new status and returns to the point system. He can then again earn his way off of the point system. Once a boy demonstrates his ability to exercise self-control, to take responsibility for his own behavior, and to work productively in the home and in the school, he is ready to be returned to his own home or to a permanent foster family.

The family receives counseling in behavioral management practices. The boy's progress with his family and in school is followed closely for several months. During this follow-up period the boy can be returned to Achievement Place if the family and teaching-parents decide that is desirable.

How Do the Boys View the System?

The boys, in most cases, seem to enjoy the opportunity to earn their own way. It appears to make every day a challenge. It seems to make them realize that freedom and the other privileges we often take for granted are not "free" but must be earned.

The point system shapes the teaching-parents as well as the youths. When a boy does something right, the point system requires that he be rewarded. Thus, the system ensures that both the teaching-parent and the youth perform their roles appropriately.

Who Makes the Rules?

After a few weeks of training in self-government, the boys (in most cases) decide if a certain behavior should be changed. They also set the cost for violating rules. The boys conduct a court in which they sit in judgment of rule violations.

However, there are some rules over which they have no control. These rules (in many cases municipal, county, state or federal laws) must be upheld. For example, many boys have long histories of truancy and failure in school. If given a choice they would probably choose not to go to school. The task of the program is to make success in school rewarding to them.

What Research Goes on at Achievement Place?

The research at Achievement Place is an attempt to design an educational environment and to describe the environment and the progress of the boys as objectively as possible. Careful records of behavior are kept to allow continuous evaluation of progress in the home and at school.

Part of the training program includes the use of closed circuit television. The educational television is used to train the boys in social behavior. The boys run the television themselves. They make video-tapes of interactions such as solving an argument, the proper way to greet adults, and the basic skills of leadership. The boys play these tapes back and discuss the good and bad points. They observe how they improve over time. Also, the tapes can be replayed to objectively evaluate the effectiveness of television in training social skills. Thus, it is sometimes difficult to separate the research from the training.

How Successful is the Program?

The first and most important measure of success will be the long-term behavior of the boys who have lived in Achievement Place. If in later years these boys live productive and law-abiding lives the program will clearly have been a success. But we cannot wait 10 or 20 years to evaluate and make adjustments. There must be more timely measures of how the boys are performing. If the boys can cope in a miniature model of the "grown up" world they will make it on their own. Thus, we attempt to use their behavior in the home and school and in the community as a measure of the effects of the program. The immediate success of the program is impressive. Once the boys enter the home there are almost **no** unpleasant contacts with the law because they are no longer law violators. The schools report that they "are new boys." One boy has advanced two grades in one normal year. But the biggest change can be seen in the boys themselves. They take pride in their achievements and enjoy their new-found responsibilities.

THE ACHIEVEMENT PLACE EDUCATION PROGRAM

Most boys who come to Achievement Place are in academic trouble. They frequently have long histories of truancy, tardiness and disruptive classroom behavior. In addition, they may be one or more grade levels behind or on the borderline of failure. Unless remedial steps are taken, they will more than likely become school "drop-outs." The Achievement Place education program seeks to correct academic deficiencies to prevent drop-outs. This program is integrated with the overall treatment system currently employed by the teaching-parents at Achievement Place.

The academic failure of these boys is probably the result of a great many factors operating simultaneously, but the key to the problem appears to be motivation. It appears that the boys just "don't care" about school or getting an education. They see no connection between doing well in school and success in later life. One possible way to overcome this difficulty is to bring the consequences of a good education closer to the actual learning.

To do this each boy begins by taking a "daily report card" to school each day for each class (see example).

Teachers are asked to check "yes" or "no" to certain behaviors observed during the class period. The grade in the second two categories is initially set on the level the student is currently performing. The teaching-parents do not ask too much of him at first. The level required is gradually raised over a period of months until it is acceptable.

Teachers have given this system their approval and support. It causes them very little inconvenience but it is very effective. Several teachers have permitted Achievement Place staff members to observe their classes in order to objectively evaluate the results of the system. Before taking the daily report card, the boys

Daily Report Card

Name: .....

Class: .....

Yes	No	
☐	☐	Studied and obeyed the rules for the whole period.
☐	☐	Completed homework assignment on time and got at least a .....
☐	☐	Earned at least ..... on quiz or exam.

Date: ..... Teachers signature: .....

spent about 25 percent of their time in appropriate study behavior. While taking the card; however, their study behavior usually increased to almost 90 percent. In addition, an average of one letter grade increase for the 9-weeks report cards was common for most boys using the daily report card. We are working out a way to slowly remove this supportive system so the boys may be returned to the normal feedback system of 9-weeks report cards while still retaining their good study behavior.

THE ACHIEVEMENT PLACE HOMEWARD BOUND PROGRAM

As the boys at Achievement Place move through the rehabilitation program they gain more and more freedom by accepting more responsibility. At Achievement Place the boys learn new social skills needed to maintain good relations with their peers, teachers, parents, and other adults. Their academic skills are improved by study habits taught at Achievement Place and by daily "report cards" which provide immediate feedback to each boy for his academic and social behavior in each class he attends. The boys also learn how to maintain a clean and orderly house; they are taught how to make beds, clean bathrooms, dust, sweep floors and wash dishes. When the boys "graduate" from the Achievement Place program, they are capable of contributing to their natural home and to the community.

The Homeward Bound program is designed to maintain the social, academic, and self-help skills by providing for a two- to six-month (or longer if necessary) transition period during which personnel from Achievement Place maintain close contact with the parents of each homeward bound boy. Initially the boy goes home for weekends and continues to live at Achievement Place during the week. Each boy learns how to plan his weekend time so he will avoid the problems which originally caused him to be placed in Achievement Place. His parents learn to use the techniques successfully employed at Achievement Place so that they can maintain their son's newly learned skills.

During the next phase of the Homeward Bound program the boy lives at home full-time while Achievement Place personnel maintain close contact with the boy and his parents. As the parents become more proficient in guiding their son's behavior, the Achievement Place personnel assume a more indirect role and turn more of the responsibilities over to the parents. The parents eventually assume full responsibility for their son's behavior.

In the event of a reoccurrence of delinquent behavior, or if some previously unknown problem arises, the boy may be returned to Achievement Place for further training. This is a necessary aspect of the Homeward Bound program since there is no guarantee that the boy has learned the quantity or quality of social and academic skills necessary to get along without the support of the rehabilitation program at Achievement Place.

The Homeward Bound program is designed to maintain the skills acquired at Achievement Place by providing a gradual transition into the home, by educating the parents in the techniques used at Achievement Place, and by providing continued support to the boy after he has returned home.

What Keeps Them on the Right Track?

The boy's parents are trained to apply behavioral management techniques used at Achievement Place. Close contact between the boy's parents and Achievement Place personnel is maintained for several months. This ensures that the home environment is changed to prevent future misbehaviors.

Each boy changes considerably at Achievement Place. He learns to take pride in helping others, he learns how to handle responsibility, and he acquires a new pattern of behavior which shows self-confidence. For these reasons, the parents do not have much difficulty with the boy. Discipline is no longer the major parent-child contact.

Finally, there are usually younger children at home. By learning how to control the behavior of their son returning from Achievement Place, parents become better prepared to cope with the problems of their younger children. Many pre-delinquent behaviors in younger children can thus be changed before they come to the attention of the juvenile authorities.

What if the Parents Refuse to Cooperate?

Although it is most desirable to return the boy to his natural home, there are at least two possible alternatives if the parents are uncooperative or incapable of fulfilling their parental obligations. One is to let the boy remain at Achievement Place until he is 18 years old. This is not particularly desirable since other boys more in need of the rehabilitation program at Achievement Place will not be able to participate until room is made for them.

The other alternative is to arrange for a foster home through the local welfare agency. Foster parents can be trained in much the same way as the natural parents. The boy then goes through a transition period from Achievement Place to his new foster home.

HOW TO START AN ACHIEVEMENT PLACE STYLE PROGRAM

The necessary resources are available in most communities to begin an Achievement Place style program. However, much effort is required to organize these resources into a program.

Board of Directors

Begin by contacting citizens and public and private agencies such as the juvenile court, the county department of welfare, public schools, the model cities department, and the mental health clinic. Meet with representatives from these agencies and determine if there really is a need for a home-style treatment program. If a need exists, begin a loosely knit association of representatives and other interested citizens who are willing to work toward the development of the program. Eventually this informal association will evolve into a Board of Directors with formal responsibility for the program.

State Health Department

In most states, group homes are licensed according to guidelines describing the requirements for the physical facilities, the administration of the program, and the duties of the personnel. Write or phone your state Health Department and ask for a copy of these guidelines and licensing requirements. Also ask for someone to consult with you about developing a group home in your community.

The House

You will want a large home to renovate. Some planners have suggested new construction for group homes, but this has many disadvantages. New construction costs more, it is less like a "real home," and it is more likely to be viewed as an "institution" by the community. In most communities there are several large older homes which can be purchased at a reasonable figure Such homes need a great deal of renovation, but they can be made extremely home-like and comfortable at moderate cost. Also, each one is unique, providing individual character.

There are several things to consider in the renovation. Renovation should be carried out in consultation with the local fire marshal and health department, both of whom will likely be involved in licensing the house. The renovation should also meet the physical requirements of the professional teaching-parents. Remember that the teaching-parents need privacy and space to make them comfortable. They will also need a nursery or second bedroom if they have children of their own.

An additional problem in choosing a home is meeting the local zoning requirements. It has been our experience that when the first home is introduced into a community the neighbors are not terribly happy with the idea. This is understandable. They have legitimate fears of strangers coming into their neighborhood with a program for "delinquents" which in some manner might, for all

they know, endanger their children, the value of their homes, and perhaps their very lives. The neighbors all need to be contacted and reassured. They need to understand that the teaching-parents are professionals and have been trained to handle youths with behavior problems. They need to be reassured that the "family" will not really be much larger than a typical large family. The neighbors need to be encouraged to contact the teaching-parents any time even a small problem involving one of the youths occurs. This is exactly what the teaching-parents want. The teaching-parents need to know each time a youth walks over a yard without permission, throws a rock at a cat, or says an unkind word to a child. These behaviors can then be dealt with and corrected by the teaching-parents. Thus, while occasional inappropriate behaviors may occur in the neighborhood, the teaching-parent family will probably, in most respects, be more responsible and more effective in controlling their youths than many of the "normal" families in the neighborhood. In any event, establishing the first home may cause some problems with the neighbors. Thus, an education program for the neighbors is needed.

Financing the Program

There are many sources of funds for establishing and operating Achievement Place style homes. Contacts with several agencies should be established. Begin by approaching the county department of welfare and the state department of welfare. A new agency in every state now concerned with establishing community-based correctional programs is the Law Enforcement Assistance Administration (LEAA) which is funded by the federal government. Each state has it's own agency which receives block grant funds from the federal LEAA. Contact the governor's office in your state for the name of the LEAA agnecy.

Private groups may dedicate effort and money toward establishing a home. Be sure to contact the local chapter of the JayCees, the Junior League, the Optimists, as well as the churches and individuals who are known to make contributions to worthy causes.

Financial needs can be broken into two classes; **start-up costs** and **operating costs**. Included in start-up costs will be the funds for purchasing or making a down payment on the home, renovation of the home, as well as the first few months of operating costs. The operating costs will include the salaries of the professional teaching-parents, food, clothing, utilities, transportation costs, etc. Operating costs may be obtained from such agencies as the juvenile court or the county and state welfare agencies. In Kansas, welfare will pay between $250 and $300 per month per youth for Achievement Place style programs. This is almost enough to cover operating expenses. Start-up costs will probably be about $50,000 per home. While this is a great deal of money, this sum can often be obtained from a combination of agencies including the state LEAA and private organizations such as the JayCees, Junior League and church groups. There is a real need for federal legislation to help communities by providing these start-up costs. At the present time there is no federal agency with the responsibility for helping communities establish these programs. Nevertheless, funds are currently available to be used to develop Achievement Place style programs. It merely takes time and a determined effort to coordinate these resources and secure the funding necessary to support an Achievement Place style home designed to make a realistic contribution to the rehabilitation of disadvantaged youths.

Achievement Place was established and continues to be supported and directed by the citizens of Lawrence, Kansas. The research program has been supported by a grant from the National Institute of Mental Health (Center for Studies of Crime and Delinquency) to the Bureau of Child Research and the Department of Human Development, University of Kansas.

COMMUNITY-BASED, FAMILY-STYLE GROUP HOMES

Group homes provide treatment services for court adjudicated delinquent, pre-delinquent, emotionally disturbed, mildly retarded, and dependent-neglected youths and their families.

Group homes provide services for youths 10 to 18 years old with six to eight youths in each home.

Group homes primarily provide services to youths from the county, city, or neighborhood where the group home is located but can accept older out-of-county youths if this is needed.

Group homes are community-based in that each youth continues to attend the same school, maintains frequent contact with his parents, and remains in his own community.

Group homes provide services to local youths, which greatly facilitates treatment and makes possible extensive aftercare services to each youth and his family that helps to ensure each youth's success and may serve to prevent further delinquency among his siblings.

Group homes are operated by local Boards of Directors made up of responsible community members who hire the staff, have responsibility for financing and for the physical facility, and supervise the operation of the house; this community control helps to ensure community cooperation and accountability.

Group homes are operated by house-parents or professional teaching-parents who live in the facility and provide a pleasant, family-style treatment program and teach the youths critical social, academic, self-care, and community-living skills.

Group homes cost less than institutionalization with a cost of about $350 per youth per month for operating expenses (compared to about $800 per youth per month for institutions) and an original cost of about $6,000 per bed to purchase, renovate and furnish a large, older home (compared to about $25,000 per bed to construct an institution).

Group homes often are 80% to 90% successful while other treatment programs often have only 40% to 60% success.

Group homes can be readily evaluated by the Juvenile Court, Department of Welfare, school officials and teachers, members of the Board of Directors, the youths' parents, and the youths themselves to determine whether the program is meeting the goals established for the home.

Chairman PEPPER. We will adjourn until 10 a.m. tomorrow in this room.

(Whereupon at 4:30 p.m., the hearing was adjourned until 10 a.m. on April 19, 1973.)

STREET CRIME IN AMERICA

(Corrections Approaches)

THURSDAY, APRIL 19, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:15 a.m., in room 311, Cannon House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Mann, Wiggins, and Winn.

Also present: Chris Nolde, chief counsel; Richard Lynch, deputy chief counsel; James McDonald, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

Mr. Lynch will you proceed with the first witness.

Mr. LYNCH. Yes. Thank you, Mr. Chairman.

Mr. Chairman, the first witness today will be Judge Keith Leenhouts. I am pleased to present him to you and to the committee.

Judge Leenhouts is executive director of Volunteers in Probation, a division of the National Council on Crime and Delinquency. He holds a law degree from Wayne State University, and served as a judge with the municipal court in Royal Oak, Mich., from 1959 to 1969. It was under Judge Leenhout's leadership that the remarkable volunteer program began within the State of Michigan. It has served as a national model. At one time Judge Leenhouts employed over 500 volunteers within his court system.

His organization, Volunteers for Probation, operates now on a budget of approximately $80,000, and Judge Leenhouts spends most of his time going from city to city within the country assisting other courts and citizens groups in establishing probation volunteer programs.

Judge Leenhouts, will you please take a seat at the witness table?

Chairman PEPPER. Judge Leenhouts, we are very pleased to have you here this morning. We know we will profit very greatly by your advice and counsel.

STATEMENT OF KEITH J. LEENHOUTS, DIRECTOR, VOLUNTEERS IN PROBATION, ROYAL OAK, MICH.

Mr. LEENHOUTS. You might like to know a little bit about the volunteer court movement. It was virtually nonexistent 8 years ago, virtually zero volunteers were involved in the criminal justice system.

Today there are one-third of a million volunteers involved in some 2,000 courts, jails, prisons, and juvenile institutions.

Mr. Chairman, you will be proud to know Florida was one of the first States to go into this in a meaningful way on a statewide basis.

Chairman PEPPER. I have met many of the ladies who are sort of monitoring our courts down there. Is that the same program?

Mr. LEENHOUTS. No; that is a little bit different. We are more in the 1-to-1 involvement with the offender and with professionals like psychiatrists and psychologists as volunteers; also, giving services directly to the offender.

Chairman PEPPER. I am pleased to know that Florida is taking a credible part in this program.

Mr. LEENHOUTS. Yes. That was 1967 or 1968, I spent quite a bit of time in your State, helping them begin the first statewide movement in that area.

The use of volunteers is very, very effective. We have research which we can leave with your committee, which pretty well proves that the volunteer and the professional, working side by side, are about three or four times more effective than the professional alone. So I think that, first of all, the volunteer represents a tremendous source of savings as far as the repeat crime is concerned.

The volunteer court movement we fully anticipate will involve 1 million volunteers within the next 3 or 4 years. So now we would think that one of the things we should be thinking more about is how these 1-to-1 volunteers, who now are involved and informed, can become agents for a change as well in other areas within the criminal justice system. This is one of the things to which I think we should address ourselves more and more.

There are two programs that I think I would like to mention to you very briefly, if I may. One is a canoe trip which is going on right now, which involves four kids that have been taken out of juvenile institutions. They are kids that we have given up on, said they were beyond us, we had to put them away. So four of them, a positive youngster, a delinquent-prone youngster, a photographer, and man by the name of Fred Ress, a young 25-year-old, is taking these six people on a canoe trip from the Pacific Ocean to the Atlantic Ocean over a 6-month period. If they can prove the effectiveness of this—and we have every reason to believe they can—then maybe what we can do is send kids who have been in trouble on adventures like this, so they will come back proud of what they have accomplished, rather than ashamed of where they have been.

Chairman PEPPER. Who is acompanying those youngsters?

Mr. LEENHOUTS. The man's name is Fred Ress. This is the Plymouth Youth Center of Minneapolis. The idea is to demonstrate that it is far more effective than putting kids in juvenile institutions.

A prior trip taken 2 years ago from Lake Superior to Hudson Bay over 73 days with a similar group of youngsters from juvenile institutions, and one or two positive youngsters who had never been in trouble, has brought about tremendous results and has brought about this 6-month trip. This is the kind of thing I think this committee might be very interested in. I think it is one of the most exciting juvenile court programs I know of.

Fred Ress is totally a volunteer. Not only has he volunteered his time, but it is costing $4,000 just to take supplies for this trip. He is a very talented young man. He could possibly be singing for thousands of dollars a year. He was a winner of a New York Metropolitan Opera Company nationwide contest. Not only has he given up his singing career, at least temporarily, but has also put his own money into this. It seems to me this is the kind of person we should identify and help.

Chairman PEPPER. Just he and the boys?

Mr. LEENHOUTS. He and one photographer and the six kids, four who have been in juvenile institutions, one who will probably go there because of a very poor background, and one positive youngster, so they can have this effect back and forth.

I think, basically, this is the type of thing Volunteers for Probation have been doing. I really think if we are going to try to summarize in just a few seconds what we have done over the last years it is that what we have really done is identify really the heroes in our society and to give them the support and help and guidance and consultation that they need to get the program started.

Sometimes these are judges; no money, began a volunteer program out of a complete vacuum like we had in Royal Oak. Sometimes they are probation officers that are just overwhelmed at the situation, and know they need help, and we go in, and help them know how to screen, and sustain, and supervise the volunteer. Sometimes they are ordinary citizens, like a man in Bethlehem, Pa., an engineer in Bethlehem Steel, who began a program which developed beautifully, well administered, became a model program for Pennsylvania. Now there are 50 or 60 programs in Pennsylvania using this basic model of Bethlehem, Pa.

These programs, of course, are not saving thousands; they are saving millions of dollars throughout the United States because they have reduced recidivism by about a 4-to-1 ratio. They also give the courts tremendous resources so that the lower courts, adult misdemeanor courts and juvenile courts, become very effective and prevent all kinds of felonies.

I can give you statistics on this. In our courts in Royal Oak, actually the parole office handling felons out of Royal Oak was actually closed years after we began using volunteers in the misdemeanor court. That is how effective the volunteer is. He represents just a tremendous savings in money and, in addition to that, of course, just a tremendous savings in human life.

The other juvenile program I might mention very briefly to you is a program called Partners in Denver. It begins something like this. When a young juvenile goes on probation the probation officer says, "How would you like to join a club called Partners?" And the response, of course, is totally negative from this young 14-, 15-, 16-year-old. He says, "I don't want to join any club you are part of." The probation officer says, "Then that's too bad, I will cancel out the airplane trip." The kid says, "What about the airplane trip?" And he says, "As a matter of fact, not only do you get to fly in the plane, you get to fly the plane if you join 'Partners'." He says, "Where do I sign?" The probation officer says, Not so quick. If you join this club, you will have to meet with the citizens for 3 hours a week and

commit no more crimes." He figures he can con his way out of that later, so he joins the club and a few days later has gone for an airplane ride with volunteer pilots who volunteer their time and gas, and they go up in the airplane ride with the volunteer and staff man from "Partners." They come back to earth, at least geographically; I am not sure they ever come down mentally, emotionally. Then they go on a fishing trip to a trout hatchery, a guaranteed success experience. Then they spend a year with a 1-to-1 volunteer; they are together with them 3 hours every week and once every 3 or 4 months a third of them take a rapping trip or camping trip, hundreds at a time, because there are now about 450 volunteers active in this program.

This is the kind of program, under the direction of a remarkable young man by the name of Bob Moffat, that should be all over the United States. The recidivism rate is virtually zero. How could it be anything else? It is amazingly effective.

Chairman PEPPER. I can't refrain from saying that this week we have had programs unfolding which would not only reduce crime, but save a lot of money for the taxpayers of this country. Yet, all these people that are bleeding hearts over crime, most of them are not doing anything about this kind of a program. They want to talk about something else.

We are very grateful this morning to have as many of the members of the press as we have here, but this is all dull, you see, it is not spectacular, it is not anything sensational. It ought to be sensational.

You are telling about how the application of what, in a general sense, might be called love, the exhibition of care and concern for these boys that have committed serious crimes, is saving these boys from future crime and saving the taxpayer a lot of money. But here the Washington Post will run big articles nearly every day telling about crime in the District and the like. If they would be telling people here in the District what you are telling us now and calling for volunteers to do the kind of work these volunteers do to save these boys, we would be saving the taxpayers money and we would be reducing crime here in the District. But I don't know how—it is just going to take a person-to-person kind of a program, such as you have described, in order to get this idea spread over the United States.

But you are talking of the finest kind of crime curbing and I just hope we can bring to the Congress and the public's attention this program and encourage its adoption by others.

Go ahead.

Mr. LEENHOUTS. Thank you very much, sir. I might say that just last night, sitting up on an airplane all night long to get here from San Francisco, I read, it must have been 50 articles, photostatic copies of articles from newspapers in Florida which have talked about the Florida program under O. J. Keller and Len Flynn and others that you probably know, and these articles show to me that the press is really starting to think this does make news.

Chairman PEPPER. Mr. Keller was here this week. We are very proud of him in Florida. The legislature is, in general, giving him support. So we are, by way of improving our system, very much under his guidance and leadership in Florida. I hope public opinion more and more is supporting that approach. Yet we just barely scratch the

surface in what we can do if we will follow the best thoughts there are prevalent in this country today in this area.

Mr. LEENHOUTS. The simple truth of the matter is, up to this point what has developed, the one-third of a million volunteers that have prevented thousands and thousands of crimes, has been in spite of and not because of the government.

That is 90 percent true. And what has developed has been people that have just said it has got to be and they have done it. And people like Guy Main, Fred Ress, $4,000 of his own money, 25-year-old man, said it's just got to be. He is taking a canoe trip which is in one way a trip in the past, the old fur traders, but in another way it is a trip in the next century, a way to deal effectively with juvenile offenders.

Chairman PEPPER. All over this country there are businessmen who are still relatively young, who have been very successful in business, and a great many of them are looking for something satisfying to do. I know one day I was riding along in the golf cart with one of my good friends in Miami, who had made a lot of money, and at that time he was not in business at all, had sold his business.

Addressing me, he said:

> You know, I wish there was something I could find to do. I don't need any more money, I don't want to be on any more boards and the like, but I just don't feel like I am doing anything, only playing golf three times a week and just taking it easy.

And this was a fellow, a very big, fine, strong, wonderful man. There are a lot of men like that all over the country. He finally went back into business to a limited degree, primarily to occupy himself. There are lots of men like that all over this country that are good sportsmen, like to go out in the woods and fish and the like, who would be wonderful men to work with boys. They would respect these men. And the men would get a satisfaction out of life that they are not now getting.

So I don't know how you spread this philosophy among the men who would like to do this kind of thing, but I think there are a lot of potential members of this great fraternity that you are talking about in the country.

Mr. LEENHOUTS. You are so right. On our staff today, in our office right today, in Royal Oak, Mich., we have six full-time people working for us. Three are retirees who get what they can of their social security. Our program in Royal Oak, in order to have 50,000 hours a year of rehabilitative service to kids, had to have 14,000 hours of administrative nitty-gritties; 14,000 hours of really fine administrative work was given to us by seven full-time retirees who worked for what they could receive under social security, half of them; the others have received nothing at all.

This is a tremendous untapped resource. One of the things we have said around the country is we ought to use one-to-one volunteers. There is a third of a million now, so that has been pretty successful. But the second thing we tried to say so much around the country is the use of the retirees you are talking about now, and I would like to see, if possible, some funds somehow to go about with this message of the involvement of the retiree.

As we approach judges throughout the United States, I would say as we approach 100 judges, and we talk about the voluteers, 15 percent

of them say, "It has got to be; it is right; I will do it myself if I have to crawl on my hands and knees. It has got to be and I will do it." And 15 percent will say, "No way, it is no good; I won't have anything to do with it." And 70 percent, in the middle, will say, "I would like to do it, but I can't do it administratively."

We can train retirees all over the United States to go to their judges with the basic concept and say, "Let's try it, and I will administer this for a year and at the end of the year we review it and see where we go." That is one of the things we would like to do.

Chairman PEPPER. You know, Judge, what you are saying reminds me, in a way, of the Peace Corps. Here we are approving conscientious and meaningful people to go into other countries and try to help those people. The age of the members of the Peace Corps, I understand, has increased in later years. So it shows that older people as well as younger people are idealistic and are interested in being helpful to their fellow man. But suppose we could organize a Peace Corps equivalent in the United States to work among the juvenile delinquents of this country? Look at what an enormous program that could be. How could we do something like that?

Mr. LEENHOUTS. This is another thought we had in mind. I know you have given a lot of thought to this because these things just don't come off the top of your head. We are right on the same wavelength. It is amazing.

One of the things we are now trying to bring about is a national college for the court corrections volunteer movement. This national college would, among other things, train graduate high school students and college students for credit, give them an idea of how they can become more effective as professionals in this field, or as volunteers later in life. This is something that is now on the drawing board and we are working at and, of course, like everything else we have ever done it has to be done totally without money, apparently. So we are going to have to put it together. This is something I think there is a tremendous potential for.

Chairman PEPPER. I don't know whether it should be done under the aegis of the Government or whether it should be done by a private organization. Have you any suggestions? How could we stimulate a larger participation, and should the Government have any part in it?

Mr. LEENHOUTS. I am really not sure, except to know that our office solely intends to it. And if we can do it with some funds we will do it quicker; and if we don't have funds we will do it the way we have done everything else, we will demonstrate its value and pick up support from here and there. It is just a degree of how it is going to come about.

Mr. LYNCH. Have you applied to any Federal agency for the developmental funding for that national college for training volunteers?

Mr. LEENHOUTS. No, Mr. Lynch, we have not. Certainly we would be amenable to the thought if there appeared to be any interest.

Mr. LYNCH. Judge, as I recall, several years ago you did apply to a Federal agency for a grant to enable you to take a year's leave of absence from your duties as a judge in Royal Oak to travel around

the country to assist other courts and citizen groups in establishing volunteer programs. Is that the case?

Mr. LEENHOUTS. No; that is not correct, Mr. Lynch. We did get a Federal grant to study the effectiveness of the Royal Oak program in 1965. That did not go to the operational program but to study the effectiveness of the same period, that research is in the packet which we are giving to the committee, and really proved the effectiveness of the volunteer to a tremendous degree.

The LEAA has contributed money for our national conferences. We have an annual national conference, the first one with 500 people, the second one with a thousand, and we expect around 1,500 to 2,000 in Denver next October. This is where we will get the Bob Moffats and Fred Resses all together so they know each other. This is the way we open communication with people of similar circumstance and interests.

Chairman PEPPER. This is the volunteer organization, all over the country?

Mr. LEENHOUTS. Yes.

Chairman PEPPER. Are you the head of it?

Mr. LEENHOUTS. Yes, sir. In 1959 we began to use volunteers. By 1965 we had 500 volunteers. In 1965 a Reader's Digest article came out about us. In 1965 the Methodist Church gave us $24,000, no money for salary, no staff, but to pay for travel and literature to go around the United States. In 1969 a very wealthy man, who wishes to remain anonymous, gave us sufficient funds so that we were able to operate for 5 years. And so for the last 5 years, on the money that he has furnished, this industrialist, we have gone around the country spreading this idea.

During this period of time, the volunteer court movement has grown from zero to about a third of a million in 2,000 courts.

Chairman PEPPER. Have you applied to any foundation for funds?

Mr. LEENHOUTS. We have not, sir. We probably should. We are now with the National Council on Crime and Delinquency and have merged with them.

Chairman PEPPER. You are working with them?

Mr. LEENHOUTS. Yes, sir.

Mr. LYNCH. You are, in fact, a division of the National Council on Crime and Delinquency; is that correct?

Mr. LEENHOUTS. That is correct.

Mr. LYNCH. I wonder if you could tell us what is the cost of training volunteers? What kind of training does a volunteer in probation need, and how much does that cost?

Mr. LEENHOUTS. This varies from court to court. Some courts will have a longer training program than others; some courts will have a shorter orientation period and then concentrate more intensely on continuing supervision of the volunteer. Generally speaking, I would say most volunteers are trained somewhere between 6 and 8 hours, but the continuing supervision and guidance of the volunteer and support of the volunteer to the future is very important.

What the volunteer seems to crave is to have somebody he can say to, "My kid said this, my kid said that, what in the heck do I do now?" This is what a good volunteer program will administratively provide, somebody that has expertise that can be with the volunteer and can

say, "Well, your kid said that, I think you ought to try this, and you will come back and we will share some more." This is the role we use with our 35 volunteer psychiatrist in Royal Oak. Many of them would spend time consulting with those doing the consulting, so to speak, working with the volunteer and supporting him.

So it does vary quite a bit from city to city. But most of the volunteer court programs I have observed are being done very well. They are working very hard. For example, the city of Royal Oak, in 1959 one person, the judge, spent one-fourth of his time, 500 hours a year, on the whole criminal court process. Five years later, 500 citizens, most of them volunteers, were spending 50,000 hours on the same process. So we are thinking very, very hard, and the results are very, very good.

But we try to express that this isn't love in the sky; this isn't just sort of a hope that love somehow or other will descend and work miracles. This is a very hard-working process in which we work at screening, we work hard at training, we work hard at orientation and supervision, and so on.

We also bring supportive services. For example, in our court every young person that appeared before our court, where there was a difference between IQ and achievement, we had a group of volunteer optometrists that would test their eyes and in many cases they found out they needed glasses, and we would get the Lion's Club to get them glasses. We had psychiatrists handle group psychotherapy as volunteers, marriage counselors acting as volunteers. The whole gamut, bringing it all together is what we have to do, and this is what we can do when the volunteer starts inspiring the community.

Mr. LYNCH. The costs, then, in this kind of a program are minimal; but if moneys were available, they could be used to obtain technical assistance, evaluation, training, and things of that sort. Is that correct?

Mr. LEENHOUTS. Yes. I think that the real role of the Federal Government would be to spread the concept, to train people to give them the feeling that this can be done, and I think in every community there is a tremendous need, but also in every community there is a tremendous resource. We have examples of people who have taken this need and the resource and put it together and come out with the solution. This, I think, is what we should be about, going around telling people that this is what can be done in their community, that they have the answer in their community. I think this should be our role.

Mr. LYNCH. Has the Royal Oak program been evaluated?

Mr. LEENHOUTS. Yes, sir.

Mr. LYNCH. What did that evaluation show?

Mr. LEENHOUTS. Well, it showed that the recidivism was greatly reduced and it also showed in an attitude test that the attitudes in a similar court that had minimal probation actually got worse in about 50 percent of the cases. It would have been better if they had never been put on probation. And our court, with the volunteer and professional working together, the attitudes were greatly improved.

I have a one-sheet document here on it. We can send you a 40-page study, if you would like.

Other research, such as Denver and Boulder, has also pretty well shown, and I think conclusively shown, that when you have intensive probation, which is possible only when the volunteer and the professional work side by side, that intensive probation is very, very effective.

[The study referred to was retained in the committee files.]

Mr. LYNCH. Would you explain what you mean by "intensive probation," please?

Mr. LEENHOUTS. Sometimes I think, Mr. Lynch, there really ought to be two different words for "probation." One type of probation is where a probation officer has maybe 200, 300, 100, some big number, of probationers and they report once every 3 or 4 months in writing or by telephone, and that is it. We call that probation.

Now, we also call probation the kind of thing we did in Royal Oak, where every offender had an intensive presentence study by retirees and volunteer psychiatrists and psychologists, so at the end of 5 or 20 hours, we knew what he needed and then we supplied that need, either the 1-to-1 volunteer or volunteer psychiatrists individually, or group psychotherapy, or marriage counseling, or Alcoholics Anonymous; 18 different things. That is called probation.

It seems to me this would be something like somebody that comes over, say, from India, and you take him and watch a sandlot baseball game with some kids, 6 and 7 years of age, and say, "That's baseball." The next day you take him to Yankee Stadium to see a professional game, and you say, "That's baseball." He is likely to say, "Which is baseball?"

In a sense, they both are, and, in a sense, professional probation, where people report once every 6 months, if at all, in a sense that is probation. But what I am talking about is this intensive probation where people really care. Our volunteers, for example, used to come in at 10 o'clock every Wednesday night, those who were having problems, and we would be up there until 12 o'clock, 2 o'clock in the morning sometimes, talking about kids and their problems.

This is probation. This other stuff we call probation, it is too bad we don't have another name for it.

Mr. LYNCH. Do volunteer programs work best when they work with the formalized probation department?

Mr. LEENHOUTS. We are seeing them develop in different ways. I think a lot depends upon who begins them. The program in Denver, the "partners" program, is a separate program. Our program in Royal Oak was always part of the probation department and part of the court. I think both systems are effective if they are done right. The key here is putting your heart in the right place and then just putting a heck of a lot of sweat where your heart is. When you do those two things, you have a combination.

Mr. LYNCH. Judge, you indicated you have in some stage of development an idea or a proposal for a national college for probation volunteers. What would that college teach? What would the curriculum be?

Mr. LEENHOUTS. I think there would be two types of people, primarily, that we would be aiming for. One would be the graduate high school student and the other the college student, giving them a course for college credit in which they would have 3 or 4 weeks in the summer so they would be trained to be effective as professionals when they get into the criminal justice system as probation officers or in other capacities; and second, we would deal with people like engineering students so that in their free time and in their spare time they could be very effective as volunteers and really feel good about themselves

and what they are doing, not only for the probationer but for themselves.

The other thing that I would see would be 1-week courses which would be pretty intensive for judges, probation officers, JAYCEES, Junior Leaguers, et cetera, to show them how they could be involved in this movement in their area. I would think that perhaps 10 or 11 1-week seminars, and maybe 3 or 4 months of 3-week courses for the college student, and I think that in a few years we could make a tremendous difference.

Mr. LYNCH. So you would be giving formalized training, if you will, to people who were signing up to be volunteers; is that correct?

Mr. LEENHOUTS. This would be very intensive training for people who would be volunteers in the future, or who seek to be volunteers now; for those who would be professionals in the future in this area, and for those who are professionals now. These are the four types I would think we would be aiming at.

Mr. LYNCH. Wouldn't that be an appropriate area for Federal or State financial assistance. It is one thing to ask a person to devote time, it seems to me, and to ask them to undergo out-of-pocket expenses for losing a week's employment or whatever to attend a college. Would that be an appropriate area for subsidy for this kind of program to pay for that kind of training?

Mr. LEENHOUTS. I think it would, and I think this kind of thing is what the Federal Government should be about. The training and encouragement or motivation and information of people who can really make a tremendous difference.

Mr. LYNCH. Judge, you have seen the volunteer programs, I know, certainly since 1969, and maybe before that, all across the country. Is there any question in your judgment that by and large those programs are as effective, if not more effective, than the traditional kinds of probation programs?

Mr. LEENHOUTS. There is no doubt they are more effective when they are done right, and our big job now is to see it is done right. The problem no longer is to sell the concept. In 1965, when we first began to spread the idea, we had to convince people it would work and it was right. I no longer do that. I spend most of my time now trying to see it is done right. As a matter of fact, I go to some communities where I don't think that they really have got the motivation and I tell them I hope you don't start because you have to really have motivation, drive, intelligence, and ability. You have to put the heart and the head together. You have to put together the inspiration, the information, the science, and the spirit. These things have to come together. And when they come together you are really effective.

Mr. LYNCH. I understand your motive. I would like to know how effective you think you can be; how large is your operation; and how many professionals do you have working with you?

Mr. LEENHOUTS. In Royal Oak, in our office?

Mr. LYNCH. Yes.

Mr. LEENHOUTS. We have six employees. We have three in the traditional sense, and three retirees that work for us.

Mr. LYNCH. Are you the principal emissary, however? Do you personally review programs across the country?

Mr. LEENHOUTS. I am the one who is on the road.

Mr. LYNCH. And your total budget is $80,000; is that correct?

Mr. LEENHOUTS. That is about right.

Mr. LYNCH. If you had additional funding, would there be a role to find people—that would be hard to do, I think—like you to review programs and to give technical assistance, as it were, to other judges, court systems, what have you; could you employ such people?

Mr. LEENHOUTS. People from around the United States that I know right now? I could put my hands on 15 of them today. That would be a great job.

Mr. LYNCH. I have no further questions, Mr. Chairman.

Chairman PEPPER. Judge, have you made any application to, or have you had any contact with, the Development and Delinquency Prevention Administration, which I believe is in HEW?

Mr. LEENHOUTS. No, sir.

Chairman PEPPER. They are supposed to be working in the field you are working in. I don't think they have very much money, so I don't know just how much they are able to do. But I was wondering if it might be desirable for you to contact them to see whether or not they are in a position to give you any help?

Mr. LEENHOUTS. I think this is one of the things we should do. I think one of the big problems is I will have whole months where I am only in the office for 2 or 3 days, because I am traveling so much to help courts get started and help cities get started with these programs, and putting on a huge national conference once a year which involves 2,000 people or more. That is pretty much a full-time job for somebody, too. I think we have just reached the point we have to have more staff so we can begin to do more things.

Chairman PEPPER. I wish you would give some thought to what kind of legislation Congress might entertain which would, in effect, support your program. I would like to relate that to the Peace Corps. I think of it as comparable to the Peace Corps but on a domestic level, and aimed primarily at delinquent youth or troubled youth. I wish you would give some consideration to the kind of legislation that might be introduced in the Congress, or might be recommended by this committee, that would enable you to do a better and bigger job than you are doing even now.

Mr. LEENHOUTS. Thank you. I will be glad to.

[The memorandum referred to was not received in time for printing.]

Mr. LEENHOUTS. Let me say that one of the persons I haven't mentioned this morning is a man by the name of Richard Simmons, in Seattle, Wash., who has—hold on to your hat, you won't be able to comprehend this, nobody can when they first hear it—matched 4,500 volunteers with prisoners, the most hopeless cases. They always look for the ones who have been there the longest with no communication from the outside. The volunteers work with them on a 1-to-1 basis, as prisoners, as parolees, and ex-offenders, as lifelong friends.

I wish I could have the time to tell you story after story of the marvelous things they have done. Dick Simmons' concept is for a national college to train young college students to commit themselves for 2 years. Peace Corps style, and this is the kind of thing Dick Simmons and Bob Moffat of Denver's "partners" program, the airplanes, and myself, the three of us are trying to work and bring about.

Chairman PEPPER. Would you work that up in a memorandum and send it to me?

Mr. LEENHOUTS. I would be delighted, sir.

Chairman PEPPER. I ran into a program comparable to the one you are describing down in Memphis, Tenn. Out from Memphis is an institution where they incarcerate people. There is a company which is interested in improving people and improving the conduct of people and the like, motivating people, that was in charge of this program they developed there.

I went down there and spoke at one of their graduating exercises. They graduate prisoners who come through these courses. I learned the business and professional men in Memphis worked with one of the inmates out at the institution and talked over things with him and counseled with him and encouraged him and helped him. Then when he gets out, if he lives in that area, they also work with him, try to help him after he has been out.

I remember one of the graduates of this school whose class was publishing the local paper at the institution. He had been a man who from the time he was a young man had been in prison. I think he was in his forties, but somehow he had finally gotten the light and taken on a new point of view, new attitude, and it now looks like that fellow is going to go out and become a useful person in society.

Mr. LEENHOUTS. We are not only pleased with that program at the Shelby County Penal Farm started by Commissioner Mark Luxwell, but we are also proud because I believe that program began when Mark Luxwell heard one of our presentations in 1964 or 1965. He came to Royal Oak twice; we talked about it and that was the program which evolved out of it. We are not only pleased with it, but we are proud of it.

Chairman PEPPER. Very good.

Mr. Winn?

Mr. WINN. Thank you very much, Mr. Chairman.

I just want to congratulate you on the work that you are doing. I am sorry I missed the first part of your testimony. I will pick it up out of the record.

I, too, long felt that most of our so-called probation systems are really a farce. Many of the young people that we have had before this committee in the last 2 or 3 years talked about being on probation, but I got the idea that they thought it was a joke. Some of them said so. Some of them said they never did see their probation officer, they would check in once in awhile when they felt like it; and it didn't seem to me like most of it was working in the sense that you say your program is.

I find your program very intriguing and I wish you all of the luck in the world.

Mr. LEENHOUTS. Thank you, sir. I would invite you, and anybody that could, to come to our next national conference or send some of your staff, because this is where you will see about 2,000 people that are really involved in this all over the country. As Milton Rector, the director of the National Council of Crime and Delinquency, said one time: "I used to think I knew something about conferences, but I never dreamed you could have the spirit you have here at our conferences."

I hope maybe you could have some of your representatives come out. I think you would meet some fabulous people doing some great things.

Mr. LYNCH. Judge Leenhouts has left a rather extensive folder for the committee. I haven't had a chance to look at it, but I would like to reserve the right to incorporate appropriate parts of that folder into the record at a later time.

Chairman PEPPER. Without objection, it will be incorporated.

[The material referred to will be found at the end of Mr. Leenhouts' testimony.]

Chairman PEPPER. Judge Leenhouts, who is the head of your program in Florida, and particularly in the Miami area?

Mr. LEENHOUTS. The statewide director of the program is Mr. Keller in the juvenile field; a man by the name of Leonard Flynn in the adult field. There are many programs, and in the Miami area they began a program about a year ago, and they have a marvelous person named Ruth Wedding, who was one of the great leaders in the whole country. This program in Miami was begun by the Junior League out of a complete vacuum. The court had no services at all in the misdemeanor field, and the Junior League gave the money, volunteered, and it is a marvelous example right there in Miami on how a private organization, the Junior League, and the courts have worked together to bring about probation services.

Chairman PEPPER. I thank you for those names. Of course, we had Mr. Keller here this week. We are very proud of his eminent work in Florida. I am going to look up those people and try to get more help down in Florida.

Mr. LEENHOUTS. I might add this: We do have in our files in our office a list of about a thousand of my personal friends around the country. They are all doing a fine job and I would be glad to share this with the committee if that would be helpful.

Chairman PEPPER. We wish you would.

Thank you very much. We appreciate your coming, Judge.

[The following material, previously mentioned, was submitted for the record by Mr. Leenhouts:]

[Excerpts from "Concerned Citizens and a City Criminal Court," June 1969, by Project Misdemeanant Foundation, Inc., Royal Oak, Mich.]

HISTORICAL DEVELOPMENT

In August of 1959, a 17-year-old boy stood before the judge of the Municipal Court of the City of Royal Oak, Michigan (Population 90,000). He was charged with a felony, robbery armed. The preliminary examination had just been concluded. The boy was all alone, without attorney, parents or friends. The Judge asked him, "Where is your mother?" "She died when I was nine," was the reply. "Where is your father?" The boy said "He left before her funeral was over. I haven't seen him since." "Where have you been living?" The heartbreaking reply was, "I lived with my grandmother for a while but she died. I then lived with an aunt and uncle, but they were divorced and neither wanted me. I have just lived here and there since."

A month or two later nine men sat around a table discussing his case. We could do nothing for him. He was now before the higher courts awaiting trial and probable sentencing. But how about the others who would follow. Were we equally helpless?

The nine men were two Protestant ministers, a Catholic priest, a psychiatrist, a psychologist, a former professional youth worker, two junior high school assist-

ant principals and the judge. All were close personal friends of the judge except one. We decided to do something about the youthful offender if we could.

On April 15, 1960, we received the sanction of the Michigan Corrections Commission to institute a new type of probation program. Our plan was simply this: Each of the eight "Counselors" would give a maximum of five hours a month to a maximum of five probationers each. They would meet with them voluntarily, without financial remuneration. An assistant junior high school principal was appointed the Chief Probation Officer. He agreed to work additional hours to coordinate the program also without pay. We hoped to establish an inspirational relationship of trust, confidence and admiration between the probationer and an adult in the community who had both the zeal of the volunteer and the training, education, and experience of the expert in a phase of counseling. Whatever else might be said, at least we were not lacking in dedication, enthusiasm, and counseling experience. Incidentally, this is perhaps one of our unique features. The volunteer usually is an expert. We anticipated that the program would continue as originally started, supplemented only by the addition of more counselors. How wrong we were.

In June of 1960, about two months after our program got started, it became apparent that the Chief Probation Officer was working many more hours than a volunteer should. We have always felt that no volunteer should work more than five hours a month. As the Chief Probation Officer, he saw each of the probationers once a month. Thus, each probationer had a minimum of two meetings a month, one with his volunteer counselor and one with the Chief Probation Officer.

We talked to a businessman who agreed to make a $50,000 donation to our Probation Department. He was our first financial contributor. Toward the end of June we contacted two other businessmen who agreed to pay $25.00 a month each until the end of the year. These were our first permanent contributors. The program was now on a solid financial foundation, at least for six months. Thus, the program that started out with no financial backing whatever now had its first paid professional. The Chief Probation Officer was our first paid employee.

Toward the end of 1961, several more volunteer counselors were added and the Chief Probation Officer's case load was getting extremely heavy. It was getting to the point where he was becoming an administrator only. This we wished to avoid. We decided that we must secure the services of a "staff assistant" who would work about 25 hours a month also. Luckily, we were able to employ an assistant principal at a junior high school who was one of the original eight. His title was "Chief Counselor."

To effectuate this it was necessary to raise more money. Four of our biggest businesses contributed $25.00 per month each. Thus we started the year 1961 with two part-time employees (25 hours a month each), approximately 35 volunteer counselors and $100.00 a month. We were sure that we had reached our peak and that the challenge would be met. Again we were badly mistaken.

In the final months of our first year (January to April, 1961) we began to learn from experience that the experts were right. A probation department must be well administered.

Very happily, in May of 1961, the City of Royal Oak gave us $2,200. This was an unsolicited gift. No request had been made by us. How many times has the legislative branch of the government given an unrequested gift to the judicial branch? It was in this manner that the city started to partially finance the probation department. It now furnishes some 75% of our financial needs.

As we continued to grow in case load, the problems of administration became more and more time-consuming. For example, notices of monthly meetings formerly were a matter of simply letting a few friends know that we were having a get-together. Suddenly, it involved the mailing of 35 notices. Up to this point most of the administration had been done by the judge, who, in early 1961, found himself involved in some 15 to 20 hours per week administering a probation department in addition to the 40 hours or so required by the regular court activities. We seriously considered the possibility of being more selective and taking only the violators who presented the gravest need. While this sounds good on paper, it doesn't work that way. We concluded that we could not turn our backs on any one in real need of help.

As it often does, a perfect solution presented itself. A retired friend of the judge volunteered his services. Formerly a business executive, he has fine sensitivity to the needs of others and particularly to the needs of young probationers. When first contacted he offered to give 15 hours a week to the program without any monetary compensation. A few months later additional contributors were

found and this retired senior citizen started to work full time for us. Due to the limitations of Social Security, he received only $100.00 per month or some 60¢ an hour. He spent nearly all of his time in the administration of the program. In addition to his other duties, he contacted each volunteer counselor once a month for their progress reports. He met at least once a week with the staff counselors. He also sent out notices of the monthly meetings, wrote letters for the Chief Probation Officer and the Chief Counselors, prepared the probation orders, typed bench warrants, contacted the psychiatrists and countless other tasks. He freed the counselors from administrative details and duties. Without him, we would not have continued long after the first year. An assistant was later added to help the over-worked administrator. Now several citizens assist in the administration of the program, giving us an administrator and five assistants at the present time. All are retired senior citizens.

For the last four years several women in the community have been donating secretarial and clerical services. Much of the letter writing and other miscellaneous typing is done by them.

We have also been assisted by several retired, senior citizens who perform "doormen" duties for us.

As has been suggested by the foregoing, our program grew and expanded as dictated by the needs of the court and the needs of the probationer.

We noted, for example, that we badly needed a presentence investigation department to gather factual background information coupled with psychological testings and psychiatric evaluations. This development followed our usual pattern. We secured the service of one dedicated individual, a minister, with training in criminology, and (eventually) some 25 volunteer psychiatrists, 10 volunteer psychologists, two staff psychiatrists and five psychological and psychiatric clinics to assist us. All but the staff psychiatrists, who, like the pre-sentence investigator are vastly underpaid and are, therefore, quasi-volunteers, receive no monetary remuneration whatever.

We heard about group psychotherapy and like the idea. We approached some businessmen who donated sufficient funds so we could hire a psychiatrist who agreed to work at far less than the going rate. Both the contributors and the psychiatrist were motivated by a desire to assist the court in the rehabilitation of those probationers who could be assisted by group psychotherapy conducted by a psychiatrist.

We knew that some defendants could be assisted by individual psychiatric treatment. Gradually we secured the services of some 30 psychiatrists who voluntarily treat the defendant who cannot pay for the service but who has the need and the desire to be so helped. Again a professional was needed to coordinate this, so two associate staff psychiatrists were added to so do.

As noted elsewhere, additional professional counseling was needed both directly with the probationer and to better supervise the volunteer. We now have eleven such professional staff counselors who perform both functions. Thus, these four aspects of the program followed the same pattern of development. In each case (pre-sentence, administration, professional counseling and psychiatric counseling) a dedicated professional who was willing to work for less than the going rate became a quasi-volunteer. We then secured the services of many volunteers to assist him. The under-paid, dedicated, warm, sincere professional and the volunteer working side by side got the job done.

Other aspects of the program followed a different pattern. In the development of the Alcoholic Anonymous, volunteer sponsors, employment counseling, non-support enforcement, church-referral, optometrists, lawyers and doctor referral programs, a volunteer or group of volunteers initiated and maintained the program assisted by the administrator and his associates.

Thus the history can be summed up rather accurately in this manner. A need would manifest itself. The court had no ability to supply that need. The court would then ask the community to voluntarily supply sufficient money to hire an extremely competent but underpaid, dedicated professional and many volunteers to work with him to solve the problem presented by the probationer, or the court asked for volunteers alone to supply the needed service.

The community and its citizens have been magnificent. They have truly fulfilled this Biblical quotation, "Ask, and it shall be given you; seek and ye shall find; knock, and it shall be opened unto you". (Matthew 7:7)

The historical development of this program has been thrilling and gratifying. It is something akin to the experience of the death of a loved one. For every task

to be performed prior to and at the time of the funeral, ten hands stretch forth to do that task. It is similar here. We are rarely disappointed.

It has been said that all that is necessary for evil to triumph is for men of good will to do nothing. We are satisfied that the opposite is also true. All that is necessary for good to prevail is for men and women of good will to do everything. For the past six years we have seen them so do. The experience has been exciting and memorable.

It would seem to us that for every need there is a person who can and will supply that need on a voluntary or quasi-voluntary basis. There seems to be no limit to what people of Judeo-Christian concern will do as volunteers, quasi-volunteers or voluntary financial contributors.

The various aspects of the probation department are described in more detail hereinafter. The foregoing is merely our attempt to give the reader the historical development.

The Volunteer Sponsors

Our list of volunteer sponsors (we changed the name from volunteer counselors) continues to grow. We now have well over 100 volunteer sponsors. Although we fundamentally rely on the staff counselors for the counseling, we have continued to select the volunteer sponsors with great care. They fall into one or both of these categories: (1) Experts in a phase of counseling or (2) Well known by the judge or other personnel of the probation department to have natural talent, sincerity, and warmth of personality—inherently good counselors and friends. Over 90% fall into both categories. They are attorneys, psychologists, psychiatrists, ministers, priests, educators, and the like. In many cases there has been a utilization of an existing employer-employee relationship or the creating of a new employer-volunteer sponsor relationship. This has been very effective. These men and women are selected with great care. They also receive orientation before they are assigned a probationer.

Their case load has been reduced. Originally they met with a maximum of five probationers. Now their case load is one probationer each.

The successful operation of this phase of the program is entirely dependent upon one factor; namely, the establishment of an inspirational relationship of trust and confidence between the probationer and an outstanding member of the community who by education, training, experience, and background has the ability to help the probationer change his inward attitude and moral concepts. The fact that the volunteer sponsor is not paid at all for his time and is motivated solely out of a warm sincere desire to assist the probationer is most important. The probationer in many cases realizes that, "this guy really is interested in me and he really wants to help me".

Initially the meetings with the volunteer sponsors are predicated upon obedience out of mere duty. They must either report or go to jail. However, in most cases this obedience based upon force is supplemented, and often totally substituted, by a feeling of respect based on admiration, gratitude and esteem. Thus, the program works something like a good parent. After the punishment is over, the volunteer sponsors seek to understand love, correct, rehabilitate, re-educate and inspire. It is in this process that the deeper and sounder relationship is substituted for obedience based upon power and authority alone. This is one of the most important phases of our program.

Originally, all our volunteers were experts in some phase of counseling. Because of the lack of professional supervision we could not, initially, use the untrained volunteer. Now, however, we use the untrained volunteer because we can give him adequate supervision. However, many of our volunteers continue to be experts in some phase of counseling.

This aspect of the program no longer constitutes the whole probation department as it did originally, but it remains a most important part of the program. Additional information on this most vital and important aspect of the program is given in Exhibit E. "The Role of the Volunteer." The list of volunteers is set forth in Exhibit 11 and gives an idea of the type of volunteers who are active in this program. Case histories are found in Exhibit D.

Screening of the Volunteer Sponsors

For the most part, the volunteers have been screened by a long friendship with the judge, a staff counselor or other personnel of the probation department. This also includes employment screening such as the standards set by the Bar Association which must be satisfied before one can become a lawyer. Those not in this

category who want to serve are requested to cooperate in a psychiatric-psychological screening process before they are accepted.

A chief counselor also conducts orientation courses for new volunteer sponsors who wish to attend the same before assignment.

The Staff Counselors

The mainstream of our program flows through our professional counselors, called staff counselors. They are the chief probation officer and the chief counselors.

At least in the opinion of the writer, a most important development was the successful consummation of our attempts to reduce the case-load of the staff counselors. We did this by adding more chief counselors. We now have high school counselors, psychologists, social workers, and a minister with special training in marriage and family counseling. Their names appear later in this report.

Their case-load has now been reduced to about 18 each. We have an average active case-load of about 550. Of this number, a few are on probation merely for restitution, non-support, or for supervision in the negative sense only. Those subject to the weekly meetings of the AA program generally meet additionally with the administrator only, and do not meet with the staff counselors. Others attend group meetings.

Women probationers meet with the administrator and volunteers of the women's division only. A few probationers work in the evenings and meet with a volunteer sponsor and the administrator only. This leaves about 200 who meet with the staff counselors, or about 18 each. This has greatly increased the effectiveness of the staff counselors, who do virtually no administrative work and devote all their time to counseling.

The greatest benefit from this change has been a closer liaison between the volunteer sponsor and the staff counselor. This process is supplemented and assisted through the efforts of an associate administrator by and through monthly written reports to the department by the volunteers. Also, the chief counselors now have more time per probationer for counseling.

The volunteer sponsor and the staff counselor often meet on a regular basis to discuss their mutual interests. Our volunteer and staff psychologists and psychiatrists attend these meetings as well.

The staff counselors work about 15 to 20 hours a month for us. They are paid $900.00 a year.

Associate Staff Counselors

Another development was the creation of the position of associate staff counselor. When the chief counselors have a probationer who needs additional counseling rather than a volunteer to act as a friend, they can turn to their associate staff counselor. These men are trained in counseling and give additional time to the probationer whose needs for professional counseling go beyond the time that the chief counselor can devote to him.

These men work about 5 to 7 hours a month. They work closely with their chief counselor. They are completely unpaid.

Here the enthusiasm, dedication and warmth of the volunteer is blended with the training, experience and talent of the expert in counseling in one inspirational personality. It has been most effective.

The Professional and the Volunteer

Although this program started out simply as a volunteer program, we are convinced that a program that combines the efforts of the volunteer and the professional is most effective. Based on our experience, we would be very reluctant to have a probation department staffed only by volunteers. However, working together the professional and the volunteer supplement each other very well and are most effective.

The Psychiatrists and Psychologists

Not unlike the rest of our program, the psychiatric and psychological services, like Topsy, "just growed". We have always been most fortunate to be associated from the beginning with men who are not only excellent practitioners but also who are warm, sensitive, and dedicated individuals. There is no group to whom we are more indebted. Of the original eight who instituted the program, one was a psychologist and another a psychiatrist.

Initially, we used their talents to do follow-up therapy with individual probationers. After a period of time, we became convinced that their time could better be utilized in the difficult area of pre-sentence investigations. By so doing, their insights were available not only to the judge in sentencing but also to the entire staff as we engaged in follow-up counseling. They also gave us a better method of selecting specific services for probationers such as group psychotherapy.

For nearly three years we were able to give free psychiatric evaluations and psychological testings in our more severe cases as part of the pre-sentence investigations only through the dedication and generosity of eight psychiatrists and seven psychologists. All practice privately and gave of their time without monetary gain.

Now, and for the past two years, we have an arrangement with three state-supported psychiatric out-patient clinics. They will give us a maximum of 13 free evaluations each month. This is most ample for our needs. Their cooperation has been most gratifying. Thus, we are now able to furnish all the evaluations that we need through their efforts alone.

A later development has been most helpful. One or two psychiatrists in residence training and their supervisor donate five to nine hours a week to the program to do evaluations. They routinely do the first evaluation. If more is needed, the volunteer psychiatrists and psychologists in private practice give us additional information. If a further evaluation is necessary, referral to the state supported clinics mentioned above is made. Thus, we can receive extremely thorough evaluations when necessary and shorter evaluations where such will suffice. These evaluations range from one hour to ten hours in length depending upon the need.

The psychological testings continue to be handled by private practicing psychologists. However, we are most pleased that a nearby educational institution has agreed to do some psychological testing for us. This, along with the private psychologists, is ample for our needs.

We also have a staff psychiatrist who works about fifty hours a month for us. He engages in a group psychotherapy and individual psychiatric follow-up therapy. The group program is described in more detail elsewhere. We have had hundreds of probationers who have attended these sessions since its inception in the fall of 1961. These groups meet weekly from September to June each year for about 1½ hours each week.

He also supervises the staff counselors and is the "star performer" at the monthly staff meetings. He meets with the judge and the staff members several times each month on an informal basis as well. This dedicated man typifies the spirit of our paid staff. He is paid about $10.00 per hour. He is an excellent practitioner who could make many times that amount by using his time in private practices. He is a dedicated individual who fits well into the pattern of our program of quasi-volunteers by reason of being grossly underpaid.

The reader will note that most of the above deals only with pre-sentence evaluations. How about the probationer who needs treatment?

Until October of 1964, we could hope that such a probationer could retain his own psychiatrist or that he would fit into the group psychotherapy program. Only in a minority of cases could the staff psychiatrist work them into his schedule for individual psychiatric treatment.

Then a gratifying thing happened. Thirty psychiatrists in private practice answered our call for help. Also, four clinical psychologists volunteered to assist us. They each agreed to accept one probationer in continuing therapy. Each agreed to give between two and four hours a month to our program.

The psychiatrist, with the assistance of the probation department, establishes the fee depending upon the financial status of the defendant. It might be as high as the usual rate or as low as no charge whatsoever.

Now we can say that any probationer who has need of such assistance and the desire to receive the same can get individual psychiatric counseling, therapy and treatment on a long-term basis regardless of his ability or inability to pay for the same. This aspect of the program is supervised by the staff psychiatrist with administrative assistance.

We are not lacking for psychiatric services either in evaluations or in follow-up therapy thanks to the generosity, warmth, and dedication of the psychiatrists and psychologists. We can meet the need for group or individual psychiatric treatment and counseling. Those who do not fit into the group and who are not sufficiently motivated will receive counseling from the staff psychiatrists.

No group has given more. No profession has demonstrated more sincere concern for our "prodigal sons". We are deeply indebted to them.

Further information on this part of the program is set forth in our letter of October 17, 1964 which appears near the end of this report. (See Exhibit G)

Group Psychotherapy

One of the most interesting experiments thus far has been the group psychotherapy program headed by our staff psychiatrist. There are many probationers who are now active in this program. The psychiatrists report that they are pleased with the operation of the groups.

The idea behind this program is to allow complete freedom of expression to a small group of (eight) probationers. Here they have an opportunity to give full expression to their hostility, rejection, anger, frustration and other emotions.

The psychiatrist, who was trained in group techniques and who supervised our first group in 1961, predicted that the groups would first spend virtually all their time cursing and condemning the world in general and the court, probation officers, and persons in authority in particular. He was absolutely correct and the first three or four weeks were used for that purpose. This has been our general group experience.

The groups then progress beyond the condemning and cursing stage. They settle down to a serious discussion of the personal problems of each member of the group. They have also shown ability to take in new members. Several members of these groups have expressed gratitude to the psychiatrist for being allowed to bring up problems which were causing considerable anxiety. Others have thanked the judge for being sent to group psychotherapy. Many have commented most favorably on the program to other members of the staff. Several of those, who have so expressed themselves, are probationers for whom we had scant hope that they would be so effected.

The group program is not a necessity forced upon us due to lack of individual counselors. Rather, group psychotherapy is a technique which, in many instances, has been more successful than individual counseling. A form of group counseling and an example of group dynamics is the highly successful Alcoholics Anonymous program. It plays an important role in our program.

Another development was the organization of a husband-wife group which was in operation in 1964 with good results.

In several years the hundreds of probationers subjected to the group program have committed very few violations of probation. In view of the fact that many of the most serious and potentially dangerous probationers have been subjected to this program, we are gratified with the results.

Due to the institution of the program of individual psychiatric follow-up by the 30 volunteers described elsewhere and the time expended thereon, no group program was carried on in late 1964 and early 1965.

However, at the present time many groups are in operation directed by the staff psychiatrists, volunteer psychiatrists and a volunteer psychologist. All are progressing well. Other groups conducted by chief counselors are also doing well.

PRE-SENTENCE INVESTIGATIONS

When we were 19 months old, we were able to initiate a pre-sentence investigation department for the more serious cases. Thus, since January 1, 1962, we have enjoyed the advantages of these investigations. As has often been said, the pre-sentence reports are to the judge what an X-ray is to the surgeon. It is indispensable. It also has other advantages. Now the staff counselors and volunteer sponsors have a considerable amount of immediate information available to them prior to their first meeting with the probationer. Our pre-sentence investigator was a minister with experience in the field of criminology. He worked about 20 hours a week. Now this position is held by a retired and well-qualified man who works full time.

In addition to pre-sentence evaluations, he will do some counseling. He also assists the administrator on administrative details from time to time. As mentioned above, he relies heavily on the psychiatrists and psychologists with whom he works very closely.

A pre-sentence report might be as short as an hour interview with our pre-sentence investigator plus about a half hour of verification of the facts and the completion of the report. It might be as long as twenty hours and involve the pre-sentence investigator, our psychiatrist in residency training, his supervisor,

a psychiatric evaluation and psychological testing by an individual volunteer or a clinic, or possibly both, and a report from our staff psychiatrists.

Thus, with the factual background on each defendant supplied by the investigator and the psychiatric and psychological evaluations incorporated into his report, we sentence with a degree of confidence that we have at least some concept of the physical, mental and emotional maladjustment which manifested itself in the commission of the crime before the court. Without the recommendations and evaluations of the investigator, the psychiatrists, and psychologists, the judge would, at least in his own opinion, be totally unqualified to sit in judgment.

We try to heed the advice of Kipling, "Be slow to judge, for we know little of what has been done and nothing of what has been resisted".

Pre-sentence investigations are so vital that we now feel any court starting a probation department out of a complete vacuum absolutely without finances or paid personnel as we did should first initiate a pre-sentence department. The fact that we did not do this first is now our greatest criticism of our own historical development.

A "reformed" alcoholic works as a volunteer with cases involving drinking.

The Work Detail

In February of 1965 a new program was instituted within the framework of the probation department. It is called the "Work Detail" program. The basic idea is to punish the wrong-doer in such a way that he does not have a criminal record when the court experience is over. Traditionally courts can punish in just two ways, by use of a fine or jail term. Each punishment, when utilized, immediately gives the defendant a criminal record that can do him much harm in future life. We have had defendants contact us 15 years later about a conviction they committed as a teenager. Years of good living did not erase the blemish on the record. They often cannot obtain jobs or promotions, advancement in the armed forces or are fearful of the effect of the conviction when discovered by their children.

We feel that punishment is important but the never-ending effect of punishment can do more harm than the good it was intended to accomplish.

Thus, we instituted a program wherein worthy defendants without a criminal record could petition the court for assignment to the work detail. To make the program financially self-supporting, they pay $48.00 a month for the privilege of working for the city 4 Saturdays a month. Thus, it costs the city nothing. The sentencing is then adjourned for as long as two years. They report to the personnel of the probation department during this entire time period, although the number of months on the work crew generally is three months or less. If the defendant has performed his work on the work crew satisfactorily, has abided by the regulations of the probation department, avoided any further criminal convictions, and fulfilled the spirit as well as the letter of the probation program then upon recommendation of the probation department the case will eventually be dismissed and the defendant will have no criminal record.

At the end of one year, these offenders paid over $10,000.00 into the city and worked about 2,500 hours performing work that otherwise would not have been done. They have cleaned parks, helped remove diseased trees, picked up litter, repaired park tables, etc. Of the 163 so assigned, only one has committed a second violation while under this program, although it has been necessary to sentence two others who did not fully cooperate with the program. Two others received additional work assignments for failure to work with due diligence. Additional information is available in Exhibit F of this report.

Employment Counseling

At first a retired citizen, formerly with the Michigan Employment Securities Commission, directed our own employment counseling service. He met with probationers whenever requested. He assisted in helping probationers discover their talents by arranging for aptitude tests. He also gave them general advice about how to get a job. In some cases he knew an employer who had a definite need which a probationer could fill. In these cases he often arranged an actual employment situation. He was one of many retired citizens who are active in our program. He worked closely with the Michigan Employment Securities Commission.

Now the administrator assists probationers who need jobs. He is assisted by all of the other staff members and the Division of Vocational Rehabilitation.

Restitution and Non-Support Cases

Another retired senior citizen gives us about two days a week. Some of his time is dedicated to the enforcement of non-support orders, where men refuse and neglect to support their wives and children. They are required to pay a certain sum each week. Non-payment of the order will result in punishment for violation of probation. In many cases, wives and children are being supported for the first time in several years by their husbands and fathers.

He also administers the payment of restitution in cases where the complaining party has suffered financial loss because of the conduct of the probationer. Again, nonpayment of the restitution order will result in punishment for violation of probation. The administrator also assists in this phase of the program.

WOMEN'S DIVISION

In the fall of 1963, it seemed advantageous to add a women's division. A retired school teacher and counselor volunteered her services. She administered this division. Assisting her were some ten women in the community. Like the other volunteer sponsors, they are school teachers, housewives with social work or psychological training and experience, YWCA personnel and the like.

In 1964, two housewives with special training in psychology and sociology replaced the school teacher upon her retirement from the program. They now administer the program and act as volunteer counselors as well.

These dedicated women have done an excellent job for us. They also make referrals to and use the facilities of the Probation Department.

ALCOHOLICS ANONYMOUS

Our court operates its own chapter of AA. It is supervised by several successful members of A.A. Some of the sponsors were originally referred to the program by the court. The success ratio is roughly equivalent to the general success ratio of A.A. Those who have completed about fifteen months of sobriety are given their probation discharge or certificate of appreciation. We are tremendously indebted to A.A. They owe us nothing. We owe them much. It meets weekly for 1½ hours. We feel that it is totally unrealistic for any lower court to operate without the services of an A.A. Chapter. For further information, see Exhibit H.

The Role of the Prosecutor and Police

We are deeply indebted to the excellent law enforcement officials of our city and county, the Royal Oak Police Department, the City Attorney and the Office of the Prosecuting Attorney. They have a sincere interest in rehabilitation. Without their assistance and cooperation this program could not have developed as it has.

CHART OF SERVICES AND GENERAL INFORMATION

An operational chart of services is in the index of this report. (Exhibit C). In addition to these services, we arrange apprentice training, employment opportunities, re-enrollment in high school, and enrollment in adult education whenever possible. There is also some additional information on specific subjects in the Exhibits.

FINANCING

Although it is impossible to ascertain the total number of hours dedicated to our program each month, a reasonably accurate estimate would be about 1000 hours a month, or some 12,000 hours a year. The total cost of the program for 1968 was about $23,000. Of this total, approximately $6,000 was donated by businesses and businessmen in the community. The rest was provided out of city funds. We conservatively estimate that the total services furnished by the probation department, if purchased at the going rate, would cost at least $300,000.

SPIRITUAL REHABILITATION PROGRAM

We also have a spiritual rehabilitation program which was initiated when we were 15 months old. About 90 churches in our immediate area responded to our

invitation to discuss the utilization of the power of the church in the field of probation. The program works something like this. If and when a probationer indicates a desire to have a church home, and we attempt to stimulate such a desire whenever possible, we then ascertain his natural church home, consult our list for the name of the clergy or layman who represents that particular church and contact him. After a home visit, the clergy or layman will take the probationer to church, thus insuring a warm welcome. It is our thought that many probationers have a subconscious and sadistic desire to be rejected by the church. If they go to a church and get less than a warm and enthusiastic welcome, this subconscious desire will be fulfilled. For this type of probationer we hope to have a real surprise in the form of a warm welcome. Although we do not have a lot of referrals, those which are made have been effective. At this date, approximately 25 probationers are attending church with a degree of regularity for the first time. Some of these, at the suggestion of our personnel, got married in a church. In some of these cases a church home was established.

ANNUAL SOCIAL AFFAIR

We have one social affair each year for the wives and husbands of the contributors, the paid staff members, those assisting on special aspects of the program and the volunteer sponsors. Altogether some 500 citizens are involved.

National Institute of Mental Health Grant

In April, 1965, we received a four-year grant from the National Institute of Mental Health in the amount of $120,000. The reader's attention is referred to Exhibit J in the Index.

Statistics

See statistics in the supplement on page 51 of this report.

Importance of Probation

The importance of probation in municipal courts and other lower courts is indeed staggering. Professional probation officers estimate that some 75% to 95% of those persons eventually committing the most serious crimes called felonies have first committed a misdemeanor (less serious crime) and have appeared before a municipal or other lower court judge at least once prior to committing the felony. A great majority of these felons have appeared several times before a municipal court or other lower courts before committing that serious crime. Thus, the vast majority of these persons have, prior to the commission of a felony, come into contact with a municipal court or other lower court. If the lower court has not at least attempted to embark upon an inspirational probation program, when the felony is eventually committed there have been two failures and not merely one. One is the failure of the defendant himself. The other is the failure of the court to do all it can to inspire, re-educate and rehabilitate the defendant. If one is to apply the principle of the Parable of the Talents, there is no doubt that the court's failure is the least excusable. Certainly the court has the superior educational, academic and cultural background to meet the challenge with which it is faced— infinitely superior to the resources of the youngster who is described at the beginning of this report and who typifies so many of our offenders.

Unfortunately, in spite of this challenge, less than 5% of the lower courts in the nation have any probation program whatever. Because many of the probation programs at this level are overcrowded and understaffed, perhaps only a fraction of the 5% engage in any type of inspirational process. For example, one probation department at a lower court level, with which we are familiar, has over 600 probationers for each probation officer. For the most part the probationers merely report in writing and scarcely know their probation officers. In addition many are forced to pay a monthly fee for probation. This program attempts to correct this situation. (See Exhibit K, "The Methodist Project.")

How Effective Are We?

How effective is the program of probation? The answer to this question must be divided into two parts. From a technical or legal point of view, we are about 94% effective in Royal Oak. This means that about 6% of the probationers have been guilty of a crime in Royal Oak or have left the state without permission

while under supervision. It is interesting to note that the great majority of these violations of probation have occurred within 45 days after the probationary term has begun. This would indicate that most violations occur before the probation program has been given a true chance to operate.

However, as noted above, this program is an attempt to truly change the inward attitude of the probationer. How effective are we in this area? This is the second part of the question. The answer to this question is most difficult. In fact, the full and final answer can never be given. Our thought is that if we can truly affect the attitudes and behavior patterns of 20%, we will be highly successful. We will be completely satisfied if we can so affect 10% of those under supervision. If we can assist just one person a year in this regard, we will feel the program is worth the effort. It is our thought that some 10% to 15% of the probationers are so deeply affected by the program that their inward attitudes and moral concepts are changed. In view of the fact that these attitudes have been created over a period of 17 years or more and we have but two years to attempt to change them, we are reasonably gratified by the results thus far. Thus, we feel we have truly changed hundreds of probationers to date.

We should add that in some cases probation is utilized simply to supervise the probationer. These are the probationers for whom we have little hope of changing their attitudes. Most of these probationers are older men or women who are on probation simply as a deterrent to further crime. However, our main effort is directed at those whose attitudes we feel can be changed (see page 45 for a far better evaluation of effectiveness).

A PHILOSOPHICAL CONCEPT

It is our feeling that the criminal presents a problem that cannot be solved simply by the tax dollar. In this age of materialism, we all rely too much on the wallet to solve our problems. This is true of us individually, and collectively. Collectively we scream for more tax dollars as a solution to all problems. However, it is apparent that many of our problems cannot be solved by money. A terminal case of leukemia in a little child, and the problems it creates, cannot be solved by a fat wallet. Those faced with such a problem must reach into their spiritual resources for the answer. We feel that the same is true with the problem of the criminal in our society. We cannot merely spend more money in taxes on him. We must, instead, reach into our spiritual resources and give of ourselves freely, warmly, and without thought of monetary gain. This the city of Royal Oak is doing. We humbly submit that the city so doing has the best chance of succeeding in the often difficult, often painful, yet infinitely rewarding task of the inspiration, rehabilitation, and re-education of the criminal.

A SPIRITUAL PROCESS

In conclusion, we feel that probation is a spiritual process. We believe that the volunteer sponsors are examples of the Judeo-Christian concept of going the second mile. They are fulfilling the principles of the Parable of the Last Judgment in that they are visiting him that is in prison, taking in him that is a stranger and ministering unto those that have need. They are also fulfilling the Commandment that he who would receive shall give and that he that would be great among you shall be the servant. They are fulfilling the obligations of the Great Commandment in a loving concern for their fellow-man.

This is essentially a process of redemption within the concept of the great Judeo-Christian tradition. Even as this tradition is primarily concerned with the redemption of mankind, so probation is concerned with the redemption of that segment of mankind which has engaged in criminal conduct. Even the method is similar. The City of Royal Oak is wrapping up its message of concern and love for its "prodigal sons" in the inspirational personalities of its volunteer sponsors, chief counselors, Chief Probation Officer and other members of the staff. Does not the use of an inspirational personality follow our religious and spiritual tradition?

We feel that, inasmuch as this is essentially a spiritual program, our success is dependent upon the ability of our personnel to comprehend and fulfill the spirit of the Judeo-Chrisitian ideas and traditions.

Exhibit D

ILLUSTRATIVE CASE SUMMARIES

CASE SUMMARY—1

As we began to prepare this report, we requested case histories from some of our volunteer sponsors. One request was sent to a volunteer who was assigned a youngster who was the most potentially dangerous boy we have worked with in five years. Small of stature, he was most aggressive and belligerent. He was first arrested carrying a knife.

We have often heard the expression, "An accident looking for a place to happen." This is a good description of a careless person. This young man was a malicious and dangerous person. He was, "a felon looking for a place to happen."

What the letter does not state is that before he was assigned to a volunteer we tried everything. Professional counseling, psychiatric counseling, employment counseling and jail all failed. (You will note that the defendant himself attributes his rehabilitation in part to the lessons imparted to him as a result of the jail term. This may be so but he gave no indication of this result when he was first released from jail. We think this benefit did not occur until the influence of the volunteer gave him the eyes to see with and the heart to comprehend.)

Everything else having failed we decided to assign this youngster to a volunteer. The volunteer was carefully selected. He is a person who can talk the language of the probationer. His morality is of the two-fisted variety. In spite of this, the assignment to the volunteer was made without much expectation but as a desperation measure. All else had failed so we decided to try it. The volunteer was warned that he would probably fail. It was the best thing we ever did.

Although the volunteer tends to underestimate his contribution to the rehabilitation of the probationer, we believe that it should be printed exactly as it was received. Only the names have been changed and the words in parentheses added. (See page 30)

Although this youngster is not perfect and still has his problems, we are satisfied that he is no longer "a felony looking for a place to happen." There is no story that we are prouder of than this one. (Story on page 30)

CASE SUMMARY—2

The defendant in this case was arrested for reckless driving. The pre-sentence investigation revealed that he had had a fight with his girl friend and, in a fit of anger, drove at a fast rate of speed down a residential street. Among other things, the sentence included a two year probationary term.

The defendant and his girl friend were married shortly thereafter. Within the first year a baby was born. The defendant was a rather inadequate person who had not even graduated from high school. In addition to his other problems, neither parent approved of the marriage.

The chief probation officer referred him to a volunteer psychiatrist for an evaluation. He reported that the boy was a character disorder. Although he was not emotionally disturbed, he was lacking in impulse control. The psychiatrist explained that the most effective form of treatment would be to insert into his life an inspirational personality who would show him that there was a better way to live. He further explained to us that such an individual could, by example, so impress the defendant with his concern and affection that the defendant eventually would not want to "let him down." "After a while," the psychiatrist said, "we hope that this desire not to let down his friend will be transferred to a desire not to let himself down." Thus, if we succeeded, rather than an impulse giving rise to an instantaneous reaction regardless of consequences, it would be tempered by a desire not to let his friend down and eventually by the thought that he would not want to go contrary to his own standards. It is by this method that we often seek to go from lack of impulse control to impulse control.

It is a big step to go from lack of impulse control to a point where one thinks before he acts but it can sometimes be done.

In this case the defendant was assigned to a volunteer sponsor who is a minister and an expert in marriage counseling. He spent many hours with this boy and his new wife. They both remarked later that without this concerned counseling the marriage never would have lasted.

We helped the defendant to secure a job. The chief probation officer talked with both parents and good relations were re-established at least with the parents of the wife.

After two years of rather intensive probation, the youngster was discharged from probation.

Shortly thereafter the defendant came in to see us. He reported that a terrible thing had happened. "My father has just made improper sexual advances toward my wife," he said. He asked for our help in handling this problem.

Through the city attorney, the father was contacted and sternly advised that any repetition of this conduct would result in a complaint and warrant being issued for his arrest. There has been no trouble since.

We think that this is probation at its best. A youngster who was so lacking in impulse control that, as a result of a minor fight with a girl friend, he drove at a high rate of speed down a residential street, two years later matured into a youngster that in a situation of great stress and strain had sufficient impulse control to seek out the authorities and ask them to handle the situation legally and properly.

It, of course, can never be proven one way or the other. However, we feel reasonably satisfied that the youngster might well have committed a most serious act of violence had it not been for the hours that the probation department and particularly the volunteer sponsor spent with him.

This young man continues to see us now and then although his probation has long since expired. He has a fine job, home, wife, and three children. He is a real credit to the community. The substitution of mature judgment for lack of impulse control is reflected in everything he does as a father, husband, employee, and citizen. He gives all of the credit to his volunteer sponsor and the probation department.

CASE SUMMARY—3

This young man, age 22 years, started on the probation program one year ago with a long history of traffic violations, including two revocations. Parents were sincerely concerned about him but were completely unable to control or guide this, their only son. His charge was DUIL and resisting arrest. This was followed by an attempt to run out of the station and a battle with the arresting officers.

Drinking and running around with the "wrong crowd" had been his down-fall for several years. Cars and racing on public highways and "living it up" with the "boys" was his idea of getting on in this world.

Not having finished high school (10th grade only), jobs were a problem and he had real difficulty holding them mainly due to his "I don't give a damn" attitude. If ever a young man seemed bent upon squandering his life and his talent, Edward (fictitious), was just such a man.

At his chief counselor's request, Edward brought in a large sample of his art work for discussion at our second meeting. Of this work he was extremely proud and the counselor, being very much impressed, phoned one of our volunteers, a Commercial Artist, who dropped everything and immediately came over to the Probation Office to see the boy and evaluate his work (car design). He was so impressed that arrangements were made then and there for Edward to start on an apprenticeship with one of the largest commercial art studios in the country. It is the same company the volunteer works for. Edward and the volunteer often work together. Edward seeks and follows his volunteer's advice professionally and also socially.

The boy has been moving through his apprenticeship for ten months now. His work and his mental attitude are vastly improved. He works 12 to 14 hours daily and six days each week "to learn the business" and "make something of myself." "My parents are proud of me now and our whole relationship is much better." "I have no time for bumming around with the fellas." Of late, these are typical remarks from the probationer to both the counselor and the sponsor. He aptly expresses gratitude for the help he has received from his volunteer and the studio. His willingness to work hard and long hours concretely supports such expressions. Parental gratitude is exceeded only by the frequency of expression.

He was completely changed. We are very proud of him.

CASE SUMMARY—4

Another letter from a volunteer sponsor reported this case.

John Smith (fictitious) was assigned to our attention approximately June, 1961. He had been found guilty of malicious injury to personal property and

served several days in jail and was placed on two years probation. His record indicated other minor police problems. John lived with his mother and younger sister in an upper apartment in another city. His father had divorced his mother approximately 11 years before, and he was quite confused and wandered as he saw fit.

This boy had graduated from high school and was working at a grocery store as a stock boy and keeping company with an ex-prisoner of one of our state institutions. Our first contact with this boy invited him to our Central Office Building for a luncheon appointment. At first he offered excuses to avoid our meeting saying his driver's license had been taken away and he had no way of getting there, but we arranged transportation. We took him to the Executive Dining Room. He had real long hair and was kind of "hoody" appearing, and made several remarks during lunch about the "rah rah" boys in the dining room. We tried to keep him interested in what we might be able to accomplish if we worked together.

For the first several months, we had lunch on various occasions and he visited our home. After the first month and a half, we noticed a definite change in the boy's conversation, and what he used to think of as sissyish, he now thought good manners. He got a brush haircut similar to the writer, and we started to notice many of his mannerisms imitating mine.

About this time, we arranged to have him go to the Social Security Department and take an IQ test which indicated mechanical aptitude. Our next step was to get a hold of the Tool Association of Metropolitan Detroit, and working with them we were able to obtain apprenticeship for his undertaking. The problem was then how he could get to and from the job and school. We arranged to meet with the Detroit Traffic Bureau, and were successful in obtaining a renewal of his driver's license to permit him limited driving to and from work and school. About six months later his license was renewed.

Approximately one and a half years after starting the apprentice course, I received a phone call from John, and he said he had something important to discuss with me, and he hoped I would not laugh. He indicated that he had an inferiority feeling around girls because of his big nose. We had previously noted that he did not mix too well around girls, but had never noticed that his nose was out of proportion. He seemed quite concerned about this as we made arrangements with the head plastic surgeon at the Ford Hospital for him to come in for an appointment. After discussing this with the doctor, John said he wished to go through with having his nose changed. An operation was performed changing the appearance of the nose. After recuperating, it was noticed that he had a girl friend, and the boy began to blossom into a fine citizen.

This August John Smith graduates from a 4 year apprenticeship program as a Journeyman Diemaker, and is earning approximately $4.00 an hour, has a fine car, and inspires his mother and younger sister. He plans to enroll in Henry Ford Community College in September, unless the draft changes these plans. He confides in us in most major decisions, including counseling him on the possibility of getting married to a nice girl he is presently courting. This boy is certainly a reflection of what has been accomplished by the Probation Department of Royal Oak.

Yours very truly,

CASE SUMMARY—5

Mr. F. is a 35-year-old father of several children. He was put on two years' probation in 1962 for "driving under the influence of liquor". At the time of probation he seemed very honest and realistic about his faults. He seemed to have a sincere desire to find a solution to his problems and pledged full cooperation. He admitted being an alcoholic. He had no steady work, having moved from one job to another, probably because of his drinking and job dissatisfaction. He had accumulated many debts and had lost his driver's license because of previous drinking and driving violations. His oldest son (9 years) was starting to have serious behavior problems in school and in the neighborhood.

During the term of his probation Mr. F. was very cooperative. He had gone to A.A. sporadically in the past. He now became regular in attendance. He was prompt in attendance for his probation appointments. The probation department arranged for a consultation between Mr. F. and an attorney in hopes that this might help his financial involvements. The probation department urged Mr. F. to cooperate with the schools in regard to referring his son for psychological or psychiatric help. As a result the youngster is being seen by the Child Guidance

Clinic. Mr. F. was referred to two or three jobs by the probation department. These, however, did not prove to be permanent.

During this time (period of probation) Mr. F. did have relapses and towards the end of his probation period he was seen by our psychiatrist for an evaluation and recommendation. As a result he was recommended for individual psychotherapy with one of our volunteer psychiatrists.

It has been a year since Mr. F. has been discharged from probation, but he is still receiving the benefits of the program in that he is still seeing the volunteer psychiatrist on a regular basis. The most recent report from the psychiatrist was quite optimistic,—in part as follows: "His drinking is less frequent and destructive and his self-esteem is beginning to rise. I expect him to start paying for his own treatments soon so that I can take another probationer candidate without fee".

I do not feel that the problems of this young man have been completely solved. In fact I doubt that his problem will ever be completely resolved. I am convinced, however, that because of the probation program he has discovered that there are people who are definitely interested in helping him rather than in punishing him; he has been introduced to procedures which he can follow to help himself; and most important, I think his relationship with his family has been improved and strengthened and as a result his youngsters perhaps will be less scarred emotionally by the behavior of the father.

CASE SUMMARY—6

The next story is one of a failure. Anyone who commits a crime while on probation will always be listed as a technical failure in any statistical study. When he was first put on probation we tried jail, a volunteer sponsor, and the professional counseling of a staff counselor. We did not get anywhere. We then referred him to a psychiatrist. Because of his financial status, we insisted he pay for his treatments. (This is quite rare but we thought it was justified in this case). He saw the psychiatrist irregularly and without any improvement. We could not of course force these meetings. He then committed a second crime while on probation. He pleaded not guilty and while awaiting trial on this felony charge he suddenly appeared to "see the light", through the now-regularly-attended meetings with the psychiatrist. Such a change was evident that he was allowed by the higher court to plead guilty to a lesser (misdemeanor) charge and received a short jail term.

When he got out he started seeing the psychiatrist eagerly. Now several months later his psychiatrist says this:

"Joe is an 18-year-old, white male, first seen on July 28, 1964. At that time, he was on probation for reckless driving at a local drive-in. He had become involved in an altercation with the manager, and Joe had threatened him. In addition, there were many other instances of Joe's losing his temper with members of his family and, in general, of showing immaturity and poor impulse control. A previous psychiatric evaluation had diagnosed Joe as a passive-aggressive character disorder with poor impulse control and many features of an early socio-pathic personality. This usually would suggest a relatively poor prognosis. In December of 1964, he was arrested because he was in company with another young man who was passing bad checks. While Joe was not directly involved in the writing of the checks, he did go along in the spending, knowing that the checks had been forged. Since that time, to the best of my knowledge, there have been no other difficulties with the law."

"Joe has been seen on the average of once a month because of his erratic attendance. This has tended to improve as time has gone on. At first, he found it extremely difficult to verbalize but gradually became more comfortable and was able to talk more easily. Generally, he has worked as a laborer, and he most recently has been employed in construction work doing masonry work. He does appear to have settled down a good deal and has hopes of getting a job at Chrysler. He is recognizing his problem of impulse control in terms of his temper and has related recent incidents where he said he previously would have "blown up" but now did not. He was proud that this was so. He is a drop-out from school, having gone only to the 9th grade. He seemingly lost interest in school and then just refused to work at it. While he has toyed with the idea of going back to school at night, he has not done anything about this. One aggravating circumstance was a girl friend. She was very possessive and very demanding and, as a result, kept Joe upset a good deal of the time. He was unable to recognize what

was going on until very recently. Now he has a new girl friend with whom he is getting along much better."

"Assessing Joe's progress, at this point, one can be cautiously optimistic. Considering the relatively poor prognosis it would appear that, thus far, the total program has asserted a positive influence upon Joe and that, hopefully, he will learn to control his impulses to the point where he can be a law-abiding, useful citizen."

Sincerely yours,"

As suggested above, it is too early to say that "Joe" will succeed in life. This story is not a complete one. But one thing is evident to the psychiatrist and to the staff counselor—he appears to be completely changed. Formerly aggressive and hostile, he now is relaxed, friendly, grateful. The staff counselor says, "A great change in attitude". The probationer says, "I went to the psychiatrist before because I felt I had to. Now I need it and it's helping. I am getting better control of myself and have more feeling for others".

The counselor concludes our story, "Although he is not out of the woods yet and still could get in more trouble he has come a long way. If this program helps keep him out of prison and if he does, as it now appears, become a contributing citizen, the program has paid for itself for years to come".

This case illustrates how a psychiatrist can work with a rather unwilling probationer and gradually give him the desire to want to help himself through psychiatric counseling.

It is very encouraging. It reminds us of another probationer who was absolutely the most belligerent, hostile and aggressive probationer we ever had. He was forced to attend group psychotherapy as part of probation that also included punishment. He was discharged "without improvement". We did not think we had accomplished a thing although he was a technical success inasmuch as he committed no second crime while on probation. A few months later he came in to see us on a minor charge. We could not believe our ears when he said, "There is something wrong with me. I need help. Could you send me to a psychiatrist?" He is now with one of our volunteer psychiatrists and appears to be progressing very well. His attitude has changed a lot and we think he will be a useful citizen.

CASE SUMMARY—7

The offender in this case pleaded guilty to indecent conduct in a public place. The facts of the trial indicated that he was in need of psychiatric appraisal and service. Previous records, in other communities, supported this decision. He agreed that this type of help was needed and was willing to pursue it during the course of his probation.

During the first few visits with the Chief Probation Officer he was most suspicious and guarded toward any attempt to help him begin to evaluate the attitudes and actions that led to his conviction. He was in deep financial debt at the time, unable to find consistent work and most fearful that his parents and immediate relatives would learn of his present difficulty. Because of his financial inabilities he found it difficult to begin to consistently meet with his psychiatrist. A letter from his psychiatrist supported this fact and further stated that his present attitude and inconsistent pattern of meeting appointments was producing little or no satisfactory results.

It became evident to the Chief Probation Officer that one of the major "road blocks" to this young man's relationship with his psychiatrist was his unwillingness to place complete faith in his appraisals and suggestions. With this belief in mind, the Chief Probation Officer began to encourage him, with firmness and understanding, to try to stop second-guessing his psychiatrist and to give him a chance to help. Fortunately, this appeal worked and it was not long before it began to show tangible results in his psychiatric relationship.

During the months that followed he was presented an opportunity to relate to the probation department's group therapy relationship. His conduct in this situation developed into a very positive outlook. At this time he also began to express to the Chief Probation Officer a sincere concern about the conduct that produced his conviction. Shortly thereafter he stated that he planned to continue his relationship with his psychiatrist after the term of his probation was concluded. He stated that he was now looking forward to his weekly appointment of group therapy with "eagerness". He explained that he has told his "complete story" in this group. He further stated that he was "no longer ashamed, in this group, of past problems, particularly the one that led to his probation". He began to recognize that a problem existed and that there are ways to conquer it.

It is believed that this young man has benefited a great deal from the influence and encouragement of this program of probation. He has expressed his faith in the friendship of his psychiatrist and the Chief Probation Officer. This apparently has given him renewed strength. He further stated that the repetition and consistent reminding of his probationary and group therapy meetings have proven most beneficial to his change of attitude and conduct. This observation is supported by a statement from his psychiatrist who reported "He is seriously motivated to work out some of his problems". Another tangible result of this reorientation has been his ability to secure and keep a job. He has also enrolled in a number of night school courses, at college level, to complement his new employment. It is felt that he is much improved as a result of this program.

CASE SUMMARY—8

In this case, a respondent was about to be charged with a felony which did not involve violence, Unlawfully Driving Away an Automobile. The law enforcement agencies suggested, after a record check revealed that the respondent had no prior record, that the charge be reduced to a misdemeanor and that he be put on probation. They also advised that the defendant was sexually perverted. He was put on probation. When the Chief Probation Officer first talked to the respondent, a male of about 19 years of age, the respondent said, "I am just bad. I have always been bad. I would like to get better, but there is no hope for me". The Chief Probation Officer referred him to one of our psychiatrists. After about 6 weeks of hospitalization, the boy was released. He came directly to us and said, "I owe you everything. Now I can have a wife, family, friends. Now I can be somebody in the community". After his release from the hospital he returned to high school and successfully completed the necessary work to graduate. As a followup to his hospitalization, he also continued to see, on a monthly basis, his psychiatrist, a volunteer sponsor and the Chief Probation Officer. Later he was released from these monthly meetings with the appraisal that the patterns of his previous deviant behavior were no longer evident. There is no doubt that the guidance of this probation program, with the professional assistance of one of our program's psychiatrists, changed this young man's pattern and outlook on life. When this offender was discharged from probation he said, "This is the final chapter in my readjustment to society". Now five years later, he continues to lead a normal, useful life.

CASE SUMMARY—9

The next example of how the program operates can be set forth as follows: A youthful offender pleaded guilty to using a motor vehicle without authority. It was quite evident during the initial interview between the Chief Probation Officer, the offender, and his attorney, that one of the basic patterns that contributed to his conviction was his poor choice of companions. As a result, the specific obligations of his probationary term was to avoid persons and places of questionable and harmful character.

This young man was soon assigned to a volunteer sponsor. An early outcome of their relationship was the discovery, by the sponsor, of the offender's interest in the pursuing of a career in commercial art. He was lost as to how he could pursue this interest and apparent talent. His confusion was compounded by a lack of the necessary finances. The sponsor, through a series of contacts, was able to inspire this young man to enroll in a commercial art course at a very nominal expense. With this renewed positive interest and consistent guidance from the counselor, this young man soon developed a very fine attitude toward a course of life quite the opposite from his previous attitude.

CASE SUMMARY—10

The following case epitomizes the relationship we hope to establish between the offender and his volunteer sponsor. Added to this is the potential influence of the church. The influence of the church is mentioned because this offender's renewed interest in his faith was established through this program of probation.

The young adult in this case represented, at the time of his placement on probation, a home broken by separation and impending divorce. When questioned about his interpretation of the relationship between his mother and father he replied, "They are both stubborn, they will probably go back together; I don't pay much attention". He further related that this had been the marital relationship of his parents as long as he could remember. The probationer had quit school

at the 10th grade level and had been engaged in heavy manual labor for the past 3 years. He had a steady record of employment in this job. An earlier contact with the court had come as a juvenile when he was placed on one year's probation due to a breaking and entry conviction.

His present probation resulted from his pleading guilty to the charge of "driving without due care". It soon became evident to the Chief Probation Officer that the probationer's greatest area of potential weakness was in the area of driving a motor vehicle. At the time of his placement on probation he owned two cars. The early meetings were devoted primarily to a discussion of his responsibility as a motor vehicle operator. He also attended the Court's Driver Safety School which is sponsored by the Royal Oak Association of Independent Insurance Agents. The school charges no tuition fee and gives 8 hours of instruction to the violator.

Midway through his term of probation the probationer entered into a business deal that ended in failure. As a result, the small amount of savings he had accumulated was gone and, even more tragic, so was his steady job. It was at this point that the probationer's volunteer sponsor "jumped" to his aid. The volunteer sponsor owned a small business and he found it possible to give the probationer a steady job with liveable wages. This not only enabled him to maintain himself but it also gave him the necessary financial backing to follow through on the marriage he was planning.

Recently the Chief Probation Officer has met with both the probationer and his wife and they report being comfortably settled in their own apartment with plans to soon rent a house. The probationer continues to work for his volunteer sponsor and he has proven himself a dependable and capable employee.

Another outcome of the Probation Officer's conferences with the probationer and his wife was the discovery that they both were seeking a new church affiliation. With their choice of churches established a referral was made to the pastor of the church and to date the pastor has made several home visits to help them reestablish this interest.

We believe this case summarizes our philosophy of probation. The securing of employment, through the volunteer sponsor, had a profound effect on this offender. He continues on probation with improved attitudes toward himself, his community, and his new marriage.

CASE SUMMARY—11

The offender in the next case pleaded guilty of committing an illegal and improper act with sexual implications. During the course of the trial he stated that he had been drinking heavily and denied any memory of what he did from the time he left the bar until he returned home. A psychiatric evaluation was required and willingly subscribed to by the offender. He continued monthly psychiatric treatments for about 7 months.

During the first few probation visits he was quite ill at ease during the interview period. He resented the visits to the psychiatrists, stating that it did him no good. The psychiatrist's report indicated that drinking and poor marital sexual adjustment were basic factors in the man's problem.

This gentleman became active in A.A. and after several visits assumed some responsibility in the organization. He recently stated, during an interview with the probation officer, that his negative feelings toward the psychiatrist were largely financial. We feel good rapport with the probation officer was achieved when he was able to openly discuss his feelings about the psychiatrist, his drinking and consequent involvement with women, the effect that his drinking had on both his marital and family relationships.

The psychiatric report indicated emotional immaturity, recommending regular supervision and encouragement. At this time we feel the probation program is affording this support.

CASE SUMMARY—12

Another case will illustrate the role of the volunteer psychiatrist. A defendant pleaded guilty to drunk and disorderly conduct. There was some indication of an intended pervert act toward a young child. However, the evidence was insufficient to justify a charge, let alone give rise to a conviction. The defendant had twice before in that year been convicted of drunkenness in other courts. Short jail terms were prescribed in both cases. They treated him as just another unfortunate alcoholic.

The psychiatrist in residency training interviewed the defendant prior to sentencing. He soon discovered that the defendant was in an advanced state of alcoholic deterioration. The supervising psychiatrist and two volunteer psychiatrists confirmed the diagnosis. All agreed that the defendant was highly dangerous.

We learned that the defendant had a service-connected disability. The VA was contacted and the defendant, based upon the psychiatric reports, was confined to a VA hospital for an indefinite period of time and until cured. Only in this manner could the public be properly protected.

Thus, due to the efforts of the psychiatrists, a desperate and dangerous case of mental illness was detected in spite of the relatively minor manifestation of that serious illness. Through the psychiatrists' efforts, society did not this time have to wait for a serious crime to happen before providing for the treatment of the defendant and the protection of society.

CASE SUMMARY—13

Yet another example concerns the role of an employer-volunteer sponsor. The owner of a tool company offered to employ a youngster who was on probation. This young man was not doing well on probation and was, in our opinion, a "felony looking for a place to happen". The employer spent many hours after the day's work was over talking to the young probationer.

After some months, the probationer's change of attitude was evident. He got a more responsible job with the company. He enrolled in night school. He began to have faith in the fact that he was "somebody". This young man is simply not the same person.

CASE SUMMARY—14

A woman probationer was assigned to a housewife with training in psychology. She was very distrustful at first of her new volunteer sponsor. The first few months on probation were not successful. Then one night her baby took suddenly ill. She remembered the volunteer's suggestion to "call me anytime". She called the volunteer at 2:00 A.M. Within a half hour the volunteer's own doctor was at her residence and the baby was in the hospital shortly thereafter. The volunteer even paid the doctor and hospital bill. The defendant paid her back promptly.

The probationer never gave us or any other criminal court any more cause for concern. She said, "You really do want to help me. I will not let you down".

CASE SUMMARY—15

Another youngster was sincerely dedicated to the economic and philosophical theory that, "only squares work". He was assigned to a volunteer who suggested that they have lunch at the executive dining room of the automotive company where the volunteer was employed in an executive capacity. The first few times the probationer showed up without a suit or tie and unshaven. The volunteer did not comment thereon. After a few meetings, he suddenly showed up well-dressed and clean-shaven. He said, "How do you get a job?" When the volunteer reminded him that only squares work, he said, "Yeah, that's what I thought, but looking around this room each week has given me a new idea about what this is all about".

The volunteer helped him get a job with a steel company. A few more months and several more meetings went by when the probationer asked about the apprentice program. With the volunteer's help, he applied and was accepted. He did well in the apprentice program and now has a responsible position. The volunteer said, when the defendant was discharged from probation, "This man is simply not the same person."

CASE SUMMARY—16

In yet another case, a chief counselor noted that a young probationer had a terrific problem with his teeth. It badly marred his appearance. The chief counselor was sure that this was part of his problem.

He contacted a local university and arranged with the dental school to have the probationer receive extensive treatment from a student dentist acting under the supervision of his professor. The teeth problem was solved in a few months. There has been no further difficulty with the probationer.

CASE SUMMARY—17

Another volunteer dropped everything to assist a probationer with a legal problem. The landlord had evicted the probationer and was wrongfully holding his stove. The probationer and his wife had no way to warm their baby's bottle. The volunteer dropped everything he was doing that day and went to his home to pick up and to lend to the probationer a baby bottle warmer for his temporary use.

Then they went to a nearby court and got out a writ of replevin to recover possession of the stove. The volunteer, who was not a lawyer, assisted the defendant in preparing the court papers. For the first time in his life, the probationer was appearing in civil court as a plaintiff rather than in criminal court as a defendant. They got the stove back, but they also accomplished a lot more than that. The probationer has not been back in any criminal court again.

CASE SUMMARY—18

L. Came to the court's attention for being intoxicated. When he was first seen by the counselor he was unshaven and quite disheveled. His eyes were watery and had a rather strange, faraway look in them. His thinking seemed rather odd and a referral to the psychiatrist brought the information that the boy was a schizophrenic whose thinking was quite disturbed. During the first year of his two year probation there was much difficulty in getting him to come to appointments and many threats were made by the probation department. The boy was not able to hold a job and would drift from one job to another. He was obviously very sick emotionally, but refused any kind of help that was offered. Counseling with this boy consisted of pointing out reality to him continuously. About one year into the probationary period, he met a girl whom he wanted to marry. A relationship seemed to have been established between the probationer and the counselor by this point in that he brought the girl to meet the counselor. They planned marriage and were married shortly thereafter. From the time of meeting the girl, the probationer's behavior changed drastically from being a very nonconforming individual who violated probation by such things as throwing a beer bottle out of his car onto a parked police car, and he maintained that his change in behavior was due to the fact that he got married. Throughout the second year of his probation he has kept out of trouble and has worked consistently at the same job. He, in fact, maintains that he wants to learn all aspects of his job so he can move on. It seems that the stability of a wife and the long term stability of a probation counselor may have been of great aid to this very disturbed individual. Perhaps the probation counselor provided the initial stability which he had never found and the initial relationship which he had never been engaged in and his wife continues to provide this relationship.

CASE SUMMARY—19

T. came to the court's attention for window peeping while under the influence of alcohol. It was felt, in the pre-sentence investigation, that he was a rather dull individual intellectually and there was much evidence to support this in that he had dropped out of school, had done poorly in school, and on an intelligence test had performed rather low. There was evidence to contraindicate his dull level of performance, however, in that he had been able to hold a skilled trade job for some period of time. When the probation counselor met the probationer for the first time the probationer did not have time to clean up from his work and was quite dirty. He was apologetic about this, but the probation counselor did not reprimand him nor make any negative comments, feeling that this man's work was a very strong basis for helping him. At the same time, the man's own feeling of self-respect was quite lowered in that his wife was threatening to divorce him because of the act that got him into trouble. The probation counselor's tact was to try and build this man's own self-confidence. The probation counselor felt that using the man's good work record was the best basis to work on. In 18 months of probation, this man never acted out again and never again drank. He did not go to Alcoholics Anonymous. The probation counselor would spend their sessions in asking this man a great deal about his trade and getting to know the trade himself. The probationer openly admitted that he enjoyed coming for our visits and it was quite apparent that the man was not dull and could function very adequately. In a very short time after they met, the probationer would appear for his visits in a very clean and groomed state. It is

felt that the probation counselor's technique of trying to build self-respect in this man through the man's work habits was highly successful.

Chairman PEPPER. Will Governor Hughes please come forward.

Governor Hughes, we are honored and most grateful to you for being here with us. We know of your spendid record, not only as a Governor and leader of an American city in political life, but a man who has made an enormous contribution to the problem of better administration of justice in the curbing of crime, working with and for the American Bar Association.

So, we are particularly grateful to have you here this morning.

Mr. Lynch, is there anything you would like to add before we call the Governor?

Mr. LYNCH. Yes, Mr. Chairman.

I would like to point out for purposes of the record that Governor Hughes brings to this hearing a special expertise in this field. He served, beginning in 1939, as an assistant U.S. attorney in New Jersey. He served many years as a judge of Mercer County Court in New Jersey. Subsequently he was Governor for 8 years, and he now serves as the chairman of the American Bar Association Commission on Correctional Facilities and Services.

Governor, would you please give your statement?

Chairman PEPPER. Excuse me, just a minute.

As you no doubt know already, these hearing, which will last at least 3 weeks—this is the second week—are dealing with street crime, and we are trying to find out the best thinking in the country that suggests what more may be done than we are now doing to curb crime of a violent or serious character in this country.

The first week we had 12 police departments of the country represented here, each of which had an innovative and imaginative program, which is achieving success in curbing crimes in those respective areas. This week is devoted primarily to correctional institutions for youth and for adults. We have had, as you heard here, outstanding thinkers in the country, outstanding administrators in dealing with the problem of youth, delinquency, and crime.

Governor, you are especially knowledgeable in the subject, and we are most grateful to have you.

STATEMENT OF RICHARD J. HUGHES, CHAIRMAN, AMERICAN BAR ASSOCIATION COMMISSION ON CORRECTIONAL FACILITIES AND SERVICES, WASHINGTON, D.C.; ACCOMPANIED BY DANIEL L. SKOLER, STAFF DIRECTOR; AND ROBERT C. FORD, DIRECTOR, ACTIVATION PROGRAM FOR CORRECTIONAL REFORM

Mr. HUGHES. Thank you, Mr. Chairman, Congressman Winn, Mr. Lynch, Mr. McDonald.

I would like to have the committee's permission, if I could, to go aside from my prepared testimony and complement the statement of Judge Leenhouts. I fully support it. He is indeed a great American, and this volunteer effort he mentions has been an inspiration to people all over the country.

As a matter of fact, I feel humble to follow him, because my expertise, although you refer to it very kindly, is nothing at all to match his.

In any case, it is an honor to be here and to share with the committee engaged in this important hearing, some thoughts on just what the plight of our correctional system is and what relationship it has to the sickness in the country, the street crime and violence. Also, I would like to talk about some promising directions for improvement.

I am accompanied by an expert witness, our staff director, Dan Skoler, who will be available to answer any question I can't from the committee and there may be many. He is the chief architect of the success of our corrections commission, whose programs I would like to describe very briefly.

Chairman PEPPER. Mr. Skoler, we know about your expertise and the valuable contribution you have made. We are very grateful to you for accompanying the Governor today.

Mr. SKOLER. We also have at the table with us Robert C. Ford, who is director of our commission's bar activation program for correctional reform, the thrust of which is to work full time with State and local bar associations in the same work the American Bar Association is engaged in concerning correctional reform.

Chairman PEPPER. Mr. Ford, we extend a particular welcome to you.

Governor, we want to advise you, Mr. Skoler, and Mr. Ford that we are going to call upon you for help and counsel if we may when we prepare our final report in respect to these hearings and in respect to these subjects.

Mr. HUGHES. We will look forward to that partnership and appreciate it.

As any good American, especially since we are citizens and human-beings, we like to look at our country and think about it as "America the Beautiful." We think about its historic birth and pioneer spirit, its longing for right, for justice, its generosity and courage and the strength of this country; but if we look again at our country, we see another side, a much more dismal picture. We see pollution and poverty and the terrible, frightening drug culture, the discrimination and hatred that still exists, and the growing disregard for law, with all of its frightening crime and violence.

This is a very different picture and it is a sickness that is so mysterious many people are confused when they try to explain it. It might have been the tragedy of Vietnam, it might have something to do with the decay of our cities, or the drugs, or the permissive society, so-called, or the comparative prosperity in which our children have grown up.

Chairman PEPPER. Excuse me, Governor. The light has gone on. They are now having a vote. If you will indulge us, we will run over, vote, and come right back.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Governor, we are sorry we had to interrupt. You may proceed.

Mr. HUGHES. Thank you, Mr. Chairman.

As the committee knows, the leading spokesman for correctional reform in this country today is Chief Justice Warren Burger, who reminded us recently of ". . . the melancholy truth that it has taken the tragic prison outbreaks of the past 3 years to focus widespread public attention on this problem."

That there is a problem—that there is a critical and dangerous breakdown in our correctional systems is beyond dispute. Even the age-old apathy of the public is beginning to be pierced by the repetitive horrors of which it reads and learns—the institutional suicides, the violent sexual abuse and even murder of younger prisoners, the frustrating level of recidivism, the riots at the Tombs and Holmesburg and San Quentin, and finally the shocking American tragedy of Attica. Dean Robert McKay describes Attica in his commission's report as displaying only "the tip of the fiery hell which lies below."

I might say that the film of that commission's report is in our possession and we have told Mr. Lynch it will be made available to the committee. It is a very interesting film of the actual Attica riot, its setting and aftermath.

Chairman PEPPER. We would like very much to have that, Governor. Thank you.

Mr. HUGHES. I know that, among other aspects of this problem, the committee and its staff have been studying the emerging law on legal rights of those incarcerated in our jails and prisons. I suspect that the chairman and the members may share with me some feeling of restlessness at the ambivalent slowness with which courts are turning away from the callous "hands-off" doctrine which has persisted for many years. It has been described by one court as "a questionable absolutism." One extreme of its application was by a Virginia court which once said, years ago:

[the convicted felon]

has, as a consequence of his crime, not only forfeited his liberty, but all his personal rights except those which the law in its humanity accords to him. He is for the time being the slave of the State.

If you will excuse a lawyer and former judge for being cynical, I would regard a dependence upon "the humanity of the law" whatever that is, as a slender reed indeed. I would much rather look to the Constitution, the writ of habeas corpus and the Federal Civil Rights Act. And, as you will hear, the courts are coming to believe this too, as held by the Federal Court of Appeals for the Fourth Circuit in 1966, which said:

The hands-off doctrine operates reasonably to the extent that it prevents judicial review of deprivations which are necessary or reasonable concomitants of imprisonment. Deprivations of reasonable medical care . . . are not among such concomitants, however. Prisoners are entitled to medical care. . . . Where there is no administrative provision for an impartial resolution of factual issues underlying such claims, there is no alternative to judicial inquiry, even though many, or even most of such claims may be asserted irresponsibly.

Even in the days of Blackstone, it was written that:

. . . to confine a prisoner in a low, damp, unwholesome room, not allowing him the common conveniences which the decencies of nature require, by which the habits of his constitution are so affected as to produce a distemper of which he dies: this also is felonious homicide. . . . For though the law invests gaolers with all necessary powers for the interest of the commonwealth, they are not to behave with the least degree of wanton cruelty to their prisoners.

On the subject of medical conditions, legal protections—or the lack of them—my references only scratch the surface of the inadequacies and substandard conditions of much of our correctional apparatus. How shocking it also is to realize that aside from Federal and some State prisons, almost half of our Nation's jails and prisons have no

medical facilities of any kind, and many have no access whatever to a physician. The prisoner in a diabetic coma, or suffering an epileptic seizure, or acutely deranged and suicidal, may languish and die, one might believe, for all America cares. But you and I know that this is not true and that this evil condition results from our indifference and not our intent, although the result might be the same.

This is why our ABA Commission is honored to be associated with the American Medical Association in developing a program "to institute and improve medical and health services in the Nation's jails and prisons." It is to upset this indifference, to change this dismal and dangerous course, that the legal and medical professions have come together with respect to solving this problem of our times.

It was with the same burden on our collective professional conscience that the American Bar Association Commission on Correctional Facilities and Services is now striking out on many other fronts to overcome the indifference and neglect of the past.

Remembering what Judge Leenhouts said about expanded probation and parole, the breakdown in corrections is so pervasive that we can put aside at once the thought that any jurisdiction can rest easily on an illusion of perfection. If New York has an Attica, other States have reformatories to which any judge would hesitate to commit a juvenile.

If one State has a splendid State prison system, its county jails are a mess and many of its judges go without probation services. It seems intolerable to me that probation services are nonexistent or a mere shell in many jurisdictions. To be without adequate probation is to be only half a judge. And the damage done by useless incarceration where probation facilities are unavailable is a most serious problem.

Sloppy parole practices often contribute in a substantial way to institutional unrest, not to speak of the resulting wreckage of human lives. I am sorry that Congressman Sandman is not here because I would remind him that in my own State of New Jersey, a progressive Governor is seeking parole reform, but is frustrated by a backlash of fear and suspicion. In the area of inmate health, Governor Cahill has sent the medical battalion of our National Guard into every institution to inventory the health condition of every inmate. He has proposed in his current budget an increase in medical facilities which would provide a more favorable ratio of doctors, dentists, nurses, and psychologists to inmates than the ratio available for care of the general population. This, on the rationale in the words of Governor Cahill's budget message that: "Attention has focused across the country on the physical conditions of imprisonment, the need for upgrading basic correctional programs and the civil rights of the convicted * * *."

So it is that executive initiative can advance correctional reform even without judicial prodding, but on the simple basis of common justice to the offender who, in the main, has been treated over the years with a reckless cruelty by a society not inherently cruel, but only negligent and indifferent. But we are also talking of justice to that society, now fully exposed, as the committee knows, not only in its city streets but in its comfortable suburbs, to the violence and crime to be expected from the released prisoner who emerges brutalized, corrupted and embittered by his "correctional" experience. It seems a paradox that in our State of New Jersey the Governor has

had to abandon, because of public objection, his hope to replace our ancient, long-since condemned State prison, with institutions of smaller population and more effective potential.

Yet we may be encouraged by the cycle of public apathy and public attention. Twenty years ago people cared nothing about air and water pollution—because they did not understand the immediacy of the danger to themselves, to every one of us. Now, protection of the environment is a primary national goal, to save ourselves from being poisoned by the end of this century.

Another example is the phenomenon of juvenile drug addiction. When it was confined to the city ghettos, many of us did not care; but now that it has reached into every suburban high school, everybody cares. And so it is, I think, that people are now coming to understand the need for correctional reform, and how it touches them and their families personally.

It is thus with a real hope that we are about to turn this corner of neglect, that I have been so encouraged in my work as chairman of the ABA Corrections Commission. Penal system improvement represents a priority concern of our association. When we organized, we discarded the idea of studying again the problems of corrections, and inclined our energies toward action programs.

We have in process our first practical undertakings, including a national volunteer program in which young lawyers work as aides providing intensive one-to-one assistance to offenders on parole, a program already showing evident success in 12 States.

We are associated with the American Correctional Association, the U.S. Chamber of Commerce, the AFL–CIO and others on another project, a clearinghouse program focusing on unreasonable employment restrictions which impair the ability of a rehabilitated offender to find suitable job opportunities. If we expect to bring the ex-offender into the mainstream of useful work, we must not forbid his opportunity at the very outset.

We are developing with the American Association of Community and Junior Colleges a national effort to stimulate college level education of custodial and other line correctional personnel. The goal is to further professionalize these correctional people who come in such close daily contact with prisoners and have so much to do with their eventual destiny—for good or bad.

We have established a Resource Center for correctional law and legal services to provide direct litigational support of test cases and to publish manuals concerning specific areas such as harsh and irrational sentences, mail censorship, jail conditions, parole problems, civil disabilities and other similar topics.

We have energized a statewide jail standards and inspection systems project. This seeks to stimulate State legislation to require minimum standards of decency and good practice in jail and juvenile detention facilities.

We also have a program to activate State and local bar associations to concern themselves with penal system improvement. That is the project that our good Mr. Ford directs. To our delight, more than 20 States and 10 major local bars have established special committees on correctional improvement. In addition, a dozen more such committees

exist within junior bar, young lawyers, or other sections of State and local bar associations.

One project most exciting to our commission, which I imagine would be most exciting to this committee, in which we are working with the National District Attorneys Association, involves the pretrial diversion of early offenders. This program would identify young offenders at the outset of a criminal career and temporarily suspend prosecution while the offender receives counseling, education or manpower services.

Should the offenders respond favorably, and already the prospects are encouraging, prosecution will be dropped and we will have saved one more American from entering the corrupting and destructive cycle of criminal imprisonment. We hope this idea will spread throughout the country for we have much to gain in this preventive effort.

We think our commission's work has been effective in emphasizing two reasons for the growing public concern with correctional reform, neither of them, please note, associated primarily with a feeling of humanity or charity or softness toward the offender. The benefit-cost ratio is extremely important at a time when public expenditures are severely afflicting every taxpayer. The per capita cost of unnecessary and prolonged imprisonment has been estimated by some authoritative groups to exceed $10,000 a year. Let us then consider another factor, namely that excellent probation or parole supervision with constant attention to the offender to keep him on the straight path, could be had for a per capita cost of less than $1,000 a year. We ask ourselves which system makes better sense, assuming that the security of society is not endangered? And what monumental stupidity it seems to be to select imprisonment where that it is not necessary to the security of society.

Even more importantly, the second point of our case involves the final product of our correctional system. A man who comes out of prison or a reformatory much more corrupted and criminal than he was when he went in, is a dangerous man. We have built a monster who is a threat to the whole fabric of our society and every family in it. This factor, too, while certainly not altruistic, is a very important one if we are talking about crime in America. From my experience as a judge, a prosecutor, a lawyer and finally as governor, I express the opinion that if by some miracle our correctional system were to be reformed overnight, crime in America, including street crime, would be reduced by one half at least.

Our ABA Commission has an interdisciplinary membership including the redoubtable Dr. Karl Menninger, and we work with a staff of excellent professionals from our offices in Washington. We have a grant from the Ford Foundation and various Federal grants, and we have constantly been encouraged by Chief Justice Burger in our work for reform. I believe our efforts are beginning to bear fruit in creating a sense of identity between the public and the problem which is necessary, of course, to the accomplishment of any reform.

And so while the problems we face are monumental, I am beginning to feel a sense of optimism that the public will support a reversal of the trend which has brought us to our present sorry condition. I have always been inspired by a remark that I think was attributed to John Kennedy. It was the effect that the tide of history need not run against

the United States, but can go in the direction in which strong and determined men compel it to go.

If professional people, governmental officials, and citizens from all walks of life can be inspired to join this effort, think what a power for good, for affirmative reform, would be generated. What a shining challenge we would be meeting. What important goals we could accomplish. If we can but elevate the status of corrections in this country, we will surely cut down the incidence of crime, which police power with all its force has been unable to do; and if we can once again become a law-abiding and peaceful society, you can see how much we will be contributing to the interest of our country and perhaps have something to do with saving it from the unhappy problems which afflict us on every hand today.

Our commission is well aware of the Select Committee's interest and the chairman's personal concern with this phase of the criminal justice process. We know of its close scrutiny of the Attica and Raiford prison disorders and look forward to the committee's forthcoming special report entitled "Prisons in Turmoil." It is gratifying to see that the Select Committee has looked beyond the simple and obvious questions of physical security and custodial force to emphasize the treatment and rehabilitation approaches that must be fostered and modernized if our correctional system is to achieve what it so desperately needs—a better success rate. Because of their inherent merit and because so many of them march in step with our own programs and priorities, we wish your work well and hope that its public and governmental impact will be strong and immediate.

Our President, I think, has summed up the case well. And—I should parenthesize here—he has supported the work of our commission very strongly from the outset. He said:

> At long last, this Nation is coming to realize that the process of justice cannot end with the slamming shut of prison gates. Ninety-eight out of every hundred criminals who are sent to prison come back into society. . . .
>
> Locking up a convict is not enough. We must also offer him the keys of education, of rehabilitation, of useful training, of hope—the keys he must have to open the gates to a life of freedom and dignity.

And our Chief Justice has isolated the "critical variables," as he calls them:

> It is not the rhetoric of prison reform, but the moral and political commitment expressed in concrete ways that move and change a modern democratic society. High in this scale is the commitment of the public purse; citizen support for enlightened professional doctrine and practice; new mechanisms, such as training academies and information clearinghouses; and translation of sound standards into statutory and administrative reality.

It remains for the Congress to make the unique contribution that only it can bring to national problems and values of this depth. It is good to see the Select Committee on Crime devoting its remaining energy and resources to this important work.

I know I speak for all of the members of our commission and the bar association when I wish your committee well in its legislation.

Chairman Pepper. Governor, you made a magnificent statement and we are most grateful to you for it, and for the contribution you are making to fight this problem.

The members might have to leave, so I would like to give the members of the committee first opportunity to question.

Mr. Mann?

Mr. Mann. Governor, I am somewhat enlightened by a statement here that probation facilities are unavailable in some jurisdictions. What type of jurisdictions in general do you find lack those facilities?

Mr. Hughes. I would say probation services are insufficient, although not absent, in my own State of New Jersey. When I was an assignment judge responsible for this I quarreled bitterly with the county purseholders, the freeholder board, as we call them, and managed by public and press attention to get them to double the amount of probation services.

You see, if a probation officer, no matter how good he is, has 200 juvenile offenders or adult offenders on his list, he is not going to be able to do much more than have them come in once a month to the courthouse and say, "Yes, I am doing pretty well." No home visits, no supervision of any kind. His caseload ought to be about 30 or 35. There are estimates floating around that the cost of having that kind of probation, good tight probation or parole, is at $500–$800 a year.

Some States have no probation. As a matter of fact, I think in Nebraska, there are many parts without probation. In some places in Texas, the judges have no probation officer at all.

Mr. Mann. I imagine it is somewhat the rule that courts such as magistrate's courts and police courts don't have any facilities.

There seems to be a rising unrest in the prisons about some of our methods of parole. I find in my prison mail that they are demanding some type of objective criteria by which they can earn parole, rather than being at the mercy of the board. Who was working on that problem? Is anyone doing any constructive work?

Mr. Hughes. Our commission is urging many of the States in this direction. I accompanied Chief Justice Burger to talk to the Governor's conference 1 or 2 years ago. In our State, for instance, there is a parole reform bill which Governor Cahill is strongly supporting, to clean up inadequate parole practices, which is the chief cause, I would think, of prison unrest. That is, the parole board giving a prisoner who is a worthy prisoner and rehabilitating himself the "back of their hands," because they don't have the time. Part-time boards, for instance, are a weak point.

But this parole reform bill is being frustrated by the usual opposition, "Are you going to let these bad people out among the public," and so forth, which completely goes past the problem.

Mr. Mann. I wonder if we have identified any outstanding parole system in the country? Does anyone know of any one that seems to be working better than others?

Mr. Hughes. I am going to refer that to Dan Skoler, if I may. He was formerly with LEAA and is quite knowledgeable.

Mr. Skoler. I am really not prepared to answer that question, but I do want to mention, Congressman, that the American Correctional Association has a parole project supported by the Department of Labor's Manpower Administration. This is working with States, and I think is already operating in several States—California, and Wisconsin being two—and which does seek to define a program for the parolee which makes clear to him what will be expected of him,

both in obtaining the grant of parole and operating on parole with definite incentives and goals.

Mr. MANN. I think this is going to be an increasingly troublesome problem and we need to put as good minds and projects on it as we can.

Mr. HUGHES. Could I offer to send down to the committee copies of the New Jersey legislation, which I think is very useful, plus a reform reference by our commissioner of institutions and agencies in which he has administratively installed parole counselors to help worthy prisoners who may be inarticulate and unable to express themselves, work up a job or family plan outside, and counsel them when they come before the board—things of that nature?

Chairman PEPPER. We would be glad to have it. Please send it to us.

Mr. MANN. Thank you, Mr. Chairman.

[The information referred to above will be found at the end of Mr. Hughes' testimony.]

Chairman PEPPER. Mr. Wiggins?

Mr. WIGGINS. Thank you, Mr. Chairman.

Governor, I have no question concerning your testimony. I am going to explore two new areas. After touching on the first area I intend to yield to my colleague from Kansas, and then we will get back to my second area, if time permits.

Your background provides the committee with the unique opportunity to ask questions of a man who has been a chief executive of an important State of this Union, a judge, and an attorney as well. My concern relates to the proper role of the judiciary in producing internal reforms within prisons.

As you know, to an ever-increasing extent, it has been the Federal judiciary that has carried this burden as the result of petitions filed under section 1983 of title 42, a civil rights statute, or occasionally petitions files for posteonviction relief under section 2254 of title 28, by State prisoners.

Particularly in the former case, the court is granted broad equity power to compel action, and often the action that is compelled involves expenditure of public funds. Now that raises a serious question in my mind about the proper role of the judiciary in determining priorities for public funds, when by their very nature they are not exposed to the multiple challenges for funds, as is the case of a legislative body or chief executive.

I think I have set the stage for the problem that disturbs me and perhaps you might expand on it and give me your observation.

Mr. HUGHES. The constitutional right and the civil rights remedy of section 1983, approaching now the same status as a "cruel and unusual punishment" right, and so forth, at least in the eyes of many courts, is one which must be recognized by the courts and dealt fairly with. As you say, it is a very difficult problem. For instance, in my 18 years as Governor of New Jersey, I was totally unable to accomplish any substantial measure of penal reform because I was afflicted with the demands of colleges and education and highways and a lot of other things.

To the credit of my successor, he is concentrating on that. That is one of the reasons I am on this commission and spending about a third of my time on it—to make up that second chance.

Really, I think the court judge who insists on the common decencies Blackstone called for in the quote I just read, is good for Governors and for legislators, because it leaves them no alternative except to do what they ought to be doing anyhow. In other words, they aren't volunteers. They can't be called "do-gooders" or "bleeding hearts" by the public, if they are merely following the admonitions of the court.

Mr. WIGGINS. Of course, the judgment as to what the Governor ought to do is not society's judgment collectively, acting through their legislative, but rather the judgment of the court, which may hear only very narrow arguments. The court hears the arguments of the petitioner or the plaintiff in that lawsuit. It hears the attorney general's office argue in resistance to it, or some counsel. But the court doesn't hear the interest of schools and people interested in roads and others.

It means either that the other values are going to be shortchanged as we focus on prisons and the internal conditions of prisons, or it means the total pie is going to be increased by new revenue brought into the system as a result of a tax increase to take care of everybody.

But what really bothers me, Governor, is that the judge is making that determination, rather than elected bodies and elected Governors. Do you think that is fundamentally incorrect in our system?

Mr. HUGHES. I think it is correct where a vacuum exists and where the executive or legislative body doesn't attend to the problem. The problem must be attended to.

For instance, a year or two ago in Dade County, which is a pretty good jail as jails go, a 17-year-old runaway boy was thrown in the cage with 20 other pretty bad prisoners, two of whom murdered him during the night. They were only waiting for his father, a minister from Georgia, to come down and pick him up. That shouldn't happen. It will behoove a court at some level to say this kind of neglect can't happen any more.

I am convinced that the general public doesn't want these things to happen. They don't want people to die from neglect in jail. They don't want cruelty.

Mr. WIGGINS. The general public has not responded generously to bond issues when presented to them for reform, or at least the modernization, of the penal system.

Mr. HUGHES. That is correct. And it is too bad. That problem is part of the administrative concern of our commission and, for instance, this committee. I have noticed, however, after a long time in public life, that sometimes the Governor or legislator has to get out in front and do what is right, even though his mail doesn't run 30-to-1 in favor of that.

Mr. WIGGINS. We saw a lower Federal judge here in the District of Columbia, if my memory serves me right, ordering that any commitment to Lorton was cruel and unusual. Accordingly, the whole institution was to be closed down, and somebody had to provide the alternative of a different institution or turn those people loose.

That perhaps dramatizes the kind of problem I am talking about, where that judge had made his assessment of the priorities for the public expenditures and said more money should go into prisons as distinguished from perhaps some other area. I don't know the ultimate disposition of that case. I suspect it may have been reversed, but at least it dramatizes the problem.

Mr. Hughes. It has to be that way. Sometimes that is the only way the right can prevail. As you say, the public mind is hard to dent on this subject, but judges throughout the country have been closing jails.

Mr. Wiggins. Does it bother you that it is a Federal judge closing a State jail?

Mr. Hughes. If a State prisoner is being deprived of his constitutional rights, for instance, if kids are being thrown in with some of these older, hardened, brutal prisoners, it is the judge's duty, I think. The judge would be very unjudicial not to recognize that and, hot or cold, make his decision. Then the legislators and the money producers would have to worry about it from there on. But the judge can't turn his back on it.

Mr. Wiggins. Shouldn't there be an exhaustion of remedies requirement in the case of section 1983 petitions? Do you know the problem to which I am speaking? I think Mr. Skoler does, if he would like to comment upon this problem.

Mr. Skoler. Yes. The dilemma referred to by the Congressman is a very real one. As a matter of fact, the courts, perhaps from frustration with the decree aspect of their decisions, are becoming more positive and more detailed in the kinds of orders they want submitted to remedy unconstitutional conditions in prisons and jails. There are real cost questions involved in implementing these decisions. It has been my observation, however, that in the test of a decree like closing a jail down, or determining there must be additional space, which does ultimately require a bond issue and executive action, there are sufficient forces on the other side to create a mediating influence. That is, the court activism in the defense of constitutional rights in these cases doen't fully win out. The give-and-take usually involves a compromise between limited public dollars and the judicial assertion of constitutional rights.

So you do wind up with a more reasoned result than one that just has to make way for the kind of executive priorities you talk about.

Mr. Wiggins. I will conclude this portion with the observation that I, for one, would certainly not wish to repeal section 1983, but on the other hand, insofar as judges are exercising their equity jurisdiction by compelling affirmative action as distinguished from injunctive relief, which of necessity will require the expenditure of public funds, that in their own self-interest, if not in the interest of the society as a whole, they exercise great restraint and not be too much of a pioneer in this field, because the public reaction could be gross and most unfortunate to the judiciary.

I have other questions I will get to after Mr. Winn.

Chairman Pepper. Mr. Winn?

Mr. Winn. Mr. Chairman, I would yield some of my time to my colleague from California, who is a fine lawyer. And since I am not a lawyer, I would like to hear him explore his field.

Mr. Wiggins. I want to carry on with just a few questions on the subject that our colleague, Mr. Mann, talked about: namely, parole. At the present time, statutes in this country range all the way from granting to parole authorities maximum discretion to determine the total period of confinement, to almost no discretion at all, as in the case of mandatory sentences, no parole being authorized.

A maximum discretion statute is really in the nature of an indeterminate sentence procedure.

Do you have any views as to the proper balance here of what is right and what is wrong?

Mr. Hughes. Yes. I had occasion to veto repeatedly mandatory sentences, 2 years, 8 years, 10 years, all of which would have handcuffed the judge and perhaps compelled him to commit great injustice in a given case, or resulted in a very evil person being acquitted in a given case, because of the nature of the sentence. I thought as a lawyer that they were totally wrong.

Now, I know this drug problem is becoming so frightening to many people that that mandatory stiff sentence seems to be quite appealing. I know in New Jersey that the new parole reform bill, which would give the parole people authority any time after 6 months of a commitment, no matter how long a sentence, to consider and grant parole, is meeting great public resistance. In Massachusetts, a prisoner must serve two-thirds of the maximum of his sentence before being considered for parole. This is causing enormous unrest, as you may have noticed in the papers, in the maximum security institutions in Massachusetts.

So these extremes are, I think, wrong. I think the answer lies in liberalizing of parole availability but strengthening the parole boards in their procedures. In New Jersey, I think by the end of this year that the case of every prisoner will again have been reviewed.

Mr. Wiggins. We cherish the notion that the court is in the best position to sentence an offender fairly, and balance the interest of society and the needs of the defendant.

I really doubt that. I think that a court is sentencing a man at the wrong time. The court has just heard all of the grisly details of a heinous offense, perhaps. Of course, he has the benefit of the impassioned plea of defense counsel and he has the presentencing report. But the point is, he is making the judgment at the wrong point in time. We are talking about the future of the given offender and his hoped for rehabilitation and we are making that determination in passion. And I think that is incorrect.

I realize reforms in this area are very difficult to enact because of the hysteria that surrounds the matter of sentencing offenders. But would it be enlightening, in your view, Governor, if we moved in the direction at least of an indeterminate sentence, perhaps not totally wide open where a convict is unclear as to how long he is going to have to serve, but at least in that direction, granting greater flexibility to parole boards to determine whether or not at some point in time in the future an individual offender has been sufficiently rehabilitated to be reintroduced into society?

Mr. Hughes. There is a wave of public reaction to that sort of thing, which I think would make it pretty much unworkable. I would prefer the New Jersey system, which gives what we call an indeterminate sentence—and we are talking about different definitions of the word—not less than 3 nor no more than 10 years in the New Jersey State prison.

Under the present law, when the minimum is accomplished, or one-third of the maximum, that man with good time—good behavior time and work-time taken off—can be considered for parole.

Congressman, I think the first thing, and I think something the public would support if it could only learn the cost-benefit ratio from this committee, would be making sure there is excellent probation—fine probation facilities available to every judge in the country.

Mr. Wiggins. I think there is greater public resistance to probation than there is to parole. The public wants to see a man go to jail, and they are very resistant to the granting of straight probation or even probation upon condition of a minimal term served in the county jail.

But after the door is closed, as you well know, society forgets about that man and it is possible to do some enlightened things with respect to him, if legislation in that direction were drafted.

Mr. Hughes. I wonder, Congressman Wiggins, if I could file a statement later with the committee, including our parole reform bill in New Jersey, and the rationale behind it. I know there is a study. I would be more informed then than I am now.

Mr. Wiggins. It would be most helpful to the committee and me if you would do so.

As you know, Congress is confronted now with the specter of mandatory sentences in three areas. One is certain Federal crimes committed with a gun, another is drugs, trafficking particularly in the heroin-morphine field, and finally in the hijacking field, all very emotional crimes. Recommendations for punishment which have been described as mandatory sentences, but in fact are not actually that, are now pending before the Congress.

Your observation concerning this matter will be helpful to me and to the committee.

Mr. Hughes. We will file a later statement and file it very quickly, because I know the committee is well on the way to finishing its work.

[The statement mentioned above will be found at the end of Mr. Hughes' testimony.]

Chairman Pepper. Mr. Winn.

Mr. Winn. Thank you, Mr. Chairman.

I have only one question that has bothered me for quite some time, and that is the selection of probation officers. Do you have an idea of what percentage of probation officers really care, and are dedicated?

Mr. Hughes. My experience with probation officers in my own State, as a judge for 10 years, has been good. They are dedicated people in the main. I tried to get the New Jersey legislature to give me money for the creation of a system of paraprofessional probation officers, in which event, instead of a juvenile offender who had to be watched, say, in the central ward of Newark, on probation, instead of going down to the courthouse and seeing some crewcut, college-type probation officer and exchanging a few words with him—that is a bad word these days——

Mr. Wiggins. You are dating yourself when you talk about crewcut, college types.

Mr. Hughes. That is right. Instead of that, the paraprofessional may be a rehabilitated offender or someone from the offender's inner-city community and thus a store-front probation officer, where he would know what that boy was doing with his family, or whether he was getting into bad company and so forth. This kind of sympathetic and intensive contact and supervision would be the system.

As to the specific question, Congressman, I would like to ask Dan Skoler or Mr. Ford to answer.

Mr. Ford. Mr. Chairman and Congressmen. My viewpoint has been as a volunteer parole officer, seeing parole officers and probation officers in action in the State of Illinois, primarily. We found that there is a great diversity, of course, in the way they go about their task, but I think for the most part they do seem to really have a significant concern for what they are doing.

This seemed to be true of both the older and less apt to be professionally trained men who have been in the system for a long time, and of our younger ones just coming out of college and graduate school.

Mr. Winn. Are there any kind of training courses for those older ones that sort of have a job by the grandfather type of thing because of their age and experience?

Mr. Hughes. There are inservice courses. The chief probation officer in the county in which I sat for many years is a man named Simon J. Falsey, and he has not the college education and so forth. He is the type of older practitioner you mentioned. I believe that if I were to go back on the records, I could find hundreds of people whom that man saved from years in jail by guiding them as chief probation officer.

I would turn a pretty bad kid loose with him on probation, with reluctance, and 6 years later he would walk in, would be a Marine, be married, and fully rehabilitated. This was a great, dedicated but fairly uneducated probation officer. So it depends on what is in the heart as much as what is in the head.

Mr. Winn. I agree with you and that is why I think that some of them do have it in the heart and some don't have it in the heart, and some of them find the easy way out.

I have not been exposed to too many, but just enough to make me wonder about some of the types of personalities that we have, and wonder, really, if they care enough about individuals in general to spend the time that is probably necessary.

It seems to me more prevalent nowadays to spend more time with the individuals and listen to their problems and talk to them than the so-called old days, or crewcut days. I don't think too many of them made the home visits that were very necessary and they really didn't find out what may have—not always—what might have been the basic problem for the behavior of the offender.

Mr. Ford. If I could add, I would suggest that some of what might appear to be a lack of concern at times may just be a result of the layer of cynicism that seems to come out on top, because of having caseloads of 200 and 300 people.

Mr. Winn. My next question: I think it is pretty obvious in some parts of the country the caseload is too much for certain individuals to handle. I don't think there is any doubt about that.

Mr. Ford, what would be your answer—other than money. Don't just say money, because we hear that like a broken record up here. What else?

Mr. Ford. You seem to be kind of leading into what we are all about and that is volunteers. I am at the moment working with just getting lawyers to get involved in any type of correctional activity. One of our projects that the Governor has mentioned is the National Volunteers in Parole program. We have tried to match volunteers, 1-to-1, with felons coming out of institutions and in some cases, probationers, too. In Missouri, in particular, I believe they were with probationers.

But I think people resource is the answer. And if you can get people resource without money, or with less money, I think that is the best solution.

Mr. WINN. Of course, if you get people resource with practically no money, you have the people.

Mr. FORD. Right, correct.

Mr. WINN. We have the people in the country; whether we have the people with the heart or not, as my colleague from California brings out, is another thing. When we are voting bonds for correctional institutions, all of a sudden, even including schools these days, the public falls on its face.

Mr. HUGHES. This probation officer business, though, Congressman, is a little different, because if we mention the word "money," if you are spending $500 a year for worthwhile, 30-caseload-type probation supervision, and you are keeping a man out of the New Jersey State prison, where, considering his upkeep and maintenance and his family on welfare and the loss to the national product, you are saving $10,000-plus a year.

That is where the money is. If somebody could get that message over to the American public, somebody like this committee, by putting in this dollar we are going to save $10, that would be an enormous contribution.

We could begin saving it right away, because there are people in New Jersey State prison institutions now that ought to be out in the street on parole.

Mr. WINN. I think your point is well made and, of course, there are lots of us in Government that wish people would look at certain things this way and in these directions, but I am afraid this is one of those tough things to sell because it really doesn't have much to do with the check they see that they bring home and the money they have in their billfold.

Mr. Ford, I have long been associated, just in youth work, as a Boy Scout master, a Cub Scout master, and fraternity adviser in college for 15 years, and I tried and tried and tried, really, with little success, but I can see the results and there were good guys. These were the good young men from middle- to high-income areas that were impressed with the time, if we could ever get it from them, from athletes or people whose names and pictures are in the press every day. Or frequently, that they recognize, with name identification.

But you have to almost tackle some of those guys to bring them in to get them to spend 10 or 15 minutes with whatever the youth group might be. These are the same people, that many of them—and I have used this when talking to them—started in some areas, started in high crime rate areas. And I say, "You know what I am talking about; now if you will come talk to some of these fellows, spend an hour with them, tell them about your experiences as a champion miler or all-American basketball player—but there is the people power you referred to, but, boy, it is like pulling teeth to get them.

Mr. LYNCH. Mr. Chairman, if I might interrupt for a moment, please.

Mr. Wiggins indicated Governor Hughes brings a special background and experience to the committee, and I think it ought to be pointed out that the same is true of his staff director, Mr. Skoler. And

for the information of the committee, I would like to tell you very briefly something about Mr. Skoler.

He attended the University of Chicago, is a graduate of Harvard Law School. He was the gentleman whom Judge Arthur described as the man who took the National Juvenile Court Judges Association out of the bush league. He served as executive assistant in the pilot Office of Criminal Justice at the U.S. Department of Justice under Attorney General Katzenbach. He was the Associate Director of the Office of Law Enforcement Assistance, along with Courtney Evans, and was Director of the Office of Law Enforcement Programs for the Law Enforcement Assistance Administration.

In that capacity, he practically single-handedly drafted all Federal guidelines for Federal assistance to police, court, and correctional agencies.

He has been a prestigious and prolific worker in the criminal justice improvement field. I think he is in a unique position to indicate to the committee what areas of correctional work need Federal assistance.

Chairman PEPPER. Have you finished, Mr. Winn?

Mr. WINN. I just want to say, Mr. Chairman, I appreciate these gentlemen appearing before the committee. You and I should be embarrassed because your State and my State are not listed in the brochure here. So it looks like we have some homework to do ourselves.

Thank you, Mr. Chairman.

Chairman PEPPER. Well, I would like to say, Governor, I share your view that it is not only the right but the duty of the courts to protect the constitutional rights of people who are incarcerated in penal institutions. In addition to that, it does stir the political and civic leadership to action, to have the courts initiate reform, initiate requirements. I think we gradually have been seeing more and more of that, not only cases dealing directly with the prison population, but I remember it hasn't been so many years ago the Fifth Circuit Court of Appeals in an opinion written by my former law partner, Judge Waller, recognized that State prisoners under the Constitution are entitled to protection of their civil rights; and the courts began to move against brutality and against abuse, with respect to State officers who had custody of prisoners.

Then, of course, the courts have ruled in many other areas: Civil rights, voting rights, school requirements, school desegregation, elimination, and the like.

Now, we all realize, of course, that the rule of reason applies to almost anybody, including the courts. I am sure the courts will not in general allow themselves to intrude their authority into every act of administration in a penal institution. That would be frustrating to any kind of effective operation.

But if civil authorities are not going to provide protection of a decent sort for those people, then I see no alternative but to have the court come in and do it.

We cited in this committee's tentative draft of a report on correctional institutions one of the most horrible cases of where a young man was brought into a cell where several other older men were confined and that young man was immediately sexually attacked and brutally abused. When they finished with him and left him bloody and un-

conscious and bruised and battered, they went back to playing dominoes nearby.

It would seem to me that a young man who was being sentenced to a State prison like Raiford, or Attica, or some of these others, that I think are a shame to the penal system of this country, would almost have a justifiable right to an injunction from a court based upon past experiences of young men in these penal institutions.

Now, he is liable to incarceration, but I don't think he is liable to be thrown in where he will be brutalized, as so many are when they are incarcerated in these institutions.

We have statistics that are recited by the President and other officials, most of them police departments, that the rate of increase in crime is diminishing, except in certain areas of violent crime—murder, homicide, and forcible rape. Generally, those offenses seem to be increasing perceptively, rather than decreasing. But the problem is, where do we go from here, what can we do now? This committee is going to make recommendations to the House of Representatives. We hope we may have a measure of impact upon public opinion. We hope we will be able to send our recommendations and, in fact, our hearings to large numbers of people in this country, who will find something of importance in them, something stimulating to help them in trying to do something about the present system.

But in a summary way, what would you and Mr. Skoler and Mr. Ford say should be done today? What kind of a program could the Congress inaugurate that would have some reasonable hope of improving the present situation, and reducing crime in this country. I think we all agree there is an intolerable amount of violent and serious crime prevalent in this country.

Mr. Hughes. That is a very broad question, but I would say, just as a "for instance", there is legislation pending in Congress to create diversionary programs in every Federal district where an early offender or first offender, with the approval of the U.S. attorney and defense counsel and the court, be put under some other track than being sent out to a Federal prison or Federal reformatory.

He would get manpower training or vocational training. He would be tried out for a period of 6 months to see if he could organize his life. The success rate of such diversionary programs on the State basis are remarkable. The one in our State, the Hudson Tri-County Intervention project, is more than 60 percent successful.

Mr. Wiggins. Would those diversionary programs be in lieu of prosecution, or after prosecution and in lieu of sentence?

Mr. Hughes. They would be in lieu of prosecution. They would be predicated upon voluntariness on the part of the prisoner and the waiver of his right to speedy trial, so if perchance he failed on his experience, 6 months hence the prosecution could go forward.

Mr. Wiggins. Could it really go forward?

Mr. Hughes. Yes, it can go forward, because of limitation of time. The time in New Jersey on our court roll is 3 months plus 3 months. After that, the court has to make a decision.

Mr. Wiggins. I don't understand the 3 months.

Mr. Hughes. The program can take an early offender for 3 months, get him back to school or get him working back at his job, get him on

methadone or urinalysis, get him off drugs, and so forth. Then they come back to the court and say this man is working out fine. He has got a job at Westinghouse. He is back with his family. We think he ought not be prosecuted for stealing this car. If the court concurs that man doesn't have that criminal record to follow him the rest of his life.

In other words, the State is taking a chance on him.

Mr. WIGGINS. It amounts to statutory requirement for review of the effectiveness of the program for this particular individual?

Mr. HUGHES. By the court.

Mr. WIGGINS. Within 3 months?

Mr. HUGHES. Yes, and if they need more time they can come back for an extra 3 months, but that is all.

In Senator Burdick's bill, unfortunately, the money involved only would provide $45,000 for each Federal district. This is nowhere near enough money to handle that kind of program. Besides that, it is a very good bill.

Chairman PEPPER. Governor, we had hearings a few months ago in Chicago on the problem of drugs in schools. We were told there about a program the prosecuting attorney has in Chicago similar to the one you described, where he brings in these people charged with crime and he has seminars on Saturday mornings with them and their families, and they are sort of put on probation, as it were, over a reasonable period of time before charges are formally brought against them, where the offenses are not too serious.

I think all of us agree that we ought to improve the present correctional system and I was glad to see the estimate you gave there, that if we could reform the correctional system we probably would reduce crime about 50 percent in this country.

We take Florida. We have that big old prison in the rural area that is Raiford. And a few times, the Raiford administrators have made an appeal to the courts, "Don't send any more people here because we don't have room for them." The Governor has indicated he wants to get rid of that institution. But I suppose he has the same financial problem that all of the other Governors in the country have of finding the money.

We heard here yesterday and the day before, what I regard as this very commendable program for dealing with youth delinquents in Massachusetts, which was inaugurated by Dr. Miller, who appeared here and testified. What was done with a $2 million grant from the LEAA. In other words, that was Federal money that enabled them to initiate this new program, which I think is very innovative.

Would you think it might be developed for the Federal Government to offer to put up, let's say, 50 percent of the cost of innovative and improved programs by the States that would lead probably to the reduction in crime, and also the reduction in the cost of maintaining these institutions?

That wouldn't necessarily mean a commitment on the part of the Government to continue after these new programs became operational. Presumably the State would be able to carry them.

But what would you think about a recommendation that the Federal Government, being satisfied that the programs are generally desirable and would be properly useful, encouraging the States to inau-

gurate these reforms by proposing to bear a certain percentage? I should say it would be 50 pecent of the cost.

Mr. HUGHES. I would regard it as a much wiser national investment than the supplying, for instance, of police armor. That thing isn't working, but this other idea you suggest can work. However, the States have to be brought along by the Federal inducement. I would consider it an excellent idea.

Chairman PEPPER. Now, I think we generally agree that knowledgeable people seem to agree that the institutions should be located in the large centers as much as possible, so that the inmate would be near his family and friends; and should be small in size, not exceeding 300 in population. What would you say would be the kind of institution, assuming that one has to be incarcerated a part of the time at least, we should try to build?

Mr. SKOLER. Smaller institutions of the size you indicated are a wise investment and are terribly important. They avoid the explosiveness of a large, overcrowded prison. There is evidence, and this is supported by Bureau of Prisons studies, that an institution of about 350 could still be cost effective, even if it is a fairly secure institution. It permits all of the humanization, it links offenders with the outside, work release, educational programs, the ability to "pierce that wall" that is much harder with the larger institution.

Chairman PEPPER. The Governor was speaking a few weeks ago about dollar use of medical care. But medical attention is available in the cities which is not available in Raiford, Fla., for all of those people. In addition to that, when they get out there would be jobs around the city to be available for them, and people to visit them, and the like. Of course, it costs money to set up those new institutions in lieu of the ones we now have.

But if we can develop these preincarceration probation programs, that would be cheaper, assuming we could make them effective.

Mr. SKOLER. That is correct. And it is really in a combination of these approaches that you can achieve cost effectiveness. There must be some rebuilding, but if one can plan on smaller populations in prisons with heavier reliance on the preincarceration programs, the staggering cost of replacing the current prison plant can be mitigated. So it probably is a mixture of abandoning destructive, impossible prison plants, of emphasizing the community programs that have been discussed here today, and of enriching the rehabilitative factors in corrections, education, the ability to get a job, areas on which we have a great deal of technology that will provide the answer. This Nation knows or should know a great deal about manpower programs. There is no reason why that expertise need be developed separately within a correctional facility. The extent to which you are operating with offenders in the community permits you to tap the normal community resources available for job problems, educational problems, et cetera. There, too, one can achieve cost-effective results.

The area of medicine, for example, can be cited. Just yesterday, I was visiting with the new, very large Johnson Foundation in Princeton, N.J., where the role of the medical college in providing not merely inexpensive medical care to the metropolitan jail, but quality medical care, was discussed in detail as not having been fully tapped.

Chairman PEPPER. Governor, several members of this committee and I went up to Attica, on Friday, following the tragedy earlier in the week there. Before we went to Attica we had a conference with Governor Rockefeller in New York. And right away he said, "Yes, nobody knows more than I that we need prison reform in New York, that our correctional institutions are by and large out of date, and that they are not conducive to rehabilitation." But one of the State senators was there, chairman of the crime committee of the State senate, I think Senator Dunn. The Governor said, "But it would cost $100 million to reform the penal system of this State. What do you think, Senator?" Senator Dunn replied: "Probably it would cost nearly $200 million." He said, "There you are, we are already under deficit status here financially. Where are we going to get the money to do that?"

And, of course, Attica goes on. Maybe there have been some reforms there, but Attica goes on for that reason.

I thought maybe if the State and Governor Rockefeller had financial problems in New York, a lot of other States have even more serious problems financially. I thought the Federal Government, in the interests of curbing crime should help the States with the cost of caring for incarcerated people. As a matter of fact, this committee was influential to a degree in getting an amendment to the LEAA bill. Some time ago, it provided that 25 percent of LEAA funds were supposed to be spent on correctional institutions. I don't know whether that is being done or not. I hope so, because Congress recognized that this was in the interest of curbing crime.

Mr. HUGHES. I think Governor Rockefeller—and any other Governor or legislator—has to weigh that $100 million against the several hundred lives that are going to be lost in Manhattan this coming year from people being murdered in subways: and it is just the street crime, their street crime, we are talking about. That choice has to be portrayed to the people.

Chairman PEPPER. Governor, we were intrigued by Judge Leonhouts. Do you have any practical suggestion as to how Congress could encourage and aid that volunteers-in-probation program, making it sort of analogous to the Peace Corp in some way? You know we do put up money for the Peace Corp, although it is a lot of sacrifice on the people who serve. Have you any suggestions as to how Congress could help that program?

Mr. HUGHES. I think you could help by a type of probation subsidy modified, of course, from the California experience. If it is a national problem and the national objectives of cutting crime in half is to be achieved, it certainly is as important as anything before the Congress, even if it does cost money. In the long run, it will save money, plus lives, plus our society, which is really in danger. It is at the point in the major cities in my State where no one would think of walking down Main Street of a town after dark. And this committee is involved in, I think, one of the most important questions in this country—a question of survival.

Chairman PEPPER. Mr. Mann, do you have further questions?

Mr. MANN. Yes.

Governor, what consideration has been given to expunging in connection with employment as well as permanent rehabilitation?

Mr. HUGHES. I am sure the Burdick hearings, the Senate Subcommittee on National Penitentiaries, discussed expungement, but I am sorry I am not familiar with the legislation pending in Congress.

Mr. SKOLER. There was some legislation in the last Congress and I believe the bill introduced by Senator Burdick attacked that problem—S. 2732, 92d Congress, the Offender Rehabilitation Act. It provided for a reasonable waiting period before there was to be expungement. I don't think there was much action on it.

Mr. HUGHES. We will do a little checking on that.

Mr. MANN. As a lawyer, you will be interested in knowing the Special Subcommittee of the House Judiciary, of which I am a member, is working on the Federal Code of Evidence promulgated by the Supreme Court. The section that we are considering this week and after the recess, involves the attack upon the credibility upon the witness who takes the stand in court with reference to his criminal record. Some very difficult problems confront us in that connection. And it ties in, of course, with what may ultimately be done with reference to pardon, expungement, and the like.

One assertion I want to make. We have talked here about diversion and preincarceration probation, and I recognize clearly you feel this is one of the greatest solutions of the problem of corrections. But I am wondering—and I may be expressing a South Carolina deficiency when I make this assertion—in South Carolina we have no presentence investigation. The probation officers have the same caseload problem they have in most places, but they have the additional caseload problem of not doing presentence investigations at all. A judge can specifically request one, which he might do once every month or so, but judges have a pretty high regard for their own understanding of human nature, and they tend to sentence without enough information.

I agree with Mr. Wiggin's implications that maybe the final determination of the sentence at this point is not the best time. So I would suggest that the American Bar Association, representing the lawyers in the administration of justice, could well jawbone the heck out of the States on this question of presentence investigation, so as to be of assistance to the judge in the first instance. Because if he is going to employ—and we are talking about most sophisticated pretrial things when we are talking about the diversion system you described a moment ago—but if he is going to be able to employ the sentencing alternatives that you envision there is going to have to be a basic presentencing agency and it needs to be there now, with just the sentencing alternatives we now have, jail or probation.

I think too little attention is being given to that problem, as opposed to the postsentencing procedure and probation, for example, as well as to parole.

I feel deficient myself in not having jawboned it more in South Carolina.

Mr. HUGHES. You have a lot of good things in South Carolina, including the Austin Wilkes Visiting Association.

We recommend pretrial sentencing reports be mandatory.

As a matter of fact, if I had it my way, no judge would ever have jurisdiction to send a juvenile or adult to any institutions that he personally had not inspected within the previous 18 months. Many judges think about numbers too much and quite often a great injustice

comes when a young boy is sent into the circumstances that Mr. Pepper just mentioned. It is a terrible thing on the conscience of society.

Mr. MANN. Thank you.

Chairman PEPPER. Mr. Lynch, would you like to inquire?

Mr. LYNCH. Thank you.

Governor, I know you have another commitment, and I will try to make this brief.

We heard a long line of witnesses this week, Governor Hughes, indicate to us there was no question in their judgment in regards to the juvenile system that juveniles did at least as well if not better in various kinds of controlled type of probation programs than in prisons, jails, or other detention institutions.

Would the same hold true in your judgment for adults?

Mr. HUGHES. Yes. There is a hard core of antisocial adult criminals, mostly violent people, who need to be separated from society. But in the main, I would consider that, say, a decent man who embezzled $1,800 from his employer because his wife has to go to the hospital, and whose friends make restitution, doesn't belong in prison. And yet he is frequently in a prison, bumping into all kinds of bad people. He ought to be on probation.

Mr. LYNCH. Would it be your judgment, Governor, that kind of treatment in fact is criminogenic, rather than rehabilitative?

Mr. HUGHES. I believe strongly in probation. Given a wise judge supervising an intelligent, dedicated probation officer, I think that probation is rehabilitative in the highest sense.

Mr. LYNCH. We have several witnesses who indicated, they were in favor of centralizing correctional authorities within States. Has your commission taken any position with regard to placing correction departments directly under the executive and under the control of one man, including adult/juvenile institutions, adult/juvenile probation, aftercare services, and the like?

Mr. HUGHES. Let me refer that to Dan Skoler. Do you mean regionalization?

Mr. LYNCH. No. Creating a State department of corrections with authority to supervise the entire correctional system within a State.

Mr. SKOLER. I don't think the commission or our association has taken a formal position, but we have in our various projects recommended to the public a number of model statutes that call for a unified department of corrections. We have in mind here the terrible burden on the State chief executive, the Governor, with the proliferation of governmental departments. We have in mind the fact that juvenile and adult corrections over the years have come much more closely together. The rehabilitative approach originally came out of the concept of how we deal with juveniles, but more and more we are recognizing that the human needs of the offender, his needs for education and training, apply to him as an adult as well as a juvenile.

I think it is fair to say that our view of good reform practice does call of the unified correctional system with clear standards of performance and with clear accountability and differentiation within a system on a problem basis. If there are some aspects in which juvenile programs should be enriched, that could take place as well in the unified department as in fractionalized departments where there may

be competition for budget funds, different standards of quality and personnel, and the like.

Mr. Lynch. Mr. Skoler, during the Governor's statement, he indicated one of the needs in the correctional system was for a clearinghouse operation, so that information on new programs and the like could be disseminated. Your commission, I believe, recently published a compendium of model correctional legislation. Could you tell us a bit about that, and to whom that publication was sent?

Mr. Hughes. Mr. Lynch, excuse me.

I wonder if I could be excused by the committee with my thanks to all of you? I hate to do this, but my time is up and I must return to New Jersey.

Chairman Pepper. Thank you very much, Governor, for coming. We want to commend you and the American Bar Association for the manifestation of the greatness you have in this development. Thank you.

Mr. Hughes. You are most welcome. We will remain in touch with you, sir.

Chairman Pepper. Thank you. Go ahead, Mr. Skoler.

Mr. Skoler. Our compendium gathers in one place all of the model legislation and all of the standards—the formal legislative standards and standards of administration relating to correctional practices—that have been developed by responsible associations, not individuals, but in the course of careful study efforts. Thus, it would include the model statutes of the National Council of Crime and Delinquency, the Advisory Commission on Intergovernmental Relations, the American Law Institute, and the American Bar Association's own Criminal Justice Standards. As you know, the ABA standards do relate to corrections in some aspects; for example, with respect to sentencing and probation.

We include also the American Correctional Association standards of good practice. Times have changed and some of these are a bit outmoded. But the compendium of Model Correctional Legislation and Standards does gather in one spot the best reform thinking and legislative milestones that we have with respect to improvement of corrections.

Mr. Lynch. I wonder if I could ask you what your judgment would be as to the adequacy of the State comprehensive law-enforcement plans, insofar as corrections are concerned? It is my understanding that the 1970 amendment, part E, to the 1968 act, requires in essence separate State plans for corrections. Has your commission had occasion to examine those, and if so, how adequate are they?

Mr. Skoler. We really haven't had a chance to look closely at the separate plans for corrections. It has seemed to us that the State planning agencies, as they are called under the Omnibus Crime Control and Safe Streets Act, do have an understanding and sense of the importance of correctional reform and balances in the expenditure of overall crime control funds.

We have some concern because it is hard to pierce through plan provisions to determine how much is rhetoric and how much is actually implemented. Congressman Wiggins spoke about the balancing of many money demands among the goals that are stated in the plans.

and they generally read pretty well. There is no opposition to work release, to expanded probation, to diversion programs, and to more humane conditions in prisons. The extent to which dollars are actually flowing through the block grants into correctional agencies and to match some of those program goals is difficult to trace.

I think this is a large problem for the Nation and will remain such until the information system to track LEAA and crime control expenditures picks up some more thoroughness and ability to identify what is happening.

It is not so much lack of plans or poor plans we have concern about as what is actually happening in the correctional systems.

Mr. LYNCH. To what extent are we able to track that now? Who should be doing the tracking; an independent commission like yours, should it be LEAA; how can we find out whether there is a difference between rhetoric and practice?

Mr. SKOLER. It was my understanding LEAA was developing an information system to keep track of the end result of the now increasing investment in crime control funds. I for one would be quite content to rely on this system to tell us the baseline data. An organization like ours can focus on a particular need—model legislation, pretrial diversion techniques, volunteer techniques—and perhaps get more specific information in that area for the general use of the Nation.

I think with the current trend toward local decisionmaking, reflected in the revenue-sharing approach, with the notion that localities have not only the right but the capacity to analyze and deal with their own problems, that the need for accurate national information and clearinghouse data becomes one that requires increasing Federal attention.

It is difficult to make a good decision in Kansas about spending a lot of money on a new innovation if you have to go through exactly the same kind of research 49 other States have done on what has happened. As a complement to criminal justice planning and decisionmaking in localities, it seems to me there is great need for increased investment in really good and thorough tracking, clearinghouse, and data accumulation at the national level. These are not expensive programs. It is the direct program expenditures and subsidies that cost billions. But I think you will find, for instance, that technical assistance budgets and the LEAA contracts for information clearinghouses are only a fraction of what is being spent in the area of education or manpower or the investment in other data banks.

Yet, it is terribly important, if local and State governments are to make good decisions, that now more than ever they must have reliable, critical information and perspectives behind the rhetoric of criminal justice—whether it be police, court, or correctional improvement.

Mr. LYNCH. I think that is a very valuable observation.

Thank you. I have no further questions.

Chairman PEPPER. Mr. McDonald.

Mr. MCDONALD. I have one question, Mr. Chairman.

Mr. Skoler, as you know, disparity and severity of prison sentences of those incarcerated is a major source and cause of prison unrest today. Daily we have an example of severity in sentencing. We read in the papers of certain individuals who have been convicted of what might be called white-collar crime, a victimless crime, which in fact

most likely the victims are untold at this point. We see very stiff jail sentences being meted out to these individuals, and at the same time, we see criminals or individuals being convicted of violent crimes, including murder, rape, robbery, what have you, being given actually lesser sentences when we compare the lengths of time. Could you comment on this for the committee?

Mr. SKOLER. Disparity in sentencing is a difficult problem and its effect can be destructive. The American Bar Association has standards on sentencing alternatives and appellate reviews of sentences that do address the problem. They provide techniques through such devices as judicial conferences and sentence appeals, which take the edge off extreme and unfair disparity. At the same time, the standards of the American Bar Association with respect to sentencing and, I think, those incorporated in other model legislation, such as the "Model Penal Code" of the American Law Institute and the National Council on Crime & Delinquency's "Model Sentencing Act," take an overall approach with respect to length of sentences which I personally think is sound. This is something our commission has not yet taken a detailed stand on, but it does reflect the overall policy of the American Bar Association which has an even broader base. Sentences in this country are generally too long and ought to be shorter. The common norm of 5 years is mentioned in these standards as the maximum prison term for most offenses. When you get the dangerous or repeated offender, a different mode of handling can go into operation, permitting the longer sentence that will provide society the protection it needs.

Part of the mess we have had in sentencing may have been a lack of this differentiation, so that sentencing based solely on a crime confronts the court with the dilemmas at the point of sentencing as Congressman Wiggins mentioned—placing the early offender, simply because he has committed the same crime, in the same position perhaps as the repeated offender. We are beginning to get a pretty good idea of who is a dangerous man and should have a procedure to handle him differently.

So I would say we are behind the general notion of shorter sentences and a special procedure permitting longer sentences for the dangerous offender, for the man who has repeated and shown time and again he is not a safe risk for the community.

Mr. MCDONALD. Should we sentence individuals who have committed victimless crimes, white-collar crimes? Should they be placed in jail at all, if perfectly capable of getting along with society?

Mr. SKOLER. Your question is a difficult one and presents great dilemmas. It would hardly be necessary for me to point out the implications of a position that holds that the "safe" offender, the public official who grossly abuses the public trust, the labor union leader who also does this, ought not to receive some kind of confinement or punishment simply because we know he is not a dangerous or violent man. This dilemma, of course, does not apply to the overwhelming body of criminal offenders. It is a difficult case, and my personal view is that society might very well establish special priorities for equal justice that would call for severe measures of punishment in these cases. This would be to show that the high placed as well as the low, when they engage in illegal activities, must pay regardless of the strict factor that the person would be a safe bet on probation and the like.

Mr. McDonald. Thank you very much, Mr. Skoler.

I have no further questions, Mr. Chairman.

Chairman Pepper. Mr. Nolde.

Mr. Nolde. Regarding the issue of what kind of offender should be locked up and what kind should be given one of the alternative forms, such as probation diversion, have you covered basically the kind of offenders that you feel should be locked up?

Mr. Skoler. Generally, it would be the violent offender who presents the immediate problem of safety to society who would be the normal candidate for incarceration. There has been a finding, and this is reflected in the standards I spoke of, that the straight "habitual offender" statute has not been successful in isolating truly dangerous criminals. The test in defining the dangerous offender who can receive a larger sentence should not be merely based on the numerical record of crimes, but on judgments as to his danger and threat to the personal safety of the public.

To say that those who commit property crimes should in no case receive a sentence of incarceration may not be necessary. But it certainly seems that we can give free play to our notions of rehabilitation, of dealing with the offender in the community, and of trying to meet his deficiencies as a person with a somewhat safer feeling if he is the perpetrator of property rather than violent crime. There is less risk to society in pursuing our knowledge as to getting at the root causes of why a person resorts to criminal activity and in preparing him to function productively in the community.

Mr. Nolde. Can you give the committee a rough estimate of the percentage of offenders that really need to be locked up?

Mr. Skoler. Being an effort of the American Bar Association, we tend to be conservative in our estimates. You will find time and again knowledgeable prison administrators—and these are not necessarily extremely liberal administrators but someone like the head of the Federal Bureau of Prisons and a recent director of the California correctional system who sits on our ABA Corrections Commission—express the judgment that perhaps as many as three-quarters of the offenders in prison do not need to be there in terms of the public safety. We have taken the position in our target setting that reduction in prison populations by a factor of 25 or 50 percent would be in order, and could be realized by identifying those who most obviously ought not to be in prison and burdening society with the very high cost of institutional confinement.

Mr. Nolde. Without threat to public safety?

Mr. Skoler. Without threat to public safety.

Mr. Wiggins. Certainly public safety is not the only criterion for putting a person in jail, is it?

Mr. Skoler. That is right. That is why we have not been interested in emphasizing the estimates that project a potential 75 percent reduction to the *n*th degree. We think quite a bit of progress and tremendous inroads could be made if there were reasonable steps to weed out a number of people in confinement and get them into community programs, based on the perceptions of good solid prison and correctional administrators and parole decisionmakers. You do reach a point where

you start getting into close cases. I think the Governor was trying to express that you don't have to reach these close cases to shut down some of the large prisons.

As a matter of fact, there has been since Attica, I think, a very rather significant development in populations of the large prisons. They are going down, and you will find that most prisons today, the very large prisons, are well below their inmate populations of a few years ago.

Mr. NOLDE. Thank you, Mr. Skoler.

I have no further questions, Mr. Chairman.

Chairman PEPPER. Well, Mr. Skoler, Mr. Ford, we wish very much to thank you for coming and giving us this valuable information. We would like to have the privilege of continuing to keep in touch with you and perhaps get you to assist in forming recommendations that we will eventually make.

Mr. SKOLER. Mr. Chairman, Congressmen, Mr. Nolde, Mr. Lynch, Mr. McDonald, we were delighted to have the opportunity.

[The following material, previously referred to, was received for the record:]

AMERICAN BAR ASSOCIATION,
Washington, D.C., May 21, 1973.

Hon. CLAUDE PEPPER,
Chairman, House Select Committee on Crime,
Cannon House Office Building, Washington, D.C.

DEAR CHAIRMAN PEPPER: A copy of the recent New Jersey parole legislation (Senate Bill No. 1122, introduced July 17, 1972), which I referred to in my recent testimony before your Committee, is enclosed.

It is unfortunate that this bill has thus far been unsuccessful, for it embodies our philosophy of encouraging use of probation and parole whenever possible, in order to take advantage of the beneficial rehabilitative effects of supervising offenders in the community.

Consistent with this approach—and in agreement with Congressman Wiggins—I consider mandatory sentences to be harmful and inappropriate. Further, this view is advocated by the American Bar Association Standards Relating to Sentencing Alternatives and Procedures [Standards 2.1(c), 2.2, and 2.3(c)], copies of which are enclosed. Mandatory sentences prevent the judicious use of administrative discretion so necessary in rehabilitation and could impair the priority and flexibility for probation, parole and individualized treatment that we consider so essential to the effective redirection of criminal behavior.

Let me thank you for this opportunity to submit these additional exhibits and comments for the record.

Sincerely,

RICHARD J. HUGHES, *Chairman.*

Enclosures.

EXCERPTS FROM THE AMERICAN BAR ASSOCIATION STANDARDS RELATING TO SENTENCING ALTERNATIVES AND PROCEDURES

2.1 General principles: statutory structure.

(c) The legislature should not specify a mandatory sentence for any sentencing category or for any particular offense.

2.2 General principle: judicial discretion.

The sentence imposed in each case should call for the minimum amount of custody or confinement which is consistent with the protection of the public, the gravity of the offense and the rehabilitative needs of the defendant.

2.3 Sentences not involving confinement.

(c) A sentence not involving confinement is to be preferred to a sentence involving partial or total confinement in the absence of affirmative reasons to the contrary.

[S. No. 1122, State of New Jersey, introduced July 17, 1972, by Senator Maraziti]

Referred to Committee on Institutions, Health and Welfare.

An act concerning the sentencing and parole of persons convicted of misdemeanors or high misdemeanors and amending R. S. 30:4–107, 30:4–108 and P.L. 1948, c. 84, and repealing sections 12 and 14 of P.L. 1948, c. 84.

Be it enacted *by the Senate and General Assembly of the State of New Jersey:*

1. At the time of sentencing a person convicted of a misdemeanor or a high misdemeanor, the court by whom such person is to be sentenced shall provide a statement indicating the reason for the specific sentence imposed. Such sentence may be for a fixed minimum and maximum term; however, any such minimum term shall be considered by the parole board as merely advisory in nature. Any such person so sentenced shall be otherwise eligible for consideration for parole in accordance with the other provisions of this amendatory act.

2. R. S. 30:4–107 is amended to read as follows:

30:4–107. A patient admitted to any institution in this State, other than a correctional institution, may be paroled or discharged therefrom in accordance with the rules and regulations prescribed by the board of managers or the board of chosen freeholders or the proper committee thereof, as the case may be. In all cases where the patient shall have been transferred to the institution from a correctional institution he shall [not] be paroled or discharged therefrom *in accordance with the other provisions of this amendatory act* [prior to the expiration of the maximum period of detention]. The chief executive officer of any State institution, other than a correctional institution, subject to regulations of the [State Board of Control] *Department of Institutions and Agencies*, may make arrangements with suitable families for the care, maintenance and treatment of patients of the institution and may place at board on parole in a family with whom any such arrangements have been made, any patient for whom family care may be deemed beneficial. Patients so placed on parole in family care shall be returned to the institution at any time upon order of the chief executive officer. Subject to such regulations, provision may be made by the chief executive officer for payment of the necessary expenses for the board and care of such patients in a suitable family, over and above the value of any service rendered by such patient; provided, that such net cost shall not exceed the daily per capita cost of maintaining any such patient within the institution. All such patients placed in family care shall be and remain patients of the institution until discharged therefrom as provided for in this chapter.

The legal jurisdiction of the professional staff of the hospital over any person discharged therefrom shall terminate at the time of discharge of the person from inpatient status. However, upon recommendation of the professional staff of the hospital, patients so discharged may continue to receive further professional services on an outpatient basis or may be assisted in securing continued treatment from other community resources.

The chief executive officer is empowered to negotiate with the legally responsible relatives of any such patient for the purpose of securing payment to the institution or to a suitable family of all or a portion of the net cost of maintaining such patient in such family placement or providing services on an outpatient basis after discharge.

3. R.S. 30:4–108 is amended to read as follows:

30:4–108. Conditions of parole; procedure. The [State board] *State Parole Board* shall *in accordance with the other provisions of this amendatory act* prescribe by rules formally adopted the terms, conditions and procedure for granting a parole and, subject to the provisions of section 30:4–109 of this Title, for securing the parolee in proper cases permission to reside without the State.

4. Section 5 of P.L. 1948, c. 84 (C. 30:4–123.5) is amended to read as follows:

5. It shall be the duty of the [board] *State Parole Board* to determine when, and under what conditions, subject to the provisions of this act, *and in accordance with the other provisions of this amendatory act* persons now or hereafter serving sentences having fixed minimum and maximum terms or serving sentences for life, in the several penal and correctional institutions of this State may be released upon parole.

In addition thereto, the board shall have full and complete jurisdiction over all persons sentenced to any penal or correctional institution of this State for minimum and maximum terms who have been paroled by the board of managers of any penal or correctional institution of this State, for and during the term of

Explanation.—Matter enclosed in brackets [thus] in the above bill is not enacted and is intended to be omitted in the law.

such parole and pursuant to the terms, conditions and limitations thereof, and the powers, functions and duties formerly exercised by and conferred upon any such board of managers for revoking paroles in such cases hereby are continued and are transferred to, and vested in, said board.

The board shall have such other powers and jurisdictions as are provided in this act.

5. Section 6 of P.L. 1948, c. 84 (C. 30:4–123.6) is amended to read as follows:

6. The board is empowered and authorized to promulgate reasonable rules and regulations *in accordance with the other provisions of this amendatory act* which shall establish the general conditions under which parole shall be granted and revoked and shall have authority to adopt special rules to govern particular cases. Such rules and regulations, both general and special, may include, among other things, a requirement that the parolee shall not leave the State without the written consent of the board, that he shall contribute to the support of his dependents, that he shall make restitution for his crime, that he shall abandon evil associates and ways, that he shall conduct himself in society in compliance with the law and with due regard for moral standards, that he shall carry out the general and special instructions of his parole officer and give evidence of good conduct at all times and satisfactory proof that he is a fit person to be at liberty.

6. Section 10 of P.L. 1948, c. 84 (C. 30:4–123.10) is amended to read as follows:

10. [No] *Each* inmate of a penal or correctional institution serving a sentence for a fixed minimum and maximum term shall be eligible for consideration for release on parole *immediately after commitment and being received at such institution, and shall appear before the parole board within 6 months after being received by State institutional authorities. However, after a prisoner shall have* [until he has] served his minimum sentence or [⅓] ½ of his fixed maximum sentence, less, in each instance, commutation time therefrom for good behavior and for diligent application to work assignments, whichever occurs sooner, [subject to the provisions of section 12 hereof.] *he shall appear before the parole board as soon thereafter as conveniently possible and shall be released on parole unless the parole board shall find that there is a reasonable probability that release on parole at that time would endanger the community with respect to the safety of persons or the security of property or that the purposes of the sentence as specifically stated by the sentencing court have not been accomplished.*

No prisoner shall be released on parole merely as a reward for good conduct or efficient performance of duties assigned while under sentence, but only if the board is of the opinion that there is reasonable probability that, if such prisoner is released, he will assume his proper and rightful place in society, without violation of the law, and that his release is not compatible with the welfare of society.

Whenever, after the effective date of this act, two or more sentences to run consecutively are imposed at the same time by any court of this State upon any person convicted of crime herein, there shall be deemed to be imposed upon such person a sentence the minimum of which shall be the total of the minimum limits of the several sentences so imposed, and the maximum of which shall be the total of the maximum limits of such sentences. [For purposes of determining the date upon which such a person shall be eligible for consideration for release on parole, the board shall consider the minimum sentence of such person to be the total aggregate of all the minimum limits of such consecutive sentences and the maximum sentence of such person to be the total aggregate of all of the maximum limits of such consecutive sentences.]

With regard to consecutive sentences imposed upon prisoners prior to July 3, 1950, and also with regard to consecutive sentences imposed upon prisoners subsequent to July 3, 1950, by different courts at different times, all such consecutive sentences, with the consent of the prisoner, may be aggregated by the board to produce a single sentence, the minimum and maximum of which shall consist of the total of the minima and maxima of such consecutive sentences. [Such aggregation shall be for the purpose of establishing the date upon which such prisoner shall be eligible for consideration for release on parole.]

When any such prisoner is released on parole the period of his supervision under parole shall be measured by the aggregated maxima of his consecutive sentences.

Notwithstanding any of the other provisions of this act, whenever it shall appear that the date upon which a prisoner shall be eligible for consideration

for release on parole occurs later than the date upon which he would be so eligible if a life sentence had been imposed upon him, then, and in such case, he shall be deemed eligible for consideration for release on parole after having served 25 years of his sentence, or sentences, less commutation time for good behavior and time credits earned and allowed by reason of diligent application to work assignments.

7. Section 24 of P.L. 1948, c. 84 (C. 30:4–123.24) is amended to read as follows:

24. A prisoner, whose parole has been revoked because of a violation of a condition of parole or commission of an offense which subsequently results in conviction of a crime committed while on parole, even though such conviction be subsequent to the date of revocation of parole, shall be required, unless said revocation is rescinded, or unless sooner reparoled by the board, to serve the balance of time due on his sentence to be computed from the date of [his original release on parole] *such violation of condition or commission of offense*. If parole is revoked for reasons other than subsequent conviction for crime while on parole then the parolee, unless said revocation is rescinded, or unless sooner reparoled by the board, shall be required to serve the balance of time due on his sentence to be computed as of the date that he was declared delinquent on parole.

8. Section 12 of P. L. 1948, c. 84 (C. 30:4–123.12) and section 14 of P. L. 1948, c. 84 (C. 30:4–123.14) are repealed.

9. The parole eligibility and qualifications of those inmates who, prior to the effective date of this act, have received "fixed" minimum or maximum sentences or who are otherwise subject to the jurisdiction of the parole board on said effective date shall be governed by this act, provided however that those inmates who are immediately eligible for hearing or rehearing shall be considered by the board and decision rendered within 1 year from the effective date hereof.

The parole board may adopt such regulations and procedures as may be necessary to implement this act which are consistent with due process of law.

10. This act shall take effect 60 days after enactment.

Chairman Pepper. I think this has been a very good week. I want to commend the staff on this week's hearings, as well as last week's, they have been very helpful. I hope these hearings will prove profitable toward curbing crime in this country.

We will adjourn until 10 o'clock the morning of May 1.

[Whereupon at 1 p.m., the hearing was adjourned, to reconvene at 10 a.m., Tuesday, May 1, 1973, in room 1302, Longworth House Office Building.]

(Prosecution and Court Innovations)

TUESDAY, MAY 1, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice at 10:15 a.m., in room 1302, Longworth House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Waldie, Mann, and Rangel.

Also present: Chris Nolde, chief counsel; Bob Trainor, assistant counsel; Thomas O'Halloran, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

I would like to first observe that this is the fourth anniversary of the creation of the committee by resolution of the House of Representatives, dated May 1, 1969. During that time, we have had hearings in over 20 cities; we have heard over 1,000 witnesses; we have published numerous reports, have four other reports yet to be presented to the House; and we have endeavored to find ways and means by which crime in the United States can be reduced.

The last of our hearings has related to the problems of street crime, of violent crime, and particularly concerning itself with various aspects of this problem, with the view to determining what are the most innovative procedures and techniques in the country that would be a good example for others to follow, which have an impact on curbing crime.

Today the Select Committee on Crime continues its hearings on "Street Crime in America" by turning to "prosecution, courts, and repeat offenders."

In prior weeks, the committee dealt with the "Police Response," and with "Reduction of Juvenile and Adult Recidivism Through Use of New Correctional Approaches." Our police response hearings included testimony from 13 major police departments across the country, disclosing innovative programs designed to reduce street crime and to make our cities safer places in which to live.

Our "Corrections Approaches" hearings elicited testimony from some of the Nation's foremost experts and administrators charged with operating correctional systems. For example, these hearings revealed Massachusetts' bold experiment in eliminating entirely its traditional juvenile institutions, and replacing them with community-based rehabilitation centers and small group homes.

This was done, as you recall, under the leadership and inspiration of Dr. Jerome Miller, who testified before our committee, as did other outstanding authorities on the same subject in the country.

Novel techniques must be tried, because if we have learned one thing from our year's work in this field, it is that our traditional correctional systems have been abject and dismal failures. They neither protect the public nor rehabilitate criminals, particularly young offenders, as evidenced by our national recidivism rate of approximately 75 percent.

I have just returned from a conference on penal institutions and correctional systems at Ditchley Park in England, under the auspices of the Ditchly Park Foundation, where people knowledgeable in this area for the United States and Great Britain discussed from Friday until Sunday evening various aspects of this problem of crime. It happened I was the chairman of group B, which dealt with the inmates who were under long-term sentences; "sentences," as we described, as being over 10 years, generally, in duration.

It was generally agreed that the long-term offender had three previous incarcerations.

We were concerned with what do you do with a person who has had a record as a juvenile delinquent, who had been in the juvenile courts, and who has had at least three instances of incarceration before the fourth one, when we regard him as a long-term offender.

Society has failed after a fashion with respect to that man, he has failed in finding himself and finding a useful role for his life, and the penal system has failed either to deter that man from the commission of a subsequent crime, or to correct whatever the predeliction, if any, that leads him into the commission of crime.

So while it is difficult to get the public together to accept some of the experiments that may have to be taken in approaching with a new point of view this problem, I heard a very encouraging statement made at our conference by the representative of the disciplinary military authorities at Leavenworth, Kans.

He told the conference, at my urging, that in the last year and a half the military authorities who deal with criminal conduct on the part of men and women in the service in the last year and a half have released 550 men who have been incarcerated in their institution at Leavenworth, to go home on a week's furlough; and only two of those men, some of whom were under long sentences, failed to return.

This gentleman said that they have a regiment there with that same number of people—500 people. If you were to let the regiment go home on a week's furlough, probably more than two of the regiment would not return. He thought this was an interesting experiment in extending faith and confidence to these people, and giving them a better attitude toward their role and perhaps toward trying to get out of the life of crime and the nature of crime with which they had been previously associated.

We have been encouraged by these imaginative police and correctional programs which have demonstrated progress in reducing levels of violence in our streets, and repetitive criminal conduct, particularly among juveniles.

This week, in the prosecution and courts phase of our hearings, we will deal with several issues directly relating to crime prevention. For example, what approaches should be utilized to divert certain

cases out of the criminal justice system so as to enable the prosecution and courts to concentrate their limited resources on violent offenders who threaten our physical safety?

What kinds of punishment should judges mete out to insure physical safety? What kind of punishment should judges mete out to habitual offenders to prevent future criminal conduct? What effect does protracted litigation in processing offenders through our criminal justice system have upon the deterrent theory of our criminal law?

Our hearings this week will provide some answers to these questions. We will hear from several of the Nation's outstanding prosecutors who have devised forward-looking case screening programs making use of computers and other techniques to make better use of the resources. We will hear from eminent judges who will articulate their philosophy in dealing with criminals, particularly repeat offenders, and who will also describe some imaginative devices such as videotape, omnibus hearings, elimination of grand juries, written briefs, and other techniques they are utilizing—or propose to utilize—to cut the tremendous delays and court backlogs which so plague our process of criminal justice.

Regarding the latter, a recent study by the Federal Judicial Center found that the average delay between arrest and trial in the busier Federal courts is approximately 350 days. Nearly a year. That is in the Federal system, which I dare say is better than you will find in many of the States, if not in most.

In my State—Florida—the supreme court, about a year ago, laid down a rule that all cases had to be brought to trial within 60 days after the indictment brought the defendant within the custody of the court. While there were a few cases dismissed at the beginning, the prosecutors have generally found themselves to labor within that rule.

Add to that figure the time for the actual trial, plus the lengthy delays inherent in our appellate process, and the end result is that possibly years pass between when a typical defendant is arrested and ultimately brought to justice by final disposition of his case.

We are going to hear today from one outstanding prosecutor. I don't know what he will say about the matter, but my distinguished colleagues here will recall we had, in the early days of this committee, the district attorney from Los Angeles County, I believe the largest office of a prosecutor in the United States. He came here to tell us how frustrating it was to him as prosecuting attorney to have the appellate delay which occurred in respect to the final disposition of the cases that he tried and when he got convictions in his court.

Some of them went on for years. I think one, I don't know whether it is California or not, there is one celebrated case in the country that went on for 12 years.

Simple logic dictates that such protracted litigation most certainly negates the deterrent effect of our criminal law.

To restore respect for the law it is imperative that we alleviate the "speedy trial" crisis in our courts. Disposition of defendant's guilt or innocence must be promptly established with finality; the guilty should be placed under immediate supervision and, where appropriate, taken off the streets. That is a matter that requires careful consideration, of course. The innocent must be cleared without delay. Judges, prosecutors, and other experts will testify as to methods for achieving these goals.

Our first witness this morning is one of our Nation's foremost prosecutors, Mr. Arlen Specter, district attorney from Philadelphia, Pa. We remember with great pleasure Mr. Specter's valuable testimony before our committee when we held hearings a few years ago in Philadelphia.

Mr. Specter is a Phi Beta Kappa from the University of Pennsylvania and a law review graduate of the Yale Law School. He served as assistant counsel to the Warren Commission on the assassination of President Kennedy, and has had a distinguished career as the district attorney in Philadelphia for the past 7 years.

He has received numerous awards, both national and local. Although known for being very firm on law and order issues, Mr. Specter operates one of the most innovative and well-run prosecutor's offices in the United States. We will learn about some of his programs to screen cases and divert certain offenders out of the traditional judicial process in order to better utilize prosecution and court resources.

We are delighted to welcome you, Mr. Specter, as our opening witness.

Mr. Counsel, would you proceed.

Mr. NOLDE. Thank you, Mr. Chairman.

Mr. Specter, would you care to present an opening statement?

STATEMENT OF ARLEN SPECTER, DISTRICT ATTORNEY, PHILADELPHIA, PA.

Mr. SPECTER. Yes. Thank you very much, Chairman Pepper, for those very generous introductory remarks.

I am pleased to have been invited by this Select Committee on Crime of the U.S. House of Representatives. I have prepared a statement and if it is acceptable to the committee, I would like to submit it for the record and then move to a more brief summary statement of it this morning.

Chairman PEPPER. Without objection, your statement will be received in the record.

[Mr. Specter's prepared statement appears at the conclusion of his testimony.]

Chairman PEPPER. We see an old friend here from Philadelphia. Won't you come up and sit with me, Mr. Green?

Representative GREEN. I just dropped in because I was doing a television spot outside and I just wanted to say hello to Arlen.

Chairman PEPPER. We would be glad to have you stay, if you could.

Representative GREEN. I would, but I must leave.

Chairman PEPPER. You may proceed, Mr. Specter.

Mr. SPECTER. Mr. Chairman, members of the committee, notwithstanding the tremendous problems on street crime in the United States, I continue to be optimistic that as a nation we can solve this problem if we turn our minds to it and demonstrate the determination and will to solve the problem. I personally believe that we have the know-how and the resources to get the job done. It is just a matter of the day-by-day application and the determination to succeed on it.

I believe the essential question turns on three issues. They are, No. 1, speedy trial; No. 2, adequate sentencing; and No. 3, realistic rehabilitation.

On the issue of speedy trial, I think that Chairman Pepper's home State of Florida has the proper standard, which is 60 days from arrest to trial. That is the standard which has been recently adopted by the National Commission on Criminal Justice Standards and Goals, on which I have been privileged to serve. That standard, I might add, however, is not imminent for the big cities in the United States, certainly not Philadelphia, because of the problems of backlog, but I believe that is the goal which we have to attain.

I believe that we can attain that goal if we divert out of the system the lesser offenses and add some additional resources and then make some administrative changes so that we can then focus in on the really serious crimes involving violence, involving repeat offenders, and focus the attention of the courts on those cases on a priority basis.

In Philadelphia, we have been experimenting with a series of diversionary programs which I know this committee is interested in and I would like to elaborate on only briefly.

The program which we put into effect in the city of Philadelphia was a program for trial without jury through a new municipal court. We had a magisterial system in our city which came into effect with William Penn's Second Charter in 1691. It was corrupt, it was inefficient, it was changed through a long reform process in 1966, 1967, and 1968, and so on January 1, 1969, we put into effect a municipal court which tries cases without indictment and without a jury and it has enormously speeded up our criminal process, giving to the defendant the right to a de novo hearing if he is dissatisfied with the result.

There are a great many cases which ought to be tried but they do not require the elaborate jury trials, nor are they likely to result in jail, and the defense is satisfied with a conviction and they can be summarily tried through a procedure such as our municipal court without the elongated jury trial practices.

A second program which we have experimented with was originally called, Preindictment probation, which describes its functional operation, and its name was changed to a fancier title of "accelerated rehabilitative disposition" when our State supreme court took the Philadelphia model and applied it throughout the Commonwealth of Pennsylvania.

In essence, that program provided for first offenders on nonviolent crimes, with some exceptions. They are brought into an informal hearing room where a judge presides. There is no determination of innocence or guilt, but there is an inquiry to see if it is appropriate to place the man under probation for a year or perhaps 2, and if he maintains that probation, at the end of that year or 2, to wipe the record clear. That eliminates the necessity of multiple listings which have become the hallmark of the administration of criminal justice in the big city; it does not get involved with the issue of whether the man is innocent or guilty. There is a presumption that he is, but there is no inquiry made because the offense does not rise to the level of meriting such extensive inquiry and there is no effort made to impose a jail sentence, but only a brief period of probation.

That program has resulted in diverting a great many cases which do not merit the time and attention of the courts.

Another program which we have put into effect in terms of diversionary programs has been police counseling, where my office has obtained a Federal grant which has enabled us to hire assistant district attorneys to sit in police districts on a 24-hour basis and in the police districts these assistant district attorneys counsel the police officers on what is sufficient evidence to constitute a case which will stand up in court.

There is a review of evidence which is obtained as, for example, by search and seizure, where there may be a constitutional issue of suppression if illegally obtained, or where there may be statements which may be suppressible under *Miranda* or identification which may be suppressible in terms of failure to comply with the U.S. Supreme Court decisions.

So there is an effort through this process to evaluate the cases before they get into the judicial system. Last year, was our first full year of operation—it went into effect as of August of 1971—but in 1972, we processed out more than 3,500 cases through this police counseling procedure.

It has been in operation in only three of Philadelphia's police detective districts, of which there are eight, and we have recently made an effort to expand it by having the assistant not stay in one district full time but to spend part of their time in each of the three districts. We believe that ultimately it is desirable to have a prosecuting attorney in every police district and it would result in tremendous savings of time of the police officers on getting rid of cases which will not hold up and would save the courts ultimately tremendous time.

Our fourth program, on the heels of the municipal court, preindictment probation, and police counseling, has been an experiment with narcotic addicts on a program called TASC—treatment alternatives to street crime—and it has been federally funded with a $1 million grant, where we make an effort to divert narcotic offenders at the time of arrest and at the time of immediate arraignment out of the court system to a treatment program.

Here, again, we make the distinction between those who are only addicts, contrasted with those who are both addicts and charged with a serious crime, such as a burglary or robbery. We will not take into the program anyone who is charged with a major crime. But there are a great many addicts who come into the system who ultimately, through elongated procedures, receive probation which is appropriate disposition, and the appropriate disposition at the end of the probation or after probation is imposed is to have rehabilitation, and we are seeking to bring that rehabilitation into play at a much earlier stage and divert them out of the criminal justice system.

I might say to you, parenthetically, on that program that we are in need of substantial additional facilities for drug addicts in the city of Philadelphia, which is a matter, I think, would be appropriate for this committee in terms of appropriate Federal funding, and I think it would be appropriate for this committee to consider the desirability as you see fit in your wisdom and discretion on having prosecuting attorneys in every police district, because to achieve that is a massive program for expenditures.

Well, those are the four programs which we have used by way of diversion, and I think that if the lesser cases are diverted out of the

system, then it is possible to concentrate on the crimes of violence and the repeat offenders.

I believe that there have to be administrative changes made in our State court systems, and one of the changes that we have pushed for in Philadelphia is the adoption of an individual judge calendar, which is a program where every case on entry into the system is assigned to a specific judge. This program is in operation in many of the Federal courts, and we have put it into effect in Philadelphia on an experimental basis, but we have not moved ahead as far as my office and I would like to move ahead.

We believe that it is a very useful program because it eliminates the possibility for judge shopping. And by judge shopping, I mean an interest on the part of the defendant and sometimes, frankly, on the part of the prosecution, although we discourage it and, as a matter of office policy, are rigorously opposed to it, but an effort to have a case placed before a specific judge who may be lenient or who may promote the interests of whichever party is interested in the judge shopping.

But when a case is called in the city of Philadelphia, and it is listed before Judge A, if Judge A is a tough judge, it will be in the interest of the defense attorney and the defendant to have the case continued because when the case is relisted, it will be before a different judge, and Judge B may be more receptive to the defendant's point of view. The result is that the witnesses who have come to court, police officers, civilian witnesses, both, are compelled to come to court on a second occasion.

If it were known that the same judge would hear the case no matter when it was tried, then there would be no point in trying to get a shift from one day to another.

Also, there would be greater responsibility on an individual judge to dispose of a case if he knew it was his once and for all. But in the court system which has 81 common pleas judges, there is an inevitable tendency on the part of some judges to believe that if a case is not tried, let it go over and I won't have to see it again.

Another factor which comes into play is that the same excuse for continuance may be given repeatedly if you come before a different judge, whereas, if you have the same judge, the case is on a fourth listing, the judge is going to be less likely to listen to my assistant say the prosecuting witness is out of town, or to the defense lawyer saying he is busy somewhere else, or his alibi witnesses are not available, and the judge can maintain a closer control, perhaps continue it for a day or 2 or 3, and set it for 4 or 5 weeks.

I think that kind of individual responsibility and certainty would be enormously helpful as an administrative change.

I think that the courts in our society, especially the big cities, are going to have to treat the criminal justice system as a crisis in terms of longer hours. I believe that we are going to have to move to night sessions to accommodate the interest of the people who are witnesses or victims in our criminal courts and really ought to move to Saturday sessions as well, because we have an overpowering backlog. We have a shortage in Philadelphia of courtrooms. We have some shortage of judges, as well, but the whole administrative procedures are going to have to be shifted and improved.

I think we do need additional judges yet, although Philadelphia received 25 judges from the legislature last year, but before we can take that case back to our general assembly, I believe we are going to have to show more progress and more productivity and more effort out of the existing judges which we have. Currently, we have a shortage of courtrooms, so that all of the judges cannot sit and some of us are trying to move to a split-shift session where court may run from 8 in the morning until 3 in the afternoon, which would be the equivalent of a full day, and then again, from 3 in the afternoon until 10 or 11 at night, and be able to use the courthouse more effectively.

I think we are going to have to provide more different counsel in this country. Certainly, in the city of Philadelphia, where there is a shortage of defense counsel. There have to be supporting personnel from the prosecutor's staff, probation authority's, et cetera, and administrative changes in order to have sufficient resources to try the crimes of violence.

With respect to the issue on the serious cases, I think that one fundamental change has to be made in the attitude of the prosecutors and the attitude of the courts and that relates to the issue of plea bargaining. The practice of plea bargaining has grown up in our country as a result of shortage of court facilities, and there has grown up a practice in many areas, especially in many of the big cities, although not in Philadelphia, of accepting a guilty plea to a lesser offense in exchange for a period of probation.

It is my firm belief that is a very undesirable way to deal with the problem of violent crime, because the critical part of the entire criminal process is the moment of sentencing. If the sentencing is not adequate and it doesn't make any difference how good the arrest was or how good the prosecution was, the adjudication of guilt, it is simply all a nullity if the sentence is not adequate.

In Philadelphia, we have a guilty plea rate of 32 percent. In some of the big cities in the United States—in many of them—the guilty plea rate is in excess of 90 percent. I do not mean to say that the offenders should not plead guilty when they are guilty and, in fact, they should plead guilty and they have an absolute right to plead guilty. But what I am saying is, the prosecutor should not bargain away city hall in exchange for a guilty plea.

The prosecutor should not feel the press of the criminal backlog, nor should the courts feel the press of criminal backlogs as a reason for making dispositions in cases which do not make sense on the facts of those cases.

It is a problem for the defendants as well as for the prosecutor because there are occasions when a defendant will have been in jail unable to raise bail. Example: For 2 months he will be in on an "operating motor vehicles without the consent of the owner" charge. He will assert his innocence. He will face a court calendar where his case cannot be tried on a given day. He will be faced with the proposition, if he wishes to maintain his innocence, he will have to go back to jail until the case is listed again 4 weeks later. But if he is willing to enter a guilty plea, his case can be disposed of at that hearing, and he will be released.

That is a very tough decision for a man to face who asserts his innocence, who knows if he pleads guilty he walks out of court that day

and if he insists on a trial, he goes back to jail for another listing, which may be 4 weeks away.

So the process of plea bargaining is undesirable fundamentally from both the point of prosecution as well as from the defense.

Once we have the speedy trial, and once we are able by diverting the cases by administrative changes and focusing in on the serious cases, then I think the second step has to be adequacy of sentencing. I would suggest to this committee today that we do not have adequate sentencing in a great many of the serious cases which come into our criminal courts in the big cities, at least in the city of Philadelphia.

I would like to touch on this subject for just a moment if I may. There is a pattern of repeat offenders on crimes of violence where they are receiving probation. A case in our Philadelphia court system that was in the press on Saturday of last week involved a man who was convicted in 1965 of a holdup murder, second degree. It turned out to be a sentence of 4 to 20 years. He went to jail, was released in 1969, then he was arrested on charges of possessing a revolver, a violation of the Uniform Firearms Act.

He comes up for trial, gets convicted, and the judge places him on probation. Placing him on probation says that he is probably making a mistake. I have no doubt as to the error of that judgment and my office is taking steps now to have his parole revoked so that he can be committed. I do not want to identify the case further because it is a pending matter. But we have problems, judging from prior cases, where the parole authorities, when we will seek to have parole revoked, because if it wasn't serious enough for a jail sentence, the parole authorities are then reluctant.

But I would like to call to the attention of this committee three cases which we have litigated extensively which are illustrative of the problem of sentencing. They are closed matters, although they are relatively recent matters. These are three cases where my office was grosssly dissatisfied with the sentence, where we petitioned the sentencing judge for reconsideration of the sentence, asked him to impose a longer sentence, where we were so dissatisfied with the sentence we took appeals to the State supreme court, although the law had been established that you cannot appeal on the issue of sentence; it is a nonappealable order.

But we took the appeals because of our gross dissatisfaction with what had happened and we made an effort to even draft a new common-law rule, criminal procedure, to have appellate review of sentences. We were turned down. The State supreme court did not want to become involved in this issue, thinking it would flood them with problems which they do not have the time for.

We pursued the matter beyond, to try to get legislation on appellate review of sentencing and while we had some support, the matter was not enacted and later our State supreme court, in a case called *Commonwealth* v. *Silverman*, ruled any increase of sentence was an issue of double jeopardy. So we are now foreclosed, at least in the State of Pennsylvania.

There is some latitude, not much, on the Federal level, after *Spears* v. *North Carolina*, decided by the U.S. Supreme Court, some latitude perhaps for increasing sentences.

So, essentially, at least in Pennsylvania, we are left with the discretionary decisions of the trial judge. One of the cases involved the juvenile problems which Mr. Pepper came to Philadelphia a few years ago to hear testimony on. It was a case called *Commonwealth* v. *Wrona*, where two juveniles in the South Philadelphia streets were engaged in a fight, and it was a fair fistfight at the start, until one of the boys, one of the juveniles was getting the worst of it and he picked a knife out of his pocket and went after his opponent with the knife and he stabbed him twice and he killed him.

The autopsy report showed that they were very serious blows, that the plunge and depth of the knife was substantially longer than the blade, showing substantial push-down, and the wounds were substantially wider than the blade, showing there was a real effort to inflict grievous bodily harm. It wasn't a matter of some light touching with a knife.

The defendant denied his guilt and said he was only defending himself, which was an absurd plea where you use a knife in a fistfight. He was tried before the common pleas court in Philadelphia on a waiver, found guilty, and my office urged the maximum sentences of 6 to 12 years in this kind of a brutal killing, in the light of the gang problems and juvenile crime problems we have in the city of Philadelphia.

Joseph Wrona was placed on probation.

We had a case called *Commonwealth* v. *Arnold Marks*, who was charged with possession of heroin, 4 ounces of pure, uncut heroin, worth on the diluted market sale, bags in the street, worth $280,000. So it was no small-time matter. He denied his guilt and was tried. He was convicted. He was sentenced from 5½ to 11 months—not years, mind you, but months. Which is, in my judgment, a totally inadequate sentence, if somebody is going to be able to deal with $280,000 worth of heroin and if you are then to be able to apprehend them and have a constitutional search and seizure and succeed in conviction, after all of those hurdles, it is a major sentence of the maximum of 11 months and the minimum of 5½.

Our efforts to get the sentence altered by the trial judge were unsuccessful.

We took appeal in that case, as we did in *Wrona*, because we thought those were unusual cases to illustrate the purpose of illegal sentence, and the State supreme court, as I said, declined to reach the merits of the case.

A third case involved a man by the name of Donovan, *Commonwealth* v. *Donovan*, who was the deputy commissioner of licenses and inspection in Philadelphia, which is the department in charge of slum housing and the issuance of permits and it goes to the very core of our city operations in terms of making sure that slum landlords comply with the laws on housing, and it goes to the very core of our city operations on new construction, safety provisions, and this man was the operational head in the capacity as deputy commissioner of licenses and inspections.

We tried him and convicted him on multiple counts of bribery and corrupt practices. We asked for a lengthy jail sentence. Donovan was placed on probation.

I mention those three cases because all three were appealed after we could not get the trial judge to change the sentence. They are

illustrative of violent crime, corrupt practices of government officials, and of the narcotic problems.

Those are not atypical. I could bring to your attention reams, which would fill the room, virtually, on cases which involve serious charges where probation has been imposed.

As a third step after speedy trial and after adequate sentencing, I would just touch very briefly on the issue of rehabilitation and realistic rehabilitation. I have visited all of Pennsylvania's State correctional institutions and I am sorry to say that the term "correctional" is a misnomer; they do not correct anything.

The necessity exists in terms of the defendant himself, in terms of humanity, of rehabilitating him. But fundamentally, in terms of protecting society, because almost everyone who goes to jail today gets out of jail, there are insufficient facilities on drug rehabilitation, which I have already touched upon, and the factor which I found the most surprising, both for Pennsylvania and also for the Federal correctional system in Lewisburg in Pennsylvania, when I visited that institution, is that the correctional authorities do not know what their success rate is.

There are no statistics maintained on what happened to inmates, convicts, residents, after they leave the jails. You may find out what happens to a man if he has a further scrape with the law and then his record will be available for you when he is arrested again and his record comes to your attention, the attention of the sentencing judge, or the press, for one reason or another. But there is no systematic check made of those who leave the correctional institutions, so that an evaluation may be made as to whether the procedures on rehabilitation made sense or not in that particular case.

I think that enormous attention has to be given to that area but I am not going to dwell on it because this committee has heard of the experts in that field.

Chairman PEPPER. That certainly is an interesting statement, Mr. Specter.

Mr. Counsel, would you like to start with the questioning?

Mr. NOLDE. Thank you, Mr. Chairman. Mr. Specter, your discretionary and screening programs are superb programs. However, certain questions have been raised, particularly by the National Council on Criminal Justice Standards and Goals, on which you serve as a member. One, that there is inherent danger the cases might be screened on the basis of deeply held social or political attitudes. Do you see any substantial danger in that?

Mr. SPECTER. Yes; I do see a danger in that. I think that screening poses a problem, that there may be corrupt practices, or there may be practices which yield to special interests, as your question raises an issue as to whether it will be responsive to special social interests. That is why I think it is desirable to have it as visible as possible and the ARD program avoids that because we do a number of things.

First of all, we contact the victim and get the victim's agreement for the program. Second, we take it into a public hearing where there is a judge, and any member of the public can walk in, and although it is informal and brief, the case is fully stated. So that procedure eliminates the possibility of abuse.

With respect to police counseling, when you have an assistant district attorney and a police officer reviewing the case, there is, in effect, an adversary proceeding because the police officer made the arrest and he has an interest and it is a vested interest in having that case go forward. If he is dissatisfied with the screening process, he has ways of complaining to his police captain, who then takes it through the chain of command and can bring it to the attention of the supervisory personnel and the district attorney's office.

Mr. NOLDE. Have you found any resentment on the part of the police in having their work reviewed by the district attorney's office?

Mr. SPECTER. I think that "resentment" might be too controversial a word, but I think it is an accurate word; yes. I think resentment is probably too strong. The reaction of the policeman on the beat is "It's a good arrest," and he will listen on the issue of search and seizure and on the law, but he wants his arrest to stand up and he wants a chance to push his arrest. We have found that we have worked it out, that there have been cases where we have disagreement and, for that matter, I disagreed with the police commissioner about cases.

We have had some celebrated battles on the issue of arrest on police brutality which have been major. But, of course, that is all right if they are publicly aired. The final responsibility rests with the courts to make the decision and below that it is the prosecutor's discretion which is to govern, providing it is displayed openly for it to be reviewed by the public. But we have worked out most of our problems with the police.

Mr. NOLDE. As I understand it, approximately a third of the cases are screened out.

Mr. SPECTER. That is correct.

Mr. NOLDE. Has this process resulted in improved police techniques, police work?

Mr. SPECTER. Yes, I think it has, to some extent. But I believe that will be a long process. I do not think you can see enormous improvements in a course of a year and a half of that. But I believe that as we expose more policemen at the district level to an assistant district attorney who is going to get into the "give and take" with him, a dialog on what is constitutional search and seizure, that it will be an enormously beneficial, educational process to the police in the long run.

Mr. NOLDE. Is there any significant risk that individuals who are innocent may be suddenly coerced into participating in diversionary programs rather than waiting the many months it takes to go to trial?

Mr. SPECTER. Yes. I think there is a risk on that. Say, our program on ARD—accelerated rehabilitation disposition—preindictment probation, because they do avoid the delays and the inconvenience of trial. We are very careful in explaining that fully to them and they have to be represented by counsel or the voluntary defender, and we receive waivers on the record that they understand what they are doing, that they are giving up their right to trial.

So that the coercion forces are as minimal as possible. That is, we go as far as we can to make it a voluntary choice. But you cannot take the coercive factor out in terms of the alternative of the trial.

But I think that the consequence is so minimal that that is not a major problem. When I say "consequence," I mean a period of time subject to some probation, which may be very minimal, and then to

having the record wiped clean. So I think on balance it is well worth the effort. Well worth that particular risk problem.

Mr. NOLDE. Referring to your notification to the complainant of this procedure, do the complainants tend to cooperate for the most part? Have you had any difficulties in their objecting to diverting this offender?

Mr. SPECTER. The complainants are almost uniformly glad to see a diversionary program.

Mr. NOLDE. How do you account for that?

Mr. SPECTER. I account for it in a number of ways. The charges are ordinarily minimal. They are not aggravated assault and battery, or they are not robbery, they are not rape, they are not really serious charges. They may be minor larceny or they may be a bad check or they may be credit card theft. The victims are not anxious at all to get into the criminal justice system as victims. They do not want to come to court on a number of occasions and sit around the courtroom.

They are acquainted with that particular problem which they may face. Our letter asking for their acquiescence is a relative full statement of what we are trying to achieve and the social desirability of the program and the solicitation of their cooperation in the program, leaving to them the choice, and they understand that.

I think those are the reasons that probably go through their minds, but we have had really great success in having their cooperation.

Mr. NOLDE. In both your ARD and the TASC programs, eligibility is strictly limited to nonviolent offenders and first offenders, as I understand it. Does that really disqualify too many people who otherwise might benefit from such treatment?

Mr. SPECTER. I think it does eliminate a lot of people who would probably be all right in the program, and while we set those as general rules, we are flexible in specific cases; if a person has a prior arrest which is inconsequential and in which he has been aquitted. We do not deviate, though, if the specific charge involved is violence.

I just do not think we can if you have a burglary or any other violent charge.

I think, also, that at least in the initial stages—and we are in the initial stages on all of these diversionary programs—we have to move slowly and gain public support and public acquiescence in the programs because they are very difficult.

We also have to gain police acquiescence in these programs. If we move too fast and too far and have cases which are too serious and have these cases come back on us, and have someone charged with a crime of violence who goes through a diversionary program and then goes out and commits another crime of violence, we can set back the diversionary programs very materially.

We are able to persuade the police about the desirability of some of these programs because we point to the backlog on the robbery cases and the murder cases and the rape cases, and they are concerned about the prompt trials. It is a delicate balancing process and I do not believe we can go too fast. Ultimately, the objective would be to screen out many more cases which are going to result in acquittals. We can tell pretty well, even though there may be a prima facie case, but I do not think we are at the stage yet where we can screen out all of the

cases which are calculated to result in acquittals, if there is justification for prima facie case for trial. Or perhaps we ought to move to preindictment probation, ARD, on all of the cases where we are reasonably confident probation will result.

But I think we can't go quite that far, at least at the present time.

Mr. NOLDE. Concerning drug abusers, many of them either have prior records or, typically, they don't always limit their crimes to nonviolent ones. What sort of treatment should they get?

Mr. SPECTER. The best.

Mr. NOLDE. How can we deal with them if they don't qualify for the program?

Mr. SPECTER. Well, we have alternative programs for them. If a person has prior records of violent crime, then he goes to the trial process generally and goes through. And when comes the day of sentencing, if it is an armed robbery, we will seek to have a jail sentence imposed. If the court imposes a jail sentence and he goes to jail, there are not facilities nearly adequate to deal with the drug addicts inside of prison. If it is a matter where there is an extensive record for drug abuse and perhaps a burglary involved which does not call for a jail sentence, we have experimented in Philadelphia with a program of what we call, "One Day To Two Years," where we ask the court to impose sentence of 1 day to 2 years, so that the person is eligible for parole instantly.

And if he then remains in a treatment program, he stays on parole. If he does not maintain a treatment program, then we conclude that he is likely to be back to crime to support his habit, we ask for his parole to be revoked and put him in jail for the 2-year period.

So there are a variety of ways of dealing with the defendants, depending on what stage they are. But all of the programs essentially turn on whether there are facilities for treatment of the drug addicts, residential treatment centers, or methadone out-patient. Those facilities are in very short supply.

Mr. NOLDE. What is your estimate of the percentage of crime that is drug related?

Mr. SPECTER. About 50 to 70 percent. We test those who come into our detention center, take case histories, and have tests, and on various days it ranges between 50 and 70 percent of the serious crimes that are drug related.

Mr. NOLDE. I take it you favor stiffer penalties for drug pushers?

Mr. SPECTER. I certainly do. I think where we deal with the pushers that we really ought to be talking about really throwing the book at them. I think there is a deterrent value in criminal law enforcement and I think if it is more expensive to violate the law than it is to comply with the law, that we will have results. I believe when you deal with people who carry, possess or sell more than 1 ounce of heroin, which has tremendous diffusionary potential, there ought to be mandatory life sentences.

Mr. NOLDE. Would you distinguish between an addict offender and nonaddict offender?

Mr. SPECTER. I would distinguish, yes; but principally on the grounds of how many bags they push. If you have an addict offender pushing five bags on the corner, three bags on the corner, I am not talking about a life sentence for him. But if you are talking about an addict

who is pushing an ounce, I talk about a life sentence for him. You ordinarily don't find addicts who have ounces.

But I think the principal distinction is the volume of their traffic and whether they are really selling it to support their own habit.

Mr. Nolde. Do you foresee constitutional problems in the urinalysis sample you require of candidates for your TASC program?

Mr. Specter. I do not see constitutional problems because we have refused in Philadelphia to condition bail on acceptance of the program. Some experimental programs which have been federally funded have made, as a condition to bail, agreement to go into the TASC program. I have problems with that in terms of the constitutional issue and that simply is not the purpose of bail, to compel somebody to undergo a treatment program, even though it has a salutary effect.

So that our TASC program does not have a constitutional problem, as I see it.

Mr. Nolde. Returning to requiring speedy trial—and I am glad to hear you say you support a 60-day limitation—would you support a mandatory dismissal if such a requirement is not complied with?

Mr. Specter. Yes; providing you have a system which is capable of handling the backlog and the workload and providing you exclude from the time the continuances which are caused by the defense, or the continuances which are out of control of the prosecutor.

I think that at the end of the rainbow you have to provide for dismissal. It has to be a system which is tough on the prosecution, but I think it has to be realistic and fair in terms of capabilities to prosecute to start with, and excluding time which is not our fault.

Mr. Nolde. What about requirements on the defense side, if you had a statutory requirement that trial must be brought within 60 days of arrest? Several States have such a statutory requirement but they provide an out where the defendant agrees the delay should not bar the prosecution. Would you support such an escape clause, or would it be feasible to impose a similar burden on the defense, that they be ready to proceed within 60 days?

Mr. Specter. I do not like the idea of having the defense waive the speedy trial issue. There are some jurisdictions which have had 60-day trial limitations for a long time and they are totally meaningless because the waiver has become a way of life. The defense lawyer is busy and he waives for his client and a smart defendant who waives and drags the case out for several years almost assures his acquittal, witnesses forgetting or dying or moving away, or the matter being less important if it is an old case.

I think this is a matter for the administration of criminal justice and a matter for the courts and I think the objective of a speedy trial is one which ought to be obtained regardless of what the parties say about it.

Chairman Pepper. Mr. Waldie?

Mr. Waldie. Mr. Specter, with the improvements that you have recited, has there been a measurable impact upon crime in Philadelphia that you could relate to these improvements?

Mr. Specter. Our major crime rate went down last year. Philadelphia has statistically the lowest crime rate of any of the 10 big cities of the United States, according to the FBI figures.

Mr. WALDIE. How long has that been the case?

Mr. SPECTER. That has been the case for the past 8 years that I am personally familiar with.

Mr. WALDIE. And the crime rate went down all over the country last year; did it not?

Mr. SPECTER. Yes; it did.

Mr. WALDIE. Can you ascribe these reforms relating then to that?

Mr. SPECTER. No. That is the conclusion of my sentence. I do not think you can point statistically to these changes on case diversion to come to any basic conclusions. We have not yet dealt with our backlog on crimes of violence.

I think that in the long haul, that over the course of the past 8 years, say—I am tentative on this—that there may be a relationship between our crime rate and an attitude which we have had on pushing for sentences and our opposition to plea bargaining.

In Philadelphia, we have had a running dialog for the past 7½ years with the judges, pushing very hard on sentencing, and it has only been partially successful. We have had a hard line by our police department and I think there has been more controversy between law enforcement in Philadelphia and our bench than perhaps in any other city.

Mr. WALDIE. Is that desirable?

Mr. SPECTER. No; I think it is very undesirable. I think it would be highly preferable if the courts imposed appropriate sentences without having any necessity for the district attorney to speak up at all.

Mr. WALDIE. I gather there is a thread that runs through your testimony that you don't have much confidence in your judiciary?

Mr. SPECTER. I do not have confidence in the way judges are imposing sentences at the present time.

Mr. WALDIE. Do you believe that is the function of the prosecutor to impose sentence?

Mr. SPECTER. Yes, I do; I believe that.

Mr. WALDIE. What is the function of the judicial system?

Mr. SPECTER. I believe the function of the judicial system is to make the ultimate determination, but I believe the prosecutor has standing to make sentence recommendation.

Mr. WALDIE. I understand that, but do you believe he should impose the sentence?

Mr. SPECTER. Of course not.

Mr. WALDIE. But when you disagree with the sentence, when they don't follow his recommendation, you believe he should have the right to appeal?

Mr. SPECTER. I do.

Mr. WALDIE. You also believe that mandatory sentence removes the judiciary from any contemplation of any individual differences?

Mr. SPECTER. No; I do not believe mandatory sentences are practical.

Mr. WALDIE. Would you call for a life mandatory sentence?

Mr. SPECTER. I do on the issue of drug sales. I think that is an area where a mandatory sentence is desirable.

Mr. WALDIE. Why is it practical there?

Mr. SPECTER. Because I think that the normal problem on the imposition of mandatory sentences would not hold sway on major drug-

pushers. I think there is an inclination on the part of the courts on waivers to reduce the level of discretion to acquittals if they don't want to face the problem of a mandatory sentence, as for example on carrying a revolver.

But I do not think we are dealing with a major pusher, somebody who has an ounce of pure heroin, that the judge will acquit to avoid the problem of mandatory sentence.

Mr. WALDIE. If we would not avoid the problem of mandatory sentence by acquittal or reduction, why do you think he would avoid the problem of sentencing sufficiently severe that you should require mandatory sentence?

Mr. SPECTER. Because our experience has been when we have possessors or sellers of an ounce or more, we do not get appropriate jail sentence.

Mr. WALDIE. If you had the life sentence mandatory, why do you conclude the judge would not accept the lesser plea or dismiss?

Mr. SPECTER. Well, because I would——

Mr. WALDIE. It seems inconsistent to me.

Mr. SPECTER. I don't think the judge ought to have the discretion to accept a lesser plea if a man is charged with the sale of drugs. If that is the charge, then he either pleads guilty or he does not plead guilty.

Mr. WALDIE. I thought you said your general disagreement with mandatory sentence was inducement of the judge to engage in plea bargaining or accepting lesser pleas or dismissing.

Mr. SPECTER. Well, what——

Mr. WALDIE. In this case, I say if you have a mandatory sentence of life imprisonment for possession, is the inclination of the judge less in this instance than it would be in any other? If you say in response to that because he wouldn't do that with a strong heroin pusher, then why would you need a life sentence mandatory if you are so concerned about the pusher?

Mr. SPECTER. Because, although he will not be motivated to acquit a major heroin pusher, when he comes to the point of convicting him, he will not impose a sufficient sentence. I will cite the *Marks* case I already told you about, 5½ to 11 months.

Mr. WALDIE. Has that been your experience that the judge is too lenient on heavy heroin pushers?

Mr. SPECTER. Yes, sir.

Mr. WALDIE. You don't address the problem in the statement of yours as to the disparate sentences by individual judges. Do you suggest the way to handle that is whatever the drawer of the lottery comes out; that is, the judge, the defendant and prosecutor is stuck with? That would address the problem of delay, perhaps, coming to court more quickly. But that isn't really the problem, is it?

The problem is the contempt for the system that the defendant must have, to know the lottery draw will determine the sentence they receive.

Mr. SPECTER. Well, I do not address that problem in my statement, nor do I address a great many other problems.

Mr. WALDIE. How do you address that problem? Do you have thoughts on that?

Mr. SPECTER. Yes; I do have thoughts on that. I believe sentencing ought to be taken away from trial judges and ought to be lodged in

panelists. I have proposed legislation to our general assembly in Pennsylvania on a number of occasions on the sentencing matter and I proposed this legislation last year, and, as a matter of coincidence, submitted it just yesterday to the general assembly, calling for the creation of a 24-man panel in Pennsylvania to impose sentences in panels of three.

[See material received for the record, at the end of Mr. Specter's testimony, for a copy of the proposed legislation.]

Mr. SPECTER. I have come to that conclusion after our efforts at appellate review of sentence were of no effect because of the double jeopardy provision.

But I would take away the sentencing function totally from the judges on offenses which call for a term of 5 years or more. We modeled our program after the California sentencing panel. But that would provide the uniformity and, I think, would provide the appropriate severity.

Mr. WALDIE. In determinate sentence?

Mr. SPECTER. Yes. Well, it is indeterminate in the sense that when the judge convicts on a waiver or jury convicts, the matter would be referred to the sentencing panel, which would then have the authority to sentence to the maximum and that panel would then obtain the uniformity and severity.

Mr. WALDIE. One final question. With that approach to sentencing, would you still call for mandatory life sentences?

Mr. SPECTER. I think on heroin pushers, major heroin pushers, I would.

Mr. WALDIE. No matter how the sentencing is done?

Mr. SPECTER. Yes; I think that heroin is that kind of a problem in our society today.

Mr. WALDIE. Is that the only crime that you would call for a mandatory life sentence?

Mr. SPECTER. No; I would call for it on first-degree murder, except for the category of especially outrageous murders, which I would call for the death penalty.

Mr. WALDIE. And what others?

Mr. SPECTER. None.

Mr. WALDIE. Just first-degree murder and major heroin pusher?

Mr. SPECTER. Yes.

Mr. WALDIE. And first-degree murder would be either mandatory life or the death sentence?

Mr. SPECTER. Yes.

Mr. WALDIE. Death sentence for any other crime?

Mr. SPECTER. No, sir; just for murders which result in a variety of particularly outrageous situations, contract assassinations, or recidivist.

Mr. WALDIE. Would those be up to the sentencing panel to determine?

Mr. SPECTER. No.

Mr. WALDIE. That would be mandatory?

Mr. SPECTER. The legislation which my office has proposed on that would call for the imposition of the death penalty on a mandatory basis in eight categories of first-degree murder and then an automatic review of cases where the death penalty was imposed by the State board of pardons. That is in order to have the requisite flexibility I

think you have to have if you use the death penalty, but no discretion on the part of juries in those cases, or the courts, in order to avoid the unconstitutional problems which are present in firm or wanton or freakish or irrational imposition of the death penalty.

Mr. WALDIE. So, if there were freakish or irrational imposition of the death penalty, it would happen under this situation as there would be no opportunity to review or make exception?

Mr. SPECTER. There would not be an opportunity, in my opinion, for freakish or wanton imposition of the death penalty on the legislation which we have proposed in Pennsylvania.

Mr. WALDIE. Which makes it mandatory?

Mr. SPECTER. Which makes it mandatory for given offenses, but then has automatic review by a board of pardons, which has the authority to change from the death penalty to life imprisonment. This provides what I conceive to be the necessary flexibility, and it comports with the Supreme Court's standards, because instead of having a jury in Philadelphia coming to one conclusion and a jury in Pittsburgh coming to another, which is the wanton aspect, each of those juries would have no alternative but to impose death. Then the matter would be reviewed by one board in Pennsylvania, the board of pardons, which operates under the standards we have taken in the model penal codes.

If that board said the case A in Philadelphia was a death case and case B in Pittsburgh was a life case, it would be with the same group applying uniform standards, which I think would satisfy the requirements of Justice White and Justice Stewart, who are affirmed to have those swing votes to uphold the constitutionality of that kind of application of the death penalty.

Mr. WALDIE. Have you found the extension of the rights of defendants in terms of evidentiary rules that the Warren court came down with a handicap in terms of your responsibilities?

Mr. SPECTER. I think they have been in some cases. I think that, by and large, the decisions of the Warren court has been desirable for the administration of criminal justice as a nation. But I was very much opposed, and am very much opposed, to the retroactive application of the *Miranda* rule.

We had search granted in one of our cases out of Philadelphia, then reversed seriatim when he found out it was State grounds, I feel that goes too far, I think the fourth *Miranda* warning, I don't think there is any such thing as intelligent waiver to right of counsel. I think any intelligent application doesn't result in the waiver of right to counsel.

I think by the time you give the fourth *Miranda* warning, you are not really being realistic. That goes to far. Some of the decisions on search and seizure, I think, have gone too far. But I think, basically, the insistence on high constitutional standards for law enforcement officers makes good national sense.

Mr. WALDIE. No further questions.

Chairman PEPPER. Mr. Mann?

Mr. MANN. Mr. Specter, I am intrigued by your ideas on sentencing and agree with it. In the meantime, what resources does a trial judge have in your court to assist him in sentencing? Does he have pretrials?

Mr. SPECTER. He has a presentence report. We have our probation de-

partment obtain presentence reports, which will obtain a psychiatric evaluation, a case history, family background, detailing the prior record, educational background, and work record.

Mr. MANN. Given the independence of most judges, is there a conference in your area where the judges confer on the questions of uniformity, deterrence, and so forth?

Mr. SPECTER. They do when they sit en banc, three judges on a murder case, where they all have the function to decide it. There may be consultation on an informal basis. There is a proposed rule of criminal procedure to set the mechanism up for some consultation, but the case histories in Philadelphia have not provided for such consultation.

Mr. MANN. There is no judicial conference in your area where the judges gather occasionally and discuss problems of mutual interest?

Mr. SPECTER. There have been a couple. I can only think of one offhand where there have been sentencing institutes where there are lectures and discussions. I think more than one, perhaps two or three. They have been very limited and only of recent origin.

When I was addressing myself earlier to the question of conference, I was addressing it to whether a judge would confer with any other judges before he imposed sentence in a specific case. And as I say, there is none of that, except for rare cases.

Mr. MANN. Who administers the ARD program?

Mr. SPECTER. It is administered by the court administrator and by the district attorney's office. Cases are selected out of the system by my assistants. They are then listed by the court administrator and they are presided over by a judge.

Mr. MANN. Does the probation that is imposed, preindictment probation imposed in most of those cases, carry conditions at the time which, in effect, amount to restitution to the victim?

Mr. SPECTER. Yes, on occasion.

Mr. MANN. How is the individual judge assigned? Who makes that decision?

Mr. SPECTER. To the limited extent we have experimented with it, it is administered by the court administrator, who makes an assignment. He assigns the judge and the judge is then assigned a group of cases. We have never gone so far as to have a judge get cases the moment they are docketed, which is what I think we ought to come to ultimately, but we have a large pool of cases in our major trial program and the court administrator recently designated two judges and took a group of cases, 50 cases, and gave them to one judge and 50 more cases to another judge.

Mr. MANN. On the question of plea bargaining, I recognize that you have taken a hard line against plea bargaining. But, given your dissatisfaction with the sentences, isn't it the feature of plea bargaining that even sentences are sometimes bargaining?

Mr. SPECTER. Isn't it a feature of plea bargaining that sentences are bargained?

Mr. MANN. Yes.

Mr. SPECTER. Yes, it is. That is the whole essence of plea bargaining.

Mr. MANN. How have you been able to resist that temptation?

Mr. SPECTER. Because I will not be a party to agreeing to what I consider to be improper sentences on serious cases. I don't get the sentences that I would like and I have made that clear, but we do

get some sentences. I think if we succumb to plea bargaining, we won't get sentences at all.

Mr. MANN. In many cases, you have your own idea about what the court is doing and you may get it in the bargain.

Mr. SPECTER. That is fine, but it is not a bargain. When I say, "no plea bargaining," I mean no negotiation or discussion, trying to come to a compromise. My assistants review cases and they consult with the chief of homicide or major trial counsel and they make a determination as to what a sentence recommendation is and we put it on file. We tell the defense counsel what we think an appropriate sentence would be and then he knows if he pleads guilty that is our sentence recommendation.

But I am not prepared to reduce it in order to save my office work or the court's time.

Mr. MANN. But it is a prearrangement to agree upon which the defendant can rely.

Mr. SPECTER. He may rely when we tell him what we think a proper sentence recommendation is. We will observe our word on it absolutely.

Mr. MANN. All right.

Thank you, Mr. Chairman.

Chairman PEPPER. Mr. Rangel?

Mr. RANGEL. Thank you, Mr. Chairman.

Mr. Specter, we are living in a time now where most communities share your belief that the judges are not giving adequate sentences for convictions of serious crimes. Why do you believe judges who normally are considered a part of this general community act in this manner?

Mr. SPECTER. I think that judges are very reluctant to send people to our deplorable prisons. I think that is a good reason, not a sufficient reason, but a reason which has some validity. They believe that going to the prisons, the defendants will come out worse than when they went in. The response I make to that is, given two undesirable choices, of sending a man to the bad jail or leaving him on the street, we have to send him to the bad jail, although we ought to improve the jail.

I think the judges for a second reason are gun shy in terms of appellate reversals. I had judges say to me, "I gave him probation. We avoided appeal. If we had an appeal, you would have lost on search and seizure ground."

I said, "I don't think we have gained anything if we are worse off than we are now. Let's take our chances. I think we can hold the case. If there is an error, let him be exonerated."

I think judges are reluctant to see appeals taken.

I think beyond those considerations, it is a very difficult moment in a courtroom to sentence a man, terribly difficult moment. Let me tell you about one case. We had a defendant by the name of T. F. Bailey who was charged with murder and confessed to all sorts of corroborating evidence before *Miranda*. It didn't come to trial until after *Miranda* and his confession was suppressed and all of the evidence went out—clear-cut holdup murder.

He walked away because of the retroactive application of *Miranda*. *Miranda* applies to every case where the trial was begun after June 13, 1966, even if the confession was obtained before and was constitutional when obtained.

T. F. Bailey got into trouble with the law on another offense, on a lesser charge, where the maximum sentence was 2 years. There was a

very difficult time in getting the maximum sentence imposed in that case and I think it would have been hard put to impose the sentence on Bailey in that case, really, a maximum sentence which was 1 to 2 years, although not really out of line. And my office urged a 1- to 2-year sentence.

We were very frank about it. We urged in part because of the man's record, and I think it was fair to consider the case where he had not been convicted because that was part of his background. And at that moment of sentencing, when Mr. Bailey's family was in the courtroom—and it is a frequent occurrence where there are wives and mothers and children and there is sobbing and it is a great human tragedy when a man is sent to jail——

Mr. RANGEL. As a former prosecutor, I don't see how that would affect the judge and not affect the district attorney at the same time.

Mr. SPECTER. Well, let me say this to you: I was the district attorney and I was affected by it. The judge did impose a sentence, not the maximum of 1 to 2 years on Bailey, but I felt the difficulties that he experienced at that particular moment in sentencing the man.

Mr. RANGEL. Well, with your background, certainly in your position, if you are affected by these emotional things, then I assume you would suspect that the judges would be.

Your second thesis, that of worry of appellate review, would only apply to the question of whether the judge convicted in the first instance, or perhaps the question of excessive sentence; but I don't see how it would apply to being gun shy. In situations where you have a crime with a statutory maximum sentence I think what you are saying and many people are saying that judges are not using the tools they have available.

Mr. SPECTER. When I say "gun shy," I am saying that the judge is reluctant to have the appellate court review the issue of trial error. He is gun shy about whether he is going to be reversed on appeal.

Mr. RANGEL. What difference would it be if he sentenced 5 months or 5 years?

Mr. SPECTER. If he proposes probation, there is no appeal.

Mr. RANGEL. I wasn't really talking about probation. I was talking about low sentences.

Mr. SPECTER. Well, it is probation, Congressman. That is what happened. That is what happened in that particular case, and that is what happens.

Mr. RANGEL. I assume you are just as strong an advocate of prison reform as you are of longer sentences?

Mr. SPECTER. I sure am. I don't think the longer sentences make any sense unless you have prison reform. Well, they make some sense in terms of separating the man for that period of time, but they don't make any sense in terms of long-range solution.

Mr. RANGEL. I was very interested in your screening process. It seems as though this has relieved your office, as well as the court, of a lot of unnecessary litigation. Does this mean law enforcement officers have the benefit of the legal opinion of your office prior to the arrest?

Mr. SPECTER. Yes, sir. Well, it is not prior to actually taking the person into custody, but it is prior to making the formal booking. So the person is taken into custody and brought to the police district, and

it is at that point, that early point in the process, my assistant reviews it and makes a determination whether or not the man should be detained, fingerprinted, photographed, sent to the central police administration building.

Mr. RANGEL. Prior to the time, the police officer has written his complaint?

Mr. SPECTER. Yes.

Mr. RANGEL. Then, in a hypothetical, would a police officer, prior to making an arrest, check with your office to see whether or not that arrest would be constitutional, according to the recent opinions as known by members of your district attorney's office?

Mr. SPECTER. Not in the legal counseling program that I have described to you. That is a matter of what goes on in the district. We have procedures on homicide and on rape cases where I have an assistant available 24 hours a day who is a specialist, where the police will review the evidence before they make arrest in those cases, make an arrest at all.

But if you have somebody who is charged with illegal liquor sales or larceny or receiving stolen goods, he is in the district and the policeman will see some activities, see someone carrying a television set, they will take him into custody and take him to the police station. Technically, an arrest has been made when they restrain his liberty. So my man does not come into counseling the policeman until they get to the police station. So we have not intervened before arrest.

But we have intervened before booking or processing. The police might not even classify it as an arrest until they write up the criminal complaint or make an arrest report on it.

Mr. RANGEL. That is my problem. What prevents, knowing most police officers believe they are making good arrests and really want to make good arrests, and in their opinion there is no question the person they apprehended is guilty, what is to prevent a police officer from getting a prior legal opinion from your office and conforming the complaint to existing law, to make certain that the case is not thrown out on technicalities?

Mr. SPECTER. If you mean to be sure he complies with the law, there is nothing.

Mr. RANGEL. That his complaint complies with the law.

Mr. SPECTER. Honestly complies with the law?

Mr. RANGEL. No.

Mr. SPECTER. Then it is a fraudulent complaint that is tailored and he has not made a constitutional search and seizure, but he finds out what would be necessary for a constitutional search and seizure and tailors the facts to fraudulently comply with the constitutional point.

Mr. RANGEL. I think you would agree your office has been frustrated by certain opinions by the Supreme Court, and certainly police organizations throughout the country believe that certain opinions have handcuffed them and allowed guilty people to be released. With this feeling, and the fact that your office makes available legal information as to what would be upheld in the court, what is to prevent the police officer from including in the complaint the language of the most recent opinion to justify how he dealt with the arrest?

Mr. SPECTER. We make available legal information. We do not make available illegal information. However frustrated we may feel, I may

feel, about what the Supreme Court has done, I observe that law meticulously. It is not up to me to convict the guilty beyond the procedures which were established by the courts. That is what my assistants do.

Mr. RANGEL. I did not mean to imply that.

Mr. SPECTER. I am saying our sense of frustration does not lead us to disregard what the courts have said. We are not so concerned with convicting the guilty that we will take it upon ourselves to decide what procedures are to be used to determine innocence or guilt.

My assistant district attorneys review facts.

Mr. RANGEL. That is my whole point. Do you get the facts and review them, or does your office make available legal opinions to the police officer before the apprehension? The cases I am thinking about, in New York, involve situations in which the prosecutor's offices made available to the police department a 24-hour district attorney available prior to arrest, in order to avoid court congestion. Policemen would call him prior to roundups and arrests, and inquire about recent opinions, or opinions they weren't really certain of, and the result was that all of the complaints that were coming into the district attorneys office had really recent Supreme Court decision language incorporated in them.

Mr. SPECTER. Well, it is improper if the district attorney would be in complicity with the police, or the police on their own, would falsify the facts to conform with recent Supreme Court decisions. But it is entirely proper and it is a goal to be achieved to have an assistant district attorney who will advise a policeman before he takes some law enforcement action on how he may do it constitutionally.

So that a search and seizure warrant prior to arrest is drafted with a full statement of probable cause.

Mr. RANGEL. But you do see the temptation of the call being made after the arrest and the complaint conforming with the legal opinion given.

Mr. SPECTER. There are constrictions in the process and they are all around us and that temptation is present. It has to be resisted like all others.

Mr. RANGEL. I assume you haven't run across those types of experiences?

Mr. SPECTER. No, I think there are cases where police officers tailor their testimony and falsify it. We have matters like that. I think it is something we have to be vigilant on all the time.

It isn't easy in terms of being a lawyer who gives advice, because a numbers writer can't have a lawyer on retainer. That is against the law. You can't do that. But it is proper for a police department to have counseling and they should have the educational value of information in advance because one of the things we seek to do is to avoid confrontations between police and citizens, where the police are going into a house without a search warrant or stopping someone on the street without probable cause.

Mr. RANGEL. I think it is a good idea. I was just wondering whether you had some safeguards we perhaps didn't have in New York.

I yield back the balance of my time.

Chairman PEPPER. Mr. Specter, do you have enough judges and do they have enough assistance and facilities to keep your dockets reasonably up to date?

Mr. SPECTER. No, sir; we do not. We received 25 new judgeships for our court of common pleas in December of 1971, just slightly under a year and a half ago. I think with those additional judges, we are still short. But as I said in my earlier testimony, I do not think we are in a position to complain at this time because I do not believe we have made sufficient use of what resources we currently have.

Chairman PEPPER. You cannot carry out, then, a system in Philadelphia that the cases must be brought to trial 60 days after the charge is made?

Mr. SPECTER. We could not do that now, even if we had no backlog. We could not do that.

Chairman PEPPER. What is your idea about the sentence? Should the judge fix the maximum sentence of the individual, giving the parole authorities or executive authorities the power to reduce that sentence in case they found justification for it, as distinguished from giving nonjudicial authorities the power to impose almost an indefinite sentence upon an individual found to be guilty?

Mr. SPECTER. Mr. Pepper, my choice would be, given all of the problems of the system, to give a sentencing board the total range of authority. I come to that conclusion reluctantly because it is a major departure from our traditional sentencing practices, but I think it is necessary. I come to it with the experience in California and I understand the experience in the State of Washington, which has sentencing by panels, none of whom is the judge in the case.

Chairman PEPPER. What would be the criteria of those sentences?

Mr. SPECTER. I think that the sentences should be based upon two factors: the nature of the act, to wit, the crime, and the nature of the man, to wit, his background and his prior record and his potential for rehabilitation and the necessity for confinement.

Chairman PEPPER. Do you find that longer sentences are more of a deterrent to the commission of crime than shorter sentences?

Mr. SPECTER. In my opinion, they are, Mr. Pepper. I think that the criminal element is aware of the opportunity for committing crimes of violence and being placed on probation, and I think that there is some calculation, some substantial calculation, that goes into the criminal planning and they would be deterred by knowledge of longer sentences.

I asked our board of judges several years ago to establish a policy, subject to exceptions and extenuating circumstances, that anybody found in possession of a loaded revolver in Philadelphia, illegally, possession of a loaded revolver, would go to jail. I believe that if that message went out loud and clear that that result was going to obtain, that there would be many fewer people with loaded revolvers in our city.

Chairman PEPPER. What would you say would be the effect as a deterrent against the commission of crime if someone convicted of a major crime would have to serve 5 years in an institution under some sort of public authority as distinguished from receiving a longer sentence? Do you think the possibility of a longer sentence would have more of a deterrent effect; knowing they were going to have to serve a reasonable length of time, even 3, if not 5, years?

Mr. SPECTER. Mr. Pepper, I do not think it is possible to come to a conclusion in any general way that 5 years would be the right sentence for a major crime of violence. There is just too much difference in the type of the offender.

There are many burglaries which don't call for 5 years for a man to be in jail; and there are many burglaries that call for more than 5 years. So I would want more flexibility. I do think it is desirable to have a jail sentence in excess of 5 years so that a man may serve, for example, on an aggravated robbery case where he has a bad record, may warrant a sentence from 5 to 15 years, and he really ought to be in 5 years in terms of toughness for sentence and opportunity for a rehabilitation system to work.

Chairman PEPPER. That is on the theory the purpose of sentencing people convicted of crime is the retributive idea they have offended against society and they must suffer. Would that be the justification for that?

Mr. SPECTER. No; I would not focus on retribution or vengeance or punishment per se. I think the legitimate goals of sentencing are deterrence of the individual who is under sentence and deterrence of others and rehabilitation. I think those are the real purposes of sentencing.

Chairman PEPPER. What percentage would you say of the defendants who have been convicted in your court have served previous sentences in some sort of institution of penal character and generally how many they have served in?

Mr. SPECTER. Mr. Pepper, that is one question I would like to give you an answer on at a later date, because I do not want to speculate on that. What I would prefer to do is review, say, 100 cases in our major felony program and give you an answer specifically as to how many of those convicted have been previously convicted, on how many occasions, whether they served time.

[The following information was subsequently received for the record:]

The District Attorney's Office in the fall of 1969 completed an extensive study of a group of 275 open cases considered representative of the hard-core criminal recidivist. It was found that in 25 per cent of those repeat-offender cases, the defendant had a prior history of at least one narcotics arrest. Of this group of narcotic offenders, further analysis showed that: (1) 77 per cent of these recidivists had an average of three burglary arrests on their records; (2) 66 per cent had an average of two larceny or related-type violations; and (3) 60 per cent had an average of two arrests for aggravated robbery.

Chairman PEPPER. Chief Justice Burger, in making a speech in New York, said we have about a 75-percent rate of recidivism in the country from institutions of penal character. At the Ditchley Conference I referred to, the concensus was the long-term people, the people who were under long-term sentences, meaning sentences over 10 years, generally had as many as three incarcerations previously.

I was just wondering, from the point of view of the protection of the society, if a man has been in prison three different times and he comes out to commit one or more crimes again, apparently the punishment he has received is not a deterrent and, as you say, because of the nature of the penal institutions we have in most places in this country, few get any corrections.

The institutions we have today have been referred to as colleges for crime rather than correctional institutions. Might it be that if society could forego its very natural desire for a certain measure of vengeance in longer sentences when a heinous crime has been committed and think only of the future safety of the citizenry of the country, that it might be better if we could try to do something to prevent that person from committing another crime rather than to

give so much emphasis to punishment for the crime he committed?

Mr. SPECTER. Mr. Pepper, I would agree with that completely. I think that we ought to arrange our criminal justice system to focus all of our resources on turning that man's behavior around and try to prevent him from committing another crime.

If I might amplify for a minute, I think the class of individuals we are referring to here is in some substantial measure a very difficult problem, if not an impossible problem. We are trying to find programs for dealing with our juvenile delinquents on what we see to be a pattern, where an individual at the age of 8 may be a truant; and at the age of 9, vandalism; and 11, burglarizing a vacant house; and working his way up to robbery and perhaps a murder, and trying to dig in with the 18-year-old in order to prevent the 18-year-old in 1983 from being a major felon.

Chairman PEPPER. In relation to that, may I ask you: What has been your observation as to the number of people coming before your court charged with index crimes who have had a delinquency or criminal experience in their teens?

Mr. SPECTER. Very, very high.

Chairman PEPPER. Then it might well be if we are trying to protect our people from crime that we put more emphasis on trying to prevent the juvenile class from becoming senior criminals at a later time.

Mr. SPECTER. That is what I was suggesting. We talked about the heavy emphasis on the third-time offender. That person may well be beyond redemption. I don't like to say that but he may be. I would suggest the best place to work is the 8-year-old, probably 8-to-11 category, or perhaps even before. But we can already identify at 8, 9, 10, and 11, patterns which we have seen on many criminal records which end up with felony murder.

Chairman PEPPER. Isn't it true the majority of the crime is committed by a relatively few people?

Mr. SPECTER. Yes.

Chairman PEPPER. That would seem to suggest that it may be wise from a social point of view that we try to concentrate on those people, to see if we can't some way or the other, prevent them from falling into the criminal class, going into the pipeline so to speak and coming out later on as an adult criminal, a habitual criminal who has committed serious crimes.

As you refer to penal institutions, I wonder if we haven't, to a large degree, been spinning our wheels. We go through the expensive process of apprehension, with a large police force, an extensive prosecuting and court system, an inadequate probation system, and then we have these expensive penal institutions.

We were told at our juvenile hearings the week before the recess that in some instances public authorities were paying as much as $36,000 a year for individual delinquents who were in some of these institutions; from which they generally come out worse than they entered.

Somebody pointed out that you could not only send them to college, but you could send them abroad every summer and still save money compared to what you are spending on them now.

Mr. SPECTER. A one-way ticket, Mr. Chairman?

Chairman PEPPER. Well, we might give them the choice at least.

But in dealing with our penal institutions, I remember very well when our committee went up to Attica, we had an interview with

Governor Rockefeller before we went on down to Attica, and right off the Governor said, "I know the penal system of New York needs correction; it needs modernizing; it needs improvement; but where is the money coming from?

It seems to me that most of the systems that we now have, most of the penal institutions, the end results of all of this fine effort you put in as a prosecutor and all of the efforts that the court makes, the end result is frustrating to all of your effort.

The concern to me is how we can arouse the public consciousness to be willing to do something about that most important aspect of the whole criminal problem. Would you say that the penal institution, by its nature and character and its worth, is very relevant to what you are seeking to achieve in your criminal system?

Mr. SPECTER. Absolutely. I think unless you have a realistic sentence, and then some rehabilitation beyond, the entire police arrest, prosecution, court inputs are meaningless.

Chairman PEPPER. I am hoping that this committee will recommend to the House of Representatives that the Federal Government be willing, at least in the initial stages of such a program, to put up 50 percent of the cost of building small institutions of the most modern character, with perhaps relatively few facilities for maximum security, to house a population not to exceed 300 or 400, preferably 300, located in urban areas as much as possible, in territories from which these inmates come, where outside work opportunities are available for them, and where there will be an opportunity for them to keep contact with their families and friends.

If we could encourage the States to start building that type of institution with the best possible techniques applied in their operation, once they got them built we could experiment with them to see whether they were doing a better job than the old, large institutions. And then once they were built, the State could carry them on and the Federal Government wouldn't have to participate so much in the expense thereafter.

Any other questions?

Mr. WALDIE. Just one.

Mr. Specter, I know you support long-term sentencing—you thought it could serve two purposes: as a deterrent, and for rehabilitation, and, obviously, rehabilitation is not part of the deterrent. The only function to be served by the imposition of the death sentence, then, is deterrence.

Mr. SPECTER. Yes, sir.

Mr. WALDIE. Has Pennsylvania had the death sentence up until——

Mr. SPECTER. Yes, sir.

Mr. WALDIE. Until the period of the moratorium?

Mr. SPECTER. Yes, sir.

Mr. WALDIE. How long has it been since an execution?

Mr. SPECTER. 1962.

Mr. WALDIE. Is there some feeling, some statistical indication, that the failure to impose the death sentence during that period of time has had impact on the deterrence?

Mr. SPECTER. While there are statistics which can be mustered on that in Pennsylvania, I do not believe they are at all conclusive. I am loathe to use the statistics in almost any line to support a conclusion with the criminal justice system, as we were discussing on the crime rate.

There is a judgment on my part that the death penalty is an effective deterrent and I come to that conclusion based on many cases which I have seen, where professional burglars say they do not carry weapons because they are fearful of being apprehended and facing the possibility of the death sentence. Cases where we have seen juveniles going on robberies who will refuse to go along if a weapon is involved, for fear of the death penalty.

Cases in our criminal institution at Dallas where there have been two murders allegedly committed by lifers since the *Furman* decision came down.

As a matter of judgment, I am persuaded that the death penalty is a deterrent.

Mr. WALDIE. If you were not so persuaded there would be no other justification, would there?

Mr. SPECTER. No, sir.

Mr. WALDIE. For street crimes, violence on the streets, the death penalty has little impact on that; I would presume?

Mr. SPECTER. No; I would say that it does. I would say the death penalty is a very serious matter on robbery/murder—the No. 1 street crime. It is hard to say it is really No. 1. The three big street crimes are robbery, rape, and burglary, probably in that order, but I think the death penalty has a real impact on the robbery issue.

Mr. WALDIE. No further questions, Mr. Chairman.

Chairman PEPPER. Mr. Specter, we wish to thank you very much for coming and making a valuable contribution to our hearing.

Mr. SPECTER. I appreciate the invitation.

[The following material, previously mentioned, was received for the record:]

PREPARED STATEMENT OF ARLEN SPECTER, DISTRICT ATTORNEY, PHILADELPHIA, PA.

After seven years as District Attorney of Philadelphia, I continue to be confident that this nation can turn back the wave of violent crime providing we demonstrate the will to do so. As a nation, we have the resources and the technology to accomplish that objective. All we lack is a firm commitment and a day-by-day application to get the job done.

In outline form, America can win the war on crime by:

I. Providing Speedy Trials for Defendants Accused of Crime.

A. Defendants, charged with robbery and rape, should be brought to trial in a few weeks instead of many months so that they are not on bail committing other robberies and rapes.

B. The constitutional right to a speedy trial must be made more than a myth which can be found only in the Constitution and not in the bulging detention centers of our big cities. Men and women incarcerated before trial must be tried promptly.

C. Sufficient courtrooms, judges, prosecutors, defense attorneys and supporting personnel must be provided to try the serious cases.

D. Plea bargaining must be eliminated. Giving away City Hall is not the answer to clearing the docket.

E. Extensive use must be made of police counseling to eliminate minor cases at the time of arrest and of diversionary programs such as Pre-Indictment Probation, Accelerated Rehabilitative Disposition, and TASC (Treatment Alternatives to Street Crime) so that lesser matters may be eliminated from the traditional criminal justice system case flow to give the trial courts time to concentrate on the serious cases.

F. The individual judge calendar must be instituted so that the motive to "judge shop" is eliminated, and court hours must be extended to include evening and weekend sessions.

II. Tough Sentences for Tough Criminals Where Warranted by the Facts.

III. Realistic Rehabilitation.

A. Correctional systems must be reformed to teach inmates to read and write and train with a vocational skill.

B. Psychological counseling and psychiatric therapy must be made available in the prisons.

C. Cure of drug addicts, who cause fifty to seventy per cent of serious crime, must be undertaken on a systematic nationwide basis.

Americans are, of course, looking to their public officials—the police, prosecutors, judges and correctional authorities—to find answers to the problem of violent crime which confronts this nation.

After fifteen months of deliberation and debate, the National Advisory Commission on Criminal Justice Standards and Goals recently completed its blueprint for vast improvements in the criminal justice system in the United States. I served as a member of that Commission. We approached our task with the realization of the deep and destructive impact that violent crime has on the quality of life in America, especially in our major cities.

To paraphrase President Franklin Delano Roosevelt—what we have to fear is fear itself.

Referring to New York City, the National Observer has characterized that city's problem as "fear by day, terror by night." The Observer made the point that the after-dark fear of the Bedford-Stuyvesant ghetto has now moved into the elegant apartments of Sutton Place. The Observer quotes Herman Glaser, former President of the New York Trial Lawyers Association and a man who was mugged and robbed in broad daylight just off Madison Avenue, as saying, "There were about 100 people on the street, but nobody came to help me. Nobody."

This public paralysis is a shameful legacy of the 1960s when our population grew by 13% while the incidence of serious crime in America increased by 148%. Our citizens not only stand mute on the streets, but stay fearful in their homes at night.

A recent Newsweek Magazine analyzed the consequences of America's "fortress mentality". A generation ago, that would have meant concern about attack from powers outside our borders instead of prowlers inside our bedrooms. The Newsweek article catalogued the increasing insignias of a frightened society: "four locks on an apartment door, the evening bridge game abandoned, cabs and buses that no longer make change, the armed guard inside a junior high school—and with nearly everyone, a perpetual feeling of vulnerability."

To confront this problem, America has produced a criminal justice system where criminals too seldom go to trial, too frequently evade conviction and too rarely go to prison. The unhappy result is more crime in the streets and more confusion in the courts.

But the problem of violent crime is susceptible to long-range solution and short-range improvement. While moving to eliminate the underlying causes of crime, we can put into operation reasonably immediate reforms in the criminal justice system to: (1) make the speedy trial a reality so that criminal defendants are tried within a few weeks instead of months or years; (2) obtain adequate sentences for the guilty; and (3) provide a correctional system with realistic rehabilitation to curtail the plague of revolving door justice where defendants move through crimes, the courts and corrections, and then right back to crime again.

The National Commission on Criminal Justice Standards and Goals has proposed specific reforms to make it happen, to push us toward victory in the war on crime—providing its recommendations are properly implemented.

The first step in moving away from what has become a commitment to confusion is to move toward the elimination of trial delay.

The delay in trial of criminal cases is the most pressing problem facing the Prosecuting Attorney of any large city. In far too many instances, the District Attorney's hardest job is not convicting the guilty but bringing a defendant to trial in the first place.

While defendants are on bail for months and months, too many commit more crimes of violence. The hard answer is not to deny the defendants the right to bail, but to deny the court system the self-asserted privilege to trial delay.

To make the speedy trial a reality, the court system needs more manpower, muscle and methodology. If Americans continue to spend more money on cosmetics than on courtrooms, they may be beautiful but they won't be safe.

But more money alone is not the answer. Public officials cannot continue the perpetual plea for more money without applying creative innovations to reform the administration of the criminal courts.

To solve the massive problem of backlog, court resources must be increased, but even more fundamentally court caseloads must be decreased. As a first step, cases should be screened by the Prosecuting Attorney before arrests are made by the police. Through such review, cases can be dropped at the police stations

before they are dragged through the courts. Court time should not be wasted where the evidence must be suppressed because it was obtained by unconstitutional means.

We have put this case-screening concept into operation in Philadelphia with a pilot project funded by the Law Enforcement Assistance Administration. Assistant District Attorneys have been assigned around the clock in selected police districts. These prosecutors review every criminal complaint prior to arrest and every search warrant affidavit prior to execution. Our statistics show that we reject one-third of all the cases which are brought to us by the police for review.

A second diversionary program has the potential to divert large numbers of cases from the trial courts where experience shows that jail sentences are not required. This program, called Accelerated Rehabilitative Disposition, removes from the trial docket those cases involving defendants with no previous record or an insignificant prior record who are charged with nonviolent criminal offenses. After a brief, informal conference, defendants are placed on probation with the stipulation that the charges will be dropped if they stay out of trouble for a year or two, as designated by the conference judge.

While it might be preferable to de-criminalize some of these charges, that requires lengthy proceedings through indifferent state legislatures. The Prosecutor has ample discretion, and should use it to segregate out the cases which do not have sufficient priority to compete with violent crimes for the attention of the trial courts.

After 2 years of successful operation in Philadelphia where more than 12,000 cases have been handled through this program, the Supreme Court of Pennsylvania has promulgated rules which establish detailed procedures for District Attorneys around the State to divert cases through Accelerated Rehabilitative Disposition.

The third innovative screening program initiated by this Office is Treatment Alternatives to Street Crime (TASC), which offers heroin addicts who meet criteria established to assess the seriousness of their past record and current charge, a whole range of drug treatment programs and counseling.

As yet another means of streamlining the trial process on lesser cases, we amended our Pennsylvania State Constitution in 1968 to establish a new Municipal Court where lesser charges could be tried without indictment or jury trial. The great majority of these cases are tried at their first or second listing. During the first 2 years of operation, the average length of time between arrest and trial in Municipal Court was only 44 days.

In 1972, 42,500 cases were tried in the Philadelphia Municipal Court. While defendants have a right to trial de novo with a jury after indictment on an appeal from a Municipal Court conviction, this right to appeal was exercised in only approximately 12% of these cases.

By use of such innovations, it is possible to meet the Commission's proposed standard of sixty days from arrest to trial.

Through the use of these reforms, Philadelphia's criminal backlog has been reduced from 11,645 cases in 1965 to 5,079 cases in 1972. This reduction in backlog has been achieved in the face of a firm policy against wholesale dispositions through plea bargaining. Contrasted with some other major American cities where more than 90% of cases are concluded by guilty plea, we have disposed of only 32% of our cases in Philadelphia through the guilty plea—and the vast majority of these pleas are non-negotiated.

Once we have isolated the important cases which require a determination of innocence or guilt and call for tough sentences for criminals convicted of tough crimes, those cases should go to trial without plea bargaining. The long-standing reliance on plea negotiations to break up the logjam of the criminal docket destroys the adversary process, denies essential constitutional rights and diminishes the prospect of sentencing for the violent recidivist.

In practical application, plea bargaining often turns into a sophisticated form of the coerced confession. All too often defendants are faced with the choice of: (1) confess, through the guilty plea, and walk out of court free on probation; or (2) stay in jail for weeks or months awaiting trial assignment and then face a much longer sentence if convicted. While all condemn the rack and thumbscrew confessions of 15th century Spain, our judicial system daily encourages its 20th Century counterpart—plea bargaining.

An unhappy by-product of this courtroom bargaining is the cynicism which it engenders in the defendant. Serving time on a charge that has little relation to reality corrodes and complicates the tasks of rehabilitation and correction. This

finding appears in the Report of the recent New York State Special Commission on Attica which concluded: "What makes inmates most cynical about their preprison experience is the plea-bargaining system . . ."

The pressures of plea bargaining are totally destructive of the Prosecutor's effort to obtain tough sentences for tough criminals. The District Attorney should not be coerced by a crushing backlog to give away City Hall in order to avoid trial through the guilty plea.

Experience with plea bargaining in many jurisdictions has taught us the painful lesson, again and again, that the violent criminal who secures his freedom through plea bargaining is often encouraged to rob or rape again. The practical effect of plea bargaining unquestionably results in the violent recidivist receiving less than adequate prison sentence.

Because of crushing backlogs in the criminal courts, the system has surrendered to the apparent necessity for plea bargaining. Plea bargaining received its ultimate sanction a year ago when Chief Justice Warren Burger wrote in a United States Supreme Court opinion:

"The disposition of criminal charges by agreement between the prosecutor and the accused, sometimes loosely called 'plea bargaining' is an essential component of the administration of justice. Properly administered, it is to be encouraged."

I submit to you, respectfully, that Chief Justice Burger is wrong and the system is wrong which clings to life through the artificial respiration of plea bargaining. The National Commission is both correct and courageous in demanding an end to plea bargaining.

The bitter experience of our criminal courtrooms has demonstrated that the bargained plea is really no bargain. We should not settle for a system which simultaneously deprives the innocent defendant of the forum where the prosecutor is compelled to prove his case, and the public is victimized by excessive leniency for hard-core criminal repeaters.

Almost as important as the elimination of plea bargaining is the institution of the individual judge calendar so that responsibility is assigned to one judge for each case the moment that an indictment is returned.

This reform would eliminate judge shopping because counsel would know that a continuance would not result in having another judge hear the case. Accordingly, the motive to judge shop would be eliminated once it was plain that the assigned judge will ultimately try the case and impose sentence no matter how many times it is continued.

As a part of this effort to more effectively utilize existing resources we must be prepared to try cases on Saturdays and at night—and on split shifts if the need dictates, as it certainly seems to.

Ultimately, however, we must be prepared to try the serious criminal cases without plea bargaining or judge shopping. Our criminal justice system must be updated from the horse and buggy era, where horse trading for guilty pleas has tainted the system and degraded its participants.

In calling for the elimination of plea bargaining in five years, the Commission has sounded the clarion call for the most fundamental of reforms in the criminal justice system. Following appropriate sentencing for the violent recidivist, the correctional system must then be in a position to provide realistic rehabilitation. These reforms will provide the best opportunity for dealing with the problems of violent crime while protecting constitutional safeguards for those accused of crimes.

Our first President, moving quickly in his first term to enact legislation establishing our judiciary, stated: "Impressed with the conviction that the true administration of justice is the firmest pillar of good government, I have considered the first arrangement of the Judicial Department as essential to the happiness of our country and the stability of its political system." In the finest tradition of that excellent advice, we should move forward on what George Washington started out to do—make our courts effective, even-handed agents of justice.

It may be possible that the fear which is rampant in our cities today is the catalyst required to cause our collective efforts to catch fire. The message of the National Commission is not blowing in the wind, it is written on the face of every citizen in this country who thinks he has a better chance of getting jumped in the streets than of getting justice in the courts.

Some of the problems have been defined and overdefined. The battle to overcome these problems will not be won in a day or perhaps even in a decade. Our efforts and concern at improving our system of criminal justice must be matched by efforts and concern at improving our system of social justice. We

cannot overlook the ills of air and water pollution, or of inadequate food and housing for the poor in our cities, or of low-grade education in an era which demands high-grade skills. If you were to mark on a map the areas in our country where there is poor housing, inadequate education, poverty, and crime, you would be pointing to the same place every time.

For this reason, we must help our nation's poor not out of charity, but out of choice; not solely with money, but also with motivation; not because we are afraid of their increasing hostility, but because we are aware of our increasing responsibility. For the real greatness of a nation must be measured against the wealth, not of its richest citizens, but of its poorest.

In closing, may I remind you of the famous colloquy in ancient Athens where an Athenian citizen asked one of the political leaders the same question we are asking here today: "When will there be justice in Athens?" The famous reply: "We will have justice in Athens only when those who have not suffered injustice are as outraged as those who have."

Only a sense of outrage can generate sufficient concern and action to reform our criminal justice system. Let America be the master of outrage by acting on it to secure justice in our courts instead of being the victim of outrage by suffering violence in our streets.

Attachment:

DISTRICT ATTORNEY'S OFFICE,
Philadelphia, Pa., April 30, 1973.

To the Honorable, the Members of the Pennsylvania General Assembly:

With this letter, I am sending on to you copies of two proposed bills.

These proposals relate to procedures on sentencing in criminal cases.

I think the passage of this legislation would be significant in moving us closer to solving the problem of violent crime.

I very much urge your support of these bills.

Sincerely,

ARLEN SPECTER.

SUMMARY OF ATTACHED PROPOSALS ON SENTENCING

In September 1968, this Office suggested to the Task Force on Courts of the Pennsylvania Crime Commission a proposed "Act Permitting Review of Sentences in Criminal Cases." This proposal was subsequently introduced for passage in the State General Assembly in 1969 as Senate Bill 77 and House Bill 2419. The bill remained before the Judiciary Committee of the Senate during 1970 and was reintroduced in 1971.

This proposed Act provided that the Chief Justice of the Supreme Court of Pennsylvania would appoint five judges of the Courts of Common Pleas in Pennsylvania to act as a Special Court of Review on sentences imposed by any Court of Common Pleas in the state. The Act allowed for this appellate review of sentences on the application of either the defendant or the Commonwealth. Its aim was to provide specific guidelines and better uniformity in the sentencing process.

After the decision of the Pennsylvania Supreme Court in *Commonwealth v. Silverman*, 442 Pa. 211 (1971), this Office revised its legislation to reflect the Supreme Court's Opinion. The result was the submission of the Sentencing Review Act of 1972, which was substantially similar to the attached Sentencing Review Act.

This bill would completely revamp the procedures for sentencing criminal defendants by establishing a statewide Sentencing Board comprised of 24 experts from a number of different disciplines. This Board would evaluate and classify the background and psychological condition of each defendant and then more properly dispose of his case. This Board would set the minimum and maximum sentences in any case where a defendant is convicted of a crime punishable by imprisonment in a state penitentiary for a period longer than five years.

A companion bill to this legislation would revoke the right to bail after conviction of certain serious felonies by giving the trial judge the authority to commit the defendant to prison pending the impositions of sentence. This second proposed statute would also allow the court, in any case, to impose sentence immediately upon determination of guilt, so that a convicted defendant, in the discretion of the court, would not have an absolute right to bail pending a separate sentence hearing. This legislation was first proposed for passage in the

General Assembly in 1970 and has been resubmitted by this Office in each subsequent year.

PROPOSED STATUTE FOR IMMEDIATE SENTENCING OR COMMITMENT AFTER CONVICTION

The court may, in its discretion, impose sentence immediately upon a determination of guilt. The imposition of sentence shall not alter the defendant's right to file post-conviction motions as heretofore. The time for appeal shall be computed from the date the court rules on the final post-conviction motion.

After a determination of guilt, the court may, in its discretion, commit the defendant to prison pending the imposition of sentence for the following crimes: murder in the second degree, voluntary manslaughter, involuntary manslaughter, robbery, rape, burglary, kidnapping, mayhem, aggravated assault and battery, assault with intent to kill, breaking and entering with intent to commit a felony, sale of narcotics or dangerous drugs, and larceny.

SENTENCING REVIEW ACT OF 1973

SECTION 1. BOARD ESTABLISHED POWERS AND DUTIES GENERALLY

There shall be and there is hereby established an independent administrative board which shall determine the minimum and maximum limits of imprisonment if not mandatory as provided by law for all persons convicted of a crime and sentenced by any court of this Commonwealth to an indeterminate period of imprisonment longer than five years. The administrative board shall be known as the Pennsylvania Sentencing Board and shall herein be referred to as the "Board".

Subject to the provisions of this act, the Board shall have all the powers and shall perform the duties generally vested in and imposed upon independent administrative boards and commissions by the act, approved the ninth day of April, one thousand nine hundred twenty nine (Pamphlet Laws, one hundred seventy seven, designated as the "Administrative Code of 1929"), and its amendments, and shall be subject to all the provisions of such code which apply generally to independent administrative boards and commissions.

SECTION 2. MEMBERS; APPOINTMENT; TERM; CHAIRMAN; VACANCIES

The Board shall be composed of 24 members, each of whom shall be appointed by the Governor, with the advice and consent of two-thirds of the Senate, for a term of four years and until the appointment and qualification of his successor. However, each of the first twelve members shall be appointed for a six year term. Members shall be eligible for reappointment.

The Chairman of the Board shall be designated from time to time. The Chairman shall be the administrative head of the Board and shall exercise all duties and functions necessary to insure that the responsibilities of the Board are successfully discharged. He shall be the appointing authority for all positions of employment by the Board. During the absence or incapacity of the Chairman, the remaining Board members by majority vote shall designate an acting chairman who shall assume the full duties of Chairman in his absence.

Persons appointed to the Board shall have a broad background in and ability for appraisal of law offenders and the circumstances of the offense for which convicted. Insofar as practicable members shall be selected who have a varied interest in corrections work including but not limited to persons widely experienced in the fields of corrections, sociology, law, law enforcement, and education.

SECTION 3. OFFICE

The principal office of the Board shall be in Harrisburg and the Board shall appoint and employ therein the necessary employees to carry out the functions of this act. The salaries of persons so appointed and employed shall be fixed by the Board. The Board may with the consent of the Governor establish a suitable number of district offices, not to exceed four, to facilitate the exercise of the Board's responsibilities. The Board shall appoint and employ therein the necessary employees to carry out the functions of this act. The Board is hereby authorized and empowered to enter into contracts on behalf of the Commonwealth for such office accommodations, furniture, equipment and supplies as needed to carry out its duties through the Department of Property and Supplies.

SECTION 4. SALARY; EXPENSES

The Chairman of the Board shall receive a salary of eighteen thousand dollars ($18,000) per annum and each of the other members of the Board shall receive a salary of seventeen thousand dollars ($17,000) per annum. Each member of the Board shall receive his actual necessary travelling expenses incurred in the performance of his official duties.

SECTION 5. QUORUM

Except as herein otherwise provided a quorum shall consist of no less than twelve members of the Board.

SECTION 6. OFFICIAL SEAL

The Board shall adopt an official seal by which its acts and proceedings shall be authenticated and of which the courts shall take judicial notice. The certificate of the Chairman of the Board, under the seal of the Board and attested by the secretary, shall be accepted in evidence in any judicial proceeding in any court of this Commonwealth as adequate and sufficient proof of the acts and proceedings of the Board therein certified to.

SECTION 7. ORGANIZATION; SECRETARY

As soon as may be convenient after their appointment the members of the Board shall meet and organize. They shall appoint a secretary, who shall not be a member of the Board who shall hold office at their pleasure, who shall have such powers and perform such duties not inconsistent with any law of this Commonwealth as the Board shall prescribe, and who shall receive such compensation as the Board shall determine in conformity with the rules of the Executive Board. In the absence or incapacity of the secretary to act the Board may designate such other person as it may choose to perform temporarily the duties of secretary.

SECTION 8. INVESTIGATION OR CIRCUMSTANCES OF OFFENSE AND CHARACTER AND HISTORY OF PRISONER; HEARINGS

The Board shall meet at the state correctional institutions or other locations at such times as may be necessary for a full and complete study of the cases of all prisoners whose terms of imprisonment are to be determined by the Board.

For the purposes of determining terms of imprisonment of prisoners the Board may meet in panels. Each panel shall consist of at least three members of the Board.

The panel upon receipt of a prisoner's court records shall set a date for a hearing. The hearing shall be scheduled no later than ninety days after the sentence has been imposed and service of the sentence commenced. The hearing shall take place at a location to be determined by the Board which shall be designed to effect the greatest convenience for all parties concerned.

Ten days notice of the time and location for the hearing shall be given in writing to the prisoner, the prosecuting attorney and the trial judge. The prisoner may be represented by counsel at the hearing. Counsel for either the prisoner or the prosecution may present evidence and may make recommendations. The trial judge may submit his recommendation to the panel in writing prior to the hearing. The proceedings at the hearing shall be stenographically recorded in their entireties. At the termination of the hearing the panel by majority vote shall establish the terms of the prisoner's sentence and shall remit the prisoner to the custody of the Correctional Diagnostic and Classification Center designated by the Commission of Corrections to receive the prisoner.

SECTION 9. COURT TO TRANSMIT RECORDS TO BOARD

It shall be the duty of any court sentencing any person for an indeterminate term greater than five years to furnish the Board, within thirty days of imposition of such sentence, a full and complete copy of the record upon which the sentence was imposed including any notes of testimony which are of record, together with the prior criminal history of the person and any presentence investigation reports or psychiatric reports which may have been prepared. The latter

two reports being confidential shall only be made available to the Board members and counsel for any sentenced person as well as the prosecuting attorney. Upon the Board's determining the terms of imprisonment the record along with the independent findings of the Board shall be transferred to the Board of Parole which shall upon receipt of the record be responsible for its safe-keeping. If prior to the imposition of sentence the Court shall not have ordered a presentence investigation report and a psychiatric evaluation it shall be the duty of said court. The prisoner shall be housed in the appropriate county prison until the and examinations are to be prepared by qualified personnel employed by the court. The prisoner shall be housed in the appropriate county prison until the necessary data for the reports has been collected at which time he shall be transferred to the appropriate state correctional institution. The data must be collected and the prisoner transferred to the state institution within ten (10) days of the date that the sentence is effected.

SECTION 10. COMPUTATION OF MULTIPLE SENTENCES

Whenever a person shall be convicted of more than one crime and where one of the crimes shall be subject to the action of the Board, the Board shall set a maximum limit of imprisonment not greater than the total maximum limits of the sentences imposed and a minimum limit not greater than the total of the minimum limits for the sentence imposed.

SECTION 11. RECORDS TO BE KEPT BY THE BOARD

It shall be the duty of the Board to keep records of all actions of the Board. The Board each year shall submit to the Governor, the Attorney General, and the several District Attorneys a report indicating its action with regard to each prisoner brought before the Board and stating in brief the basis for the action.

SECTION 12. REMOVAL AND SUSPENSION OF EMPLOYEES

No employee of the Board, except the secretary, shall be removed, discharged or reduced in pay or position, except for cause, and only after giving him the reasons therefor in writing and affording him an opportunity to be heard in answer thereto: Provided, however, that an employee may be suspended without pay and without hearing for a period not exceeding thirty days, but the reason or reasons for such suspension shall be given to the employee by the Board in writing: And provided further, that successive suspensions of the same employee under the power hereby granted shall not be made.

SECTION 13. POLITICAL ACTIVITIES OF MEMBERS AND EMPLOYEES

No member of the Board, or officer, clerk or employee thereof, or any person officially connected therewith, shall take any active part in politics or be a member of or delegate or alternate to any political convention or be present at such convention, except in the performance of his official duties hereunder. No member of the Board, officer, clerk or employee thereof, or any person officially connected therewith, shall serve as a member of or attend the meetings of any committee of any political party, or take any part in political management or political campaigns, or use his office to influence political movements, or to influence the action of any other officer, clerk or employee of said Board. No member of the Board, officer, clerk or employee thereof, or any person officially connected therewith, shall in any way or manner interfere with or participate in the conduct of any election or the preparation therefor at the polling place, or with the election officers while counting the votes or returning the ballot boxes, books, papers, election paraphernalia and machinery to the place provided by law, or be within any polling place, save only for the purpose of voting as speedily as it reasonably can be done, or be otherwise within fifty feet thereof, except for purposes of ordinary travel or residence during the period of time beginning with one hour preceding the opening of the polls for holding the election and ending with the time when the election officers shall have finished counting the votes and have left the polling place. No member of the Board, officer, clerk or employee thereof, or any person officially connected therewith, shall directly or indirectly make or give, demand or solicit, or be in any manner concerned in making, giving, demanding, soliciting or receiving any assessments, subscriptions or contributions, whether voluntary or involuntary, to any political party or for any political purpose whatsoever. Any person or persons who shall violate

any of the provisions of this section shall be guilty of a misdemeanor, and, upon conviction thereof, be punished by a fine not exceeding five hundred dollars ($500) and imprisonment not exceeding one year, either or both, in the discretion of the court, and in addition thereto, shall forfeit his office or employment, as the case may be, and shall not thereafter be appointed or employed by the Board in any position or capacity whatsoever. It shall be the duty of the Board to dismiss from his office or employment any officer, clerk or employee thereof who shall violate this section.

SECTION 14. OTHER OFFICE, BUSINESS OR EMPLOYMENT; REMOVAL OR SUSPENSION

The members of the Board shall not hold any other public office or employment, nor engage in any business, profession or employment during their terms of service as members thereof, and shall hold their offices during the terms for which they shall have been appointed, if they shall so long behave themselves well. A member of the Board may be removed by the Governor, by and with the advice and consent of two-thirds of all the members of the Senate. During a recess of the Senate the Governor may suspend a member of the Board for cause, and before suspension he shall furnish to such member a statement in writing of the reasons for his proposed suspension, and such suspension shall operate and be effective only until the adjournment of the next session of the Senate following such suspension.

SECTION 15. USE OF FACILITIES

The Board in the performance of its duties shall utilize as needed the resources of the Board of Parole, the Department of Welfare and the diagnostic and treatment facilities of the state correctional institutions.

SECTION 16. LEGISLATIVE PURPOSE

It shall be the purpose of this Board in the exercise of its duties to establish terms of imprisonment which both reflect consideration of the protection of society as well as the rehabilitation of the prisoner. Prior to fixing the terms of imprisonment the Board shall undertake a complete study of the circumstances of the crime and the complete history of the prisoner.

SECTION 17. SENTENCE FOR INDEFINITE TERM; RELEASE ON PAROLE; RIGHT OF COMMUTATION

Whenever any person, convicted in any court of this Commonwealth of any crime punishable by imprisonment in a State Penitentiary for a period not longer than five years, shall be sentenced to imprisonment therefor in any penitentiary or other institution of this State, or in any county or municipal institution, the court, instead of pronouncing upon such convict a definite or fixed term of imprisonment, shall pronounce upon such convict a sentence of imprisonment for an indefinite term: Stating in such sentence the minimum and maximum limits thereof; and the maximum limit thereof shall never exceed the maximum time now or hereafter prescribed as a penalty for such offense; and the minimum limit shall never exceed one-half of the maximum sentence prescribed by any court.

Whenever any person is convicted in any court of this Commonwealth of any crime punishable by imprisonment in a State penitentiary for a period longer than five years as prescribed by law, the Court shall, unless such convicted person is granted a new trial or if sentence is suspended, sentence the person to be imprisoned in a state correctional institution but the court shall not set the minimum and maximum limits thereof unless a mandatory minimum or maximum limit is specifically prescribed by law. The minimum and maximum limits shall be set by the Pennsylvania Sentencing Board within 90 days of the execution of sentence unless mandatory minimum or maximum is specifically prescribed by law, but in any event the maximum limit shall not be greater than that authorized by law and the minimum shall not be greater than half the maximum limit set by the Board.

Whenever any person is convicted of any crime punishable by simple imprisonment, the court may, in its discretion, pronounce a sentence either for a fixed term or for an indefinite term, as may seem proper under the circumstances of the case, but in no case to exceed the maximum term prescribed by law as a penalty for such offense:

Provided that nothing herein contained shall be construed to derogate from the power of the judges of the courts of quarter sessions and of the courts of oyer and terminer, or other court of record having jurisdiction, of the several judicial districts of the Commonwealth, after due inquiry, to release on parole any convict confined in the county jail, house of correction, or workhouse of their respective districts, as provided in section one of an act, approved the nineteenth day of June, one thousand nine hundred and eleven (Pamphlet Laws, one thousand fifty-nine), entitled "An act extending the powers of judges of courts of quarter sessions and of oyer and terminer, in relation to releasing prisoners in jails and workhouses on parole," its amendments and for an indeterminate term not longer than five years shall be entitled to any benefits under the act, entitled "An act providing for the commutation of sentences for good behavior of convicts in prisons, penitentiaries, workhouses, and county jails in this State, and regulations governing the same," approved the eleventh day of May, Anno Domini one thousand nine hundred and one;

And provided further, that, before any parole shall be granted pursuant to the terms hereof, notice of an intention so to do shall be given, at least ten days prior thereto, by the Board of prison inspectors to the judge of the county who imposed the sentence, if he be still in office, but otherwise to the judge or judges of the court of oyer and terminer or the court of quarter sessions then in session, or if there be no current term, then to the next ensuing term thereof, and having jurisdiction of cases of the like character. Similar notice shall also be given to the District Attorney then in office in said county.

Chairman PEPPER. Mr. Counsel, would you call the next witness.

Mr. NOLDE. Mr. Justice Ross, would you come forward, please.

Mr. Rangel would like to introduce the witness, Mr. Chairman.

Mr. RANGEL. Yes, Mr. Chairman.

I asked for the opportunity to introduce to this committee Mr. Justice Ross, who has 20 years of outstanding public services to the city and State of New York, including experience as a member of the New York State Assembly. Mr. Justice Ross is a member and majority leader of the New York City Council of Justices of the supreme court, administrative justice of the criminal court system, and now is the administrative justice of the supreme court.

Not only has he made a valuable contribution in both the judicial and legislative areas he has served. I think Justice Ross is best known in the city and State of New York as being a compassionate, understanding individual, and it is indeed a pleasure for me to have an opportunity to be here on this committee as he tries to share with us the policies that have led to his great success, as well as the frustrations he has had in our court system. And, certainly, since he has been administrator, we have had more successes than we have had in the past.

Chairman PEPPER. Judge Ross, we are very much pleased to have you here. Thank you for coming.

STATEMENT OF HON. DAVID ROSS, ADMINISTRATIVE JUDGE, CRIMINAL COURT OF THE CITY OF NEW YORK; ACCOMPANIED BY LESTER GOODCHILD, EXECUTIVE OFFICER

Judge Ross. Thank you very much.

Congressman Rangel, thank you for your very kind remarks, and honorable members of this committee.

On January 1 of 1971, by direction of my superiors, I took over the administration of the criminal court of the city of New York.

Now, that court is part of the unified court system of the State. It operates in the five counties comprising the city. We are authorized

98 judges and approximately 1,100 employees, just about all of whom, with the exception of perhaps two, are civil service.

The gentleman to my left, Mr. Lester Goodchild, who is from the court system, is my executive officer and directly responsible for seeing to it that all of my administrative mandates and memorandums are carried out.

That court, gentlemen, handles every single arrest that takes place in the city of New York, whether it be as insignificant as smoking in the subway—and believe me, we get those; I don't know why, but we do—right up to the most atrocious robberies, rapes, and homicides. If the matter remains a misdemeanor, then it stays in that court for its ultimate disposition, whether it be by plea, trial, acquittal, whatever the facts happen to be.

If it is a felony, we have the responsibility, unless, of course, defense waives a hearing to send the case directly to the grand jury or conducting a felony hearing on it. Should the matter survive the hearing as a felony, it then goes to the grand jury.

From there it goes, if there is an indictment returned, to the criminal branch of the supreme court and, as of March—as of March 5 of this year—I was again designated by Mr. Justice Stevens, our presiding justice of our appellate division, to take over the administration of the criminal branch of the supreme court in addition to other duties.

On January 1, 1971, the criminal court of the city of New York had a backlog of approximately 60,000 cases. The reason I say 60,000 is that we have no conception of what we had there. So we had a hand count, and when we reached 60,000, gentlemen, in all honesty, I directed them to stop counting because I went into shock.

We now average a caseload of about 16,000 cases per month, which is less than 1 month's intake. We average on a monthly basis from a low of 15,000 arrests to a high of about 20,000 arrests. Those judges sit in 11 different buildings around the city, and since the Supreme Court of the United States came down with the last directive on jury trials, they conduct jury trials.

And today I can say without fear of contradiction by anyone, the largest criminal court—and I don't say this as a matter of pride; I say it as a matter of volume—is totally current.

The budget for this court, gentlemen, for the city of New York, is $14.8 million. We return to the city of New York, in fines, the sum of $11 million-plus. I will refer to an analysis that was done of our court by the accounting firm of Peat, Marwick & Mitchell, not by our request, not that we can afford them, but by the request of the Economic Development Council of the City of New York, and they have come to the conclusion that our increased productivity has saved the city of New York somewhere in the nature of $6.5 million per year as a continuing savings.

So if you take that, plus the fines we have been delivering back to the city treasury, we don't cost the city a dime to operate. We are not in the business of making money, but, in fact, the city has been making a profit on us. I haven't been successful, gentleman, in convincing the city fathers to return that money into the court for its own operation.

In addition, there was a raging battle for about a year in New York City—I am sure Congressman Rangel is very well aware of it as he was involved in it—whether we should or should not build additional

prison facilities within the city. The criminal justice coordinating counsel and this accounting firm came to the conclusion that our increased productivity has resulted in a one-shot savings to the city in capital funds of $48 million, the price of one prison.

Gentlemen, what I am talking about here is approximately $45,000–to $50,000 per bed, and the most expensive construction in the world.

So I think before we jump to build these great prison fortresses and take in inexperienced youngsters and produce real hard-nosed tough guys, that we have got to think in terms of using this money more intelligently. The correctional system, gentlemen—I can only speak for the State of New York—doesn't work. It doesn't correct; it doesn't rehabilitate.

Mr. Chairman. I was listening to your questions. Do we get them back? Absolutely. It gets to the point where sometimes older judges, who have been around a lot longer than I, have started to recognize some defendants they had 6 and 8 years ago. But some of the nonsense you contend with is. "Send the man to jail in my State and we will teach him to be a barber." And up until a couple of years ago, he couldn't get a license to be a barber when he came out of jail.

We put him to work manufacturing license plates for automobiles. Well, there is no such occupation in civil life. He manufactures on the inside, but once he gets outside, we unfortunately, get him on another charge.

We can teach him to be a carpenter, plumber, electrician, but he can't get a union card. And if he can't get a union card, you can't be a carpenter, plumber, or electrician in my town because they will shut the job down. So I think we are all responsible. When I say "we," I mean our entire society.

I think what we have been most responsible for, what I consider the biggest sin of all: The sin of nonfeasance. We have ignored the problem of rehabilitation. We have ignored it because the only people concerned other than those in the field as professionals would be the mother or father of the defendant, or the victim who was injured. But the individual families who are not victims or a defendant, they weren't interested.

You know, narcotics is a new problem in the last several years in the United States. Narcotics has been a problem to me, gentlemen, since 1951 when I was first elected to the State legislature, because I represented the southeastern portion of Bronx County, which was a very low-income area then and is still a low-income area now. Narcotics was a problem there in 1951.

As Congressman Rangel would recall, we couldn't sell that to anyone until it became a problem in the suburban areas. Narcotics, so far as using is concerned, is not a problem of the ghetto alone; it is a universal problem. Then, for the first time, government, and professionals, got involved.

In our court, gentlemen, in January 1971, when I took over, we had in detention about 3,500 prisoners awaiting disposition. As of January 1973, we had only 1,315 defendants awaiting trial.

Chairman Pepper. Excuse me, Judge. We will have to excuse ourselves and go over to the floor and vote. We will be back in a few minutes.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Judge, you may proceed.

Judge Ross. Thank you.

Just to briefly finish on my statistics and then perhaps, if I may, try to explain to you how we think we have accomplished some of this.

In January of 1971 the average duration of a case in the criminal court of the city of New York, from the moment of arraignment through disposition was 8.91 weeks, approximately 9 weeks. As of the close of January 1973 the average duration was 3.3 weeks. We have cut that time by two-thirds.

Now, in order to accomplish that we had to reduce the inordinate delay that is automatically built in by long adjournments. In January of 1971 the average adjournment in my court was 4.45 weeks. We have cut that to 1.38 weeks. The average adjournment. That is bail and jail cases both now average 1.38 weeks.

Many things had to be done to reach this point and the first thing I decided to do——

Chairman PEPPER. Excuse me. What was that: 1.38?

Judge Ross. 1.38 weeks is now the average length of adjournment granted in any court.

Chairman PEPPER. What do you mean by "adjournment"? You mean adjournment of cases?

Judge Ross. Individual matters, the lawyer isn't ready, the district attorney isn't ready.

Chairman PEPPER. I see.

Judge Ross. Or counsel hasn't been paid; he has a missing witness. One thing we told the lawyers immediately, "Gentlemen, you will have to get your fees up front. Mr. Green, as a missing witness, is no longer an acceptable excuse in the criminal court of the city of New York."

The lawyers screamed, the district attorney screamed. We did it and today they tell us it is fine. It is a question of turning people around after a lifetime of habits which aren't always good habits.

It wasn't really that difficult, insofar as the professionals in the profession are concerned. I find lawyers are very adaptable people. You know, we learn the law, we think we are experts, and the next day the U.S. Supreme Court changes it all. We don't get hysterical. We may be critical, but that is our privilege. But we conform and, after all, judges are just lawyers, too, who made it.

The first thing that I noticed was that all of the ancillary services—and when I speak of the criminal justice system ancillary services, I am referring to the district attorneys, defense counsel, Legal Aid Society, police departments, the department of probation, the department of corrections, the psychiatric hospitals where our examinations are conducted—all operated as if the other agencies didn't exist. If any one of these agencies fails to fulfill its obligation, the court must falter. If the department of corrections cannot deliver a prisoner to my judge on time, we can't move his case.

If the district attorney isn't prepared, he won't move the case. If the defense counsel isn't prepared, he wants an adjournment.

I then convinced my judges that before I had a right to demand better service from the ancillary services, they had to first render better service. I made them a promise, which I have kept, that should

the judge in any instance be criticized and it is correct, we will make a change. If the criticism is unjustified, I will personally reply for him.

I have done that. You see, it is very easy for a reporter to walk into a courtroom at 10:30 in the morning and if a bench is empty assume the judge isn't working. The fact of the matter may be he was there at 9:30 a.m. but the prisoners haven't been delivered. Counsel hasn't shown. The Bellevue report, psychiatric report, isn't back. If it is a narcotics case, the police laboratory hasn't finished their analysis.

I decided that none of these would be acceptable excuses and I made my judges give me their word—and they did—they would mount the bench at 9:30 a.m. It was my responsibility to get the other ancillary services there. We met with the ancillary services, individually and collectively, and we let them know in no uncertain terms what they had to expect of me but certainly what I demanded of them. Again, they were professionals, they screamed a little bit; but we get our prisoners, basically, on time. In fact, I get a report every morning from all 65 of my trial parts in the criminal court and all 42 of my trial parts in the supreme court, setting forth the time when the first prisoner was available to the court.

And in any instance in which it is beyond 9:30 a.m., a copy of that goes directly with a note from me to the commissioner of corrections.

In order to conform the profession, we instituted what we call, for want of a better term, "sanctions." I had our appellate division, I needed their authority for it, and they gave it to me. Under our sanctions we recommend to the judge that if a defendant is incarcerated, and a request is made for an adjournment, a proper request, that that judge think in terms of an adjournment not to exceed 5 days. After all, this is an incarcerated defendant and he might be innocent. As of this moment there has been no determination of guilt or innocence. And he certainly has the presumption we all have in America.

We further pointed out to him, if this defendant is incarcerated in excess of 12 days, that he think in terms of 2 days as a sufficient adjournment. In a bail case, we suggest he think in terms of a maximum of 2 weeks.

We then instructed the judge, in every instance where an attorney doesn't show, or is late, and for want of an acceptable excuse—and we list the acceptable excuses: Illness; death in the family; police officer, for example on another arrest—but for want of an acceptable excuse, if a lawyer doesn't appear he receives a letter from one of my supervising judges. I appointed one in each county as my direct representative, and the first letter is a very gentle letter informing him of my great desire to bring the criminal justice system into the 20th century. We need his cooperation as an officer of the court; we are sure there is an explanation as to why he didn't appear. But the last paragraph requires him to respond as to the reasons why.

And invariably, as we predicted, the letter would come back, "Sorry about that, Judge. My secretary inadvertently entered it on the wrong page."

I wasn't shocked. I used that excuse 25 years ago, for want of a better one. But the second time it doesn't happen. No lawyer wants to receive a letter from a judge which might be preparatory to a disciplinary proceeding.

Now, we are not in the business of hurting lawyers. We are lawyers. I made my livelihood as a lawyer for a long time. And that hasn't arisen, with the exception of two or three, who perhaps shouldn't be practicing in our town because of their personal problems.

You get total compliance. If that lawyer is going to be 15 minutes late, he makes sure the clerk in that part gets a message from him. So at least when the calendar is called, the clerk is in position to say, "Your Honor, Counselor Jones called. Would you please hold the case for a second call."

I also noticed at the very inception of my administration there that, at my arraignment parts, a tremendous amount of cases were being dismissed on the motion of the district attorney. It sounded something like—like a liturgy. You couldn't understand the first few lines, but the last line said, "Therefore, I move to dismiss."

I didn't know what was going on, so I inquired. These are called in New York City, "343's," because the form is No. 343. This would be an instance in which a police officer makes an arrest, walks into the district attorney's complaint room, and as he walks in—I am sure Congressman Rangel is way ahead of me because he has been exposed to it—he calls out to the district attorney, "I have a 343."

The arresting officer is already telling the district attorney "I have an arrest that is not worthy of prosecution."

Now, of course, the question is, Why did he make the arrest? A very simple answer. He gets credit for arrests, not for convictions. I guess in that numbers game you play you need x amount of "collars" to use the police parlance. Otherwise, he hasn't done his function.

The present commissioner and I have gone around and around on that one many a time. Give me one peddler of heroin in kilo lots as against a thousand nickel-bag junkies. But to get that one felon, the policeman who is working that case can't be bringing in his 20 or 30 arrests a month. That case may take a year of high-class investigation. I say it is worth it. We know it is worth it because, in the last few months, the last year in New York City, we have had periods of heroin drying up on the streets because 6 months prior the Federal task force and local combined task force, has made major arrests of large volumes of heroin.

It takes a few months to have an effect in the street. That is why, Congressman Rangel, you may have read in the paper a few months ago that cocaine and methadone became the popular item in Queens County because apparently the big haul that was destined to go to Queens County, whatever the operation was by the people doing it, was intercepted by the task force. It was a multikilo lot.

I then sat down with the five district attorneys and told them they were wasting too much of my court's time on this trivia. I demanded that they stop going through all of the administration of a 343, where the policeman says there is no case, prepare the same affidavits and the same complaints as you would for the most troublesome crime, then docket it in my court, and then at the arraignment, stand up and move to dismiss on the grounds there isn't sufficient evidence.

Well, the district attorneys were a little leary about that one. I then went to the appellate division and received a directive from the appellate division that the district attorneys are to fulfill their constitutional obligations right in the complaint room and refuse to honor

the arrest. If it is a 343, it is out. That took approximately 10 percent of my caseload out of my arraignment part.

When you are talking in terms of 250,000 arrests, that is a lot of work. What I was trying to do was reach the important cases.

We then instituted a practice which we called "front loading." As I said when I first started, we get everything from smoking on the subway to homicide. A good experienced judge—and we developed a team of what I call "arraignment judges," and it is not instant expertise; it is a lifetime of experience—can look at a set of papers and he knows that 6 weeks from now, back in the trial part, this defendant is going to plead and probably get 6 months because that is all it is worth; or 3 months, or a year, or probation.

Now, if those are the facts, I want my judges doing that right at the original arraignment and save all of the bookkeeping—perhaps the incarceration of the defendant who shouldn't be incarcerated—save all of the work and administration that goes in carrying calendars from day to day, and have the same end result.

These are not dismissals we are talking about, these are convictions. In the city of New York, approximately one-third of our entire calendar in the criminal court is disposed of at the first appearance, and properly so. These are the $2 fine cases, $25 fine cases, 30-day sentences, the probation, the withdrawal of complaints by getting people to shake hands, because not all persons coming into my system are criminals. Some are next-door neighbors. Someone makes a complaint because his neighbor plays his stereo too loud. He receives a summons but we have to treat him with the same dignity as any other person who comes to my court. He is entitled to it, but there is no reason to drag those cases through our system for months at a time.

So my arraignment judge disposes of it up front. Incidentally, I was very interested in what the last speaker said. I didn't hear him out. In New York, a judge cannot reduce a charge without the district attorney's consent. So if a defendant is brought in under a complaint that reads as felonious assault, for example, my judge can't reduce that to a simple assault, a misdemeanor, in the absence of a hearing unless the district attorney consents. So we have this balance and counterbalance.

The district attorney isn't interested in giving away his good cases. He wants his wins. We judges couldn't care less what the end result is, whether it is conviction or acquittal. We are referees. We don't win when the district attorney gets a conviction, or lose when there is an acquittal. That is not our function. A lot of people, including the news media, seem to forget that.

I have been asked to respond to a policeman's protest; that we weren't supporting the police. I told them it is not our function to support the police; not as a judge. As a private citizen, that is another story. As a judge I am there to referee the ball game. If I see a foul, I blow the whistle, and if the home team doesn't like it they can "boo" me and call me dirty names; but that is what my responsibility is.

We are getting the police a little trained to that now. They found out, as Congressman Rangel knows, they get instant calls. They had better be right before they criticize. Because it is historical throughout the country, that the judiciary doesn't answer back. We don't get involved in public controversy, and we shouldn't. But when Judge

Stevens asked me 2½ years ago to take over the criminal court, I only had one condition that I asked him for. I said, "Harold, if my court is criticized unfairly, I want the right to respond and tell the truth."

Now, courts have not done this. As a result, the story is always a distorted story because if it is one sided, it is unilateral, it can't be factually correct. Certainly not the way I have been brought up.

Now, the sanctions have worked. The front loading has worked. Then we came to the problem of how do we reduce the time between arraignment and disposition. It is in the system. I listened to the previous speaker talking about getting the cases before the right judge. For 2½ years in New York City, all of my parts have been what we call "all purpose parts," which means when that case goes before that judge, and we pull them out like a jury box wheel, the first case out goes to part 1, 2, 3. Each one gets his calendar. And that case stays with that judge until that case is completed.

A defendant has motions. He can make any application he wishes and we will handle it for him right up front. We will take a court trial for him in our arraignment part, in our calendar part.

If he asks for a hearing, that will be conducted by the judge, that same judge. If it goes to trial, it will be before that same judge. We have done away with judge shopping in the criminal court in the city of New York because no matter how many times you adjourn that case you will come back and find the same judge sitting there. So you can't look for the tough guy, the easy guy, depending on what side you are on.

One thing I would like to indicate is that judge shopping is not unique to the defense counsel. Prosecutors are great at that, too. It is not a unilateral thing. We get it on both sides. We have done away with that in the criminal court of the city of New York. Once that case is in that part that lawyer has to anticipate, no matter when he comes back, that same judge is sitting. So if there is to be a proper disposition, you might as well do it now, because you are not going to get a better break or the district attorney won't get a tougher judge at a later date. Judge shopping doesn't work in the criminal court.

Now, we found out we were short of courtrooms. Incidentally, 50 percent of all of my courtrooms are inadequate. They have no holding facilities for prisoners. These courtrooms are old. They were built at a time when we didn't have this great volume. Many of the courtrooms we occupy now were originally intended for civil parts. If you haven't got a holding pen, that means that my court officer has to bring a prisoner from a different part of the building, frequently through the public corridors.

It certainly isn't the best type of security; it certainly is a tremendous drain on an already understaffed personnel. Security is a terrible problem in our courts.

I am short right now, by the city figures, 70 court officers—70. That is their figure. I reject that. By my figures, I am short almost 150, but I can't get the 70, either. I am running courtrooms, trying incarcerated defendants, with two court officers. It can't be done. It cannot be done. There are a minimum of five court officers to every courtroom required where you have a single defendant.

There must be one in the form of a bridge man. If you were the presiding justice, he would be between you and the defendant. He also

hands the evidence to the witness. There has got to be one seated behind the—I am the defendant; I am incarcerated. I may just be a tough guy. That is No. 2.

There has got to be one at that rail that separates the public part of the courtroom from the courtroom itself. There has got to be one to walk the aisle where the public now sits and participates. And what I mean by "participates," when I was a young lawyer, after the judge said, "Quiet, gentlemen," it got quiet. Today you might have an epithet.

There is one or two things he can do. He can say, "Arrest that man," and 40 men stand up in the courtroom. Because it has now become what the defendants like to refer to as a "political trial." He has got his followers here and I have two court officers. I learned a long time ago you don't commit your troops if you know you can't manage the situation. I have two men. They can't handle 40. I can't push a buzzer and a flying squad of reserves come running in. I have no reserves.

And the fifth one must be at that door, both to keep people out and to keep people in. That is with one defendant. We have multiple defendants. I have trials with four and five incarcerated defendants. Obviously, you need more court officers, and on top of this, my court officers now take this defendant, handcuff him, walk him through public corridors and up steps and back to a correctional facility and bring the next prisoner down.

It is the most atrocious, most dangerous situation. We have been fortunate, but we have daily incidents.

One of my court officers, 2 weeks ago, in Bronx County, had his wrist broken while he and another court officer were escorting a defendant who had just been sentenced. Five of the defendant's friends were out in the corridors. Someone shouted, "Let's free Jose," and so my court officer was trampled in the rush.

If it weren't for the fact that they were just in front of the district attorney's office, where his detective squad came to their assistance, God knows, the fellow may have been shot dead. One of my men suffered a broken wrist.

The Government has no right to ask me to have my uniformed force escort incarcerated defendants through public corridors. There should be a door there that takes them to a holding pen. Fifty percent of my courtrooms are like that.

But I need more courtrooms. I don't know how long it takes the Government to build a courtroom in Washington, but I know how long it takes in New York City, and I would hate to stand on one foot that long.

I learned there are two legal requirements in this State for a court to be a courtroom. One, obviously, public access, and the second requirement, there has to be a sign up there that says, "In God we trust." Those are the two legal requirements.

We called the carpenters and asked them to build judges' benches with casters and they folded up like a child's playpen. I hate to say that, speaking about a judge's bench, but that is the way it folds up. We have a portable jury platform with casters and a rail, and we have a nice little podium effect for the lawyer to put his papers down.

Then we went scouting for rooms. And we found a couple of rooms that could hold 40 or 50 people. We made access to the public corridor,

we put our benches in, and our sign on the wall and ran courtrooms there.

It is not in the best interest of the image of justice. I would love to have all beautiful courtrooms. I don't have them. And in the entire city of New York, the entire five counties, the only decent building I have is in Queens County, and that is because it is the newest. Brooklyn is a disaster. I have no holding pens there. The building where I maintain my own office in New York County, at 100 Center Street, is not a courthouse; that is a misnomer. I share it with the corrections department, district attorneys, probation, with computer operators. Who else have we got there? It is not a courthouse.

In spite of all that, the 98 judges I am authorized—incidentally, I never have more than 95 because the appointing authority, for reasons best known to him, always holds back a few. It really isn't the true picture because those judges and the nonjudicial personnel have done a heroic job. Without them, it couldn't have been done. But right now, I have 15 of my criminal court judges on assignment to the supreme court as acting supreme court justices.

I listened to all kinds of recommendations. I want you to know that in New York City, my court works 7 days and 7 nights a week. When I first took over, we had a night and weekend court in New York County which also serviced Bronx County, and we had a night court in Brooklyn County which also serviced Queens County. It was a disaster.

If a policeman made an arrest in the Bronx at 9 o'clock in the evening, by the time he booked his defendant and got a complaint drawn and brought him down to Manhattan, it was 1 o'clock in the morning, and the court had just recessed for the night.

I applied for a Federal grant and received a grant, for which I want to thank you gentlemen, with which we opened night and weekend court in Bronx County and Queens County. So we now have night court working in four out of five counties. Staten Island doesn't require it because their volume is too low.

The prisoners aren't hauled long trips by vans. I don't know what we save the police department. They are not anxious to discuss it, but I do know we did away with about 15 of their vans, and 40 or 50 of the escort officers. As for quality of justice, there is no way I know how to put a dollar sign on the quality of justice.

A person who has to face the judge in the evening in Bronx County, from 6 p.m. to 1 a.m., has a judge there. The same in Queens, Manhattan, Brooklyn.

Now, in most jurisdictions in my own State, you get arrested on a Friday afternoon, you may sit until Monday morning before you see a judge. It may very well be a trivial, insignificant matter in which there was no right to incarcerate the person in the first place. Of course, there is always the risk. I say "risk" in quotes from the police viewpoint.

We may have an innocent person here. And to a person who isn't a hardened jailbird, those are not nice places to spend a couple of nights. They are terrible places.

We keep our court open 7 days and nights. My arraignment parts are working Christmas Day, July 4th, you name it. There is no holiday in those arraignment parts. So any person arrested is brought to my arraignment part which is going from 9:30 a.m. until 1 a.m., every

person arrested on any day of the year, the police have no excuse for not bringing him in for speedy arraignment.

You can't use the excuse that this is Christmas, there are no judges. Nonsense. My arraignment parts work.

It becomes more difficult as I send more of my judges to the supreme court to use our methods up there because when I first took over the average judge—everyone—had to pull an assignment at night or weekends. It is not a desired assignment, obviously. They were averaging night and weekend assignments about 1½ times per year. We are up to about four now. We are now up to four times a year. I don't think they like it; I haven't heard any strenuous complaints because they get answers when they complain.

We have very few judges in my State—perhaps it is different in Florida—that were drafted for the bench. We have no difficulty in finding volunteers who want to be judges.

One thing I know, and I said this publicly, in our operation in New York City the day when a lawyer retired by going on the bench is gone. I don't care how hard he practices, how hard he worked at his practice. If he comes into our system today he is going to earn his bread. He is going to work, and after awhile they love it. Because people like to have a sense of accomplishment.

Now, one thing that we must do, I think, in every part of the judicial system, and we are doing it with more success, is have regular meetings with the court's ancillary services. God knows I hate all of the appointments I have because they take me from my office most of the time, but certain meetings must be held with the five district attorneys I have to deal with, the Legal Aid Society, police department, corrections department, mayor's office, because the mayor, incidentally, is the appointing authority for the judges of the court I supervise, where I administer, and the criminal court and supreme court, the appellate division, which is our superior judges, the judicial conference, which is the statewide umbrella over all of the courts in our State and, of course, last and most important and where we have failed in the past, is the bureau of the budget.

But we meet and meet constantly. We scream at each other. We tell them wherein they fell down last month. They tell us wherein we fell down last month, and they are not always wrong and I am not always right. But we have an onging continuing dialog where everyone must pick up their load. The minute they don't, they hear from me. And, believe me, the minute one of my judges doesn't, I hear about it. Because they don't let me get away with it. And the judge hears about it.

I must say, and say it publicly and on the record, that complaints about our judges have become quite scarce because our judges are producing.

That is about as brief as I could make it. I do have reports if the committee wants them. I have our first annual report which tells, in effect, exactly what we did and how. I have my second report, for the 9 months of 1972—I haven't completed the last 3 months of 1972. I have the Rand Institute report, which I think might be of particular interest to you gentlemen because my night court being federally funded, the State of New York employed Rand to analyze and survey and report, evaluate the night court operation.

Their evaluation speaks for itself. I couldn't have written a better one myself.

But I think I would like to point out here that our operation, by Rand computation, saved 30,000 police appearances in the period of time they evaluated. Roughly, that is worth about a million dollars. We are talking in terms of about $30 or $35 in cost per appearance, besides freeing police from court duty back to street duty.

Now, it is not the million I am interested in; I am interested in the fact I have 30,000 saved appearances when, in theory, and I hope in practice, the patrolman is out in the street where he belongs rather than sitting around warming the bench in any courtroom. We are doing well in the criminal court and we did it, all of these things I am talking about, for very little additional cost to the community.

I intend to address myself to the same in the supreme court. There is only one way to cut into the problem, and, I don't believe it is in the severity of a sentence.

Sure, there may be some individual cases where the fellow says, "I won't take the gun because if I kill someone I will be executed or I will get a life sentence," but one thing I have learned and I am quite certain of, to move this system into the 20th century, you don't do it by making the sentence tougher and tougher because our volume doesn't decrease.

There is one way you must do it. From the moment of arraignment to the moment of disposition we have to make that period shorter, shorter, shorter, and shorter. The magic words in the trial part, are "Gentlemen, select the jury." You get more requests from the defendant for a conference with the district attorney and the judge, for the purpose of disposing of the matter by other than trial, by plea bargaining, if you will, when you say, "Gentlemen, select the jury."

Those are the magic words, the moment of truth. The smart district attorney then says, "Counsel, we will pick a jury; my offer is withdrawn."

If there is some conversation, we may not know about it. You may have offered them a reduced charge which may have been fair; I don't know. But once you say, "Gentlemen, select the jury," and when you get to that point, you have to cut the period down, you have to reduce the adjournments. You have to make people ready. Under my sanction, if the district attorney isn't ready at the exact time and doesn't have an adequate, acceptable excuse, I will dismiss his case. I get no kickbacks because when he goes back to his bureau chief, or the district attorney, and he says, "Ross just threw my case out." The district attorney will invariably respond to his assistant: "Good; next time be ready."

Chairman Pepper. May I interrupt?

Judge Ross. Surely.

Chairman Pepper. How do your courts select the jury? Do they do what they do in some cases, they take a month or two to select a jury?

Judge Ross. Senator, one of the biggest problems I have in the supreme court—I don't have that in the criminal court—is the voir dire of the jury. I have been pleading with the State legislature to turn the voir dire over to the court.

Now, we recently finished a case that made all of the newspapers up in New York County, in which it took 7 weeks to select the jury and 5 weeks for the trial. My experience as a trial justice before I left the trial bench is that in homicide cases, for example, or major felonies, robberies, if the fellow has a bad record and a conviction going back 20 years, perhaps more, he may be a consistent felony and offender facing a life sentence. If it is a month's trial, you can be sure 2 weeks was spent voir-diring the jury.

We have a multitude of judges in New York who can voir dire a jury in 1 day flat and get you a totally honest and honorable and impartial jury. But lawyers—and I love them, I am a lawyer—do not question jurors for the purpose of obtaining an unbiased juror. Both sides hope to find someone partial toward their own side.

The district attorney wants a real strong "law-and-order" man; the defense counsel wants a socially minded person who may weep, "Yes, he did it, but he is a kid; he is only 39 years old," you know. I don't hate lawyers for it, believe me. I have done it thousands of times in my life. But it has gotten to the point where I could increase my actual trial time by about 30 to 35 percent if they would let us voir dire the jury.

The objections to the voir dire I think, are incorrect. I think they are based upon an absence of facts. But most lawyers, and God knows I love them, they think they win their case after the selection of the jury. I don't think it is true.

The Governor, I understand, has introduced a bill this year, but he did last year, too, and it didn't prevail. That was in the criminal procedure law as amended in the State of New York, but before it became effective, the legislature deleted it and turned it back to counsel. I could increase bench time, trial time, on the important felonies by about a third without adding a single soul, because it would be the same court, same judge, and same court personnel and we wouldn't have that inordinate delay that takes place in the selection of the jury.

This is something that the States will have to address themselves to. You can't do it at the Federal level and it has got to come from the State legislatures, as far as my court is concerned. I don't have high hopes for it.

Chairman Pepper. Judge, you have indicated an opinion that Justice Tom Clark imparts to me, which I think he has publicly expressed on many occasions, that in order to expedite the disposition of cases you get better results by having effective administration, such as you have exhibited, than you do by just adding on more judges.

Judge Ross. That is one of the mistakes many people are making in the criminal justice system. That includes some of my brethern on the bench. There are areas in which I could use a couple of judges, but more and more trial judges is not the solution; and let me tell you why in simple arithmetic.

In the area where I serve, Manhattan and Bronx, where I have the supreme court criminal branch, we have a backlog of about 8,000 felony cases. That is too much, much too much. If I were to add one trial part, we can average, with the average trial justice, about 20 trials a year.

Chairman Pepper. How many?

Judge Ross. About 20. Selection of jury, et cetera, et cetera, et cetera. A real speed demon will get 30. So I put a speed demon in there, I put

five in there. That is 150 more trials. That doesn't even put a scratch on the 8,000. What has got to be done is that the courts have got to come into the 20th century on administration. What has got to be done is that the executive branch and legislative branch have got to give us the capacity.

Now, what I am talking about in capacity, I learned in high school there are three equal branches of Government. That is really not so. That is nonsense. I speak as a man who spent most of his adult life in legislative chambers as a legislator. The executive and the legislative branch control the budget; therefore, they are a little bit more equal than the courts. Don't misunderstand me. I don't want to control budgets, I have had enough of that for one lifetime.

But I can't go hat-in-hand every year pleading for the right to pay my men 1 hour overtime, because they won't give it to me. The fallacy is when they add up that overtime for the policemen and other uniform forces of the city—corrections officers and probation officers—then give me the capacity to work that man that extra hour. My judges don't get overtime. This came to a head when one of my judges gets a whole influx of new cases at 1 a.m. A big raid somewhere kept his court going until 4 a.m. I was ready to give him a medal. My employees were ready to go on strike. Give me the capacity to have a courtroom with a holding pen. I can increase that calendar by a third because once that court officer takes the prisoner out, nothing can take place in that courtroom until he comes back with the next. I have no security.

This is without any great expenditure of funds.

But there is one thing the Federal Government can do, and one thing I would most respectfully request this committee to consider. With the LEAA, which has been great as far as I am concerned, I have asked for very little and when they could help, they did. But in the area of capital improvements, we then get involved in the formula, the locality has to submit 50 percent. It was 50 percent.

I think they have changed it but I am not sure. If I can get the 50 percent from the city and State, I could probably get the whole thing from the city and State. I can't get that first 50 percent to build myself a holding pen. That is a capital improvement. And it is not for me, it is for the department of corrections which is an ancillary service.

The second thing I would like this committee to please consider with LEAA, and I don't know whether this is a problem universally in the country but it is a problem in the State of New York, is I decided that sentencing was a problem. I listened to your previous speaker. There is a disparity among judges. So I wanted my judge to meet for 2 days away from the courtrooms, at a seminar in which I would bring other judges in from around the country and have a real exchange of what is and what is not an appropriate sentence. I had that seminar funded by LEAA. They were most gracious.

But for me to apply to the LEAA, I must first apply to the city agency. If they approve it, it goes to the State agency. If they approve it, it goes to the LEAA.

I can't do business that way. I have been in public office too long for that. I first go to LEAA and find if they can approve it for me. Now, I hand carry it. Now, I am in a brawl with the city fathers and the State fathers. Although the "Feds" have already approved my request the city and State want it done another way. I say, forget it, give me my application, tear it up, and go back to work.

What I would like the Federal Government to consider—and this is going to bring a scream from the State government—whatever percentage they will allocate for the court system, that they consider that that percentage, whether it be on the State basis or district basis, got to, be administered by the chief judge in the State. I would much rather do business with Stanley Field, who is the chief judge of the State of New York, as to getting a couple of dollars to build a holding pen than go into this fantastic bureaucracy before I can reach LEAA. They can't give me a direct grant so I have to ask the city for it, with all kinds of brawls and disagreements.

Chairman PEPPER. You mean, the LEAA in the dispensation of funds should allow the disposition of those funds by the chief legal authority that is responsible for the trial system?

Judge Ross. Yes, sir. I am not naive. I don't expect them to accept my application directly. Someone should be in control. But if I can't sell the chief judge in my State on what is a worthy improvement, then it is not much of a worthy improvement. But when I get involved in the city and State agency they may agree, but have different priorities.

This year their accent is on police or something else, and I go to the State agency and get into a brawl with them because they decided, after Attica—a State prison uprising—that all of the money has to go into prisons. And yet we say down here, our Congressmen say, x percent of this money must be allocated to the courts, because if you don't we are not going to get an equitable share.

We are judges. We don't know how to fight.

Chairman PEPPER. Is LEAA giving you any support?

Judge Ross. Oh, yes. My experience with LEAA has been magnificent. My complaint is not with the LEAA. It is with that built-in layer of bureaucracy at the city and State level.

Chairman PEPPER. I am concerned about how extensively over the country LEAA is funding just such programs as you are administering at home.

Judge Ross. I wouldn't know. My experiences with LEAA, Mr. Nardozza in the New York regional office and Henry Dolgen and his staff, have been great. But you have to put it through the city and State.

Chairman PEPPER. Have you other recommendations to us?

Judge Ross. If I could get these two, it would be a tremendous improvement. One is, if LEAA would be permitted to make some substantial investment in the capital improvement, provided that capital improvement is in the best interest of good court administration. I don't mean build a new courthouse. That is not what I am talking about.

Second, if we could avoid the built-in layer of bureaucracy that exists in my State at the State and city level. I don't expect the money to come to each court administrator directly. But there is a chief judge in the State.

Chairman PEPPER. Mr. Justice, I could listen to you for hours, and I am sure my distinguished colleagues could, also, because you are exactly the epitome of what many of us have been hoping we would see all over the country. In Miami, in Dade County, we have given one of our presiding judges administrative authority to assign judges to do all sorts of things, and we have obtained marvelous results since we have done that.

Heretofore, judges were autonomous: they were independent and didn't let anybody tell them what to do. We have coordinated our whole system in our largest county, Dade County. It is similar to what you have been so well telling us about here today.

Mr. Rangel?

Mr. RANGEL. I just want to thank you, Judge. And I think we should not be that optimistic because of the caliber of Justice Ross. It is rare to get someone with the unique background and assets that he has.

I was wondering whether or not there was any lobbying restriction on you as an administrative judge. It is so easy for politicians to join in with the newspapers and attack the police and attack the courts, or attack whatever has been attacked. But, really, there are so many things we don't know that are going on, and it just seems to me that you know better than anyone else that this type of information should be in the hands of those people that can be persuasive on the local level.

Judge Ross. Congressman, if you recall, back in my State legislative days and city hall days, I wasn't exactly bashful when it came to the press. In fact, I probably was a bore to many people.

The point I am getting at is when I mounted the bench in January of 1969, I spoke to Judge Stevens, who was my presiding justice and your presiding justice. I pointed out to him, I forget what rank it is in the U.S. Supreme Court, but either second or third or fourth clerk is a public information officer. You mention the words "press relations." It became a dirty word.

I said, "For God's sake, Harold, the first judicial department, the most important department of the whole State of New York, and we don't have an information officer." I said, "We have got so many good accomplishments here, it's a darned good department," and you know it, Congressman, but it is a secret. If you are not in it, you don't know it. And if we get criticized—and I mean an improper criticism, not a legitimate one—and they are right, we make corrections. But if you get criticized and the criticism is inaccurate or based upon statistics 3 years old—that happened a month ago.

Their statistics were 3 years old. I don't know where they picked that one up. There is no one to reply because you don't get involved in public controversy. We don't get involved in debates. This is right, it should be that way, but someone should be designated.

Mr. RANGEL. Has that been done?

Judge Ross. I do as much as I can.

Mr. RANGEL. I don't mean you.

Judge Ross. It has only been 4½ years. You have got to be fair. We made the suggestion 4½ years ago. The answer is no.

Mr. RANGEL. Are there any restrictions in terms of the example you cited? There has been Federal approval of a proposal, and you know you can't personally call up people, but isn't there some vehicle available wherein the legislators can be told of the priorities? The legislators from time to time have to support the mayor and have to support the Governor on certain issues, but in most cases they would benefit from your views.

Judge Ross. Yes, Congressman. This bureaucracy was mandated by the Federal statute. In other words, they are not permitted to accept an application directly from me.

Mr. RANGEL. I understand what you are saying, Judge. My point is this: If you were not a judge and you merely had a proposal, it makes good sense to me, whether or not when it is finally in Washington, it will be approved. I think you are saying once you find that out, you have to start all over from the beginning.

Judge ROSS. That is right.

Mr. RANGEL. If you were not a judge, there is no question in my mind you could reach certain city councilmen, you could reach certain State legislators that could put the necessary pressure on the city and State to move that application, to get it to Washington.

Judge ROSS. Well, the truth of the matter is, in my individual instance, I hand-carry them. I don't give them to councilmen because the criminal justice coordinating council in New York is an agency reportable to the mayor. Incidentally, I am a member of the executive board. So for the first time, they now get a negative vote once in a while.

As far as Arch Murray is concerned—and you know the commissioner as well as I do—I have no problems with Commissioner Murray. But it is another 2 or 3 months of delay. So by the time it comes through the crisis may be gone. The body may be cold.

Mr. RANGEL. You don't have a problem getting your affirmative vote on the proposal; it is only the time factor involved?

Judge ROSS. Because they may decide they have different priorities. After the Attica situation; the State of New York decided to put all of the LEAA funds they could get their hands on into the prisons.

Mr. RANGEL. You know as well as I do that legislators respond to whatever public opinion is at the time, and if there were some way—because you talk about the judiciary not being as equal as the other branches—and on the national level I think there has come to be only one supreme branch of government, and we in the Congresss are worried about that now. But if there were some way to have conferences on the local level so that the elected officials could better understand what the problems are you are facing so as to be able to respond and give you the tools to work with——

Judge ROSS. I will tell you this, Congressman, I wouldn't hesitate to walk over to city hall, the building I spent a good part of my adult life at. I speak to them and don't hesitate to go to Albany. I spent time in Albany on the voir dire bill and I pushed for the introduction of it on the floor to bring it to a vote in the Senate. The same day I pushed for its introduction out of committee in the assembly. Where it is going to go from there I don't know.

Mr. RANGEL. I don't mean to be continually complimenting Judge Ross, but I think one of the problems we have in the Nation is that most administrators in the courts come from private life to the courts without having the background and resources and information that the judge has.

One question, and I know you have to leave. I have never been able to get an answer to this question from any judge. Why is it that the judge must ask the defendant whether or not anything has been promised to him as a result of him pleading guilty, and why must the defendant say "No; nobody has promised me anything"?

Judge ROSS. It isn't true. I don't mean what you are saying isn't true. That isn't necessary. That is nonsense, Congressman.

Look, let me correct that. I am not saying what you are saying is not true. What you are saying is true. I have watched that play act take place too many times when I was sitting as trial justice and saying, "Wait a minute, I just said to that man, you are pleading to a D felony. You are facing zero to 7 years. The best you can hope from me, I won't give you the maximum, which means I give myself a leeway of zero to 6, if your probation report indicates what your counsel tells me. If it doesn't, fellow, I indicate a zero to 7 or withdraw your plea of guilty."

I think that is something, Congressman, that is lost in antiquity. They were doing that when I was admitted to the bar in 1942. It wasn't taught in law school.

Mr. RANGEL. The defendants have so little respect for the process, whether they are innocent or guilty, and when defense counsel is forced to advise his client to answer in the negative, or when the district attorney has to tell the defense how—especially new lawyers—to handle the plea bargaining, when the defendant expects a better deal, and he should get one if he pled guilty rather than going through the expensive and involved process of a trial, I just don't see why we can't deal with it.

Judge Ross. Congressman, I don't see that as a problem. I agree with you completely. I think you see less and less of that in the criminal courts of New York because I keep urging my justices, if you think a year is a proper sentence, or probation, or unconditional discharge, et cetera, et cetera, you say that. It is your responsibility. It is as simple as that.

I have no difficulty, of course, as you know. I am not sitting in the trial part now, but I have no difficulty saying to the defendant, "If you understand that your plea of guilty as I accept it makes you liable to zero to 15 years and I told your counsel it is my inclination to think in terms of 12½ to 15." You put it right on the record.

Mr. RANGEL. That is no bargain.

Judge Ross. Maybe to this man it was a bargain.

Mr. RANGEL. Twelve and one-half years instead of 15?

Judge Ross. No. He is pleading to a possible maximum of 15. The bargain he already received is getting the reduced plea. Not in every instance. The sentence has to fit the crime, to paraphrase a great operetta. But as far as this crime, "Have you made any promises," really what is involved there—and I think the genesis of it is the Constitution guarantees that a defendant has—we don't bludgeon him, whether it be the policeman extracting a confession or an overreaching court compelling a plea. That is just as wrong.

But I tell my judges, "Put it right on the record, by all means." By all means.

Mr. RANGEL. I hope that some of these reports you have could be made available to us, Judge. I don't know how much expense would be involved to get them at least to the New York City congressional delegation.

Judge Ross. We will get them out.

Mr. RANGEL. I think it will be a great help to us, and we could ask you to meet with the delegation from time to time.

Judge Ross. One of your Congressmen doesn't want to meet with me because he had an incident in the streets and the fellow jumped bail.

So he is mad at me. But the fact of the matter is, in that instance when they wanted to book the fellow on assault, he became very social minded and got him for public intoxication. I can't get excited about a fellow arrested for public intoxication, I am sorry.

Chairman PEPPER. Judge, as you heard us say, we are seeking in these hearings the most innovative programs and procedures we can find in the country that will be an example of an inspiration to other authorities to do a more effective job in the administration of justice. I think you have given us the further hope there will be more judicial administrators like you. That would be the most innovative thing that possibly could be done in all of the courts of this country.

I don't include the Supreme Court or appellate courts, but all of the trial courts that seem to be so badly in need of this sort of experience, confidence, drive, and dedication to the job that you have manifested in your excellent testimony here today.

We want to thank you.

Mr. RANGEL. Mr. Chairman, I would like to state for the record, the effect of this judicial spirit on the community. Recently, when we had elections, Judge Dudley, outside of the judicial responsibility of the court, assigned judges to various polling places to make certain that the election and the registration processes would be effective. I think this is something that makes people proud of public service.

Judge Ross. Thank you very much.

Chairman PEPPER. We will recess until 2 o'clock.

[Whereupon, at 1:30 p.m., the committee recessed, to reconvene at 2 p.m., this same day.]

[The following material was received for the record:]

[Excerpt from the "Nine-Month Report of the Criminal Court of the City of New York," January–September 1972]

CRIMINAL COURT OF THE CITY OF NEW YORK,
New York, N.Y., January 9, 1973.

LETTER OF TRANSMITTAL

To: Presiding Justice Harold A. Stevens; Presiding Justice Samuel Rabin.
From: Mr. Justice David Ross.
Re: Report for First Nine Months of 1972.

Pursuant to a policy of submitting quarterly reports on the progress of the Criminal Court, I am forwarding this Nine Month Report.

Because an Annual Report is due to be prepared soon, this report, unlike the previous ones does not include details of operations but is limited to statistical data.

Again I am very pleased to inform you that the Criminal Court's record of performance has continued to show improvement during the first nine months of 1972. When compared to the first nine months of 1971, the current period registered the following significant achievements:

Pending cases down 40% from 28,068 to 16,695,
Cases awaiting sentence down 7% from 3077 to 2852,
Defendants in detention awaiting court action down 37% from 2831 to 1797,
Average duration of cases down 44% from 6.29 weeks to 3.51 weeks,
Average length of adjournment down 47% from 2.75 weeks to 1.45 weeks,
Warrants issued down 31%,
Hearings conducted up 27% from 16,620 to 21,179,
Filings down 9% from 180,737 to 164,208.

[Excerpt from "Analysis of the Night and Weekend Arraignment Parts in the Bronx and Queens Criminal Courts," February 1973, prepared by the New York City RAND Institute]

SUMMARY

With the aid of a grant from the State Office of Planning Services, Division of criminal Justice, the New York City Criminal Court opened night, weekend, and holiday arraignment courts, or "parts," in its Bronx and Queens branches on September 27 and October 4, 1971, respectively. Prior to this time, these branches operated only during regular daytime hours; defendants to be arraigned at night or on weekends or holidays were transported to either Manhattan or Brooklyn.

The problems encountered under this system included: especially heavy burdens in the Manhattan and Brooklyn night parts, few dispositions at arraignment in Bronx and Queens cases taken to the other counties, and high police transportation costs. In addition, the transfer of cases between counties caused delay, confusion, wasted effort, and less effective defense representation.

The added cost of operating the new parts has been about $1.2 million per year. However, our analysis shows that, in addition to solving the above problems, the new parts have produced substantial additional benefits: estimated direct savings to criminal justice agencies in excess of $1.3 million per year; reduced defendant time in detention by an estimated 82 man-years (an average of about 5.5 days for each of 5500 defendants) annually; reduced cost and inconvenience to witnesses, police officers, and defendants through the elimination of some 30,000 unnecessary court appearances each year; improved quality of judicial decisions.

Among our recommendations are the following:

The new parts should be continued in operation, since they are yielding substantial net benefits.

The excess capacity in the new parts, particularly at night, should be utilized by (1) scheduling additional post-arraignment appearances in these parts, and (2) shifting the night hours of operation later. In the Bronx we suggest exploring the possibility of holding night court in the Supreme Court building, which is in a better location than that of the Criminal Court building.

The use of Civil Court judges on weekends and holidays should be discontinued, since the indirect costs are more than the saving.

The practice of rotating inexperienced personnel through the weekend parts should be carefully reviewed.

Means of smoothing the delivery of defendants to the arraignment parts by the police should be developed.

Legal Aid Society representation at arrangement should be extended to all defendants.

[Excerpt from "Annual Report of the Criminal Court of the City of New York," 1971]

CRIMINAL COURT OF THE CITY OF NEW YORK,
New York, N.Y.

LETTER OF TRANSMITTAL

To: Presiding Justice Harold A. Stevens; Presiding Justice Samuel Rabin.
From: Mr. Justice David Ross.

The Annual Report of the Criminal Court of the City of New York is submitted herewith.

This is the first annual report of its kind to be submitted by this court. Heretofore the court's annual report contained mostly a statistical summary of court business and contained no information concerning the court's administrative programs.

Although the court plans at a later date to prepare and distribute a more detailed statistical report similar to the previous annual reports, I believe this new type of report will be more informative and representative of the activities of the court in the year 1971. Also, the previous report required a great deal of time to prepare due to the detailed statistical work involved and thus was often not available until a year or so after the close of the year being reported. I hope that we can reduce that delay with the assistance of the New York City Judicial Data Processing Office, upon whom we are placing complete reliance for the production of that report. In the meantime we have developed a new statistical

program that is intended to be a more useful management tool and provide data on a more current basis than was available in the past.

That new statistical system, and the other programs reported on herein reflect the work of the court in 1971.

INTRODUCTION

The Criminal Court of the City of New York is part of the Unified Court System of the State of New York. As such it is subject to administrative supervision by the Administrative Board of the Judicial Conference of the State of New York and the Appellate Divisions of the First and Second Judicial Departments. Funds for the operation of the court are supplied by the City of New York. The court's current budget for fiscal year 1971 1972 amounts to $14,125,789; this is only 3% more than the previous fiscal year when the budget was $13,655,027.

The Appellate Divisions, by a joint order designate the Administrative Judge who is responsible for the administration of the court. His management policy is implemented by the court's Executive Officer. Effective January 1, 1971, Mr. Justice David Ross was designated as Administrative Judge succeeding Mr. Justice Edward Dudley who had served as Administrative Judge since January 1, 1967. The position of Assistant Administrative Judge was eliminated. Judge Vincent Massi, Assistant Administrative Judge since 1967 was returned to judicial duties and assigned to sit as an acting Supreme Court Justice. On February 5, 1971 Mr. Justice David Ross named Lester C. Goodchild, former Administrator of the court, to fill the newly created position of Executive Officer.

Due to administrative reorganization, lines of authority have been tightened. Supervising judges designated for each county are responsible for the more effective utilization of judicial personnel assigned to the various court parts. Assistant Chief Clerks in each borough, responsible to the Deputy Executive Officer in charge of operations have achieved tighter controls over the non-judicial personnel operations in the courts. Deputy Executive Officers in charge of administrative operations, planning, and court operations have been given complete control in their areas. However, the court is handicapped by not acquiring an adequate in-house analysis capability and is compelled to rely almost entirely upon voluntary and makeshift substitutes for a much needed "research, planning and implementation staff." The Executive Officer, as second in command directs all line and staff administrative functions of the court. To assist him a new position of Executive Assistant to the Executive Officer has been created.

The court is authorized to have 98 judges. Judicial positions were kept filled during 1970 and 1971 with but one (1) vacancy existing at the end of 1971 and two (2) at the end of 1970. The names of judges of the court who served during 1971 are listed in Exhibit I. Judges are appointed by the Mayor, and serve 10 year terms and receive a salary of $30,750 per year.

The court has jurisdiction over felonies, misdemeanors, violations and traffic infractions committed within New York, Kings, Queens, Bronx and Richmond Counties; the five counties which comprise the City of New York.

During the calendar 1971 the court's intake amounted to 236,600 arrest cases plus 378,000 summons or appearance ticket cases. The number of arrest cases disposed of amounted to 256,122. Summons case disposition figures are not available at this time. Arrest cases pending disposition as of the end of 1971 amounted to 18,875 cases and there were 2,852 cases awaiting sentence. More detailed statistical reports appear in Exhibit II and in the appended Progress Reports.

The court's judicial operations are carried out in some 66 parts which handle arrest cases and 8–9 parts which handle summons cases all of which are housed in 13 court houses. Exhibit III contains a list of the courthouses in use during 1971.

The court has 1092 authorized non-judicial employees all of whom are civil service employees. A list of the number of positions and the respective civil service titles appear in Exhibit IV.

The 1092 figure represents a reduction from 1111 authorized positions for 1970 and 1122 authorized in 1969.

While authorized positions have decreased 3% since 1969, non-judicial position vacancies have increased by 12% rising from 127 vacancies in 1969, to 135 in 1970 and reaching a high of 143 vacant positions in 1971. Thus the court operated in 1971 with 13% of its authorized positions unfilled.

SUMMARY—"HOW THE COURT WAS TURNED AROUND"

No one factor can be pointed to, which stands alone as the reason for the Criminal Court reaching its present capability of managing its caseload in contrast to the many other criminal courts in the state and country which are reported to be continuing to build backlogs and increase delay in bringing cases to trial. The fact remains however, that the Criminal Court of the City of New York "turned around" in 1971 and efforts ought to be invested in the conduct of an in-depth evaluative study of changes and programs instituted in 1971. This report is not of that nature. Such an undertaking by this court is not presently feasible because:

Many of the programs are still in the experimental or implementation stage.

Full and complete statistical data has not been collected.

Most innovative programs were not initially designed as controlled experiments.

The court lacks sufficient time and manpower to conduct and employ evaluative study techniques.

The purpose of this report then is to list change-oriented programs conducted in 1971 which were adopted and implemented because the court managers firmly believed change was needed and, if undertaken, would offer reasonable alternatives to previous practices and procedures.

In the first few months of 1971 the new administration spent a great deal of time gathering and sifting through the many suggestions, comments, criticisms, reports and studies that abounded concerning the court and its status and role in the criminal justice system. One of the most important of these studies is the Organization Study by the Economic Development Council Task Force. See Exhibit V. That Study made it abundantly clear that new managerial leadership could not be effective without giving adequate and sufficient attention to the:

Establishment of a management team capable of assisting the new Administrative Judge in carrying out his role as "change agent".

Fostering a cooperative atmosphere among all the members of the criminal justice system to make changes and improvements possible.

Statement of goals to be attained.

Giving management a means of measurement of goals reached.

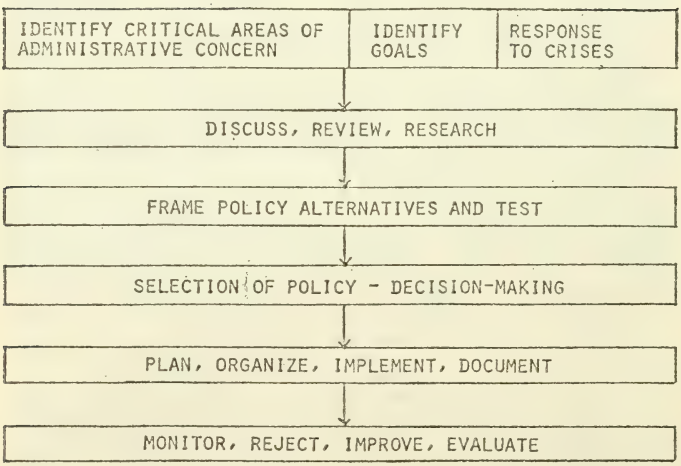
Design of an information system to monitor performance and productivity.

Improvement of communication between court management, judges and non-judicial personnel.

Promotion of a sense of accomplishment, reward and achievement among the court personnel.

Armed with the knowledge of the changes that were being recommended from many quarters, the court could then employ the above management techniques to select and introduce those changes which possessed the greatest potential for "turning the court around". Change-oriented programs were selected by the Administrative Judge and implemented and that process is continuing. The following chart, although oversimplified presents a summary of the entire process:

COURT MANAGEMENT FLOW CHART



The major programs undertaken by the court in 1971 are described in a series of progress reports which have been submitted to the Appellate Division on a near quarterly basis. Those programs were selected for implementation early in 1971 with the hope that if implemented, the Criminal Court might improve its ability to cope with the administrative and case processing problems that were confronting and nearly overwhelming the court. The results achieved following the implementation and continuation of those programs were beyond expectation.

A smooth-working and effective management team has been put together.

The calendars of the Criminal Court of the City of New York are now current.

Judicial "bench time" now averages 5.25 hours—more than double reported figures for previous years.

There are fewer defendants in detention awaiting court action than at any time since 1967.

Cases pending disposition have been reduced so that they now are about the same as the monthly intake.

Delay in case processing has been controlled so that on the average, cases are now being disposed of within 4½ weeks.

The number of appearances and length of adjournments have been reduced.

The size of the calendars is now under control and manageable.

The innovative programs that were reported on in the progress reports (pp. PR1–156) although implemented under crisis conditions have crystallized as a total system with the primary orientation toward change of court operations. There has been a total acceptance, at every level of court management, of the need for change.

The purpose of this summary is to relate the individual programs to the results sought to be achieved. To accomplish this the programs will be grouped for discussion purposes under the following headings, each of which points to a goal selected, a crisis responded to or an identified area of critical administrative concern:

Administrative.
Case Processing.
Resource Allocation and Utilization.
Coordination.
Performance Monitoring.
Improvement of Judicial Performance.
Physical Plant.
Service to Defendants and Public.
Improvement of Non-Judicial Performance.
Records Management.

1. Administrative

Grouped under this heading are such programs as appointment of supervising judges; appointment of executive staff; reorganization of all administrative operations of the court; regular meetings and discussions with administrative staff, judges and supervising judges; reorganization of court bulletin and administrative issuance procedures (See Exhibit VI for index to 1971 administrative issuances); consolidation and relocation of all Executive Office staff to the third floor at 100 Centre Street; redesign of statistical reporting system to make it more current and to include all necessary data to prepare the newly designed monthly Comparative Statistical Profile (CSP) reports which are discussed more fully in the Progress Reports (p. PR–141) and in Exhibit II; continued planning sessions with the New York City Judicial Data Processing Office to complete programming of computer support to statistical and management report system; coordination and review of work of the Economic Development Council Task Force in its documentation and analysis of Queens County operations, work flow, procedures and work measurement studies.

Each of the programs were aimed at improving the court's ability to make administrative decisions, solve problems and operate the judicial machinery. However, it had to be coupled with the indispensable element of Leadership. That Leadership in full measure was provided at every level of management.

2. Case processing

Included under this heading are such projects as establishment of city-wide all purpose parts (which are divisions of the court into which a mix of cases are sent for action after arraignment to remain there before the same judge, defense counsel, etc. until final disposition), creation of additional arraignment parts

throughout the city to include hearings, trials and motions; continuation of the federally funded Master All-Purpose Part experiment designed to test improved case readiness procedures whereby cases are fed to the judge only when judicial action is required; reduction of case flow to courtrooms by dismissal at intake (in complaint room) of cases the District Attorney deems not prosecutable; special calendar call of "old cases" with purpose of disposing of them; completion of youthful offender eligibility examinations on same day requested by judge instead of adjournment to future date; requirement that a prisoner against whom a new arrest warrant has been lodged (where a peace officer is the complainant) be arraigned immediately so that the case can proceed; exchange of Criminal court rooms in Brooklyn court house which lack access to detention facilities for Civil court rooms which have such access so that more Criminal Court parts can process jail cases; establishment of night and weekend courts in Bronx and Queens to reduce burden in Kings and Manhattan resulting from handling Queens and Bronx arraignments as well as their own. (See Exhibit VII which is a full report on these newly created courts); prescription of penalties for unreasonable adjournment and delay in order to reduce adjournments and speed dispositions; bail review every two weeks for defendants detained over 30 days waiting disposition.

These programs were intended to improve movement and flow of cases through the judicial process with reasonable speed and opportunity for judicial action.

3. Resource allocation and utilization

Projects which fall under this heading include consolidation of three separate summons parts in each borough into a single summons part conserving personnel, court rooms and judges and improving productivity; assignment of judges and non-judicial personnel to boroughs based on relative workloads; creation of a central records unit to be responsible for city-wide operations of fingerprinting, microfilm storage, and disposition reporting to Judicial Conference in order to achieve standardization, control and improved utilization of employees; establishment of Executive Cabinet of key administrators to review personnel assignments, promotions and policies; documentation of special needs to overcome "job freeze" and vacancy controls.

Good management calls for careful utilization and conservation of resources so that productivity is kept high and the workload and resources are evenly matched. Limited local government funds have imposed an additional burden on court managers by forcing managers to "ration" resources and give careful attention to setting of priorities. The above programs are an attempt to meet this situation.

4. Coordination

Grouped under this heading are the various efforts made to improve court operations by giving adequate attention to outside agencies and institutions which can impact court operations. Thus the court prepared legislative reports to enable it to keep abreast of new laws being proposed and make known its position regarding their effect on the court. Frequent conferences are held by administrative staff with outside agencies such as Department of Correction, Police Department, Legal Aid Society representatives and District Attorney to discuss changes and problems. Continuous discussions are held with planning and other officials of Judicial Conference concerning improvement of Disposition reporting procedures. This had led to cooperative efforts to obtain federal funds for the hiring of personnel to eliminate the 160,000 backlog of disposition reports. There has been constant interchange of information and options between the court and the Criminal Justice Coordinating Council so that the court both contributes and receives data and planning considerations concerning all units of the Criminal Justice System. Special attention was given to the problems posed as a result of legislative changes in the arrest record procedure giving the task to the New York State Identification and Intelligence System in Albany. These problems included design of arrest record report, delay in receipt of report, lost and misdirected inquiries, poor quality of report and incomplete records. Although some of these problems continue, some improvement appears likely due to coordinated efforts between court, NYSIIS, Police, CJCC and others.

The following is a partial list of the units and agencies with whom the Court has had frequent communication and exchange of information concerning problems of more than a routine nature:

Police Department
NYSIIS
Public Works
District Attorney from five counties
Department of Correction
Department of Motor Vehicles
Office of the Mayor
Appellate Divisions, First and Second Department
Judicial Conference
Legal Aid Society
Criminal Justice Coordinating Council
Parking Violations Bureau
Bureau of the Budget
Comptroller's Office
Secretary of State—Albany
City Department of Law
State Police
Department of Purchase
Narcotics Addiction Control Commission
Office of Probation
Bellevue Hospital
Kings County Hospital
State Department of Correction
City Department of Personnel
Office of Deputy Mayor
City Council
State Investigation Commission
Supreme Court
Civil Court
New York City Judicial Data Processing Office
Office of State Crime Control Planning
Temporary Commission on Courts
Office of the Governor
State and City Department of Mental Health
Vera Institute of Justice

Even this list is not complete but it clearly points to the importance of attending to the coordination aspect of court administration.

In the case of the new night and weekend courts and the new procedures for determination of fitness to stand trial (CPL article 730 effective July 1, 1971) neither program could have achieved the success indicated without extensive attention to multi-agency coordinating efforts.

5. Performance monitoring

Included in this category are such projects as day by day reports on prisoner arrival time, design of new statistical system (CSP Report), report of opening and closing of court, reports on absence or lateness of police officers for court appearance; time record sheet on police officer arrival at each stage of case processing, special daily reports on night court and weekend court funded by federal grant; weekly report on the number of cases dismissed in complaint room by District Attorney, revised report on cases reviewed at special bi-weekly bail reviews, report on time delay in furnishing NYSIIS criminal history sheet from fingerprint record.

The year 1971 saw a substantial increase in the number and kinds of reports kept to inform management of the effectiveness of measures taken, and to direct attention to problem areas that it must know and deal with in order to set and achieve standards of performance. However, each report has a specific purpose and was usually in response to a problem or crisis situation which faced the court in the early months of 1971. Attention was given at the same time to developing timely standardized monitoring methods. The basis for this

will be Comparative Statistical Profile (CSP) report which is designed to rank and compare monthly performance of each borough in selected areas, record cumulative data and establish judicial man day measurements enabling evaluation of per part day performance. Continued development in this area is vital and will aid in resource allocation.

These reports have been utilized by the supervising judges and assistant chief clerks to give them a basis for measuring their performance vis-a-vis the total city system and other boroughs.

Because the data for the new CSP system is available on a more timely basis (usually by the 15th of the month following the reporting period), management's evaluation of the information and response to problems can be more effective.

6. Improvement of judicial performance

Underlying all the efforts and projects in this area is the tenet laid down by the administrative judge that the first priority of court management is to service the judicial officers in their task of processing the caseload of the court to the end that prompt and effective justice is administered.

Thus, such projects as reassigning the clerk to each courtroom; reducing judges' workload through establishment of additional day, night and weekend arraignment parts and District Attorney termination of cases in the complaint room; providing law student interns to work with judges and providing them with legal assistance; establishing a judges' prison visitation committee to see at first hand and report on prison conditions; instituting improved "calendar tickler" so that daily calendars are evened out and reduced to a more manageable number; transferring responsibility for prompt competency determination to mental health agency thus relieving judge of the burden of selecting appropriate hospital or clinic; completing youthful offender procedures at initial appearance so that adjournment is not required; providing judge with continuity of control over his cases by converting to All Purpose Parts and establishing long term assignments to those parts; improving judge's control over calendar by giving him new means of enforcing compliance with speedy trial and reducing delay and continuances through the use of sanctions and adjournment guidelines; establishing an orientation program for new judges (See Exhibit VIII for the content of the most recent of these programs); encouraging prompt filling of judicial vacancies so that a full complement of judicial officers is available for equitable distribution of workload; designing improved "record of court action" form to improve case history records for judge; holding regular meetings with judges and their respective supervising judge and in banc meetings with Administrative Judge to discuss problems and introduce and explain new administrative and procedural policies; holding seminar on new Criminal Procedure Law and distributing materials concerning CPL changes and new procedures.

Judicial morale has greatly increased as a result of this program and the efforts in 1971 to reduce backlog, even out workload, establish more manageable daily calendars, improve case flow (so that judges spend less time waiting for cases to be ready for judicial action) and provide judges with more "judicial muscle" to eliminate delay, continuances and procrastination by parties to a case.

7. Physical plant

Procedural changes have put added burdens on the already inadequate courthouse facilities. Programs had to be planned which could quickly adjust existing plant to new procedures such as all purpose parts, new arraignment parts, etc. One such program was the design and construction of benches and jury boxes that were both collapsible and portable so that as new parts were opened or moved, they could be set up for judicial proceedings without usual construction delays; 15 such portable benches and 15 portable jury boxes were built and are now available for use. Courtrooms can now be converted into jury parts almost instantly and vacant rooms can become courtrooms overnight. As previously mentioned exchange and sharing of courtrooms has been undertaken between the Criminal Court, Supreme Court and Civil Court.

Long range planning for space utilization is continuing with construction already begun for a new building for the Bronx, and master planning is almost complete for Manhattan. See Exhibit IX for summary of this plan which is being prepared under a Safe Streets Grant by Dr. Michael Wong, a court space consultant and architect.

A great deal of time and attention has been given to the space problem by the court and the Department of Public Works.

Programs were completed to consolidate all summons parts into a single part and under one roof. Thus the courthouse at 52 Chambers Street which housed summons parts is no longer used (except for record storage) as a result of the consolidation of the Manhattan summons parts at 346 Broadway.

8. Service to defendants and public

Included under this heading are such projects as posting calendars for all parts on two new bulletin boards on the main floor lobby; preparing and posting new signs for all parts; arranging for defendants appearing on station house summons to report to a central location maintained by the issuing agency—from there to be taken to court by the issuing agency representative (rather than going directly to the courtroom and waiting around for a case to be called about which the court had no case papers on file); giving defendants notice in English and Spanish of their rights, bail conditions, trial date, adjourned part and location; continuing bi-monthly bail review of defendants detained over 30 days permitting judicial review as to possible release, reduction of bail or accelerating trial date; endorsing commitment order (of defendants ordered remanded to Correction) with notice of need for possible medical attention for defendants suspected of being sick, addicted or otherwise disturbed; requiring defendants that they be produced in court for arraignment within 24 hours to encourage immediate arraignment and possibly reduce abridgment of prisoner's privileges automatically invoked where warrant is lodged; reducing overnight holdovers of defendants by providing night and weekend courts in Queens and Bronx thus enabling speedier release of defendants whom court ROR's, releases on bail, or discharges at arraignment.

9. Improvement of non judicial personnel performance

A concerted effort was made to inaugurate programs to improve the performance and morale of non-judicial personnel. Included under that program were such projects as obtaining from the City, permission to make promotions over and above those permitted under the job freeze—some 94 employees were rewarded for performance through promotion from the civil service list of eligibles; inauguration of an employee newsletter in 1971 which provides an informal in-house information medium operated by the employees with particular attention to bringing the far-flung court locations into closer contact through the monthly publication; preparation and issuance of certificates of promotion to employees to provide a remembrance and honor them upon their achievement; design and planning was completed for establishment of a court employees training program starting with a program for Uniformed Court Officers, the most important entrance level position in the court. Director and Assistant Director of training positions were established and filled to operate the program and funds were received from the Administrative Board of the Judicial Conference to purchase training materials; inauguration of a series of administrative bulletins and directives to keep the employees informed of operational, administrative and personnel policies.

Successful completion of restructuring the parts and reducing calendars and backlogs could not have been possible without the loyal and dedicated non-judicial employees' contribution; success in those areas served to improve employee morale.

10. Records management

Although some limited efforts were undertaken in this area a great deal remains to be done. However, most records management problems will eventually be approached through a complete revision of the manual procedures replacing them with automated records management systems. Following the completion of the procedural revisions and successful introduction of calendar control, attention can now be turned to introduction of electronic data processing changes. Design of a total record management system has already been undertaken. Preliminary work and testing was undertaken in 1971 in conjunction with the New York City Judicial Data Processing Office (JDPO) but further development had to be delayed until 1972 due to JDPO's shortage of system design personnel. See Exhibit X for a draft proposal concerning that system.

Study is continuing in the microfilm area and several systems approaches have been studied.

Installation was completed for storage on microfilm of original stenographic notes. That system, perhaps the first of its kind in the country, involves immediate filing of original stenographic tapes (similar to adding machine tape) to be

retained as the court's permanent and central record of the original minutes of all court proceedings. The original tapes are returned to the court stenographer for his later use in transcribing work. This system protects against a repeat of the loss and destruction of these important original records that occurred in 1969 as a result of a bomb explosion at 100 Centre Street when 90 days of trial and arraignment minutes were totally or partially destroyed.

Projects were also completed in the design of new and simplified court records including docket books, summonses and appearance tickets, fines receipt and register procedures, case backs, etc. Lack of trained forms-design personnel greatly hinders the work of the court in this important area.

Perhaps the most important change (that offers to pay future dividends) was the creation of a Central Records Bureau and the appointment of a Director to assume overall responsibility for citywide records management problems and programs.

As previously mentioned, a special federally funded project was undertaken to obtain funds to pay clerical help to complete the backlog of some 160,000 disposition records for the Judicial Conference. Responsibility for direction and management of that project was placed in the Central Records Bureau which greatly contributed to its success.

[Press release dated Apr. 22, 1973]

Presiding Justices Harold A. Stevens and Samuel Rabin, Appellate Divisions, First and Second Judicial Departments, released a report prepared by the well-known Certified Public Accounting firm, Peat, Marwick, Mitchell & Co. measuring the financial impact of administrative improvements instituted by Administrative Judge David Ross in the New York City Criminal Court from January, 1971, through June 30, 1972. The Report and related study by this accounting firm was made at no cost to the courts or the City.

According to the findings and conclusions of the Peat, Marwick report:

The Criminal Court's administrative improvements over an eighteen-month period ending June 30, 1972, have produced an estimated net *annual* saving to the City of over $6.7 million.

Reduction in Criminal Court backlog of cases and of defendants in detention during the above-mentioned period resulted in an estimated *one-time* saving to the City of over $48.5 million.

Annual cost savings estimated to the City are summarized in the Report as follows:

	Estimated	
	Cost	Savings
Night and weekend courts	$1,750,374	
Police vehicle operation		$122,064
Additional criminal court parts		1,539,820
Additional supreme/civil parts		555,594
Controllable personal service cost		163,088
Police time during post arrest		144,089
Reduction of defendants in pretrial detention		6,000,000
Total	$1,750,374	8,524,655
Less cost		−1,750,374
Estimated excess of annual saving over cost		6,774,281

Concerning one-time savings, the largest item represented the projected cost of constructing a new detention institution which would have been needed to house at least 1,000 more defendants awaiting trial. A reduction in the average number of Criminal Court defendants in pre-trial detention by at least 1,000 eliminates the need to construct and operate such a new detention institution to comply with standards agreed to by the city.

* * * * * * *

The Peat, Marwick Report points out that there were many other areas of possible savings which could not be verified. Statistics or data needed were not kept or were unavailable. This was true, in particular, with respect to the absence of Police Department statistics concerning police time spent in making court appearances.

The Peat, Marwick analysis was based on a time period which began in January, 1971, and ended on June 30, 1972. The time period was chosen to determine the impact of the first eighteen months of an administrative reorganization of the Criminal Court carried out by Administrative Judge David Ross under the direction of the Appellate Divisions. Because Criminal Court dispositions exceeded new filings of cases in January 1971, for the first time in several years, a strict standard was adopted by using that month as a base point from which to estimate subsequent costs savings through June, 1972.

The Criminal Court backlog has continued to decline substantially since June, 1972. As observed in the Peat, Marwick Report, the average number of prisoners held in pre-trial detention has declined steadily to less than 1,200 in January, 1973.

* * * * * * *

AFTERNOON SESSION

Chairman PEPPER. Judge, I am sorry we are a little late. We had to go and vote. But I don't want to keep you longer than we can possibly help. We are so grateful to you for coming.

Mr. Counsel, you may proceed.

Mr. NOLDE. Thank you, Mr. Chairman. Our next witness is Judge Lisa Richette, who has had a distinguished career and brings to the bench a unique blend of experience. A Phi Beta Kappa graduate of the University of Pennsylvania and a Yale Law School alumni, Judge Richette began her legal career as an assistant district attorney in Philadelphia, and in 2 years she was named chief of the family court division of that office.

After 10 years as a prosecutor, Judge Richette began teaching law at several universities and became an eminent defense attorney specializing in juvenile offenders. In 1971 she was appointed judge of the Philadelphia Court of Common Pleas, which is the State court of original jurisdiction for the county of Philadelphia; namely, the basic trial court for civil and criminal cases. Judge Richette has been commended by several Philadelphia organizations for her outstanding contributions to the community and to the bench.

We are delighted to have you here, Judge. We would be happy to have any opening remarks you care to make.

STATEMENT OF HON. LISA A. RICHETTE, JUDGE, COMMON PLEAS COURT, MAJOR CRIMES DIVISION, PHILADELPHIA, PA.

Judge RICHETTE. Thank you very much.

Chairman PEPPER. Judge, I share the fraternity of Phi Beta Kappa with you, but I had to go to Harvard to get it.

Judge RICHETTE. Let me say, first of all, Chairman Pepper, you were a great inspiration to me in my youth. You were one of my heroes. There are a great number of people in my generation for whom you were a very important symbol of courage. It is an honor to be in your presence.

Chairman PEPPER. Thank you.

Judge RICHETTE. I did apply to Harvard Law School, sir, but they turned me down on the basis of sex.

Chairman PEPPER. Another one of its mistakes.

Judge RICHETTE. They admitted women the next year.

Chairman PEPPER. I am glad they corrected that error.

Judge RICHETTE. I am very happy to be here because I think the whole problem of street crime is a very urgent one and it has been obscured by a great deal of rhetoric and a great deal of misinformation, which is helping to shape public misunderstanding about the nature and process of our judicial system, which I believe is very fundamental to the functioning of our whole democratic process.

And it is very interesting that today is Law Day because it seems to me that, in our terror and in our fear, a fear that is being consciously generated by certain political forces in our society, we are seeking what are basically antilegal and antidemocratic solutions to what has to be, in the last analysis, a human problem.

I have had a very long period in working with deviant people, people who are labeled by our society either "sick" or "criminal," depending very often on which socioeconomical state they occupy. This is especially true in the case of children. The children of the rich, middle-class children, who commit antisocial acts, are viewed in the majority as being emotionally ill and they end up in psychiatrists' offices, whereas the children of the poor who commit identical or parallel acts of behavior end up as human products in our juvenile justice system.

I want to say that while I was attending Yale Law School, which happily did admit women when I applied, I worked for 3 years around the clock as a cottage parent to a group of emotionally disturbed children who were committed by court order to an institution that was "therapeutic," called the Children's Center in Hamden, Conn.

While these children attended their classes, I went to my law classes. This was a very valuable and important experience because it gave me something that I think everyone who is involved in the criminal justice system, and particularly those who have to pass the sentences, should have and that is what I would call a longitudinal view of the offender and the causes of his behavior.

So spending 3 years with children gave me an opportunity to see antisocial behavior at close range or on a day-to-day basis. I came to have a feeling about what kind of people were caught up in compulsive, repetitive patterns and what kind of people could break out of these patterns.

I then had 10 years in the district attorney's office, and I can fairly say I watched a whole generation of Philadelphia ghetto children pass from childhood to maturity because, in those 10 years, we saw about 10,000 cases a year and since the recidivism rate in our juvenile court is somewhere close to 75 percent, I saw many of the same children, starting in at age 8, for breaking into car meters, and ending up at age 15 or 16 as gang members, charged with assault, and even homicides.

Because I was in that court day in and day out, I really got to know these children and almost on a first-name basis. When I was appointed to the bench, sir, I thought that probably I would not go to the juvenile court—there is a reverse application to the Peter principle that operates in human affairs—so I got assigned to adult trials, the major trial division, and there I saw these very children whom I called the "throw-away children" grown up. And that was literally true in many cases.

People would come into my court and they would tell their attorneys that I had been the assistant district attorney in a case involving them,

and in several cases I had defended these children and they knew who I was.

So the population represents a continuum in the criminal justice system and it starts in the juvenile justice system and—well, I think you cannot deal with the phenomenon of street crime and ignore the realities of the juvenile justice system.

Very recently I was on a panel with our police commissioner, Joseph M. O'Neil, and he gave the audience some statistics, just a week ago, that were the most recent ones he had culled. I thought perhaps you would be interested in knowing that in Philadelphia, 25 percent of all the murders are committed by juveniles, 40 percent of all of the robberies are committed by juveniles.

Chairman PEPPER. Twenty-five percent of the murders?

Judge RICHETTE. And 40 percent of the robberies and 39 percent of the burglaries.

Chairman PEPPER. You are describing juveniles of what age?

Judge RICHETTE. Under 18 under our law.

Despite these percentages, only 16.8 of all LEAA funds last year, nationally, went to juvenile programs; and in Philadelphia the percentage is even smaller; it is closer to 14 percent.

So that I feel we ought to look at the system, or nonsystems, if you please, this criminal justice system, which I truly believe is a nonsystem, as a continuous nonsystem. I urge that in all recommendations that this committee will make that it will bear in mind that the seeds of antisocial conduct are planted in early youth.

Chairman PEPPER. If I may interrupt you, you heard the buzz. I have to go over and vote. This is the last vote so we won't be interrupted any more. We are so much interested in what you are saying. We will return in a few minutes.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Judge, we again want to apologize to you for our delay. We won't be interrupted any more so we are looking forward to the pleasure of hearing you.

One of my distinguished colleagues just arrived. Would you repeat those figures about youth crime in Philadelphia?

Judge RICHETTE. Mr. Mann, the official figures of the Philadelphia Police Department, given to me by Commissioner O'Neil, are that last year 25 percent of all of the murders, 40 percent of all of the robberies, armed robberies, aggravated robberies, and 39 percent of all of the burglaries were committed by juveniles in Philadelphia.

Chairman PEPPER. What year was that?

Judge RICHETTE. That was 1972, sir.

Mr. MANN. Meaning 18 years or younger?

Judge RICHETTE. Yes; 18 years or younger. And I was saying that despite these percentages, 16.8 percent of the LEAA funds last year, nationally, went to juvenile programs, and ever a smaller percent in Philadelphia were used for juvenile programs.

We had a recent thing occur in Philadelphia in which a 72-year-old woman was raped and the police finally apprehended the culprits. They turned out to be two 12-year-old boys. Under our law, 12-year-olds cannot be institutionalized so the court had no alternative but to place them on probation.

Two nurses at the university, two students at the University of Pennsylvania, were brutally raped on the street. They were pulled out as they were walking along the campus lane and were raped, and their assailants were 14- and 15-year-olds, three of them.

So that street crime is largely the province of the young. I have been sitting in the major felonies, as I said to Chairman Pepper earlier, and I would say most of the defendants I have seen in the 16 months in which I have been in this court are men and women between the ages of roughly 19 and 23. The median age would be about 21. All of them, except for those who are addicted as a result of Vietnam experiences, have juvenile records.

Chairman PEPPER. Judge, I saw some figures, if I remember them correctly, in a report of the conference called the "Dean Pound Conference."

Judge RICHETTE. Right.

Chairman PEPPER. If I remember correctly, the figures were that 25 percent of the serious crimes, index crimes, were committed by people under 18 years of age; about 40 percent by people under 21; 51 percent by people under 25. Then I have seen at another place, they figured about two-thirds of all crime is committed by people under 28. Do those figures seem about right to you?

Judge RICHETTE. Yes, they do. Absolutely. They coincide completely with my own experience.

I also want to point out to you, Mr. Pepper, I wrote a book about the way in which our juvenile justice system largely sweeps these problems out of sight, and these people, of course, grow and then they become statistics in the criminal justice system. That book is called "The Throwaway Children."

I will be very happy to send you a copy of it. In it I culled many, many more statistics that illustrate this point.

Chairman PEPPER. Thank you.

Judge RICHETTE. Going back to what I was saying, the criminal justice system has to be viewed as a continuum that takes into account the juvenile justice system. I was also saying that it is largely a nonsystem, in that the component parts of the system are mainly operating autonomously, are not in communication with each other, and the most important component of the system, which I believe to be the judiciary, is absolutely out of control with what happens before the case gets to the courtroom and what happens after it leaves the courtroom.

Now I understand this morning you had some recommendation that the judge also not be in control of the very important part of what goes on in his courtroom; namely, sentencing.

So that there has been a loss of control, a dispersion of control in the system away from the judiciary. Why do I think it ought to stay with the judiciary? Because I think that it is the judiciary that has the complete picture of the whole process. It is the judiciary that has the duty to uphold community values, community security, and all of the rest, balancing them with individual due process values and also, I would submit to you, that I think if there is one group in this society that has the duty to take the long view, the overview, it is the judiciary, that we cannot succumb to simplistic solutions.

I would say warehousing of people is such a simplistic solution.

The judges ought to be doing two things. They ought to be making sure that people get full due process rights in the criminal system.

If you had the opportunity to read Richard Harris' theories in "The New Yorker," 2 weeks ago, he has done a series on the way that criminal justice operates in Massachusetts. The first article deals with experiences in one court, where due process just absolutely goes out the window. That article ends up with the quotation of one judge who threatened to hold a lawyer in contempt of court if he mentioned the Supreme Court of the United States once more.

Fascinating articles, Mr. Harris, of course, is a very astute commentator on the legal scene. But the judges must uphold these due process rights because if people do not get justice in our courts, the whole system is a system of criminal injustice.

The second thing is that I really believe the judiciary has the duty to bring about all the substantive reforms that are necessary in our correctional and therapeutic systems.

Chairman PEPPER. My understanding is that the two things that Hitler first abolished as he was establishing his dictatorship were the courts, the right of access to the courts, and the labor unions.

Judge RICHETTE. Right. That is it exactly. And the press right behind the courts and the labor unions.

So that it seems to me the most sensitive and difficult part of a judge's work is, first of all, not to be pressured by the numbers of people who are before him, by the backlog, by the inexorable conveyor belt that faces him every day, to take any shortcuts at all, that the fair trial is a crucial thing, and to be sure people are properly represented.

I just want to give you a short thing that happened to me yesterday morning as I was parking my car. A young black man came running up and said, "You are Judge Richette?" And I said, "Yes." He said, "I really want to thank you because you helped me." And I said, "How did I help you?"

He said, "I came in and I was going to plead guilty on a rape case and when you were talking to me, I told you that I didn't think I had really done it and you said, 'Then you ought to go and get a jury trial.'"

And he said, "And I got a jury trial and I was acquitted." He said, "I just want you to know I was an innocent man."

It would have been very simple to take a mechanistic view and say, "All right, his lawyer says he is going to plead guilty, the district attorney is going to be agreeable to it," but you have to take the time to know that individual knows exactly what he is doing. That is what I do and I think a great number of judges do, and for this we are frequently, you know, pilloried. But it is very crucial and essential.

The sentencing process is a very important one and I take the position that the judge has to become the interpreter for the community of its sense of law and order, and he or she has to supply the omissions and correct the uncertainties and harmonize those results with justice. So that is the most difficult problem that a judge faces, given the youthfulness of these offenders, which is an absolute fact, and given the reality that much of street crime is drug related—I would say 65 percent of the cases that come before me of aggravated robberies, assaults, et cetera, all involve people with serious drug habits.

It is not unusual for a defendant to say during the sentencing process that he is on 15 bags of heroin a day. And I have had defendants who have been on 30 bags of heroin a day. One defendant whose arms were

so infected from his puncture marks they were swollen out like balloons, and he had already had surgery that rendered his fingers numb and lifeless to prevent the spread of this kind of infection. This was a young man who was 21.

So that to ignore this reality is, I think, to not only blindfold justice, but to also put strong hearing plugs in the ears of justice.

Chairman PEPPER. Judge, would you kindly express an opinion as to the adequacy of the treatment and rehabilitational facilities in the Philadelphia area for drug addicts?

Judge RICHETTE. I can tell you that I think they are totally inadequate, Mr. Pepper. In our whole State correctional system there is no coherent treatment program per se, so that when the district attorney comes in and demands penitentiary sentences in the State correctional system for drug addicts, what really occurs is that this person will be in a state of enforced detoxification which holds no promise at all that the moment he is released he will not return to crime.

I would like to just interject at this point another experience that I had in which a man had served a full 20-year sentence for an armed robbery. A full 20 years. It was one of the most serious armed robberies that ever occurred. Less than 3 months after he was released from prison, he was back on heroin and he masterminded a $125,000 Brink's robbery at our Philadelphia General Hospital, a payroll robbery, in which the money was taken. It was a carefully planned scheme. They wore hospital uniforms, et cetera.

This man confessed while the police gave him methadone, and in return for a guilty plea he was given a sentence of 2 to 4 years in our State penitentiary.

Now, this is the kind of disfunctional addicts for whom absolutely no treatment has been provided during the 20 years he was in. When he got out, he immediately engaged in this kind of crime. And when people talk about tough sentences or tough crimes, they have omitted the most important component of all; namely, the character of the defendant and his motivation for committing the crime.

I don't think any justice system can operate effectively if it overlooks the individual, human defendant who is before that judge. Because we do not service to society to warehouse these people for short or long periods of time and we have done nothing to turn them around in any way to cure them of whatever has compelled them to commit these crimes.

We don't have any drug program and the sentencing alternative I face and the other judges face, when we deal with someone who has a serious felony crime and no prior record, and we know that person is an addict, and our psychiatrist says he is a suitable candidate for a treatment program, is either to send him into the State system or put him into a community-based treatment program, or a hospital facility in which there is absolutely no security.

The only thing that the court can do, if it really wants to set up a therapeutic program for this individual, is to go about and hope that somewhere in that community an in-patient treatment program can be found. But then you run into this problem, the people who are running the drug programs are, I submit, quite unrealistic, too, because they insist on a humanistic, open approach and they abhor anything that resembled locked doors and security measures because they feel they are antitherapeutic.

This is one of the great problems we have, that the psychiatrists and the lawyers and the judges cannot synthesize their goals into something where each gives up a bit for the well-being of the whole system.

I have had to work out an elaborate program and send people to a hospital that is excellently run, called Eagleville, but where the situation is totally open and a person can leave. Several of the addicts I have put in there have just walked out and bench warrants have had to be issued for them. They had to be brought back in.

In the last analysis, a person who really cannot cope with an open treatment situation is signing his own court order to jail, because we have nothing in between. What I think we need desperately in our State system is an intermediate facility which is not a jail, but is something more than an open therapeutic community. There is Federal legislation to create this kind of intermediate facility in the federal system, but people are not urging this because, as I said at the outset, the entire emphasis to the public is that judges are being lenient when they send these people to treatment facilities, instead of pointing out that the judge has only this as a rational sentencing alternative.

Chairman PEPPER. If a person is not rich and has an addiction to heroin, costing—in testimony from various witnesses—up to $200 a day, it is inevitable that individual has to go out and commit crime to sustain the addiction.

Judge RICHETTE. No question about it.

Chairman PEPPER. So it seems to me that if we can develop an adequate system of dealing with the addiction—that is, a medical program for dealing with it—I wouldn't have the slightest hesitation about voting for legislation that would authorize the involuntary incarceration or involuntary taking into custody and control of that individual.

But the only thing that puzzles me is methadone, which is about the best thing we now have. Although some of these programs do give a good bit of relief, sometimes adequate relief, methadone is a narcotic and it is addictive. We have been told by experts that only about 35 percent of the addicts really should take methadone, and they should be carefully examined before they are exposed to it.

But even that, to protect society from the inevitable crime that those people are going to commit, I think we ought to have legislation. When there is a proper adjudication; I would think there ought to be a fair trial. The criminal denies he is an addict when the question of being taken into custody is involved. That person should be entitled to a trial to determine whether or not he or she is an addict, a confirmed addict, which means heavy monetary demands to provide for the addiction.

Judge RICHETTE. I would submit the best way to identify this population is by looking through your arrest reports.

Chairman PEPPER. That is what I said.

Judge RICHETTE. They identify themselves by the crimes they commit. But all of the programs that exist in Philadelphia for a more enlightened medical treatment of these people, exclude anyone who has been convicted of so-called violent crime.

Chairman PEPPER. That is self-defeating.

Judge RICHETTE. Absolutely. That is my argument. And I am saying that where there is an overriding medical factor, then the solution ought to be a medical one, but it ought to be an involuntary kind of

commitment, and we ought to have that kind of intermediate facility that would be like a mental hospital.

Chairman PEPPER. That would reduce the amount of street-crime considerably, wouldn't it?

Judge RICHETTE. I am sure of it.

Chairman PEPPER. If we could get some legislation.

Judge RICHETTE. I also think the so-called pushers who are arrested in the main are pusher-addicts, and any legislation that is going to have mandatory prison sentence for pushers, should distinguish between nonaddict and addict pushers. Many of the people who commit these crimes that I have seen, who are pushers, do it in order to finance their own habit.

I just want to talk briefly about a few other things, because I know my time is limited. I want to talk, first of all, about plea bargaining, because I wanted to address myself to some of the anti-plea-bargaining statements that have been made to you earlier.

As a judge, I think that plea bargaining is an honorable and legitimate tool of the justice system. And when it is engaged in fairly and openly, giving always the judge the discretion to reject the plea, this is absolutely a traditional part of our procession which ought not to be eliminated.

Now, when the judge feels that for any reason it is an inappropriate recommendation or that something involuntary has occurred, the judge can reject it, just as I did in the case of that rape case I talked earlier about. And I have had cases where the district attorney of Philadelphia, who was so opposed to plea bargaining, has come into my court and has recommended probation in one case, a young man named Nathaniel Berry, who held a gun to a clerk in a supermarket—he had no addiction, no overriding medical factor—just because he would turn State's evidence and identify the other two defendants, he was going to be given probation, and the others, I am sure, were going to get long jail recommendations.

I think one of the things a judge always ought to find out is what is going to be the sentencing recommendation for the codefendants. Because nothing is more destructive than for men to go to jail and to know that one of them is serving one-third the length of sentence for precisely the same crime, simply because he played ball with the district attorney.

So I think we have to leave the plea-bargaining situation where it is. And for heaven's sake, let's return to some faith in the rationality and intelligence and sensitivity of judges and stop sniping away and trying to usurp their functions.

Also, I feel very strongly that there is nothing wrong with leaving the sentencing process exactly where it is, and giving the judge that authority which he now has under the law, of imposing sentence. I think if you set up panels, such as you have with courts en banc, one of two things will happen.

The other two men or women, as the case will be, will defer to the judge who actually heard the case because there is no substitute for hearing that case yourself, evaluating the quality of the testimony, watching the defendant's reaction through the case, et cetera. So the other two judges will either defer to the superior knowledge of the case that judge has, or they will veto out of their own prejudice any-

thing that that judge has to offer. In any event, it is not going to be a fruitful procedure.

If a judge wants to get assistance now on sentencing, he can do that, and I do that frequently. I call up my colleagues and say, "What would you do in this kind of a situation, given this kind of psychiatric report?"

Chairman PEPPER. Excuse me. Do you believe it is desirable for the judge to fix the maximum sentence rather than to leave the total sentence to a panel?

Judge RICHETTE. Oh, yes. I am coming to that, because I think what happened, the judges have been absolutely eliminated from the process. I think when parole considerations arise, virtually no attention is paid to any of the judge's recommendations. I write letters all of the time recommending people for parole, or against parole, and my recommendations are totally ignored. I would very much like to have review provisions so that these cases could be brought back in the case of probation as well in penitentiary sentences for periodic reviews. I think that sentences could be modified and could be revised, and this ought not to be left up to a group of citizens who very often know nothing about the case, who do not have the benefit of any representation by counsel, and who were thoroughly unfamiliar.

This man is just another number as far as they are concerned, but not so with the trial judge and the sentencing judge. Believe me, those people make an impact on you, and you remember them very vividly.

Chairman PEPPER. I heard at a conference I just attended, somebody knowledgeable about the Federal system, said that there was some 16,000 cases which had to be considered by the Federal parole board, and each case was given 10 minutes.

Judge RICHETTE. Oh, yes, that is right.

Chairman PEPPER. The applicant for parole, or his representatives, were given 10 minutes to make their presentation.

Judge RICHETTE. It is just absurd; absolutely. And unless the judge is put back into the situation, which is a very important component of the justice system—I am very much for having judges responsible for the administration of prisons and for the institution of programs in prisons—I think that putting them in another bureaucracy ties our hands and also diminishes the kind of impact we can make.

What good is it to send a man to prison knowing what he needs, if you in some way cannot say to him, "I am going to make sure you get this"? We are all liars and hypocrites because we tell people we are sending them to institutions where they are going to be rehabilitated, and when they write back to us, as these prisoners frequently do—I have long files from prisoners and we answer our prison mail constantly, and they complain they can't get into this program, it doesn't exist, and that they were doing very well in a vocational kind of program and then suddenly they were removed from it.

Our hands are tied. There is nothing we can do except make a phone call and beg whoever is running that prison to give some consideration.

I really think we belong in every level of the system and instead of pushing us out of it, we ought to be built back into it. Because, as I said at the outset, I think that judges are the forces of society, that is the balancing force, that will balance individual rights plus community values. And these two things are very important. My fear is

that the rights of the individual and the value and dignity of the individual human being are just being sacrificed under the banner of "law and order."

You can't have that without justice and justice is the key thing.

Finally, I just wanted to say that I am very concerned with the way in which rape cases are prosecuted. I do believe that rape is a serious aspect of street crime. If you are going to come before a committee and talk about terrified citizens, may I tell you that the largest group of terrified citizens in our major cities are women. You can't get women to come out to a meeting at night. You can't get women involved in any program that involves night travel. We have been setting up a "hot line" for child abuse programs in Philadelphia and our big problem in getting volunteers is women will not come out at night to go to the hospital because the hospital is in a high-crime area.

These are well-motivated, wonderful people. So rape is a very serious problem for women. It is estimated in Philadelphia that only 1 out of every 10 rapes is reported. The reason for this is because of the incredible gauntlet that the rape victim has to run, which is unlike any other experience that any other victim of street crime has to undergo. This all stems from the fact, I submit to you, Senator, that our rape law is founded on propositions which have no place in the 20th century society.

Women are not property, women are not sexually aggressive; men are not sexually irresistible. The victim has to prove her innocence as much as the defendant is protected by the presumption of innocence.

I presided over about 50 rape cases in the last 16 months, and I have come to the conclusion that the defense of consent is absolutely unnecessary, that we ought to think about rape in terms of situational force, a situation in which force is used to achieve a sexual result, and that a woman's past sexual history has no bearing on her credibility, that whether or not embarrassing questions are to be put to her for the purpose of discrediting her, that that is an issue that absolutely ought to be resolved in favor of the victim.

Now, we just have had a new crime code passed in Pennsylvania, and we were appalled to discover that slipped into this code was the provision the judge must charge the jury to receive the testimony of the rape with special scrutiny because of the highly emotional nature of her testimony. We thought that this was reflecting a typically male attitude, that I would say is a sexist attitude, in which there is great suspicion surrounding even the possibility of rape.

I have heard fellow lawyers say they didn't really believe anybody could be raped. So that we have a growing feeling in our society that women are easy prey, that rape is a crime that largely goes unpunished, because it will go unreported. I know of an Evening Bulletin newspaper reporter who was brutally raped in her house, and one of my neighbors who was raped in the very public garage where I parked my car. Neither one of these women would report the crime because they did not want to go through the police process.

This is a very, very common phenomenon.

Chairman Pepper. It seems to me that the circumstances under which is a contact occurred would be very, very influential. I realize that there are unscrupulous women——

Judge RICHETTE. Oh, sure.

Chairman PEPPER [continuing]. As well as unscrupulous men. And you can't allow ordinarily the word of a woman to send a man to a long term in prison, but it is another thing where you have a boy and girl in social contact with consent between them in places where they might have had intimacy, in a case like that.

I remember there was a case in one of the British courts where the girl consented to go with a fellow into a remote area and the court said she practically indicated her consent by consenting to go into a situation like that.

But where a person is walking along the street peacefully, in her own hometown or some other sanctuary, suddenly to be attacked by such person with whom she would never have any social contact in most cases, and eventually assaulted, threatened with a weapon, and the like, I know all of the questions that the defense lawyers ask in these cases, but it would seem to me under those circumstances that it would be almost absurd to believe there was consent under that. You don't approach a person.

Judge RICHETTE. Correct. I would also say to you, that the presence or absence of a weapon is not so crucial because, very often, a women is so intimidated by the entire situation of the strange man making this demand on her that that situation in and of itself renders her agreement, if you please, an involuntary one.

I think we have to take account of the fact that women are not trained by our society to fight their way out of such a situation. And to expect a woman to put up physical resistance or to interpret the lack of physical resistance as consent, which is what happens in our courts, "Did you fight, did you kick, did your scream?" is an unrealistic demand to make and gives the men in that situation an absolutely exploitative advantage.

The other thing about rape is that it is a repetitive, compulsive crime, that sheer incarceration in and of itself for a limited term of time will not change that behavior, and the worst repeaters that we have in our courts are the rapists.

So I think we do need a different kind of sentencing practice with respect to rape.

Chairman PEPPER. What age groups are the ones who are the most numerous in the rape cases?

Judge RICHETTE. Eighteen or younger. Twelve—I will start with 12: we have the 12-year-old boys—I would say it starts at 12. I discussed it with one of our psychiatrists and he said at about age 50 the drive diminishes.

But the important thing is, it isn't the sexual gratification that the rapist is seeking, but the thrill and the excitement of that moment of complete control over the woman. Woman after woman has testified in my court. I had one woman who was absolutely lucid because she was a physician and she was raped by a mental patient, and while this rape was going on she had sufficient mental discipline that she could think and record mentally everything that was happening to her.

She noted physiological things that were going on and the man was almost totally impotent, which is generally true. Contrary to the public's stereotype that it is highly sexed people who do this, this is

not true. It is insecure people with terrific hangups who get their gratification in this way, by that kind of control.

That has to be understood. I don't think we really have done enough research.

Finally, I just want to say what I think New York City is doing—and I understand you had that lieutenant here before you—is just excellent. And we have urged our Philadelphia police commissioner to institute that kind of practice. He is not very receptive to it because he says it would inject a sexual bias in the proceedings.

I pointed out to him we already have a sexual bias in that the investigators are of the same sex as the defendants. So if you are going to have a bias, why not have it in favor of the victim?

I feel strongly about that because I think that rape is very important.

I have very little else to say except that I would sincerely hope we remember always that the process of justice is just never finished and that it reproduces itself generation after generation, in changing forms, and I think I would agree with Roscoe Pound, whom I am quoting from now, when he says, "Today, as in the past, it calls for the bravest and best people to be in that justice system."

I would like very much to speak here in defense of the judiciary. I think that the judges who are being attacked today are not softheaded people; they are hardheaded people who believe in due process rights and who still believe that rehabilitation is a legitimate goal of the criminal justice system.

Thank you very much for allowing me to come.

Chairman Pepper. Well, it is exciting to hear you, Judge Richette. We are most grateful to you for coming.

Mr. Mann?

Mr. Mann. On the rape question, what specific recommendation do you have for change in the law? Most of the matters we are talking about are evidentiary in nature.

Judge Richette. I didn't hear you.

Mr. Mann. Most of the angles we talked about on rape were somewhat evidentiary in nature. But, specifically legal changes, I gather one would be to make it inadmissible to attack a woman's reputation, except upon specific violations of the law involving moral turpitude.

Judge Richette. As in any other case. A victim being cross-examined on an aggravated robbery is never asked about his past criminal record.

Mr. Mann. So you would have an evidentiary rule which would prevent attacks of her character. What else? The same law as in rules of evidence?

Judge Richette. I think the definition of force ought to be a definition that includes constructive force as well as actual force, which is a legal distinction, but that also the doctrine of constructive force should be extended so that the force is inherent in the situation.

I have in mind a situation that I tried where a young nurse was taken by four men to a roominghouse in a different ethnic area than she was familiar with. It was an all-male roominghouse. They raped her, they sodomized her for about 4 hours. Then the man who owned the room came upon the scene after they had left and she was pulling herself together.

He walked into the room and he said—by his own testimony—he took the stand and said she was as frightened as a leaf, shaking, and he said to her, "What is your problem?" And she said, "I would like to get home." She was dressing at that point and he said, "If you are nice to me, I will help you get home." Whereupon, she stopped dressing, undressed and had relations with him. And his defense, of course, was "consent."

And I said there was no consent in that situation whatever, that it was a situational force that had been used. And I would make it a case-to-case thing, as the chairman was suggesting. You have to look at the situation and that is all that the jury should consider, whether or not there was actual or constructive or inherent force in that situation.

On the issue of whether she said yes or nothing—because to say nothing is to consent, unless there is an active rebuffing or denial—the jury is charged on those lines of consent. And very often a rapist is let go free.

Mr. MANN. Well, I know we are talking about 50 different definitions in different States as to what constitutes force. Frankly, the definition in my State would certainly cover constructive force. I am not sure there is a Federal solution to the definition of rape.

The question of the judge's duty to be more active in bringing about reform. Why aren't they?

Judge RICHETTE. Because I think many of them, Mr. Mann, have come from a background that is not activist in orientation. Let's be very candid. Judges are politically appointed and it is not the wavemakers and the dissidents who are in line to get these appointments. My own background is an activist, intellectual one. I have been a writer, a teacher, and have been intimately involved in legal reforms. There are a number of people who are serving on the bench who are of a similar background, but they are in the minority, and most of the judges feel this is outside their province.

What I think is needed is a vast and enormous program of judicial education and I, for one, am very pleased that Chief Justice Burger takes this position that our penitentiary system and criminal justice system is totally a national disgrace and judges need to hear it, and need to hear it from people of that caliber.

I think you have a new breed of judges coming in who really don't accept the fact that all they have to do is wear black robes and look dignified and utter the right legal phrases at the right legal moments so they won't get reversed. Our obligation is much more.

Mr. MANN. I certainly agree they left a tremendous vacuum. Reform usually awaits the election of some progressive lawyer to the legislature who then promotes some needed reforms. There is no other organized group; the organized bar is not criminally oriented.

Judge RICHETTE. That is correct.

Mr. MANN. Judges don't meet and discuss anything but their own salaries, usually.

Judge RICHETTE. You are right.

Mr. MANN. All right. I quite agree with your assessment of the process of plea bargaining. I see nothing wrong with a prosecutor, in his wisdom and discretion and experience, making a calculated judgment as to the nature of the case and the nature of his proof and other things——

Judge RICHETTE. Exactly.

Mr. MANN [continuing]. And presenting it to the defense counsel and to the judge.

I propounded the question to Mr. Specter. He and I don't have the same definition of plea bargaining. He, frankly, did offer sentence bargaining—but it wouldn't shut off, apparently.

I don't believe I have any specific questions.

Chairman PEPPER. Counsel, do you have any questions?

Mr. NOLDE. Thank you, Mr. Chairman. Judge, how does the failure of our correctional system affect your determination as to the type of sentence to impose?

Judge RICHETTE. Well, it causes me great personal anguish, but there are situations, of course, where there is no alternative but to send that man or woman to the penitentiary. I sent 76 people last year to jail for long sentences, just had to. They were repeaters, they were compulsive, antisocial types, who were just continually reeking destruction on the community and there was no other alternative for it.

But I look back at their criminal records and when the probation department does its presentence report, I always make sure they have got the juvenile record in. And you would see when this boy was 14, a psychiatrist or psychologist said he must be taken out of his environment, he must be given "X Y Z," and none of it was done.

Chairman PEPPER. You believe, then, that if we can do something effective for the juveniles we would reduce the volume of crime enormously?

Judge RICHETTE. Absolutely.

Chairman PEPPER. Most of the people who are repeaters as adults had juvenile criminal records?

Judge RICHETTE. No question of it. And when we send these people to jail, they usually have sired offspring and because they are not there and because the family is without a father, we are just creating new problems for another generation.

Chairman PEPPER. Mr. Mann.

Mr. MANN. The continuum to which you referred, I think that is a good point and an interesting one. But taking the necessity of the continuum and applying the recommendations you have about the judge maintaining a continuing interest in a specific case being perhaps more desirable than the parole board, the necessity of picking up this juvenile, following him on through his career, seems to me to indicate the necessity of some other agency, other than the court, other than the prosecutor's office, but a continuing agency which I think we generally put in the category of probation, parole, pardon, supervision.

Now, such an agency could provide the continuum over a period of years that a judge could not.

Further—and I haven't formulated any details—I question your suggestion that a judge might be better equipped to follow the defendant to the conclusion of his sentence, because of the general problems in this country, the tremendous volume of cases that exist and the necessity of making the most efficient use of the judge's time, and being able to give each case the individual attention you would like to.

Of course, in other jurisdictions, the lack of even presentence investigation, the lack of any real information on the part of the judge, the judge sits there and by the seat of his pants makes a quick judgment without even an adequate record being prepared by the local prosecutor, in that type of situation.

I would say that type of situation is in the majority in this country.

Judge RICHETTE. Yes, it is.

Mr. MANN. Rather than presentence psychiatric report.

So, given those circumstances, I am wondering if we don't need a more sophisticated agency to follow that thing once he comes in the criminal justice system.

Judge RICHETTE. Well, if we do have such an agency, I was suggesting the judge be a very important part of that agency and not be co-opted out of it, which is what happens now. We have absolutely no role to play.

The other thing, Mr. Mann, judges waste an enormous amount of time, and I can tell you that. We have the most confused calendar system you can imagine in Philadelphia. I am strongly in favor of individual calendars and I am strongly in favor of each of the judges having an assigned quantity of work that must be done.

I sit in court waiting for hours for cases to be sent down to me and then they arrive and either the district attorney is not prepared or the defense counsel hasn't had time to interview his clients. Some consideration occurs that makes you absolutely required to continue this case and nothing fills that vacuum. It costs us $1,000 each day just to keep our courtrooms open. We waste a lot of time.

Once again, because the hardware people have persuaded the courts that efficient court administration is a function of computers, and all we have done is computerized chaos. We have millions of dollars' worth of computers spewing out printouts in Philadelphia, and we have a huge backlog and we have judges who sit by waiting for work.

So I think we have to put, you know, human intelligence back into this thing and we have to get the judges working to set up their own calendars.

Chairman PEPPER. Judge Richette, you didn't hear Justice Ross?

Judge RICHETTE. No, I missed him.

Chairman PEPPER. He was very good, because he has been designated as the court administrator of the New York court system.

Judge RICHETTE. Wonderful.

Chairman PEPPER. And lately of the criminal division of the Supreme Court. He was talking about some of those very things you are talking about. You start to get the prisoners down on time from the jails, and so on. He has been able to reduce the backlog in the New York court system an enormous amount within 2 years by virtue of getting all of these component parts to work together, to fall into place.

Justice Clark has taken the position it is better to have a good administrator for a judge than it is to appoint a new judge. He says in the Federal system it costs about $125,000 a year to sustain a new judge. You get a very good administrator for much less than that. And he said he can do a better job of expediting the disposition of cases.

So you might consider and inquire about what Judge Ross has been doing in New York in some appropriate way.

Judge RICHETTE. I read about him in the New York Times but I have never heard him in depths, and I understand he was excellent here this morning.

Mr. NOLDE. In that connection, it appears the impression is created that Justice Ross' success is due not to computers or hardware but the personal equation to which you referred.

Judge RICHETTE. Of course.

Mr. NOLDE. With his own personal dynamism he was able to direct that system in the right direction.

Judge RICHETTE. But he can train other people and that is what we need. We need a Judge Ross institute to train other judges to do this.

Chairman PEPPER. Do you think that might be a proper subject for funding by LEAA?

Judge RICHETTE. Absolutely; you see, judges are put on the bench and they have no background for what they are to do. They come from the practice of law and they are untrained. And going out to Nevada and taking this great crash course which is like a crash course for the bar, doesn't really help you run a system.

We walk into a system that is vast and incoherent and no one seems to make it work. I say, if we have in this country men and women judges who have achieved successes, they ought to train and teach others.

Chairman PEPPER. Speaking about having to wait in your office or the courtroom for cases to be brought to your attention, I remember that we were holding a hearing in the ceremonial courtroom in the Federal Building in San Francisco, I believe it was in 1969, and one of the judges told us that one morning when he went down to the courtroom and opened court. He was supposed to try a criminal case and, lo, and behold, he couldn't find the defendant.

Consequently, he had no other cases that could be set then.

Judge RICHETTE. That is right.

Chairman PEPPER. And he lost that whole day, simply because the defendant wasn't there. If he had had a good administrator he would have found out where that defendant was and he would be there at the right time the next day.

Judge RICHETTE. We sometimes have defendants with fairly common names like Johnson or Smith, and they send the wrong man down. That's the end of that. Because it takes a full day to transport a prisoner back and forth through our machinery.

Mr. NOLDE. Judge, in the cause of violent offenders, what alternatives do you consider in sentencing? What alternatives are available to you as a judge?

Judge RICHETTE. Mr. Nolde, if there is some strong medical underlying reason for the violence, hopefully, one could find a hospital facility. But that is very rare because our mental hospitals will not take people who are not, frankly, psychotic. These men and women fall into a no-man's land. They are not psychotic. There have been all kinds of names assigned to them, psychopaths, and so forth. So that that possibility is not often fruitful. So there is only, really, one alternative and that is incarceration for a long term.

Mr. NOLDE. In the cases of drug offenders?

Judge RICHETTE. The same. The same, because as I said, the community-based facilities often do not provide the proper security measures.

Mr. NOLDE. What is your opinion of the diversion programs in Philadelphia that divert offenders out of the system into treatment alternatives?

Judge RICHETTE. They are very inadequate at the moment and their administration is abysmally bad. A person is put on ARD, but there is never a followup report, nobody checks on whether or not he went into that treatment program. And when he is rearrested for a subsequent crime, there is no way to know whether or not he had ever been in a treatment program and what his success or failure rate was in that program, because there are just no records kept.

So to me ARD is worthless. All you have done is have a nice friendly conference with somebody and you said, "We are going to give you a chance to go get help." But nobody knows what has to be done with these people, which is that they have to be supervised in the help, they need a great deal of human intervention. Just to say to somebody, "You are going to go to a clinic," isn't enough, not with these multiproblem people we have. We have people who are born losers, people who just have no faith in themselves or the people around them. They need a lot of human support. The programs at the moment are just not well implemented. They are paper programs and all you see are paper results.

Mr. NOLDE. What about the eligibility requirements?

Judge RICHETTE. I think the eligibility requirements are unrealistic. The people who need those programs most are excluded from them. You are dealing with a peripheral group of people who are potentially harmful because they can get more deeply involved in antisocial behavior and when they do get more deeply involved, you know nothing more about them from their having been in that program.

I think a program that doesn't have internal controls, that can't measure its own results, is not a serious program. They have no way to evaluate how effective they are.

Mr. NOLDE. Judge Richette, I understand you put 89 defendants on probation last year.

Judge RICHETTE. Yes, I did.

Mr. NOLDE. Only 14 were subsequently rearrested. How do you account for such an outstanding success rate?

Judge RICHETTE. Well, they are still alive and at large, and it may not be such a great figure.

No; I think what I was saying at the beginning is important. I think if you have had a vast longitudinal experience with people, and you have read a lot of reports and you have interacted on a 1-to-1 basis with a lot of people as a lawyer, you get to have a kind of intuitive feel, which I submit to you is part of the art of judging. There is an art of judging which I am slowly learning. But this quality is completely devalued by the vilification, I think, and the pillorying of judges.

You do, after all, have a group of people in a society who do develop a kind of expertness and the expertness is something that is intangible. But whenever I put anybody on probation, I think it through very, very carefully, because I have only dealt with serious crimes and I

know that the prosecutor will run to the press and will have a front page story on the fact I put this man on probation. This can be an intimidating force and be a negative one or it can be a positive one and make you really think through what you have done and force you to have a valid rationale in each case, and I have had that.

I bring everybody in. I make them come in with their families, with community people. If there is a plan for probation, I want the person who is administering that plan in front of me. I want to hear exactly what is going on and I really think that face-to-face human contact is very important. People feel they are accountable to you.

Mr. Nolde. Judge, one final question. What is your reaction to the statement we heard earlier this morning: tougher sentences for tougher criminals?

Judge Richette. It wasn't for tougher criminals. It was for tougher crimes, which is very important, because in our jurisdiction we have a way of overindicting people. The Philadelphia Inquirer did a complete survey on this. You overindict so you have a huge kind of criminal statistics built up.

I feel that we ought to look at the human being first and foremost. If this human being who is in front of us is not amenable to any of the limited treatment facilities we have available, then we have no alternative but to send that person to jail. But I think we should be very sanguine about the fact all we are doing is postponing the day of reckoning with that person.

We have protected the community for a limited number of years, and what is going to happen when that person returns?

Mr. Nolde. Thank you, Judge Richette. I have no further questions, Mr. Chairman.

Chairman Pepper. Judge, we are certainly indebted to you for this very stimulating and, may I add, inspiring presentation you made to us.

Judge Richette. Thank you.

Chairman Pepper. It is very gratifying to know there are people like you on the bench and I am sure there are many others and a growing number. I hope you will see your tribe will rapidly increase.

Judge Richette. Thank you.

Chairman Pepper. Again, I want to express my regret that Harvard didn't change its position.

Judge Richette. Thank you very much. I was sitting here thinking this is a great dream come true, that I would be in front of you some day.

Chairman Pepper. Thank you so much. It has been an honor to have you.

We will now call on the Honorable Don Riegle from the Seventh Congressional District of the State of Michigan to present the next witness.

Don, we welcome any statement you care to make and invite you to sit with the committee for the remainder of the day.

STATEMENT OF HON. DONALD W. RIEGLE, JR., A U.S. REPRESENTATIVE FROM THE STATE OF MICHIGAN

Mr. RIEGLE. Thank you, Mr. Chairman. I am away from another subcommittee that is in session right now.

I appreciate the honor of sitting with the committee here, and I want to say at the outset how much I appreciate your work and your leadership in this area for such a long period of time. You have friends all across the country, across party lines, for the good work you have done.

I just want to add my brief words of appreciation to so many others I am sure you hear.

Chairman PEPPER. Thank you very much.

Mr. RIEGLE. It is an honor for me to introduce Robert F. Leonard, who is the prosecuting attorney for Genesee County, Mich. This county is contained within my congressional district and I had the opportunity to witness Mr. Leonard in action for many years. He has compiled an outstanding record of service which people of our district very favorably responded to in terms of reelecting him in successive elections.

Among his achievements has been expediting the disposition of criminal justice cases and that is what he is here to speak about today. I think you will find him a very knowledgeable and useful witness to the committee.

There are many in my State who feel that he may someday be attorney general of Michigan. So at some future date you may have him back in another capacity. It is a pleasure for me to introduce to the committee Prosecuting Attorney Robert Leonard.

Chairman PEPPER. Thank you very much, Mr. Riegle. We appreciate your coming to be with us today and the support this committee has had in its efforts to try to do something about the crime situation. We are very grateful to you.

Mr. Leonard, we are very well pleased to have you. Again, I want to apologize to you for the delay. You saw the circumstances here and you have been most patient and I hope we have not inconvenienced you too much.

STATEMENT OF ROBERT F. LEONARD, PROSECUTING ATTORNEY, GENESEE COUNTY, MICH.

Mr. LEONARD. Not at all. I certainly want to express my appreciation for being asked here and say to Congressman Riegle that I appreciate his introduction. He is a friend of mine for many years.

Chairman PEPPER. A distinguished Representative.

Mr. LEONARD. Absolutely, I might say, I know this is not a political meeting, but I am a staunch Democrat and, Don Riegle, I voted for Don Riegle when he was a Republican, too. That is how much I thought of him.

Chairman PEPPER. We are very glad to have him on our side now.

Mr. LEONARD. Thank you.

I do appreciate the opportunity to appear here and I am honored. I have heard of you for many, many years, Mr. Pepper. and, as I say, I am honored to be here. I heard of the work of this committee, doing an outstanding job. I had the pleasure of talking to Mr. Nolde and some of the other members, and Tom O'Halloran, who came up a week or two ago to see us. We are very pleased to see him. It is nice to be visiting in Washington.

I have a prepared statement that I won't burden you with reading.

Chairman PEPPER. Without objection, we will insert your prepared statement in full in the record, Mr. Leonard, and you may summarize it.

[Mr. Leonard's prepared statement appears at the end of his testimony.]

Mr. LEONARD. Thank you very much.

I do want to just say how much I enjoyed Judge Richette's remarks. She obviously is an outstanding jurist and outstanding woman. Many of the things that she said, I was going to say, too, so I will try to quickly pass over those areas and just give you some of my ideas, which will very much parallel her thinking.

I see the major problems in our criminal justice system which, as you know, is under heavy attack throughout the United States today by many people, some knowledgeable, some not so knowledgeable, but all coming to the same conclusion—that there is something wrong with the system.

In considering these attacks and trying to understand what is wrong with the system, I came to a couple of conclusions and I would just like to kind of touch on these areas, if I may, and what solutions I might have for them.

I think one of the major problems, of course, is the prohibitive delay between the time of arrest and time of actual trial or disposition of the case. That will kill the system if we don't correct it.

Another problem is the lack of finality, the lack of judgment. You never have a final judgment in any kind of a criminal case these days. Not every case, but a great number of them. In our jurisdiction, for example, the judge, when he sentences anyone to jail almost encourages, by virtue of the rules of the Supreme Court, a person to appeal.

Now, I see nothing wrong with appeals and I have no objection to them, but it is an example of what encourages this lack of finality.

Chairman PEPPER. Excuse me. I just returned from a conference in England and discovered there that immediately after the sentence is passed they go to prison. They are sent to prison and they are in prison while the appeal is pending. Here, of course, people don't go.

Mr. LEONARD. In most cases, they don't. That is right.

The third area, as I was mentioning, is the problem of diminishing credibility in our criminal justice system.

I would like to maybe take them in reverse order, if I may.

Today, constantly you are hearing great discussions about the problem of street crime. We identify street crime in most cases as violent crime or burglaries of considerable nature. And right now these are concerns of ours and concerns of the public and they have to be dealt with. We have to continue to deal with them.

But one of the problems with the thrust and the emphasis in this area on street crime is the failure to look at other types of crime, and that is the crime of public corruption, the white-collar crime, and organized crime.

When you consider where the emphasis is today, it is on what we call visible crime, crimes that people see and respond to and want something done about, speak out against. As a result, we respond to that. We respond in law enforcement, we respond in the legislatures, and we respond in the executive, to do something about this. The result is that our primary efforts and direction against crime are in this area and very little is done in the other areas.

The result of this is, when you consider who the people are that we are focusing our efforts in crime against, invariably it is the poor, minorities, usually black when we talk about minority people.

Now, there is no group that is more indignant about the commission of crimes in their community than the blacks. But they are also recognizing a very important factor, and that is that the laws are now geared to, in effect—and I think unintentionally—discriminate in the enforcement of the law. Because if you look at history, it is replete with discussions about the poor, low-income people, who are involved in the commission of the types of crimes that we are talking about here: the Irish when they started, the Jews, Italians, blacks, Puerto Ricans; you name it, as they came up the economic scale.

What is happening is that these individuals against whom the thrust of our law enforcement is directed are beginning to recognize they are not the only ones committing crimes. They are just committing a different type of crime. When I say "they," I don't mean the entire community. I am talking about those individuals in that community that commit crime. And there is a large area, as I suggested to you, that is not being policed, and those are the three areas I mentioned—public corruption, organized crime, and white-collar crime.

The people who are involved in these areas and who commit these crimes are very rarely blacks, low-income, or from minority groups. Generally, it is the establishment or white people who control the laws or the enactment of laws which would be able to ferret out or zero-in on this type of crime.

What I am saying to you is that it becomes more difficult every day for us in law enforcement to effectively prosecute street crime because of the diminishing credibility that we have in the community, particularly in relation to these individuals in these groups, low-income, minority groups, because they are our witnesses. They are our jurors in street crimes as well as other types of crimes. And unless we have credibility, unless we can convince them we are just as concerned about the white, high-income, affluent people committing crimes, they will have no faith, no confidence in the system, and fewer will want to become witnesses—because we are having trouble today bringing them in—fewer will want to sit as jurors, or when they sit on juries they will reflect their attitudes in the disposition of the cases.

Now, there are books, I am sure, that have been written and will be written on this subject. I know I am just touching very lightly in the area, but as it relates to the area of street crime. I know I am talking about crimes that may not be classified as street crimes, but will, if

looked at as I suggest, have an impact on street crime in the way that we enforce the laws and how effective we are.

The issue of finality in judgment is a very difficult area for us to consider but it is killing us in law enforcement. Cases are being appealed and they go on and on and on, and people are out on the streets committing other crimes and, as they commit other crimes, they are arrested and begin the process all over again. Where they go through the State system and all of a sudden we find them in the Federal system—more years waiting.

And the prosecutors, they are human beings, they lose interest, because we have a more important case that has come up and we are utilizing our resources in that area and giving less attention to this case that is now 2 to 3 years old.

Let me give you an example of what I mean. About a month ago a young man in our jurisdiction during the commission of a robbery killed a young girl. Two men held up a store, a music store in Flint. They walked in, and one went to the back of the store. A young girl was in the back at the safe, either kneeling down, or he had her kneel down. Without any rhyme or reason he shot and killed her.

In our opinion and the police opinion, he was involved in drugs at the time and was high on drugs. That is another problem I will talk to you about in just a moment. As it turned out, this individual had about a year prior to that time been arrested for armed robbery, had gone to court, had pleaded guilty, and had been advised by the trial court that he had a right to a jury trial.

He was sentenced to, as I recall, 7 to 20 years for the armed robbery. He appealed after going to prison, on the grounds that he was not advised of all of his rights when he pleaded guilty. The appellate court reversed, saying he was correct. He not only should have been formally advised that he had a right to trial, but that he had a right to cross-examine witnesses and he had a right to refrain from taking the stand if he were tried.

In my wildest dreams, I can't imagine that individual, that defendand, ever deciding not to plead guilty if these other two items had been told him. He would have still pled guilty.

Now, because of this technicality, he was released from prison and this young girl is dead today.

Chairman Pepper. Excuse me. Would it be considered double jeopardy to try him again?

Mr. Leonard. No. He pled guilty. He wasn't jury convicted. He went and said, "I am guilty of the armed robbery." That is what makes it so flagrant. If he had been convicted by a jury, you might say there was error. But this fellow said, "I am guilty of it" and he should have been in jail. He was sentenced to 7, 15, 20 years. He would have been in jail if the court had not reversed on that technicality.

I am a lawyer; I recognize the importance of technicalities in some situations, and I recognize the importance of a man's right to appeal and to have a higher court make a determination of the guilt or innocence of somebody, or the issue of his constitutional rights. But I am inclined to think it is going to just stifle the entire system unless we somehow develop rules and procedures whereby—and maybe the case must be this, a man has one appeal, and it goes to one court and some-

how set up a system so that the appellate court hears that matter within 2 or 3 months—and there is no reason why it can't—and have that matter disposed of then and there, and that is it.

No going through the Federal system, or no going through the Maritime system, or whatever the system is. I am just surprised that some of them haven't figured out the Maritime system because they may have a way of going through that system, too.

But the point simply is we have to have the finality in the system in getting those people committing violent crime that cannot be treated by community forces off the street and serving their sentences. Not only is it going to have an impact on that individual but those individuals out in the street, considering what to do, whether they should commit other crimes.

Finally, the issue of the prohibitive delay in the time period between arrest and trial. You know, we have heard many suggestions, such as more judges, more prosecutors, and more police. If anybody would sit down and project what we are talking about, more judges, police, and prosecutors, I think they would rethink it, because we are talking about an increase in the expenditures in the criminal justice system of probably three or four times.

That means when you go back to the public: "I am going to increase your taxes x number of millions on your property or income tax, or what-have-you."

When you start talking dollars and cents to people, to the public, to the constituents, they are going to respond a little bit differently. They are going to ask what are the alternatives? I suggest to you there are all kinds of alternatives that the criminal justice system has never used, primarily because its members, had their own little ball game. They operate in a vacuum and they think they know everything about the criminal justice system ,where police, prosecutors, and judges say, "You stay back where you are and take care of your own discipline over here and your own sciences over there, and we know how better to take care of the system," and we won't let you in.

I say that is one of the reasons we are in trouble today. There are all kinds of agencies, institutions, public and private, sciences, that are available to us that could help us, particularly in communities, because I think that is where the help has to come from.

When a man goes to prison, or a woman goes to prison, 90 percent of them come back to the community that sentenced them, at least in our area. That is our problem. That individual is a creature or a product of our society, not of his home alone, but of our society, which is the schools, the neighborhoods, the churches, all of the discriminatory acts we may have committed against the individual for whatever reason. He is our responsibility.

We have got resources in our community that we should be using. All kinds of resources that we should attempt to use to help rehabilitate those people in our community, rather than sending them 400 and 500 miles away, where they have impossible problems in those prisons today trying to solve the problems. It is our problem, our community.

Now, I am not suggesting to you that prisons aren't needed, but I think we overuse prisons. I think that there are certain individuals that should be imprisoned and if we send them to prison it is clear

they are going to do nothing but create problems when they come out. I suggest to you whatever they are charged with, turn the key and throw it away and leave them there. There are people like that in our community and we have to do it.

But I suggest to you also that there are people in the prisons today who shouldn't be there, whom we could better handle in our own community. As a reflection of that kind of an attitude, we developed 8 years ago what we called the "citizen probation authority program", which is a diversion program. I agree with the judge, it is absolutely essential if you have a diversion program that you have followup and you have people working with these individuals.

Ours is a felony program. We take people, primarily young people, who have committed nonviolent acts—burglary, car theft, larceny—who have no previous record, who we know that 9 chances out of 10, maybe even better than that, we show it about 9½ out of 10, will probably never commit another crime. But we are trying to protect them from criminal records, because I think we all know the inhibiting impact of the criminal record.

I know Congressman Mann was a former prosecutor and he understands that tremendous impact that it has, as we all can.

But that is one aspect of it. We also recognize how much more effective diversion is than probation, 6, 8, 10 months later. We take him in our program if the individual fits the qualifications and the criteria, which is very definitely spelled out, so there is no unfairness in the treatment of any individual.

The day after he is arrested, if he falls into this classification, he is diverted. He goes to a professional staff of people who deal with these people, former probation officers, who now in fact are the front of the system, and they begin working with him and do the research on him and the background check and make the determination whether or not he should be accepted for the program. But he starts on the program in anticipation that he will be accepted.

We accept about 60 percent; 40 percent are rejected and sent back for prosecution because they don't fit the criteria, maybe on account of previous offenses or because they want no part of the program.

The practice there is from 6 months to 1 year that individual works with his assigned officer and he develops programs. Those programs are directly involved with our community. We find, for example, that many of these people have alcoholic problems. We have alcoholic clinics in our community that we utilize. If he has a drug problem, he goes to the drug clinic. If he has a particular problem with reading or writing, we teach him reading and writing. If he has a problem with a skill, or he has no skill, we work with him in that relation. We train him.

Now, the recidivism rate, the rate of repeating, of committing more crimes, is about 3 percent.

Chairman Pepper. In that classification?

Mr. Leonard. In that classification. I might say to you I have these statistics. We have done a study on it. The LEAA arm in Michigan, which is the State planning agency, has done a year-long study and comes to these conclusions. I have it available.

The National District Attorneys Association has adopted it as its model program for diversion.

Chairman PEPPER. We would like very much to have it.

Mr. LEONARD. I have one here. I have also the St. Paul-Minneapolis program, which is called the "de novo program," and the Hawaii program.

Chairman PEPPER. Would you leave it with us? If they are not bulky, we would like to put them in the record.

Mr. LEONARD. They are lengthy. Ours is about a 200-page report.

Chairman PEPPER. We will put it among the documents of the record.

Mr. LEONARD. Fine.

[The documents referred to above will be found in the files of the committee.]

Mr. LEONARD. We have, as I say, a very low recidivism rate. Frankly, we take the "cream of the crop" away from the criminal justice system, and we utilize all of these community resources that are available. What I am saying to you is that all of these resources were not available originally. We created some of them. I think prosecutors, and as Judge Richette has said, judges and police, should be in the system, should be out in the community, creating the resources they need to help the criminal justice system.

It opens up the criminal justice system to those individuals committing those kinds of crimes you are interested in, and I am interested in, in this committee hearing. Violent crime, street crime. The people committing the armed robberies, the assaults, the rapes, the murders. I think the proof is in the pudding.

Our time delay between arrest and trial is about 3½ to 4 months on the average case. It is the most current docket in the State of Michigan. In all fairness, much of the credit has to go to our judges. We do have six hard-working judges. Certainly, they recognize and they support the diversion program I am talking to you about, because they know they can better do their job and they don't have the long delays or large backlog of cases.

Chairman PEPPER. Does that program apply only to adults or adults and juveniles?

Mr. LEONARD. My jurisdiction is primarily adults, from 17 on. The great majority of these types of offenses, as you know, are committed by young people. Then when you talk about young people in the category that I look upon, about 17 and above, generally about 75, 80 percent of our cases are 24 years and under.

I have jurisdiction in probate court, but only as an advocate. I don't charge, I don't make the charges. That is done by the court itself. So they have a similar type program they are working on in Flint now called the "Youth Assistance Program." That is fashioned after ours and has been quite a success also.

I have a second diversion program that is about a year and a half old. I can't tell you how successful that is going to be because it is going to take some years, like this one has, to prove it sufficiently, and that is a drug narcotic program. I happen to be of the belief, after 16 years in the prosecutor's office, that prosecuting drug addicts and hopheads, who have some psychological hangups, is not really the answer. I know nothing about the treatment of drug addicts. I know the judges don't, and the correctional system has also proven the same pretty well.

So, what we do in our county, in these cases where an individual is arrested for possession of heroin, or possession of pills or drugs of any kind, is we divert. Again, to outside agencies that we have created or assisted in creating.

We have a drug commission which is the umbrella agency for funding all of these other agencies, and also the clearinghouse for our diverted individuals. These individuals are diverted into the drug commission, which has the experts, the people who deal in human behavior, who understand the drug problem, what motivates these individuals, what kind of drug problem they have, whether it is serious addiction, whether it is heroin, what-have-you, and they themselves then direct that individual to a particular agency or modality, keeping in mind all of the time that these programs—they are diversion programs of "Deferred Prosecution." And the deferred prosecution is what we call the "hammer."

The individual must abide by the rules or he or she will be prosecuted. When the person goes to the modality, we have a contract, a written contract with the modality, that requires it to give us monthly reports on the progress of that individual. One of my assistants is assigned for the purpose of reviewing those reports to make sure everything is going all right.

We have a resident modality which has been organized and is run by the Odyssey House out of New York, which does a very good job. Dr. Denison Gerber is in charge of that, a tremendous individual.

We have an outpatient center called SODAT, similar to the one in Pennsylvania. We have three units now operating in our area. We have a methadone maintenance modality and then we have one we have organized, which we are really quite excited about, and that is our crisis centers in the high schools and communities throughout the area.

We have about 500,000 people in our jurisdiction and what we have done is establish these crisis centers to handle the less complicated drug cases with young people themselves. In other words, we have trained 20 to 25 young people in the area of empathy training, and what have you. They receive about 60 hours' training from professional psychiatrists, psychologists, others, sociologists, and they are then put into these drop-in centers.

In those areas where young people are arrested for pills or marihuana violation, we defer the probation and send them to the drop-in centers in these high schools. We have 27 high schools, about 13 crisis centers now in the high schools, and 4 or 5 in the analogous community.

What is exciting about it is—and we are satisfied that if you are really going to have impact with young people, you have to do it with their peers—the kids themselves work with these individuals to try to correct whatever problem may have caused them to get involved in drugs. Keep in mind, some of these young people have no problem at all. They just happened to be arrested when they had some marihuana in their possession. The reason they have been charged with a crime is because of the possession, not because they have the particular problem, but because they were doing something that may have been illegal, because of peer pressure.

I am not playing that down, but it happens to be a fact. When these young people work with these persons, and we have contracts with these drop-in centers, they then make recommendations back to us. When their monthly report comes in, they indicate the progress of the individual and the recommendation as to whether or not the person needs more treatment or they are satisfied he has successfully completed the program.

What is exciting is we have young people themselves participating in the system in a meaningful way—not just window dressing. They are actually making recommendations and have impact on other young people's lives.

We think it has been successful. It has been taken up by many other schools in our area and it has now been introduced in the master plan. I understand it is for the State board of education to be encouraged and other jurisdictions around the State. The point simply is that we, I think, recognize we don't know the answers to the drug problem, we in the criminal justice system, and there are many people that we can utilize who can assist us, who want to assist us.

Chairman PEPPER. Excuse me, Mr. Leonard. This committee held hearings in six major cities—New York, Miami, Chicago, San Francisco, Kansas City, Kans., and Los Angeles—on the subject of drugs in the schools, and we have felt all along that much could be done in the schools to deal with this problem. We are delighted to hear your personal experience in what you have been able to accomplish in that area.

Mr. LEONARD. Thank you, Mr. Pepper. I really believe the availability of young people, the desire on their part to become involved and to do this is a tremendous resource that we have never used. I am confident in a couple of years I can return and talk to you again and tell you how successful it has been. I am hoping it will be. I don't know, I can't tell you it will be. All I know is there are many young people who have been sent to these schools, who have now gone into the centers themselves and are counselors, they are so excited about the program.

We have some statistical information in the report here, in my prepared comments. But, I think that at the same time we feel very strongly about those people who are pushing drugs and we prosecute those individuals without any thought of giving any kind of consideration to plea bargaining there. We feel very strongly those individuals have to be prosecuted, those who are profiting for that purpose. You have to distinguish between those individuals and the junkie out in the street selling because he has a habit. I am more inclined to think we could do something for him instead of sending him off to prison if his problem is an addiction as such.

But the dealers who are dealing for profit, who do it knowingly, know what it is all about, deserve to be prosecuted and to be prosecuted to the full extent of the law.

Let me conclude by saying I feel that we have many resources in all of the communities throughout this country that are not being used by the criminal justice system. Until we begin using them, either the system is going to fail or we are going to have to build so many courthouses and add so many prosecutors, police, and judges, that the cost will be prohibitive. We just can't do it.

There are all kinds of people in our communities throughout this country that want to help if we just let them come in and practice what they know and assist us and make this a better community to live in.

I would be happy to answer any questions you might have.

Chairman PEPPER. Mr. Mann?

Mr. MANN. Thank you, Mr. Chairman.

Mr. Leonard, I saw from some preliminary notes that you were a critic of the part-time prosecuting system. In South Carolina, we still have part-time prosecution across the board. State prosecutors as well as lower jurisdictions. And the problem that you mention about having triple property taxes to achieve an adequate system, I think probably holds true there. It is a State system and the prosecutors there could be converted to full-time prosecutor without any impact on the local property taxes.

It certainly should be done. It is a disgustingly inadequate system.

When you compound the inadequacy of the law enforcement agencies themselves, and inadequate prosecutor's office, no presentence investigation for the benefit of the judges, then you really have a tough situation. It wouldn't take any more people, really. Just a few little changes in the system. We are making progress on the training of law enforcement officers now, but the prosecuting offices are not geared up to it.

No diversion systems. In my experience, I certainly saw the need for them. It used to disturb me very greatly to have these teenagers up for grand larceny when it was using some automobile without the owner's consent, and the first thing they know, they have a record that follows them for the rest of their lives and disqualifies them as citizens, and so on.

I recently—well, not recently, about 2 or 3 years ago—jawboned the LEAA because they weren't putting out the word on successful programs. They have now started doing better. But I am disturbed about the lack of some central—I notice you are an officer in the prosecutor's association?

Mr. LEONARD. National District Attorneys, yes.

Mr. MANN. I commented earlier about the failure of the judges to properly organize and give the public information. I don't know what the coordinating agency might be to get the message out. This committee has done a great job in that connection, your prosecutors association, national judges groups, and others. But as you indicate, there are resources available and techniques available, but the word is just not getting out.

I hope the result will be to put out a lot of innovative systems. I know there are seminars and national training meetings from time to time. Are you getting support from the local jurisdictions to pay the expenses for the prosecutor's attendance there?

Mr. LEONARD. Many jurisdictions, Congressman Mann, do provide funds, but there are many that do not. The district attorneys have a hard time convincing their local boards of supervisors or commissions that they should be going to these conferences, which are absolutely essential to a continuing educational program of a prosecutor. As a result, the District Attorneys Association, as well as the National College of District Attorneys—I don't know whether you are aware we have a national college at the University of Houston Law School that

trains district attorneys all year 'round—have been going out to local jurisdictions, like, say, Atlanta, Ga., and trying to get the States in from there.

Up in Philadelphia, Chicago, they have been moving the conferences around to try and bring the information to the district attorneys, as well as providing State programs for various State organizations that want one.

One of the big advancements, I think, that district attorneys have made now, which has come from LEAA, much of it, is what we call State directors, or coordinators, a hired prosecutor or former prosecutor who works full time for the State organization and works as a lobbyist in regard to legislation, keeps them informed of what is going on, sets up training seminars, and things like that. So we are making progress.

I am very pleased to hear your concern about it because that is exactly the problem, making the local legislative bodies understand that these people should be receiving training.

Mr. MANN. Which brings up another problem. It seems the attorneys general across this country seem to be involved in civil matters rather than assisting the criminal courts, although they have authority over solicitors and act as prosecutors and can assign them around, when a problem occurs with reference to a special prosecution. But the attorneys general aren't doing much in the area of training prosecutors. That is an area that perhaps should be explored.

Thank you very much.

Chairman PEPPER. Mr. Nolde.

Mr. NOLDE. Mr. Leonard, your citizens probation program has achieved a remarkable success. As I understand, only 3 percent recidivism. Would you tell the committee the fantastically low cost involved in that program?

Mr. LEONARD. I think what is really important about this is that the cost per person on the program per year is $65 a year. That is the cost. We have over 1,000 individuals on the program right now, and it continues to go up. The cost per probationer in our county is about $360 per year.

Now, there is one aspect of it that we have introduced because of financial problems and things like that, and our desire to continue the program, and that is we require every probationer who can afford it to pay $100 for the program. In other words, for the services the program provides. We don't think that is an unusual expenditure or demand.

If a person is indigent and can't pay, he is allowed on the program without paying. About 70 percent of them pay the $100.

It is not a blackmail thing in any way. If they can't afford it, they don't pay it. But it keeps the program going, reduces the cost to our county, which funds most of the bill for this thing, because they recognize the tremendous saving in taxpayers' money in not having these people go through the criminal justice system, judges' time, prosecutors' time, police time, probation time.

We have diverted them out.

Mr. NOLDE. But this only costs the county prosecutor $65 per person per year?

Mr. LEONARD. The county. What I have done, so there isn't any question of political hanky-panky or unevenness in treatment, I have

divorced the citizens probation authority from my office. So it is an independent agency, although as a prosecutor they are helping me exercise my discretion and I have to make the decision whether I am going to prosecute or not. But their recommendations are given great weight and I don't know in the 8 years it has been operating, that we have ever rejected their recommendation.

Mr. MANN. What is the nature of that decisionmaking body of theirs?

Mr. LEONARD. You mean the citizen's probation authority?

Mr. MANN. Yes.

Mr. LEONARD. It originally got its name because it was citizens who did it. We started out with lawyers in the office who advised the committee and we used again community resources, psychologists, psychiatrists, ministers, priests, social workers, teachers, people who deal in human behavior, who sat in teams and would take these individuals that worked with them. It got so big it couldn't be followed up like it was suggested by Judge Richette in the Philadelphia situation.

We established a professional staff and that staff is made up primarily of people who were former probation officers who came to us and began working with us. They know how to deal with the people. They examined them and set up programs for them. They find out what their problems are, whether they need therapy, whether they need training for a skill, whether they need training in reading, or whatever it is, and they begin to work on it.

We have a program, any young person who goes into the program, who can be admitted into college, we will see to it, if they can't afford it, they will receive a scholarship.

Mr. MANN. Is there a citizens advisory board?

Mr. LEONARD. Yes, the citizens advisory board meets about once every 6 months, twice a year, to discuss policy matters with us. That is a very important aspect of the program, to keep the citizens of the community involved in it and make sure you have public support for it. And in all of the 8 years we have been operating, we have processed now around 3,800 young people through the program, people who could have been charged with felonies, who are now out on the street without criminal records, not committing any more crime, either in college, business, or what have you. We have never received any criticism. I don't think it hurts anything to have publishers and managers of television stations on the committee.

But I think, if the program were bad, these fellows would have said so. They were very helpful in developing the program, keeping it on the straight and narrow, and have been a tremendous asset to our program.

Chairman PEPPER. Where do you get the money, Mr. Leonard, to teach anyone a skill?

Mr. LEONARD. We are very fortunate that in our community our high school has a big skill center that has night classes and the Mott Foundation in our community is one of the originators in keeping the high schools open at night. We have all kinds of programs going on in every single high school in our community at night. We can plug them into all kinds of different programs.

We give them testing to find out where their interests are, where their skills are, and we plug them into those various programs throughout the community.

It is a very simple project. It just takes someone to put them together. Once it is put together, it is not that much more expensive. We have all of those resources available.

Chairman PEPPER. How much of an administrative staff do you have to supervise the operation?

Mr. LEONARD. The citizens probation authority now has 10 people. So they are supervising approximately 100 people each month. Keep in mind, they are supervising people who are not likely to commit other crimes, who have a real interest to stay in the program, because if they don't, they will be prosecuted.

Chairman PEPPER. Suppose a young person, 18 years old, is arrested, from then on what happens?

Mr. LEONARD. The police officers, as you know, usually the police agencies, might be reluctant to participate in a program, but they have no choice. In our State, the prosecutor requires all of the warrants and they must come through us. But now they are very cooperative with the program. They come in, if they know this person fits a certain classification he possibly will go to the program.

They make out a form which tells all of the information and they have a recommendation. We allow them to make recommendations. We don't always follow it if we don't think it is a legitimate recommendation. For example, if they caught a young kid burglarizing something and they are satisfied this is a kid they were trying to get for a long time, he and 50 others, they make note of it, and the citizens probation authority, which is the independent agency with the 10 workers, will then be assigned.

He will be told to report to their office on the next day and he will come through the office. He first comes into our office where he is screened and interviewed and then he is told to do certain things in the process of the investigation. It takes between 10 days and 2 weeks to finish.

Then the recommendation and the process of investigation is done by one of the probation people in our citizens probation authority program. The recommendation comes back to us whether he is accepted or rejected. If he is accepted, they immediately begin whatever workup on the program they feel they need.

If he has a reading problem, any kind of problem, if he has been to college and is dropping out and needs some help there, we get him this. If he needs job skills and wants to go into auto repairs, we begin working with him in that area. After 6 months or up to a year, they will work with him. If they feel during that time period he has sufficiently completed the program, they set up for him, they recommend the prosecution be dropped.

If he were fingerprinted, mugged, they will all be returned by the police agency bureau order. We try to avoid him even being processed in that way if we can, because we know if a person is mugged and fingerprinted and it comes to Washington, we don't know if we can ever get it back. We have no control over that. As a result, we try to stop it and the police agencies have been very cooperative now and very helpful.

But there are reports constantly coming to us on whether or not the person is sufficiently fulfilling his program. He must report. If he has problems, they work with him.

Chairman Pepper. If there are problems in the family——

Mr. Leonard. Yes, sir. That is very important in our program. Absolutely essential when we started out was the fact that the family be brought in immediately and even if his family were a broken family, the mother and the father are brought in and they sit down with the young boy or girl and we begin working on the problem with them.

We used to have a great deal more power in Michigan in that respect until they dropped the age of majority down to 18, and we don't have the control. But we still get a lot of cooperation from families where we think it is necessary. It is very much a part of the program.

Mr. Nolde. Mr. Leonard, I would like to ask you about the use of the grand jury. As I understand it, in Michigan, you do not use the grand jury to routinely initiate charges, relying instead upon the issuance of a criminal complaint.

What is your opinion about the use of grand juries?

Mr. Leonard. Well, I think the grand jury is a necessary evil.

Mr. Nolde. It is an evil?

Mr. Leonard. I think it is an evil. It is a necessary evil because prosecutors have no way of investigating that area of crime I am suggesting to you is going uninvestigated. That is, public corruption, white-collar crime, and other organized crime.

The prosecutor has to have some subpena power to force these people in because we are invariably talking about books and records in many of these cases and we can't get at books and records until we start the case. Unless we have the books and records, we can't start the case, so it is kind of a vicious circle.

Mr. Nolde. But for other types of crimes, isn't it a tremendous waste of time in the routine criminal case?

Mr. Leonard. Yes, because generally you are talking about an individual who is caught in the act, or he is identified in the lineup, so we never use the grand jury in that type of crime. Based on identification and lineup, fingerprints and what have you, we issue the complaint and the warrant goes out and the process comes through. The grand jury——

Mr. Nolde. It is, in effect, a rubber stamp?

Mr. Leonard. Right. We use the grand jury only in the cases I described to you, pretty much. Very rarely we might subpena a witness in who refuses to come in, refuses to say anything in a violent crime case. We may have to call him in. But that has been done out of all the cases we have had in the last 2 or 3 years in Michigan—it is rather recent in Michigan—then only two or three cases. Right now, we use the grand jury primarily for investigative purposes, just to investigate crime.

Then we go to the complaint and warrant rather than indictment. I have always said, and we have tried to convince our legislature that it is an awful waste of money to have 17 people, why not give the subpena power to the prosecutor and let him do the same thing anyway, and the defense attorney can come in to the prosecutor's office and sit down. I am of the belief that grand jury laws should permit the defense attorneys to sit in with their clients when they are testifying before the grand jury.

It is really a game we are playing. Technically, they could sit out by the grand jury room and the witnesses don't have to answer questions until they have the right to consult with their attorneys. So why waste time? Have them sit there and you eliminate a lot of the criticism that they can't have their attorneys or consult with their attorneys.

I think if prosecutors had subpena power, where they could subpena records and books and things in their investigation, they would be much better off. Subpena power with the approval of the judge. In other words, if you are going to investigate a case, you have to petition, like for a search warrant, an affidavit, what have you, asking the judge to give you permission to subpena. And you have that protection in that way.

But until we have that, we have no choice, we have to use the grand jury in those areas other than street crime I talked about.

Mr. NOLDE. Before I close, Mr. Chairman, I would like the record to reflect some of the outstanding achievements Mr. Leonard has accomplished over the years. He was twice chosen as outstanding prosecutor in the State of Michigan, and recently chosen by a national magazine as one of the 10 most admired men in the country for, in part, having donated his salary increase to the county drug program.

In addition to that, he recently returned from Russia on a fact-finding tour in which he investigated charges of persecution of Soviet Jews, having to enter the country posing as a tourist because they would not permit any official outside investigation.

So he has achieved many things in addition to the outstanding work we have heard he has done in the prosecutor's office in Flint, Mich.

Chairman PEPPER. Mr. Leonard, you are obviously one of the innovative leaders in the whole criminal justice system. We are so pleased you could cooperate with us in these hearings. What we are trying to do, as you know, is put into the record and make available to prosecutors and other law enforcement people all over the country the most innovative programs that will be examples and, we hope, an inspiration for many in helping combat street crime.

Before we conclude—you are so knowledgeable in and have such a feel for this whole program—what would you say we should do about our correctional system and what can we do?

Mr. LEONARD. I am of the belief the correctional system, the centralization of the correctional system, is a real serious error. For example, in Michigan, we have what we call 19 major metropolitan areas, which are fairly large cities. I believe we ought to have more minimum security institutions whereby, again, if we have the minimum security institutions in our major cities, we can begin utilizing those community resources that are there and ready, willing, and able to help us.

We are attempting to do that now in Michigan. We have, I think, a very progressive sheriff, just recently elected, a young fellow who is finishing law school in the next year or so, and he is willing and desirous of doing these things.

So we are very hopeful we will be able to do that in Michigan.

But I think it is going to need some help from Congress at least in direction and encouragement. Probably some of them will be coming in asking for some financial support. But I think you are giving it in LEAA. I think the money is there. I think all we have to do is set some priorities.

I think if we could establish the minimum security prison, where we had open visitation rights, where we try to keep families together instead of destroying them when a person goes off to prison, where we even have conjugal visiting rights as far as I am concerned, where wives and children can go and be with their husbands and their fathers on weekends, or whatever it may be, to try and keep that family together, and also work-release programs and things like that, which we can do in these various communities.

I just think we have to decentralize our prison system.

Chairman PEPPER. I am very pleased to hear you say that. I think it is one of the critical weaknesses of our criminal justice system today. I don't know to what extent the LEAA is now financing the experiment establishing that kind of institution. I know the Federal Prison System has stopped building big, centralized institutions and are trying to get them on a smaller scale and embody more of those principles.

But even more than that, I would like to see the Federal Government put up 50 percent of the money with the States in establishing institutions, such as you were describing, in the urban areas where, generally speaking, the inmate in the institution would be close to his family, close to his own environment.

Mr. LEONARD. Absolutely.

Chairman PEPPER. And helping the State get started with those systems and then, I am told, probably once they got them established and in operation the States could pay for the operation of them, because it would not be a continuing Federal responsibility.

But I feel if the Federal Government wants to do something, and certainly it does, I believe we could reduce crime a great deal if we could establish that new kind of correctional institution and operate it from a new point of view, with a new purpose; primarily to protect the people against the repetition of the kind of crimes the inmates in there have committed.

What hope is there for an institution like Attica or Raiford in Florida, where they are overcrowded, they don't have any adequate programs of any sort, built out in rural areas where there are no job opportunities, no visitation opportunities available, and the like.

Mr. Leonard, we are most grateful to you. We just hope you will continue your great work in whatever office will allow you to do the most good in this area.

Mr. LEONARD. Thank you for having me, Mr. Pepper, Mr. Mann.

[Mr. Leonard's prepared statement follows:]

PREPARED STATEMENT OF ROBERT LEONARD, PROSECUTING ATTORNEY, GENESEE COUNTY, FLINT, MICH.

Mr. Chairman and members of the committee, in the present decade, the traditional American System of Criminal Justice has come under close scrutiny and has received much deserved criticism. Legal scholars, legislators, judges, and prosecutors are all too well aware of the patent, major defects and deficiencies which exist in the present operation of the Criminal Justice System in the United States. The proliferation of crime in the streets in our country is certainly related to the basic inadequacy in our Criminal Justice System in failing to curb the frightening upward trend.

Some of the more obvious and significant problems and defects we have observed are:

1. The "assembly line" processing of accused persons in our criminal courts, in the vain attempt to ameliorate their hopelessly clogged criminal dockets, through such measures as forced plea bargaining.

2. The commingling in our jails and prisons of truly hardened and incorrigible violent criminal sociopaths with non-violent and misguided offenders the latter who, but for their often inexorable entry into prison, might have been able to avoid stepping onto the "treadmill" of criminal recidivism.

3. The lengthy delays at every stage between the time when an offender first commits a criminal act and the ultimate time when his price to society therefor is finalized, which delays insure that the offender will learn no beneficial or rehabilitative lesson at all from his ultimate punishment because he has long since forgotten or rationalized away the significance of his prior conduct.

4. The indelible and permanent labelling of many such non-serious and non-violent "law-breakers" as "criminals" and "ex-cons" who will retain such a stereotyped designation for the rest of their lives, along with the concomitant social stigma, ostracism, disgrace and loss of status as full-fledged citizens.

5. The exorbitant expense and cost of funding programs of post-conviction probation and parole which fail to adequately supervise or rehabilitate the probationers or parolees.

6. The loss of credibility in our very Criminal Justice System itself which the public has manifested and which has resulted to a great extent from the fact that our justice system has traditionally focused its resources on the poor and minority groups while at the same time failing to deal with the crimes of the more affluent or the "Establishment" which often have a lesser degree of visibility but to which we must and should devote more attention in the future.

There has indeed been much proper and warranted criticism of all of the above-described ills present in our standard and traditional system of criminal justice—a system which has been crying out for reexamination and change, for innovative, positive and thoughtful approaches and solutions to all of the above serious concerns.

It cannot be gainsaid that we do need more judges, courtrooms, police and prosecutors to operate our system as it exists, but not only must we be concerned with the prohibitive costs of such additions, we should also recognize that such additions alone, even if they were financially feasible, would not solve the present inadequacies we have seen.

What is necessary beyond the bare multiplication of the participants in the system is a basic revision in thought and in philosophy on the part of police, prosecutors and our criminal courts. What we need to stem the proliferation of crime is a proliferation of the viable alternatives available to our presently beleaguered Criminal Justice System. We must recognize that our treatment of offenders should be made more flexible and more variable, and that per se uniformity and rigidity in treatment has not proven to be an effective answer to the crisis in crime. The police, prosecutors and courts—the introductory channels of the system—can no longer afford to operate in an isolated vacuum. The successful diversion of selected offenders from the system is predicated on the need to remove this vacuum and to integrate the operation of the police, prosecutors and courts with the community at large—with the co-participation of all of the communitywide agencies which can and should effectively work together with the basic criminal agencies in the mutual effort to stem the ever-increasing rise of crime. Such an alternative and option is the concept of diversion, that is, diversion of selected offenders from the system by the prosecutor, the pivotal chief law enforcement agent, who is responsible under our law for making the fundamental decision whether to prosecute or not to prosecute any offender under the traditional warrant process.

The supporting basic need for the concept of diversion is that we must manifest more concern for finding the most appropriate ways of dealing individually with individuals, or recognizing each offender as being a peculiar human being with a corresponding unique background and complex of personality traits.

We must remember that each and every offender is a member of a community and whether he goes to prison or not, he will one day return to that community. It therefore seems both logical and necessary to bring these offenders into early and initial contact with any and all community-based agencies which are currently in a position to isolate, define and evaluate the various needs and deficiencies of the individual, which are treatable and curable by them and not by the police, prosecutors and courts per se.

The breakdown in our Criminal Justice System which we have seen is perhaps most directly a result of the overburdening of it; that is, the input into the system is so high that the ideal operation of it cannot possibly be achieved. The use of diversionary programs would certainly help to reduce this excessive in-

put by selectively diverting certain nonviolent and nonserious offenders to voluntary programs of preprosecution probation before any formal criminal warrant is issued, or any formal criminal charges are lodged against them.

Many of these accused persons, who would otherwise fall into the "assembly line" system in the courts, are effectively kept out; this way the more serious and often much-neglected crimes can be more effectively dealt with, such as crimes of violence, organized crime, public corruption, and crimes against the consumer.

Second, by diverting such selected offenders at this initial stage under the discretionary power of the prosecutor, they are effectively kept out of the prison environment and thus removed from the influence and example of those incorrigibly hardened violent and sociopathic criminals.

Third, there is a distinct advantage to being able to deal with the offender at the moment when the magnitude of his offense as an anti-social act is still uppermost in his mind and before he's had an opportunity to spend months making excuses for himself or learning from jailhouse lawyers how to beat the rap or not get caught the next time.

Fourth, by so diverting offenders, they would avoid the indelible stigma of "criminal" or "ex-con" which would not only operate to penalize them in many collateral social contexts throughout their future lives, but which, moreover, would stand in their minds as a self-fulfilling and internalized perception, which might further encourage them to act out their social roles as "criminals" and effectively discourage them from rehabilitating themselves in the future.

Fifth, by so diverting such offenders from programs of post-conviction probation or parole into such diversionary programs of preprosecution probation, the presently overburdened caseloads and costly expense of often ineffective post-conviction probation and parole can be significantly reduced while at the same time society loses nothing in the way of protection by the mere per se shift of selected offenders from one form of supervision (i.e., post-conviction) to another form of the same (i.e., preprosecution).

Sixth, by so diverting such offenders from the Criminal Justice System, and thereby reducing the overwhelming caseloads of our criminal courts, all of the remaining more serious cases which are formally prosecuted will thus be freed from the real pressures and deficiencies of too scarce manpower, time and resources which currently exist and which also currently compel the oft-criticized practice of "plea-bargaining" on the part of prosecuting attorneys. Moreover, by so freeing such scarce resources, and by, at the same time, adding to them, we can insure that the areas of criminal conduct which have too long been ignored and which are ever-increasing in our complicated and technical society will be more fully dealt with and prosecuted. Such areas include white collar crime, organized crime, public corruption and the area of consumer fraud. It is important that we bring the resources of the justice system to bear upon these serious areas of criminal conduct which, even though they are perhaps less visible and less frightful than violent and assaultive street-type crimes, are nevertheless, if unchecked, extremely destructive of the very fabric of our society.

White collar crime and crimes directly perpetrated upon consumers affect a far greater number of people than do street-type crimes of an assaultive nature. The collective consequences to the public from the former are extremely dangerous in the sense that many people come to doubt the worth of our society itself—a society in which criminal behavior is not confined to merely a sub-set of robbers and murderers, but in fact cuts across every social stratum. If we do not prosecute in these too long ignored areas, we are further engendering the general public's lack of trust and confidence in the ability, or even desire, of government to protect the public good. In addition, we will further encourage many more of our citizens to lapse into the attitude that criminal behavior is "normal" human behavior, to become indifferent to it, and indeed to adopt it as a good way to get ahead in life. Although we must continue to vigorously prosecute those who engage in assaultive street-type crime—whether these offenders are poor or from minority groups or not—we must make sure that the poor, members of minority groups, and, indeed, the public at large do not lose a basic confidence in the credibility and even-handedness of the operation of our Criminal Justice System. We cannot allow the poor or the blacks or other minorities to continue to believe that crimes committed by those with power, wealth or social status, either as individuals or as members of a corporation, will go unpunished and ignored. We cannot allow the disadvantaged and underprivileged to continue to refuse to testify as witnesses and to sit on juries and refuse to convict those

who commit violent street-type crimes because they believe that it is not fair to convict these criminals while, at the same time, the government hypocritically "exonerates" the advantaged members of the more privileged classes whose criminal conduct certainly has a more widespread effect and which certainly touches a much greater percentage of our population, even if not in a more brutal or blood-spilling manner.

Seventh, by diverting selected offenders from the Criminal Justice System, we can effectively cure the lack of finality in the disposition of offenders which exists in the system. Under the traditional system, the wheels of justice once set in motion often never cease—even after a formal conviction is obtained the process of appeal, re-appeal, rehearing, habeas corpus petition and so on commences and continues in an unending cycle at not only an extremely high financial expense to society, but with the further consequences of engendering a lack of trust or belief in the finality of justice. By taking people out of this perpetual cycle initially, we will certainly insure that one of our primary concerns—the finality of justice—will be better achieved.

Through the implementation of diversionary programs we can more effectively treat selected offenders through the mode of preventive rehabilitation, as contrasted to the traditional Criminal Justice System's wholly post facto and proven ineffective attempts to rehabilitate offenders. As stated before, we must also foster the broadest possible community involvement in the solution of the problem of crime through dynamic, active, and innovative agency co-participation. We must have and promote diversified and viable alternative community-based methods of analysis, treatment and support for the offender, such as development of reading and writing skills, vocational training and education, job placement, financial aid, learning disability tutoring, psychological and medical care, marriage and family counseling, peer group therapy and counseling, and so on. For example, in Genesee County, Michigan, certain selected youthful drug offenders are diverted from formal criminal prosecution by my Office, and, in lieu thereof, voluntarily attend community-based drug problem treatment centers and so-called "drop-in" centers, where they are counseled by and relate to previously trained members of their own more influential peer group in relation to solving their own drug problems. This kind of integrated communitywide involvement and support is essential to the success of such diversionary programs.

We must deal with all offenders at the time when they will still feel the full impact of the consequences of their actions. We know that the success of behavioral modification attempts is directly correlated to the time span between the implementation of such attempts and the commission of the initial unlawful conduct by the offender. The failure of our penal institutions is perhaps traceable to the fact that the extreme delays which take place at every stage of the criminal justice process insure that a great deal of time will pass before any offender is even given any supervision for a long-past-committed action. The expeditious diversion of offenders and their immediate treatment in a plan of preprosecution probation will most certainly shorten this critical time span and will promote the societal goal of rehabilitating offenders much better than do our present penal institutions.

Our diversionary program in Genesee County, Michigan, has two distinct segments. The first segment is called the Citizens Probation Authority. Citizens Probation Authority does not handle drug-related cases which are handled in the other segment of deferred prosecution. The accused is asked if he would like to freely volunteer for the program. If he chooses not to, he is placed in the regular criminal justice channels. If he freely chooses the Citizens Probation Authority, an investigation of his entire background takes place and a "treatment program" is established. It should be pointed out that, as soon as the accused volunteers for the program, all activities, interviews, investigation and counseling are handled completely by the Citizens Probation Authority—separate and distinct from the Criminal Justice System.

The Citizens Probation Authority has its own professional staff and the individual treatment programs involve either paid or volunteer social workers, therapists, counselors or concerned citizens with an appropriate background. Treatment programs last no longer than one year. The Citizens Probation Authority derives its financial support from LEAA local trust funds, the Emergency Employment Act, and the Genesee County Board of Commissioners. Our office actively seeks funding sources for the Citizens Probation Authority.

The second segment of deferred prosecution is another type of diversionary preprosecution probation plan. It is an excellent example of the justice system working in conjunction with community agencies. This segment involves persons

of any age arrested for possession of drugs and narcotics. Again, individuals are eligible who have been arrested for the first time or who have no established record of antisocial behavior. Accused persons involved in a drug-possession case can volunteer to be referred to the Genesee County Regional Drug Abuse Commission. The GCRDAC is the coordinating agent for all drug education, treatment, and rehabilitation units in the county.

My office refers an accused person to the justice system liaison officer at the Commission. The Commission staff then conducts appropirate interviews and counseling sessions to determine what counseling or treatment program would be the most appropriate. Legal contracts are entered into by my Office and the modalities offering, among other things, monthly reports on the rehabilitation progress of the individual. Also, the Commission reports back to the Prosecutor's Office when the individual treatment program has been terminated, either successfully or unsuccessfully. Unsuccessful terminations result in a return to the regular criminal justice channels. The treatment or counseling is done at a Commission-affiliated agency.

Have these diversionary programs worked? In the past seven years, the number of cases placed on adult probation through the Genesee County Circuit Court has continued to steadily decline proportionately while the number of cases placed with the Citizens Probation Authority has continued to steadily increase. The probation violation rate for clients of the Citizens Probation Authority has averaged under 5%, with many of those being only technical violators rather than actual recidivating offenders. The program is currently supervising over 1,000 offenders a year.

From January 1972, to April 29, 1973, the drug diversionary segment processed 310 cases. Sixty-five offenders have graduated from programs. Ninety-one have been rejected or have requested prosecution rather than treatment, and the remaining 164 are still in treatment. Only four of 305 cases were arrested again during the year. Roughly speaking, over 70% of the clients referred to the program are still involved or have graduated.

Many programs sound good on paper. Why is deferred prosecution working in Genesee County? There are several important reasons. The nature of the relationship between the agencies and the Prosecutor's Office is crucial. Because the case can always be tried at a future date, the Prosecutor does not interfere in any way with the treatment process, thereby encouraging new and innovative approaches to treatment which are often discouraged by formal, rigid, statutory requirements, departmental regulations, and bureaucratic inhibitions. The attitude is one of letting those who know their job—do it.

The second reason for our success is the spirit and nature of the treatment agencies themselves. Because they are responsible only to their clients, they see themselves as helping, not punishing, and most clients see the process in the same light. Methods vary from individual counseling to group sessions, and in cases involving acute behavioral problems, therapy.

Another key to the success of Genesee County's deferred prosecution programs is our Office itself. We have actively sought diversionary approaches. My staff has continued to work for expansion of community resources, cooperation among agencies, and has successfully sought funding for Criminal Justice System programs and community resource support options. We have worked consistently to remain flexible and have constantly asked for evaluation from those in the programs themselves and also from outside agencies. Deferred prosecution hasn't solved all the problems of the Criminal Justice System in Genesee County, but it has brought confidence—a confidence from a Criminal Justice System that looks for realistic options, and more confidence in that system from those who work within it.

A client's participation in CPA takes place before he is actually charged with an offense, often even before formal arrest. Any offender who meets the preestablished certain criteria, for example, that his suspected offense be a nonviolent crime and not represent a continuing pattern of antisocial behavior, is referred by the Prosecutor's Office to CPA for an interview and investigation. If, on the basis of these preliminary contacts, CPA counselors determine that the program of preprosecution probation and counseling, as opposed to traditional criminal prosecution, would offer appropriate treatment, and, if the suspect voluntarily agrees, the Prosecutor will allow the offender to participate in the program for the customary probationary treatment period of up to one year under the supervision of CPA. Given satisfactory completion of such probation, which may include a requirement of restitution to the victims of a crime, prosecu-

tion is dismissed, and any police arrest or booking records are given to the probationer. CPA may, after careful analysis of both the individual's potential and the facts of the case, decide at the referral stage that voluntary probation would not be an appropriate treatment; if so, the case is then referred back to the Prosecutor's Office with a recommendation for further consideration and decision by that Office. Anyone referred to CPA has the right to withdraw from the program at any time, with the understanding that his case then becomes subject to prosecution. Additionally, probation may be revoked by the Prosecutor's Office, upon recommendation of CPA, if the client violates the terms of his probation.

To the extent that the above procedure demonstrates a mutual cooperation between the Prosecutor and CPA in the initial stages of the charging function, it would appear to be clearly consistent with the traditional legal basis of prosecutorial discretion. In fact, the impartiality of the Prosecutor in ultimately making his final charge decision is not in any way impaired, and ultimate control of the charge decision always resides in the Prosecutor. One legal basis of prosecutorial discretion is the traditional and well-founded jurisprudential concept that an elected and responsible public official is more capable of making impartial decisions concerning the advisability of bringing charges against an offender than is a private complainant—the person who in effect made the charge decision under the old English system of criminal justice. Permitting CPA contributions of information relevant to the desirable goal of insuring intelligent and enlightened charge decisions by the Prosecutor does not vitiate the impartiality of the Prosecutor or the prosecutorial process. A prosecutorial decision made in conjunction with the helpful and valid information supplied by a politically neutral CPA staff would clearly tend to be made in a more impartially informed manner than would the decision of the Prosecutor acting without any such assistance.

It might be argued that this very impartiality makes the CPA staff insensitive to public opinion regarding the types of persons who ought to participate. Judicial deference to the judgment of public Prosecutors has often been justified by the belief that the Prosecutor, especially an elected state Prosecutor, makes charge decisions that accurately reflect community values. But this objection has no force since: (1) the CPA worker is protected from improper pressures concerning individual cases; (2) the CPA program itself was established by the Prosecutor; and (3) the CPA program is always under the Prosecutor's ultimate control, and thus, through his elected office, provides for sensitivity to community values.

Thus, CPA operates merely as a supplement of the Prosecutor's Office. It impairs neither the legal justification of prosecutorial discretion nor the Prosecutor's final control over the charge/no charge decision. Rather CPA enhances the knowledge and expertise necessary for a just decisionmaking process.

The Prosecutor and CPA standardize the operation of prosecutorial discretion through the promulgation of rules and regulations to the end, not of expanding the scope of discretion, but of exercising that discretion more intelligently. The Prosecutor still makes an individualized, case-by-case determination of whether to prosecute.

Chairman Pepper. The committee will recess until 10 a.m. tomorrow here in this room.

[Whereupon, at 5:15 p.m., the committee adjourned, to reconvene at 10 a.m, Wednesday, May 2, 1973, in room 1302, Longworth House Office Building.]

STREET CRIME IN AMERICA

(Prosecution and Court Innovations)

WEDNESDAY, MAY 2, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:10 a.m., in room 1302, Longworth House Office Building, the Honorable Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Mann, Murphy, Wiggins, Steiger, Winn, and Sandman.

Also present: Chris Nolde, chief counsel; Bob Trainor, assistant counsel; Thomas O'Halloran, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

Mr. Counsel, will you proceed to call the first witness.

Mr. NOLDE. Mr. Chairman, we have two very distinguished witnesses here this morning, the district attorney from Houston, Mr. Carol Vance, and the district attorney from Los Angeles, Mr. Joseph Busch.

Chairman PEPPER. Excuse me, Counsel.

We will ask Miss Jordan if she wants to honor us by coming up and sitting with the committee.

Miss JORDAN. I will do that. I am going to have to leave shortly.

Chairman PEPPER. We are very pleased to have our distinguished colleague from Texas, a former distinguished State senator, Barbara Jordan, with us today.

I believe one of the witnesses is from your State, Miss Jordan, and we would be pleased to have you introduce him.

STATEMENT OF HON. BARBARA JORDAN, A U.S. REPRESENTATIVE FROM THE STATE OF TEXAS

Miss JORDAN. Thank you, Mr. Chairman, and fellow members of the committee.

I am most pleased to have the district attorney of Harris County here this morning, Mr. Carol Vance. I have known him for a long time. He is not only an outstanding district attorney, but he is a close personal friend of mine and supporter, if I could add that, which makes me just a little prejudiced on his behalf.

Mr. Vance is the president of the National District Attorneys Association. He holds high office in the Texas District Attorneys Association. He has done great work with the criminal justice council. This is

his third term as district attorney for Harris County. And for this third term, he was unopposed for reelection, which is testimony to the outstanding job he has done in Harris County.

I am very pleased that he is here. I am very pleased that you will hear him. He is a man of great competence in the area and I hope you will benefit from what he has to say.

Chairman PEPPER. We thank the gentlewoman very much for a most excellent introduction.

Mr. Vance, we are very much pleased to have you.

I now call on the distinguished ranking minority member of this committee, one who has made a very valuable contribution to the cause we are concerned with here, Mr. Charles Wiggins of California.

Mr. WIGGINS. Thank you, Mr. Chairman.

It is my pleasure to introduce a friend, a constituent, and a valuable public servant for the county of Los Angeles. The witness, Mr. Chairman, is the Honorable Joe Busch, the district attorney for the County of Los Angeles.

District Attorney Busch is the prosecutor for one of the largest counties in the world. Nearly 7 million people live within the jurisdiction of the Los Angeles County District Attorney's Office. He is the supervisor of one of the largest law firms in existence.

I believe, Joe, there are approximately 450 deputies under your command.

Let me say that enormous job, Mr. Chairman, is performed efficiently and well in the county of Los Angeles. Mr. Busch has the deserved reputation for being an honest and fair, fearless, and aggressive prosecutor for the county of Los Angeles. By reason of the enormity of his job, he is able to provide this committee with certain expert testimony on matters properly within our jurisdiction.

I am particularly interested, Mr. Busch, in your comments with respect to bringing matters to trial and their early disposition. The subject of speedy trial is one that is confronting this Congress and your contribution in that area in particular will be both welcome and valuable to the committee.

Mr. Chairman, I am honored to introduce to the members of the committee, the Honorable Joe Busch from Los Angeles.

Chairman PEPPER. Mr. Busch, we are very much pleased to have you.

We are fortunate this morning to have you two outstanding prosecuting attorneys to come and honor the committee with your presence and your presentation.

As you no doubt are already informed, these hearings that we are having relate first to the most innovative procedures in the police departments of this country. We had 13 of the outstanding police departments of the country make statements here of techniques and procedures, the most innovative procedures in the country. We found them most interesting and I hope they will be emulated by other police departments in the country.

Previous to the Easter recess, the subject of our hearings was juvenile crime and correctional institutions. Of course, as you know, the courts are very critical of the area of the whole judicial administrative process. There, again, we had innovative procedures disclosed to us by outstanding people in these two fields.

Now, this week is devoted to innovative procedures that have been developed by the outstanding prosecuting attorneys in the country. Also, innovative procedures and programs developed by trial and appellate courts, both State and Federal.

We are very much pleased to have you with us this morning.

And we want to thank you very much, Miss Jordan.

Miss JORDAN. Thank you, Mr. Chairman.

Chairman PEPPER. Mr. Counsel, would you inquire.

Mr. NOLDE. Thank you, Mr. Chairman.

Mr. Vance and Mr. Busch both have plane schedules to meet, so if it meets with your approval, Mr. Vance will open with his prepared remarks, followed by Mr. Busch, and then we will have questions from the members.

Chairman PEPPER. Excuse me just a minute.

We are delighted to have another distinguished representative of the great State of Texas, Robert Casey, one of our colleagues. We will be pleased to have him come and join us and sit in and inquire if he will.

Would you care to say anything, Mr. Casey?

STATEMENT OF HON. BOB CASEY, A U.S. REPRESENTATIVE FROM THE STATE OF TEXAS

Mr. CASEY. I tell you, Mr. Vance can speak for himself pretty well. He is one of the ablest, if not the most able, district attorney Harris County has ever had and people recognize that. He has no opposition I think he can have it as long as he wants and I hope he wants it a long time. Our community likes his diligence and his work.

Chairman PEPPER. Thank you very much.

Mr. Vance was just beginning with his statement.

STATEMENTS OF CAROL VANCE, DISTRICT ATTORNEY, HARRIS COUNTY, TEX., AND PRESIDENT, NATIONAL DISTRICT ATTORNEYS ASSOCIATION; AND JOSEPH BUSCH, DISTRICT ATTORNEY, LOS ANGELES COUNTY, CALIF.

Statement of Carol Vance

Mr. VANCE. Thank you, Mr. Chairman.

It is a real pleasure to be here and have the kind outstanding introduction from Congresswoman Jordan and Congressman Casey and particularly to be on the panel with my very dear friend, Joe Busch, who certainly runs the biggest district attorney's office in the country, an extremely outstanding prosecutor.

Joe and I both came up through the ranks, sort of the hard way, and both served as assistant district attorneys for more years than probably either one of us would like to remember.

I thought rather than reading my comments this morning, it might be a little more effective to just sort of go through some of the things we are trying to do.

Chairman PEPPER. Without objection, we will incorporate your entire statement in full in the record and you may proceed to summarize as you wish.

[The prepared statement of Mr. Vance, above referred to, will be found at the end of the testimony of this panel.]

Mr. VANCE. Thank you.

I do appreciate this opportunity to be here. I have a feeling that through the years the prosecutors have sort of been the neglected stepchild of the criminal justice system. I say this because many people that go into prosecutors' offices do this just as a steppingstone to further a political career or else to go with a private law firm, and this cannot really be said with regard to the other professions involved in the criminal justice system.

For example, a person who goes on the bench generally stays a judge for a long time; a person who goes into police work generally intends to make a career out of it. Of course, a lot do not, but they don't go there to just stay 1 year, 2 years, or 3 years, and then move on.

So I think that the prosecutor's office is the hub of the whole criminal justice system, and they are the ones that basically set the tone or determine which charges will get into the system to begin with. So we must have career prosecutors and upgrade the entire profession of the prosecutor.

Concerning plea bargaining, this is something that we nearly all have and must have. The cases simply cannot all be tried. The prosecutor has perhaps as much to do with the setting of punishment as any other person in the entire system. He works closely with the police officers, advising them. He is just in the middle and yet prosecution has been a neglected area.

We have been extremely fortunate in the State of Texas so far as the LEAA funds are concerned. We have probably spent more on courts and prosecution by far, from my study of the figures, than any other State. I think that I heard Jerry Leonard once say he felt Texas had the best balanced program, or as good a program as any State in the country.

I think one of the reasons he said this was because in 1973, approximately 20 percent of the funds in Texas are planned for courts and prosecution. Obviously this is an area in which we need reform. If we don't process criminal cases properly, then the entire system fails. We cannot put all of this money into hardware for corrections and neglect the court systems, prosecutors or probation officers.

I have served on the Texas Criminal Justice Council and we have tried to do things with this money in our courts and prosecution, that would make some impact upon crime. Of course, it is difficult to look at statistics and see what impact you have, because we have, like Los Angeles, a growing community, now close to 2 million persons in Harris County. Our chamber of commerce estimates our growth at 50,000 people a year. It is a community of all segments, of diverse occupations, of people moving there from all parts of the country. We have a vast seaport. We are a port of entry—the gateway to Mexico and South America. We have all of the reasons to have a high crime rate.

But I think that some of the programs that I will discuss this morning have helped level our incidents of crime—although I caution it is a little early and premature to judge the impact of them.

One day I was called by Joe Frazier Brown, who, until recently, was the distinguished executive director of the Texas Criminal Justice Council, and he said, "Carol, if you had a blank check in Harris

County today to do with these funds as you saw fit, what would you do?"

And I explained that I was appalled that cases are not coming to trial as rapidly as they should. They were coming to trial—at that time—that was about 2 years ago—after a considerable delay of 15 to 18 months.

I told Judge Brown, "This is deplorable. If we have punishment, if we are going to spend money on correctional facilities, if the accused is going to get probation, if he is in jail, if he is out on bond and likely to be committing other offenses, the most important thing we can do is try this person quickly."

I told him, "Our jail is getting overcrowded. We are going to have to build a new jail facility and I don't know that that is money well spent. Perhaps on some correctional facilities, yes, but a jail facility, a holding facility, no."

So I said, "I think we need some temporary courts."

So we examined the law and through a Texas Criminal Justice Council grant we obtained two additional courts. This grant works like this:

Visiting judges are sent in to man these courts. It took quite a bit of staff by way of clerks and support personnel. I guess the cost is about the same as it would be with any other two courts. But this has really helped. Instead of increasing our jail population because of a tremendous increase in the number of indictments in the last 2 years—they went from 12,000 to 18,000 in the last 2 years—the jail population has actually decreased. We did not have to build a new jail.

Also, we achieved a first trial setting in our courts within 3 or 4 months after the offense has been committed. They might not get to trial on that day, and we have some cases that are over a year old due to legislative continuances, or cases that have been set three or four times, lawyers in another trial, witnesses missing, and all kinds of legitimate reasons. Really, we have so many cases pending that it is difficult to give you an accurate figure of how long it takes to try cases. It depends on the nature of the case, it depends on whether the person is in jail or on bond. But the first trial settings in most of the courts are now coming after 4 months instead of approximately 15 months.

One of the reasons for this is the fact that our two courts under this grant concentrate on trying jail cases. Now, we have two more courts sitting over there. One of the dynamics of court management is when a person sees the State has announced ready, it is rather strange how they all want to plead guilty. If the defense counsel knows you cannot get to trial that day because another case is in trial, then he announces ready and knows that his case will be continued by operation of law.

Yet, if there are two other courts that cases can be transferred to, a tremendous number of pleas are entered.

Therefore, this has been a most helpful use of LEAA funding.

Also, judges, I guess, like prosecutors in some respects, are a funny breed. You can have a good prosecutor or good judge and yet they can be lousy administrators for keeping the case flow going. In reality, they ought to be in the process of judging. That is what they are

being paid for and not to be in the paper-shuffling business. But, the paper-shuffling business is a necessity to a successful court operation.

So, pursuant to this same LEAA grant we obtained a court administrator and a court coordinator for each court. This takes a lot of time off the judges. Coordinators can plan dockets well in advance. There is one coordinator for each judge.

Another advantage was to give control of dockets back to the courts. We used to set the cases, the district attorney's office did. I didn't have any real objection to it but this isn't our function. It is not the defense counsel's function to set the case. The judge ought to be setting these cases and they ought to be set in accordance with some sort of priority and planning. So the court administrators have helped.

We are now in the process, through more LEAA funding, of putting in a computer. My opinion is we wouldn't have gotten any of these things from the regular funding sources without LEAA money. This computer operation, when it gets installed, is going to prevent such things as a person getting lost in jail due to having, at times, five persons with the same name, and multiple situations as to why persons are in jail.

In our county, we have charges coming in from nine justices of the peace and 22 police departments. There are so many different agencies involved when you are handling approximately 50,000 serious criminal cases a year—counting the serious misdemeanors and juvenile cases—we need the kind of machinery that can help. The computer programing has been very important.

We have been about the last 18 months in planning the computer programs. We don't really know how they will work out, but they are now producing daily jail lists. Also, the people who do the work on the computers are persons in our department of corrections. This is a great use of labor to help the courts.

Another thing that has caused the jail population to go down is a pretrial release program that was instituted pursuant to an LEAA grant, and they have the usual point system and they are pretty careful as to who they release. They make some mistakes but their rate of persons coming into court is as good or better than bail bondsmen.

I doubt we would have had this program either without LEAA funding.

Let me talk about some prosecution programs we have instituted. The one of the highest priority and the one I am most proud of is what we call our "organized crime division." There are lots of organized crime divisions with district attorneys' offices and there are lots of task forces and joint task forces and Federal and State task forces. But ours is the only one anywhere in the country that has been completely funded by LEAA and is completely within the district attorney's office.

As matching funds, we used our special investigations bureau. The whole unit consists of seven lawyers and one investigator. The emphasis of these attorneys is what is so different. Altogether, we have 90 lawyers on our staff. This is a tremendous expense of the taxpayers' money—$2.4 million a year—and yet on a caseload basis, it is not adequate.

Most of our lawyers are assigned to courts. Prior to our special investigations bureau and organized crime division, the only things

we were investigating and prosecuting were the cases that just came to us by way of police officers making arrests through ordinary routine. Now we have seven lawyers and an investigator that concentrate, you might say, more on people rather than cases that happen to come our way. This group of lawyers zeros in on professional criminals.

For example, take a recent car theft ring. In this 86 million operation 20 of 22 persons involved were sent to the penitentiary as a result of a 1-year investigation. We have been in the narcotics area. The work is hard in this division. Two lawyers have been tied up for about the last 5 months on a matter involving public corruption in the fire department.

We have been involved in all kinds of organized crime activity including attempts of the LCN to gain a foothold in our county.

We have been fortunate. Federal agents and others in Washington tell me we probably have as clean a city as anywhere in the country as far as the Cosa Nostra is concerned. We don't have any members in Harris County. But we know that they would like to move in. And there are other organized crime groups and activities other than the LCN.

So we work on any group of people that get together and conspire and make their living off crime, whether in the narcotics area, automobile theft area, receiving of stolen property, or hired killings. Also, this manpower gives us a chance to look into many large crimes such as embezzlements that are difficult, if not impossible, for present local law enforcement agencies to investigate.

Last year, to give you some type of idea of how many cases were handled, there were 218 indictments that were returned by Harris County grand juries as the result of investigations by this particular division. I would match the work of this hard-working, dedicated group of lawyers, against any group of seven lawyers anywhere.

Our organized crime division provides a better relationship between all law enforcement agencies. Somehow it is a little easier for the district attorney to coordinate joint law enforcement efforts. Sometimes it goes a little smoother than when you have two other police departments or law enforcement agencies getting together. We work very closely with the State department of public safety and their intelligence agents, with the Houston Police Department, the sheriff's office, and also work very closely with many of the Federal agencies on matters of mutual interest, where it is easier to prosecute statewide or turn over information for Federal prosecution.

We have been sort of a clearinghouse for information on organized crime activity. Of course, when you get into this area, it depends upon the integrity and competence of the people on an individual basis.

There is no way I could have started such a division regardless of its high priority. It takes $200,000 a year to maintain this division. Yet, I think the impact is tremendous. When you get persons that can get involved in investigations and work on the big people rather than the ones that just happened to get caught in the stolen car or burglary, this is effective. We are very proud of this particular division and the impact that we believe it is making.

Now, one thing that is true in police departments is that there are few in this country that have gone out and hired lawyers and C.P.A.'s and accountants to do investigative work. Yet you go over in your

Federal agencies, the FBI or whatever, and you find many lawyers, accountants, and others that are qualified to look into very complicated business crime, to get the records, interpret them, make some sense out of them before taking a case to the U.S. district attorney's office.

This is not true on the local level except for a handful of departments around the country. It is not true in my county. We don't have a section in the Houston Police Department or sheriff's office where there are lawyers or accountants or persons with expertise going into business records, corporate swindling schemes, and this kind of thing. So our office must be involved, including major consumer frauds as pyramid clubs, etc.

I think this is real important.

Mr. Wiggins. May I interrupt at that point to inquire about that type of investigative capability. Should it exist within the police department or under the jurisdiction of the district attorney, in your opinion?

Mr. Vance. I think the guidelines that were written by the National Council on Criminal Justice in this area are pretty well set out. I think they are good. I think if it is a routine sort of an embezzlement kind of case, even though it may be complicated, I think it ought to be in the police department or the investigative agency. However, we don't have persons so qualified. They just say, "Go over and see the district attorney."

I think any investigation involving public corruption—such as, investigations of a police department or its officers, police brutality, public corruption cases, or extremely complex investigations, and the consumer fraud area, which requires so much legal knowledge to determine what cases ought to be filed—should be done by the district attorney.

I think it would be a mistake to oversimplify or generalize. It is restricting to overly categorize. Our best investigations and results have come from a joint effort and joint sharing of information and a team effort of police agencies and the prosecutor. Also, consider the waste of manhours if you get investigators on a highly complex case out of a local law enforcement agency that has spent thousands of man-hours and then a lot of this information is not usable because they didn't realize it would not be material or relevant and admissible in court.

So you have to use a commonsense approach to be effective.

Let me take up another project in Harris County. We are lucky to have three law schools there. We used funds—only $24,000 a year and one of the best expenditures of money I have seen—to hire six law students on our staff. They get paid for 20 hours work a week, but they really average about 30, according to the time records, and these people are a part of our office.

The last assistant district attorney I hired had been number one in his law school class. We are getting extremely qualified applicants. Our student assistants go back and spread the word and we get more applications and it generates a high quality of persons wanting to go into the prosecutor's office and also starts the seed of generating career motivation.

Chairman Pepper. Excuse me. You mean you employ them part time while in law school?

Mr. VANCE. Yes. We generally try to get them about anywhere from 12 to 18 months before they finish law school and they can practice on a limited basis, their senior year. And during their stay, we put them in about two departments. They do very menial tasks, but they will get to know the people, see the office organization, get a feel for it, and go into court some. So it will be like the equivalent of several months full-time experience as an assistant, so far as knowing certain things that are necessary. This has been real helpful.

But the main thing is generating interest.

Also, we invite persons to be student assistants from our law schools on a voluntary basis. We have about 40 or 45, I can't even keep up with it, students assigned to work with particular prosecutors. These students receive academic credits in most instances. They are not paid.

This program is with all of the three law schools we have in the city. This generates a lot of interest, too. So this has been a helpful program because the staff is no better than the quality of people we have. We have to get good people and keep them there. That is the important thing.

With regard to management, we received a grant about 2 years ago to do a 1-year management study. Pete, Marwick & Mitchell did it. The reason we asked them to do it was they had already studied the Texas prosecutor's system and were already familiar with certain basics. They had written a large book that could be available to this committee, if it would be of any interest, on the office of the prosecutor in Texas.

Chairman PEPPER. We would appreciate if you would make it available.

Mr. VANCE. Fine. I will make a note and send that. So they came in and they went through our office. Through the years, you had a lot of management experience in the police area because you had the International Association of Chiefs of Police with a very large staff. They have been in the management area a long time. Yet in the prosecution area, the National District Attorney's Association has just gotten in this the last 2 years, and we got into it in a fairly significant way.

Because of this study our office was reorganized. We were using a lot of procedures we did not need. We streamlined the flow of cases, the reporting, knew better who was doing what, this kind of thing. It was something you need in any organization, and I won't elaborate on it any more. When you spend a bunch of money, have a bunch of people, and many problems, it helps to have a systematic study. So I am real happy that the NDAA recently obtained an LEAA discretionary grant for the National Center for Prosecution Management. It has been helpful in serving the prosecutors' offices around the country and also writing certain guidelines and suggested procedures for small-, middle-, and large-size offices. This has been a neglected area up until recently.

We would not have been able to do that without LEAA funds. To illustrate, had I gone to the local unit of government and said, "I want a management study," they would have said, "Look, you are paid to run that office, you ought to know everything there is to know about it."

Because I spent 8 years as a trial lawyer, and 3 years prosecuting

murder cases, that doesn't make me an expert in paper flow. Every administration needs expertise in administration.

Another program, which is not original with us, is our screening grant. We were able, for the first time in our jurisdiction, to set up an office to screen charges prior to their being filed. We do this for all of the city of Houston. We hope to expand it soon for all of Harris County. When you screen a felony case—and perhaps this is the most important decision made in our whole process—you decide whether to put this case in the system with persons being arrested, charged with a felony, with all of its implications to society, with the cost of processing that case through court. Therefore, you ought to spend a few minutes prior to putting that case in the system to see if you have a case or not.

There are some situations where you don't have a case and will never have a case. There are others where you do. Others are borderline and make for tough decisions. But cases must be screened if we are to raise the level of justice and provide a greater confidence in judges and juries that ultimately must decide.

Another advantage is to specifically advise police if they did some more work and came up with this or that, the case could be successfully prosecuted. This allows the prosecutor to talk to the investigating officers at the very beginning and suggest certain things they can do before the case becomes stale and witnesses forget.

There used to be a saying, "you can beat the rap but not the ride." I don't really subscribe to that theory myself. It is perfectly acceptable for a police officer to go out and bring someone in for questioning without having a completed case. That is one thing. That is proper. But I don't think you ought to file an actual charge that is going to get into your system unless you do have sufficient evidence to warrant prosecution of that case.

One thing we have done under our screening grant is to keep the office open at nearly all hours. We are open to 2 a.m. every night and 3 a.m. on weekends. It is difficult to get the quality of prosecutor you need to work at midnight and strange hours, doing this type of work. It is not very desirable work from the average lawyer's standpoint. So what we did, pursuant to this grant, is to pay our most experienced prosecutors—already on the staff—to go over and man this important office, and get paid for it.

Our top lawyers rotate this duty. No. 1, they look forward to making the money, but the main thing is these prosecutors in court trying these cases have a better understanding of the problem than somebody that just sits there night after night and becomes institutionalized, bored, and hardened at this preculiarly undesirable assignment.

Chairman Pepper. Excuse me. We had a prosecuting attorney from Philadelphia here yesterday, Mr. Specter, and I believe he mentioned about making available legal service to the police department to help them more to know what they can find out.

Do I understand from what you said, you do discuss these things with the police, make legal advice available to them?

Mr. Vance. Yes, sir, we do. What we have, of course, during Monday through Friday, 8 to 5, there is no problem. We have various departments and they can call the particular department involved, but nights and weekends it is very important. The law has gotten complicated, as

I am sure everyone is aware. Drawing up a search warrant or a warrant of arrest that can stand up in court is highly complex and requires expert advice on the spot. Or else you could have a case thrown out that might involve $1 million worth of heroin.

In order to try to kill two birds with one stone and get our experienced people involved, we sent over the senior district attorney and he doesn't get paid a large amount. If he is at the very top of the staff, he gets $10 an hour, but he can go over and within 8 or 9 hours, earn $90. He gets about as much as a high-grade plumber would. This is money well spent for a very sensitive position.

Also, we send over a junior prosecutor and he can work on things like search warrants, warrants of arrest, or take routine cases. The night screening office is manned by a team of two, and they are the ones screening all of these cases and they provide legal services, mostly in person to the officers that come in, or by telephone, because we do have 22 separate police departments in our county. So we have this central office—it is like an extension of the district attorney's office—open at night and weekends.

Another thing in this area, we cut down the time—you know, you could get into all kinds of law reform with a committee like this, of what you should do to try to solve the crime-on-the-streets problem, and I guess you would start in each State, if you were going to do this, and say, we have a real efficient criminal justice system to begin with. We do not have efficient legal machinery in the State of Texas. In fact, we are archaic.

We have a new penal code that we hope will be passed this week by the legislature. Now ours is over 100 years old, our penal code. We have things in our constitution such as you must be indicted by grand jury before you can be tried.

Concerning the time to take a case from the charge being filed, and an examining trial set, and taking before a grand jury used to take about 90 days on the average. Well, we got another grant where we had five more lawyers assigned to our grand jury and examining trial division and even established regional offices that are there by day, Monday through Friday, to be a lot closer at hand with the other police departments in that area and some substantial sized communities are about 30 miles from the courthouse. Also, due to additional manpower, we got rid of our backlog and we now present all cases for indictment within 30 days and many are presented in about 15 or 20 days. This is just another step improvement.

The logical way for any criminal justice system—after the charge is filed—is to have your preliminary hearing within 2, 3, or 4 days. If a judge sees there is sufficient evidence, I should think that gives the accused more protection than grand juries. I like grand juries on investigations, but I don't like them on routine cases. After an examining trial let the district attorney file his information, which is like an indictment, and you have the case in the system and in the trial court in about 5 days, rather than going through these duplicitous steps. But we do have to do that.

Mr. Wiggins. May I interrupt at this point?

You indicated earlier in your testimony that you have about a 4-month wait for trial in your county. At what point do you start counting?

Mr. VANCE. I am talking about from the time the charge is filed.

Mr. WIGGINS. Is that after indictment?

Mr. VANCE. No; I am talking about the period in most of our courts. What would happen is you would be filed on, let's say, today, 10 days from then you would have an examining trial, about 10 or 15 days later your case would be presented to the grand jury for indictment. Let's say, roughly, 30 days go by there. Then the case would come up for arraignment in court, about maybe 10 days after that, making this around the 40th day in the actual court that has jurisdiction to try it.

In most courts after arraignment the trial setting is another 45 days. There are one or two courts further behind and it takes longer. So I am talking about the first trial setting generally comes around 4 months at the present time after the offense has been committed.

Mr. WIGGINS. Do your statistics include felony and misdemeanor cases, or only felony cases?

Mr. VANCE. I am talking about felonies. We are in a real dilemma with misdemeanors. We used to bring all of those to trial in about 45 days after the actual offense was committed. They were getting set at the 30th day and on the resetting it would be 2 weeks or maybe 4 weeks. I think we had the quickest trial of misdemeanors like drunk driving, carrying pistols, aggravated assaults, misdemeanor thefts, as anywhere.

But we haven't had a new county criminal court of law, that handled these cases, created since 1963, and we have gone from 9,000 cases to 26,000 since 1963. We have a bill that is on the floor of the Texas House today that would create three more county criminal courts of law, bringing us from four to seven, which I think would help alleviate this problem. I think this will pass.

Mr. WIGGINS. The average that you mentioned, does that include pleas as well? The 4-month average you mentioned, does that crank in pleas which are disposed of without trial, as well as the trial itself?

Mr. VANCE. Yes. Because the big problem there is that we have a tremendous number of announcements ready for trial. Like out of 18,000 cases disposed of last year, only 700 of those were tried before juries. I think we had around 11,000 or 12,000 pleas of guilty. On some of those pleas of guilty, once in a while somebody would come in and would want to plead guilty early and the matter is submitted to the court and the plea is taken very early.

But in most instances, whether defendants are in jail or out on bond, they ask for a trial and they wait until they see the witnesses there and the jury is about ready to come down before they enter the plea of guilty.

Mr. WIGGINS. I understand that. That is normal tactics. How long does it take to get to trial in your county in the case that actually goes to trial?

Mr. VANCE. Those that go to trial, around 4 months. In some cases, it varies. Anywhere from 4 months—I guess we have cases that are 18 months old. But I would say the average case probably goes to trial around the second setting and around 6 or 7 months would be an average. But if somebody writes us a letter and says, I want my constitutional right to a speedy trial, whether they are in jail or on bond, it can be set up within a couple of weeks for a person to have a trial, because we will transfer it to another court.

But we only get about 3 or 4 of those letters out of 18,000 a year. Nobody wants their constitutional right to speedy trial.

Mr. WIGGINS. What would be the impact in your county of a statutory provision for trial within a prescribed time—60 days, 90 days, whatever?

Mr. VANCE. I think something ought to be done along these lines. The only thing that scares me—and I testified 2 weeks ago before the Constitutional Rights Subcommittee, before Senator Ervin's committee, about the speedy trial provision—is the 60-day provision, with a mandatory dismissal date. I am scared to death of the mandatory dismissal date because I know everybody would then ask for a jury trial, knowing we can only try *x* number of jury cases, and the rest of the defendants would go free.

I think if we had that, we would have chaos. We would be encouraging everybody to ask for a jury trial. I would hate to see dismissals with prejudice, or even without prejudice, just simply because a court couldn't get to a case by a given day.

On any given date, Monday through Thursday, when we have the trial settings, there are approximately 4 or 5 cases in each of our 10 criminal district courts that are actually set for trial that day. This is defendants who have said they wanted a jury trial. So just by these percentages—it would be just so easy to frustrate the whole system by everybody really getting that jury trial. It would throw us into chaos and if they felt they could get past a certain line and their case would be dismissed, I think it would be the worst thing in the world.

Mr. WIGGINS. To what extent do the pretrial motions to suppress and the like, clog or delay speedy disposition of trials?

Mr. VANCE. A tremendous amount. A tremendous amount because somebody comes in, and they file a motion and we can spend up to 3 weeks hearing maybe one motion to suppress. I think the exclusionary rule is a ridiculous rule. I think we are going about it the wrong way. If a police officer makes an unreasonable search and seizure, the police officer ought to be dealt with. Don't punish the public by throwing out the case.

I think these motions to suppress, and most of them are there because of some of the Supreme Court opinions, like the *Miranda* case on confessions, or the cases on search and seizure with their motion to suppress, or what have you. Certain people believe if you can set all of these motions prior to trial and have particular days for courts to hear these motions, then you will solve a lot of the trial issues and speed up the dispositions. I just find it complicates the system and adds to the delay.

The more things you have to do in court and the more days you have to spend doing certain things before you finally get to the trial to discover whether the man is guilty or not guilty, I think the more you complicate the whole system of justice.

Mr. WIGGINS. In your system, do you have a requirement for consolidating trial motions for one setting? Can that be done at one time?

Mr. VANCE. It depends on the judge and they are working on some rules to try to get that done at a particular time. I think if you had the kind of caseload that your Federal courts have, you could do that and it would probably be a good thing. But where each of our district courts are averaging about 1,700 felonies per year, you hardly have time to take the pleas of guilty—which now take about 30 minutes to take a plea of guilty instead of 5 minutes like they used to because

of all of the material that must go in the record. Most of it is what I would call a sham, with all kinds of stipulations and paperwork and people signing things.

I really don't think all this really benefits the defendant or his lawyer who is sitting there to look after his interests, but we have to do it.

Mr. Wiggins. In your system, is a decision on a pretrial motion appealable at that time or is it appealable from judgment?

Mr. Vance. Texas is the only State in the Union, I am afraid, where the State has absolutely no right of appeal. So if the motion is not granted, then you would have the trial and they would probably bring up the motion again. Unlike the Federal rules, Texas rules say you relitigate the matter before the jury or the court in many instances In Federal court, if you don't bring certain of these things up, prior to trial, you waive your right to pursue them. But that is not true in State court. They bring them up again at the jury trial. And if the defense is ruled against, they can appeal that. We cannot appeal these interlocutory decisions.

Mr. Wiggins. Even by the defendant?

Mr. Vance. Even by the defendant. He must wait until after the trial, and if convicted, he can then appeal.

Mr. Wiggins. I have no further questions.

Chairman Pepper. You may proceed.

Mr. Vance. One last thing that I want to mention so far as the prosecutor's office goes, is something that is real important. This is the great need to fund an executive director for the prosecutors of each State. There are two lawyers on the staff for the Texas District Attorneys Association, and this was also done through LEAA funding.

The dues the prosecutors paid to the organization were just too low to afford this staff, but there are certain central services that are desperately needed. This person has the full confidence of the prosecutors because, the State prosecutors' association's board of directors decides who the executive director shall be.

Through our central offices we have accomplished certain projects. One year the State bar came up with a penal code that had many objectionable features in it. Even though it had a lot of good ideas, it never even came out of committee in the legislature.

But our District Attorneys Association spent a year studying and revising the State bar version. We have 11-man committees and they meet 2 days at a time about once or twice a month, and we came up with a good code. In fact, it was in such good shape, the State bar really liked this version and the State bar is now sponsoring it. They made a few little changes, but not very many and the code before the legislature is essentially the prosecutor's version—thanks to LEAA funding.

I think you need a basic kind of prosecutorial system in any State. We have a bad system in Texas. I am a district attorney and handle misdemeanors and felonies. But in a lot of the areas, the district attorney handles felonies and the county attorneys handle misdemeanors, and they have two completely different prosecutors in one place.

You have the same problem as far as judicial reform. You have a lot of specialized courts and if one judge gets through his docket he cannot take a case from another court.

I think the first place to start is some kind of judicial and prosecutorial reform. I hope we would get to the place where we would have our prosecutors well paid. They should not practice law, and they should be completely full time except in very sparsely populated areas. I think the same should be true with the judiciary. I think we are moving toward professionalization because of having a central office to serve prosecutors. And they provide for the rural prosecutors different training sessions each year and keep them apprised of the law. So many services are needed to keep a prosecutor up to date, particularly if he is in a small area.

This move has been very significant in raising the quality and professionalization of many of the prosecutors in Texas by having this central office.

As you can see, I am strong on these LEAA funds. I do think it is sort of sad that prosecutors' offices generally throughout the Nation, receive about 1 or 2 percent of the money. And I don't think the courts have fared as well as they should. I just think we have been fortunate in Texas.

I am opposed to complete revenue-sharing concepts where the moneys will go into roads and bridges, and I am opposed to another massive Washington bureaucracy to tell us how to run local law enforcement. So I like the LEAA approach as it is now, but I think it could be modified to call for more funds to go into prosecutors' and judicial offices because this is perhaps one of the weakest links in our system as it now stands.

Thank you so much.

Chairman PEPPER. Thank you, Mr. Vance.

We will hear now from Mr. Busch and then have an opportunity to ask questions of both of you.

Statement of Joseph Busch

Mr. BUSCH. Mr. Chairman, thank you very much.

It is a pleasure to be here and particularly a pleasure to have Chuck Wiggins, who is my Congressman——

Chairman PEPPER. A very good one.

Mr. BUSCH [continuing]. A very fine Congressman, to be a part of this committee.

I might do as Carol just asked, incorporate my prepared remarks into the record.

Chairman PEPPER. Without objection, your remarks will be incorporated in the record.

[The prepared statement of Mr. Busch appears at the end of the testimony of this panel.]

Mr. BUSCH. It is always difficult when the prosecutors from Los Angeles talk to any committee or appear with other prosecutors, to compare our functions with what occurs in other parts of the country. As it has been indicated, I have a staff of 450 assistants. I have eight different places, eight different branch offices, where felony prosecution occurs, and where they will be representing perhaps 7.5 million people.

I have 23 offices, area offices, that handle the consulting with police departments. We have 50 police departments in Los Angeles County.

Our largeness has worked against us in getting any type of grant funds because when Los Angeles County wants something, it looks like the State of Michigan walking in. We are about that size.

So when you talk about LEAA grants, and that type of thing, why you can do more for many smaller counties.

Chairman PEPPER. Michigan or Florida. We are a little over 7 million population.

Mr. BUSCH. That would be just about it. When you walk in and say, "We would like a grant," you are talking not Dade County, but you are talking the State of Florida. But I think they are very important.

I think it is important that Congress and State legislatures be interested in upgrading the administration of justice. This may be considered political folly, but I asked, after I was made district attorney in Los Angeles County, and permitted the Rand Corp. to come in and make a study of the adult felony prosecutions within our county and they just put out the report.

I would ask to leave a copy with the committee.

Chairman PEPPER. We thank you for doing so.

[The material referred to was retained in the committee files.]

Mr. BUSCH. This, of course, is systems analysis, data analysis, taking cold statistics, and they arrive at the conclusion we don't have equal justice in Los Angeles County. In the sense, not that there is injustice, but it may not be equal justice.

Now, as a result of that report, I was able to convince my board of supervisors, our county commissioner, so to speak, to underwrite the local contribution to a grant of $1 million. This was what—these are the type of things—a grant of $1 million for me to bring into Los Angeles County a systems study, management study, as Carol has talked about. It would be a little more sophisticated than that, perhaps involve programing and computerization.

They have a very fine one, incidentally, in the U.S. Attorney's Office in Washington, D.C. It is very important to do that. It is so important that in the county of Los Angeles, what happens in Pomona to a defendant is the same that will happen to a defendant in Santa Monica. In other words, I think it would be important in Florida, a man accused of a crime in Jacksonville get the same treatment as a man in Miami gets.

We really aren't sophisticated enough today in our criminal justice system to evaluate and know we are doing that. That is why it is important that there be a thrust from Congress, and through funding to have this come about. It is very important.

Independent of that concept, as Carol so eloquently talked about, there are other areas we should be concerned about and I think the Congress should be concerned about. I think that there should be more diversionary programs. And by "diversionary programs," I mean rehabilitative programs without giving somebody the stigma of conviction, for it is so apparent among minorities and economically depressed people, that they will have convictions, and it works against them for the rest of their lives.

And crime is a product of the young: 90 percent of all crimes occur between the ages of 15 and 29 years. It is a product of the young, and they gradually outgrow much of it and the stigma of arrest and conviction is something we should be concerned about. It is so hard to

erase a record. You see the records and the things they talk about in juvenile courts.

So I think the funding of diversionary programs is very important. In other words, you don't prosecute, you rehabilitate the first offender, whatever it may be—the most popular program is the drug programs—and see if they can't correct their wrongful attitudes without the stigma of arrest.

California has that type of legislation. We are probably a little bit behind in our diversionary programs, but I would say now that half of our narcotic first offenders are not being prosecuted, they are being diverted, and that is a very important thing.

Chairman PEPPER. About half, you say?

Mr. BUSCH. I would say about half, first offenders. That is very important.

In our office—and again, we are so large and I have programs that we institute on our own, particularly in the juvenile field—I have what we call "partners program." We encourage police departments, principals of schools, anybody that has contact with the young, who have had their first contact with the law and they are not a serious offender, rather than process them into the system and expose them, because I think there is a great area of reform in the juvenile procedures that should be considered, but at any rate, it is a one on one.

Volunteers, college students, people that want to be involved, and they take that youngster and they give him recreation, give him guidance, whatever they may be lacking in their environment. A very successful program, very important.

Another program, I have 24 youngsters through a Model Cities neighborhood program, in a grant, on my staff, from the Watts area, which is the highest crime incidence area we have in Los Angeles County. These 24 youngsters are from all of the various high schools and they create programs in the schools to respect law and order.

They have sympathy and respect for the law. If you don't have sympathy and respect for the law, you are going to have criminal activity, believe me. They have—gosh, they have programs bringing convicts from State prison to talk to people. I think it is the most successful young people's program that I have seen anywhere.

These are right from the ghetto area, right from the heart of it. It has taken about 2 years to lose the stigma that they are the "District Attorney's Youth Advisory Council," because it sort of puts you on the "establishment" side.

That is an effective program. I would encourage other district attorneys to be involved in that type of thing. I really feel the role of the district attorney should be not only concerned about prosecuting people, screening cases, but to be in criminal prevention and not let the police departments be the only public relations people as a buffer between the criminal justice system. It is pretty tough for a policeman who has to arrest somebody to also be the public relations person.

But these are important concepts and I think should be recognized by Congress and State legislatures. And as Carol said, there should be more concern by LEAA into funding moneys for the criminal justice system with the prosecutor rather than just police departments, or hardware for police departments.

One other thing I might say about California and one of your concerns is the right to speedy trial. We have a 60-day rule in California for felonies and also it applies to misdemeanors. From the filing of the information—that is the former pleading in the felony court—you must be brought to trial within 60 days if you demand it, or you get it. In our county you get a trial in 60 days if you demand it.

Now, a weapon of defense is delay, so there are many continuances at the request of the defendant. But over half of our cases are disposed of within 90 days of the filing of the information which we use, rather than the grand jury indictment. The one unique thing about our procedure in that area is that if there is a dismissal after 60 days, it is not jeopardy. So we can refile the case as a prosecutor.

But everybody recognizes it as a valid rule and we do have speedy trials and I think Mr. Wiggins would attest that we pride ourselves with the speed that we bring our cases to justice.

Chairman PEPPER. Mr. Busch, it is obvious you have been in your office there with meaningful programs for the public interest.

Mr. Counsel, do you have some special questions you would like to ask before we start inquiring?

Mr. NOLDE. Thank you, Mr. Chairman.

Perhaps I could just point out several things the members would like to get into.

One, Mr. Vance should address himself to the organized crime division he established in his office, as to the effect it would have on street crime. I think both gentlemen could deal with the issue of plea bargaining we heard about yesterday from the prosecutor from Philadelphia. He is against plea bargaining.

Both distinguished gentlemen have screening programs in their offices designed to screen out the minor cases in order that the prosecution and courts can concentrate their resources on the kinds of offenses that should be given attention. In addition the entire speedy trial issue should be addressed.

I think Mr. Busch has indicated that prosecutors in California are able to function effectively under their speedy trial statute, which has a 60-day limitation. I think Mr. Vance has indicated that a mandatory dismissal would pose great problems. Both gentlemen could discuss the issue of whether mandatory dismissal would be a good idea, and also if the defense were required to proceed within 60 days, whether that might alleviate some of the dismissal problems if a similar burden were imposed on the defense, requiring them to be ready for trial within the same time period. We are interested in whether that would be a good idea or not.

I now turn it over to you, Mr. Chairman and the members to ask the questions you wish and I can follow up at the conclusion.

Chairman PEPPER. Mr. Mann?

Mr. MANN. Mr. Vance, do you not have a 60-day statute?

Mr. VANCE. No, sir. We have no rule whatsoever. In fact, very few States, I think Florida and California are about the only two States that I know of, do have such a rule. There may be some more now. I think there is a lot of legislation pending.

Mr. BUSCH. Even if you have the legislation, the courts would not be bound by that in their opinions because it becomes a fundamental constitutional right. Any legislation is just a guideline.

Mr. VANCE. If it were congressional, like the bill that is before Congress now that provides a case will be dismissed if you cannot get it in within 60 days, it is more than a guideline. That is what I am scared of.

Mr. BUSCH. Of course, it would have a controlling factor but in certain instances they can declare failure to get trial in 30 days could be denial of a speedy trial. All you are giving is a guideline.

Mr. MANN. What you might get into is a form of jeopardy. Do any of them attempt to do that?

Mr. BUSCH. Some of them do make it jeopardy. California does not.

Mr. VANCE. I thought Florida nearly did in some respects.

Mr. BUSCH. A couple of States may have the jeopardy ruling, but it is not a 60-day rule. It is a 6-month rule. It is much longer. If you are concerned about getting a speedy trial, I say put the 60-day rule in there, but don't make it jeopardy. Delay is a weapon of the defense, not prosecutors. It is defense attorneys that delay cases, not prosecutors.

Mr. NOLDE. If I may, Mr. Mann, I just want to ask Mr. Busch, if you require the defense to be ready within 60 days, wouldn't that help that problem?

Mr. BUSCH. Oh, yes; certainly. But I wouldn't want to see the jeopardy attach.

Mr. MANN. Based on my experience—and this is somewhat facetious—the 60-day limitation would put a lot of paid defense lawyers out of business, because they don't get paid in 60 days.

Mr. BUSCH. That is right.

Mr. MANN. Unfortunately, the technique is for the defendant to go out and steal some more so he can pay the lawyer. So that part of it would be curtailed.

What is your practice, Mr. Vance, with reference to plea bargaining?

Mr. VANCE. We have plea bargaining and I think every metropolitan area in the country has some form of plea bargaining, even perhaps including the city of Philadelphia, in accordance with conversations I had with judges and prosecutors there who say sometimes they get together and decide these cases by advance discussions even though, I understand, Arlen Specter prohibits his assistants from making recommendations.

Mr. MANN. I asked him about that and I got the impression in his answer that they did determine the recommendation that they would make and they offered that to defense counsel and counsel took it and they would follow with the plea recommendation.

Mr. VANCE. That is what I call plea bargaining.

Mr. MANN. I do, too, and I so stated. But he seemed to think if you went further than that and compromise occurred, what you are really pleading for was a fair sentence and came below that, as he expressed, to give away city hall. Of course, that is bad. Of course, those of us who engage in plea bargaining don't think we do that; otherwise, we couldn't live with ourselves.

So I agree with you, it apparently goes on there, too.

Mr. VANCE. One thing, in answer to your question, I really think that plea bargaining, if it is done properly, is a good thing. I agree wholeheartedly with the American Bar Association's standards in this area. I think No. 1, you have to have sufficient courts and resources

so you are not giving away the courthouse and that the plea is made on the basis of the facts involved in the case.

I think, second, you have to get plea bargaining out on the table where you don't go through a subterfuge there as you are entering your plea such as we do in Texas and many States.

I think the third thing is you have to bring the judge into it. After all, it is his final responsibility. I think, ideally, you know, the judge would take the counsel for both sides back to his chambers prior to it and say, "OK, what's this case all about," and the prosecutor would say, "Well, Your Honor, we are recommending 4 years because here is our side," and the defense counsel says, "We think this is proper because * * * ." At this point the judge can require any evidence or ask the lawyers any questions he has to satisfy himself, and then it becomes a joint decision.

I think if you have competent counsel representing the State and the defendant and the judge approves the bargain, I do not see anything inherently wrong with a person having a reasonable expectation of what sentence he might receive should he enter a plea of guilty. I think this is one of the things that makes a guilty person enter a plea of guilty, that is the certainty he will receive a particular sentence and can adjust his life in accordance with the sentence he will receive. I don't see anything inherently wrong with that.

I do think you have to have sufficient courts, and you have to have a balance between trials and pleas. If you don't have the trials, say you only have the courts to have 1-percent trials, and everybody asks for a jury trial, in that case you would just be giving the cases away to keep up with the cases coming in. I think we would all disagree with that. None of us wants to do that.

Mr. Busch. I would make this observation. As long as there are accusers and prosecutors and defendants, there is going to be compromise of cases. I think the abuse of the plea-bargaining process, the abuse of that, enters into the sentence bargaining aspect of it. I have started a pilot program in our county in three different areas where my deputies can enter into plea bargaining but not sentence bargaining.

In other words, they are not going to say what a man is going to get; they will say what he can plead to. And to eliminate the judges. We are going to see what effect that has, what impact that has.

I think that the public generally feels that there is something wrong in plea bargaining. There is an inherent feeling in the last few years—I don't know why that has come about, whether it is the academicians who have come in to study prosecutors' offices, or whatever it may be, but there is an inherent feeling there is something wrong in plea bargaining.

Mr. Steiger. Would the gentleman yield?

Mr. Mann. Yes.

Mr. Steiger. I would be happy to tell you, as a layman what is wrong with plea bargaining.

The habitual criminal is apprehended, released on bond, and commits two other offenses. He is then permitted to plea bargain for that offense which will give him the lightest sentence and he has paid for the other two offenses, or six, or nine. That to a layman is offensive.

Mr. Busch. That would be offensive to me as a prosecutor, but that assumes that the prosecutor, to get rid of the case, to ease the court

load, to move justice so to speak, is giving the guy a break. It isn't dishonest, but it is really almost immoral. That is the stigma that plea bargaining has had.

The reason I mention this program I have, the compromise of a case isn't bad; I think what comes about is the sentence bargaining. That is the part. I agree with Carol that really and truly, as a defense attorney, I may have a client that is very guilty and he will plead guilty, but he will plead guilty only if he knows what is going to happen to him. He wants to know what is going to happen to him. If he doesn't know what the sentence is going to be, why not have the trial?

Mr. MANN. When you limit the bargaining to——

Mr. BUSCH. That is where the abuses come in.

Mr. MANN. Yes; to the lesser included offenses, you won't have a broad enough spectrum in the code-described crimes to pick out the right slot.

Mr. BUSCH. When Arlen Specter says he doesn't engage in plea bargaining, I don't think that is true. He isn't engaging in sentence bargaining. These are two different things.

Mr. MANN. He recommends sentences, though. He acknowledged that.

Let me make one other observation, and it is an observation in response to Mr. Steiger's statement.

He admits to being a layman, and the average layman really doesn't understand the power of a prosecutor's office. The power of the people has to reside somewhere and it resides in that prosecutor's office. The public never quite realizes that that prosecutor can determine whether or not that case goes forward or whether or not to terminate it. They would like to think that is the role of the court.

Well, in some jurisdictions, I guess it is. But in most jurisdictions it isn't. It is a determination by the prosecutor, representing the State, and he can dismiss all of those cases. He doesn't have to bargain; he can just do it because he wants to. It is not a matter of bargaining; it is a matter of using his power to carry out the function of his office, and that is to produce justice. And in doing that, he has life or death powers over all cases, generally.

So because he bargains one or two, or handles them in a certain way, they can seek their remedy at the poll, which is no use to think people don't take a vote, or impanel the court to make these decisions, or get a committee to do it. The prosecutor has that power and it is going to have to stay there.

Mr. BUSCH. Carol touched on it and I didn't discuss it, but the most important decision that is ever made with a criminal case is whether or not a prosecutor issues the case; the prosecutorial discretion of putting it into the system. The most important decision a prosecutor makes is the screening process.

In my office you have to be a senior deputy. We don't let young men decide whether somebody comes in. You have to be a senior man—we have them by grade, and they make that decision. That is long before plea bargaining.

Mr. MANN. That is right.

Mr. WIGGINS. There is bargaining in that process, too; isn't there?

Mr. BUSCH. Not really. It is what the police present you with. You may be bargaining with the policeman, not with the individual.

Mr. WIGGINS. Surely, in your experience, you have had the opportunity to receive a call from an attorney who says, "Before you file on this case, I would like to talk to you about it." The purpose of it really is to convince you that you don't have a case, or if you are going to file, you ought to file a lesser offense.

Mr. BUSCH. If it is the type of a case that isn't just a file of arrest of somebody, there has been an investigation. We always extend the courtesy to counsel to come in and have a hearing to present their side of the issue before you file a complaint. Yes; we do that.

Mr. MURPHY. Would the gentleman yield at this point?

Mr. MANN. I am through.

Mr. MURPHY. The reason for this, though, politically speaking, is that we have a lot of violations going on all over the country, especially in the Federal system. When you take a suspect before the grand jury and a determination is about to be made whether to indict or file an information, then leaks to newspapers will say, "So-and-So indicted."

This is worse than the conviction because the convictions are usually found in the back of the paper.

A lot of people are using this for political purposes. The leaks coming from grand juries all over the country is a very serious problem.

Mr. BUSCH. We do not use a grand jury indictment system. We use the preliminary hearing where we have a magistrate and present the witnesses in open court and confront the defendant before he is held to answer. Out of 55,000 felonies, we take about 100 to the grand jury.

Mr. MURPHY. Do you discourage going to the grand jury? Is that what you are saying?

Mr. BUSCH. Yes.

Mr. MURPHY. Why is that?

Mr. BUSCH. I think the preliminary hearing and the confrontation of the defendant and the right to cross examine the witnesses before he is held to answer, it really lets him know what kind of a case he has. Defense attorneys have the opportunity of discovery. It gets them prepared and leaves you in the position, when you get to the arraignment in the superior court, to talk about plea bargaining or to dispose of the case.

Mr. MURPHY. Either one of you may answer this—have you seen violations of the secrecy of the grand jury?

Mr. BUSCH. I have never seen a reporter disclose testimony of what occurred in the grand jury. I have seen witnesses, after they left the grand jury, tell what they testified to. And in California, that is supposed to be a crime. I don't know how you would ever convict them of it.

Mr. VANCE. I think this is what happens often. Lets say I go into a grand jury room and I testify I saw "A" shoot and kill "B" at a particular time and place, and describe it. Even though it is a violation of the law to say what I told the grand jury.

Let's say a reporter asks me, "Do you know anything about this case?"

Then I can say, "Yes, I saw 'A' shoot and kill 'B', et cetera."

Mr. MURPHY. I am not talking about a case like that. The kind of case I am talking about is when you pick up a newspaper and find a columnist that will have a verbatim question and then the answer. There is some violation there.

Mr. Busch. Absolutely. I have never run into that, but that is what I would call an absolute violation.

Mr. Murphy. Have you met Jack Anderson?

Mr. Busch. No, I haven't. But I read his column. Whether it is the court reporter who did it—he will dictate to the transcriber, the transcriber makes copies. They get paid by carbon copies. Somebody can pick up a few extra copies.

Mr. Vance. Only the court reporter has it and the trial attorney has it, and the grand jurors don't get copies, and neither do defense counsels or newspapers until the time of the trial.

But I would agree with Joe Busch, the best use of grand juries is in investigations and not in routine cases. In ordinary cases, I think the examining trial and filing of information is a much better way to handle the investigation. Even where a grand jury is investigating someone and even though they come out and there is a "No bill", it is sometimes written that a grand jury is investigating a particular matter. The reporter sees the three witnesses at the grand jury room area. When asked, I, or an assistant district attorney, will sometimes say this matter is under investigation. However, we release no other comment. I think this is better for a person under investigation to have a "No bill," than to have an examining trial and a lot of damaging things testified to in open court before the press. Sometimes there is no criminal case but a tremendous amount of damaging testimony against a particular individual.

But I do think grand juries are useful for investigations. They do protect the defendant as well as the State.

Mr. Murphy. Across the country there have been some bills introduced in State legislatures—I don't know about your particular jurisdiction—to do away with the grand jury. I take it from your comments you would not be in favor of this?

Mr. Vance. Not to do away with it. I think we need it in investigations. But we are slowed down by the fact a grand jury indictment is a requirement under the Texas constitution, so the legislature can't even change the law. It would take years to change the constitution. It would probably be an unpopular thing to do politically, to want to do away with them. People would think I am trying to get more power.

Really, if you have an examining trial, that gives the accused more protection than the grand jury in a routine case.

Mr. Murphy. Then there is a question of accountability with you. As Mr. Mann said, the people have to place this responsibility of their power with one individual who is held accountable. If there are violations, or some political indictments or smearing of individuals' reputations and characters, then there is some accountability.

With the grand jury, there is no accountability.

Mr. Vance. That is true. There are some very close cases, like murder cases. You get one witness testifying the person shot and killed someone without any reason, and you have four witnesses saying it happened in self-defense. You have a prima facie case. If you had an examining trial, the judge would bind him over for trial because you made your case. But yet you have maybe independent witnesses that have no ax to grind, saying it happened in self-defense. It is a real close decision.

I don't mind running these things by grand jury. It is not a matter of trying to shift my responsibility to them, but I just think as citi-

zens, in the sometimes real close cases, to develop a case before citizens such as would sit on ordinary juries is a real useful thing.

Mr. BUSCH. It is a check for the prosecutorial discretion. Maybe he would go ahead and again just accuse a man and go to the preliminary hearing and have the public hearing, but it may be a close question and you want the judgment of sincere individuals. I would always presume grand juries and the people that sit on them are sincere individuals, not controlled by a prosecutor.

Mr. VANCE. Another thing along those lines, sometime we turn down charges. Some people feel it is a matter of right to file a criminal charge and get it in the system. At least with a grand jury, there is one body other than an appointed prosecutor who can look at the thing and say, we are going to return an indictment.

Mr. MURPHY. I know the function of the grand jury. My point is that it is being so abused today throughout America that people's reputations are on the line through statements made by prosecutors. For instance, in Illinois there was a racetrack scandal. Some people were brought to trial and some people were convicted.

But then the prosecutor makes the statement: "We are continuing our investigation and we are looking at some 9 or 10 legislators." I think that is unfair.

Mr. BUSCH. I think that is true. I think it is unfair to make public statements about it.

At the present time, back in my county now, they are talking about the possibility in the *Ellsberg* case there was a burglary and the press is all over my office wanting public statements. What am I going to do about it? Well, I am not going to talk about it. That is what I am going to do. I am not going to talk about it.

Mr. MURPHY. You are a unique prosecutor, then, because a lot of them don't hold that same degree of integrity and they go to the press. I think this is a dangerous thing. I can appreciate your comments about it.

Mr. WIGGINS. I have several quick questions, Mr. Busch.

In the county of Los Angeles, the practice of plea bargaining is almost institutionalized.

Mr. BUSCH. That is true.

Mr. WIGGINS. It has been recognized as a proper function by no less than the Chief Justice of the U.S. Supreme Court.

Is it currently the practice to lay all of the facts before the judge who accepts the plea?

Mr. BUSCH. Yes. When we engage in plea bargaining, or sentence bargaining, we will have conferences with the defense attorney. If the judge wishes—some judges don't—we have conferences with the judge. Then at the time the plea is taken in open court, all of the discussed negotiations are made part of the record. What has been offered, what has been accepted, the discussions, and if the judge has been part of it, what his sentence will be. That is part of the official plea record.

Mr. WIGGINS. You end up with the magic question of whether or not the plea which is offered, or rather accepted, by the defendant is voluntarily accepted without inducement of reward and promises of favor or the other ritualistic type of statement?

Mr. Busch. No; that is not done any more. When I was first a young prosecutor and you took a plea to one kind of robbery and dismiss two, you say, "Are you doing this freely and voluntarily, without any promise?" And the fellow would say, "Yes."

Well, that isn't true. You were going to dismiss a couple of counts. Now, you say, "You are pleading guilty because you are guilty? You are, in fact, guilty, but you understand that two counts of robbery will be dismissed in exchange for the one count of robbery and the sentence will be State prison, or whatever it may be."

Mr. Wiggins. To what extent is the court bound by sentence bargaining in which the court did not participate?

Mr. Busch. He would not be. Most of the judges at the time of the plea, if there is a sentence bargaining, they will indicate that they have agreed to this particular sentence, based on the representations that have been made at this particular point.

In California, any felony case has to be referred to the probation department for investigation. If the probation report would show facts that the court had not considered, or had been misled, they will set aside the plea.

Mr. Wiggins. Now, another area. I think you have tried hundreds and hundreds of felony cases, Mr. Busch. Would it expedite the trial without affecting its fundamental fairness if the voir dire right of defense and prosecuting attorneys in selection of juries were severely curtailed?

Mr. Busch. As a trial lawyer, I hate to see the judge do the voir dire. If I were a defense attorney, I would want to pick that jury and if I were prosecutor, I would want to pick the jury. I wouldn't want the judge to do it. I don't think it would speed up the trial with the judges doing the voir dire in State courts.

Again, there are abuses of it. But I think the judge should be able to control it. But I don't think the right of voir dire should be taken away from counsel. They are picking the jury, not the judge.

Mr. Wiggins. Mr. Vance?

Mr. Vance. I think it should be very much curtailed. I do think the prosecutor and the defense attorney should have a right on the part of their case to make certain basic inquiries of the panel as a whole, or maybe even individual questions, but I do think it is ridiculous to spend 1 or 2 weeks picking a jury when you could get substantially the same amount of justice by 3 or 4 hours, perhaps, on an average felony case.

I think it depends on how complex the case is, as to how long the jury selection should take, because some should take longer than others. But I think the judge should be in the position to limit it and perhaps have a statute that would give him this power and by case law say a particular type case, to limit it to 30 minutes to each side to make certain general observations to the jury, to ask them questions, and the judge explain the remainder of the law, would very much speed up our entire system.

Mr. Wiggins. Back to Mr. Busch.

Recognizing the prosecutor's interest in conditioning the jury and the interest of a defense counsel doing exactly the same thing, trying to rise above those biases and prejudices, if you were limited in your

voir dire, if the defense were limited in its voir dire, do you think it would affect the fundamental fairness of the trial?

Mr. Busch. No. I would have to agree, I don't think fundamentally to limit voir dire would affect the outcome, except that when you are an advocate, whether prosecutor or defense attorney, I just can't see alienating your entire right to have the power of voir dire and give it to the judge.

I do not believe it would substantially affect justice.

Mr. Wiggins. Another quick area. Have the hundreds and hundreds of fourth amendment-based decisions, in your opinion, deterred unlawful police conduct in any major way?

Mr. Busch. No. I think the exclusionary rule and the application of the fourth amendment as a result of—you know, exclusion of evidence—have not affected police conduct in any way.

Mr. Wiggins. Mr. Vance, the same question to you.

Mr. Vance. Very same answer.

I would deal with the individual who makes an unreasonable search and seizure and deal with him in accordance with how unreasonable his search and seizure was and what all of the circumstances were and not exclude the evidence and scorn the public.

Mr. Wiggins. One final question, Mr. Busch. Would it speed up the process of trial, in your opinion, without effecting the fundamental fairness of the trial if, (*a*) the size of jury were limited to the extent constitutionally permissible, and it may be constitutionally permissible; and (*b*) if something less than unanimous verdict were required?

Mr. Busch. Yes. I even wrote my thesis when I was in law school that the requirement of unanimity in criminal trials where you have a test of beyond a reasonable doubt, to me is not necessary.

I wouldn't say that in a capital case, a death case. But, I do not believe that fundamentally things need be decided by 12 people; 6 people could decide it.

I think smaller juries and less than unanimous verdicts would speed up the process of justice and not do injustice.

Mr. Wiggins. Do you agree with that, Mr. Vance?

Mr. Vance. I certainly do. New Orleans, La., has nonunanimous verdicts and they have been upheld. I would select a number like 10, allow 10 to return a verdict. Most of all our hung juries are like 10 to 2, or 11 to 1.

Further, I think a six-man jury and less peremptory challenges would speed up the process in handling sentences of not more than 10 years in prison. This is for cases other than armed robbery or murder, where you want a full-scale jury. With a six-man jury why not let five return a verdict. I think it would be very helpful.

Mr. Wiggins. I think the summary of your testimony to be, if we could implement all of these suggestions, limiting voir dire, limiting the number of jurors, modifying the unanimous verdict rule, it would have a favorable impact on speeding the process of criminal justice?

Mr. Vance. Very definitely.

Mr. Busch. Very much so.

Chairman Pepper. Mr. Steiger?

Mr. Steiger. Thank you, Mr. Chairman.

I restipulate, as Mr. Mann has said, I not only admit to being a layman, I revel in that fact. Also, you can lead a rich full life and not ever have met Jack Anderson.

I am concerned because I think Mr. Busch's response to Mr. Wiggins' question with regard to voir dire is very interesting from this aspect. I have come to the conclusion that the entire criminal justice process in this country, both at the State and Federal level, has been reduced to a kind of gamesmanship in which the personality and the ego of the counsel plays a major role, in which victory has become not only more important than justice, but in many instances—and I hate to generalize because obviously, there are exceptions—but in many instances victory for defense counsel or for the prosecutor is all essential.

And the fact you, sir, have very candidly expressed the idea you would like to have the edge by loading the jury to people who might be sympathetic to your approach and recognize the defense has the same desire—and, of course, we would all be very naive if we didn't think that was our purpose—it has occurred to me again, as a layman, that any kind of random sampling, any kind of random selection of jurors, whatever number, over any given period of time has got to be more equitable than any kind of injuries resulting from a series of peremptory challenges or challenges for cause.

Obviously, in the specific matter confronting us at the time we have reason to be concerned. But the point is, not only with the exclusionary laws and fourth amendment defendants, but with a whole variety of structures which we have created because of laws and Supreme Court decisions, in a valid and honest attempt to protect the innocent and accused, we have erected a barrier behind which the guilty can conceal himself just as cleverly.

That is where this ego process, or the superseding of justice, becomes a very serious matter.

I don't mean to lecture, and I don't expect you to respond.

Mr. BUSCH. I know, yes.

Mr. STEIGER. Fine; if you would like to respond, please do.

Mr. BUSCH. We have the finest system of justice of any country in the world.

It is an adversary proceeding. You are an advocate. I represent the people when I try a case. Defense attorneys will voir dire a jury and say, "Would you be fair to my client," I voir dire that jury and say, "Will you be fair to my client." The issues are drawn. People will be under oath and presumed to tell the truth and they will be cross-examined and this is a real adversary proceeding.

I would never want to see that stopped, even to the point where as an advocate I would be denied the right to talk to the people who are going to judge my case for my client. Just as for the defense attorney who is asking those people to judge it for his client. It is a very healthy, good system.

And to just say, to do it at random, I think that would not be a fair system.

Mr. STEIGER. In the course of a 12-month period Mr. Busch, how many felony charges would result from your office's activities; not how many you consider, but how many are charged?

Mr. Busch. We file about 50,000 to 55,000 felony complaints. Those are screened by professional people and the conviction rate, if you are interested in that, is about 88 percent.

One thing a prosecutor should never do is put an innocent person into the system. That is why you screen the cases. We only want to have the people in there—the test in my office is, "Would it probably result in a conviction." Note, "probably." If not, don't issue it. Don't expose a person to that.

Mr. Steiger. The 55,000 figure are those who have survived the screening process?

Mr. Busch. That is right.

Mr. Steiger. Of those, how many plead guilty?

Mr. Busch. Actually, over half of the defendants who are accused plead guilty. Over half; about 60 percent.

Mr. Steiger. Of the half who would plead guilty, is that the result of plea bargaining?

Mr. Busch. Not necessarily.

Mr. Steiger. What percentage would be the direct result of plea bargaining?

Mr. Busch. Again, using the term "plea bargaining" in the sense——

Mr. Steiger. I will define it as I understand it: In which the defense counsel and the prosecutor's office engage in negotiations which result in a common agreement as to charge and sentence?

Mr. Busch. You always discuss with counsel when you take a plea; but in that sense, if you were to take out of plea, not talking about sentence, probably half of them would have to be. At least half.

Mr. Steiger. Mr. Vance, I wonder if you could respond as to the approximate number of complaints that are filed, felony complaints that are filed, and the approximate proportion of those that are resolved by plea bargaining.

Mr. Vance. Well, we had 18,000 indictments disposed of last year. There were some 700 jury trials, where, of course, there was no plea bargaining. There were approximately 12,000 that resulted in pleas of guilty. Now, we have a different system in Texas that causes our figures to be a little high.

For example, if somebody commits a burglary and felony theft we have to have two separate indictments even though it is one transaction. It is ridiculous.

Mr. Busch. We don't do that.

Mr. Vance. A person might get probation on the burglary and have theft counts dismissed and that would be a conviction. So we have one conviction and one acquittal.

But there were about 12,000 pleas of guilty, so I would say it would be around 6 percent of the cases were tried by juries compared to those who pled guilty. I would say 95 percent of those who pled guilty were the result of the plea bargaining process and maybe another 5 percent plead to the court without a recommendation.

These were more of a contested matter.

I think you brought up a tremendously interesting point a while ago in talking about plea bargaining and the habitual criminal who keeps on committing offenses. When I say plea bargaining is a good thing, if our goal is to put the habitual criminal in as long as the law provides,

we should not plea bargain in these kinds of cases. These persons should be tried and not subject to plea bargaining.

Yet there are so many cases.

Take the 17-year-old who has to be tried as an adult in my jurisdiction, who has not been arrested before and joy rides in an automobile, and didn't intend to take it and go sell it to someone. That is pretty much of an automatic probation case if there ever was one.

I don't see anything wrong with recommending a specific probated sentence so long as the judge knows all of the facts and he agrees.

You might have an armed robbery case—we don't reduce offenses often in that our law just doesn't provide for offenses being reduced for the most part. We will take the plea on the actual charge. Like on robbery cases for example. Let's assume it is a first offender robbery and you assume a judge or jury upon a full-scale hearing for this first offense, one armed robbery, would give in the neighborhood of 7 or 8 years, let's say, or 5 years for the first time out.

We are perhaps a little tougher on armed robberies than some jurisdictions. But I don't see anything wrong in going back and making the judge a part of this thing. He knows all of the facts, and saying, "Judge, we have talked this thing out, both of us agree, even the defendant, that 7 years would be the proper recommendation for pleading guilty to this particular robbery offense."

I think the public, if they know all of the facts would say, "Yes, that is proper." That is somewhat in the neighborhood of what I would do as a juror.

Where we get into a problem, is where the public sees somebody, and knows he ought to be tried because he has been in the penitentiary five times before and charged as a habitual criminal, and a prosecutor let him plead for a shorter sentence because of overloaded dockets.

My concept of plea-bargaining would try to come out with a verdict that would be acceptable to the public, to the community, according to the morals and justice of the day. And you cannot do this unless you have sufficient courts to try a good percentage of the cases.

Mr. Steiger. Mr. Vance, I want to make it very clear that I do not object to plea bargaining. In fact, you gentlemen here have eloquently stated what is the fact in every metropolitan jurisdiction in this country. There are more cases resolved by plea-bargaining than by any that result in convictions by either jury trial or straight guilty pleas. That, I think, is true anywhere in the country.

My point in questioning this is, since plea-bargaining, in spite of what Mr. Specter says——

Mr. Busch. I don't know how he says it.

Mr. Steiger. Plea-bargaining is an accepted and responsible portion of our criminal jurisprudence.

My question is: Have we ignored it in the construction of the law? Have we generally chosen to pretend it didn't exist because to the public it has somehow a stigma; which I think is improper. I think we have, and I think we aren't being realistic. I don't think anybody fails to recognize the significance of the prosecutor's power to determine whether or not his office will prosecute. That is clearly essential even to the layman. It is clearly a proper role.

But in the minds of many there is that problem, if it is a problem, a problem of justice in the hands of a single individual is compounded by the practice of plea-bargaining.

In effect, the guilty have two shots before he ever gets into the system. He has the shot to which the prosecutor makes the judgment and too, he might make a whale of a deal in plea-bargaining. That is prior to whatever the system calls for.

So I wonder, if in your opinion, it would be easier for you if there were some more ground rules laid down for plea-bargaining and, if so, if either of you have any suggestions as to what those specific rules might be.

Mr. VANCE. The only ones I have—and I have made somewhat of a study of it—I think the rule that is established by the American Bar Association, in this regard are good rules.

I think you have to go further than that. I think most of these rules were designed to protect and bring the judge into it and get it out on the table and protect the defendant's rights.

I think perhaps there are more standards or rules or guidelines needed to protect the public's rights, but I think basically the ABA's standards should be adopted.

Mr. Wiggins, before he left had asked a question of Mr. Busch, and they put all of it in California, but we don't. We ask the defendant if he is pleading guilty because he is guilty and absolutely no other reason, and usually he says no and the lawyer jabs him in the ribs and he gets the message that he should say yes.

That should be changed. The public should know what is going on and any time a recommendation is being made by the State and accepted by the judge, this is something that should be subject to public scrutiny, too.

Mr. STEIGER. I want to get the one thought. I was hoping maybe one of you would suggest it. Would it be an impossible burden if the prosecutor's office, faced with multiple crime situation, more than one specific felony which is involved in the bargain, if he would not be permitted to dismiss any of the counts, but all of the charges must be considered in the bargain?

Would that be an impossible consideration?

Mr. BUSCH. Well, of course, as Carol stated, in their jurisdiction they have to make separate indictments, and in ours, suppose a fellow wrote 14 forged checks. We would charge him with 14 counts of forgery, whether they were $10 or $1,000.

Now, I see nothing wrong if he wants to plead guilty to forgery, a felony, to taking 3 counts out of the 14 and dismissing the others. Not sentence bargaining. Forgery in our State is punishable, possibly by 6 months to 14 years in the State prison.

We have an indeterminate sentence. You don't set the thing. But the judge can also make it a misdemeanor and put him on probation. I see nothing wrong with saying, "I will take three counts of forgery, you plead guilty to a felony, we will dismiss the other counts."

What the judge does, as a way of sentence, is not make that part of the bargain. We don't sentence bargain.

I think the abuse in the bargaining process comes when you have 14 counts of forgery and the prosecutor and defense and the judge as just part of the plea say, "You are going to get a year in the county jail." But that is what the people can't possibly understand. It is difficult, as Carol indicated. We know by experience what the in-

dividual will get and we want to speed justice, we want to get what we feel is a fair sentence.

Here is a youngster, first offense, we know that is what he is going to get. Let's take a plea. Why take the 14 counts to the jury now and take about 2 weeks.

I would not agree you have to plead to all counts.

Mr. STEIGER. I didn't mean the case was a forgery of 14 specific checks. I am talking about the man who is apprehended robbing a Circle K in January and is placed on bond pending disposition of that matter, and robs another store in February, is apprehended and released on bail, et cetera, in which we have four specific situations, none of which have been dealt with.

When he has finally been apprehended, the practice here, at least, is if you will cop out on the two robberies, we will forget the other four.

I understand the need to get on with the business of the prosecutor's office and the courts, but I also wonder if it wouldn't be easier on the bargaining process—and this is an honest question; it isn't a rhetorical question—wouldn't it be easier if the defense attorney now going into this plea bargaining could not arbitrarily decide, if you had a valid case, you could not dismiss felonies B, C, and D in the bargaining process? Would that make the plea-bargaining process itself meaningless?

Mr. BUSCH. I think so. You have taken away the bargaining process.

Mr. VANCE. I guess we bargain in a different way. We would take a plea of guilty on the four robberies committed at different times and would not dismiss those cases unless we came up with insufficient evidence in a particular case. But we would recommend the particular sentence that would reflect all four of those and we would get into the sentence part of it. Joe doesn't like sentence bargaining. I don't see anything wrong with sentence bargaining provided the judge is made a part of it and you have an experienced prosecutor and defense attorney who know what they are doing.

But I certainly would agree that we just couldn't try all of those cases.

Now, really what happens is the person ends up with a lesser sentence than if you did have all four of those trials. Undoubtedly you would end up with a lesser sentence than he would expect if you went to trial in all four cases and took up a month of the court's time.

Chairman PEPPER. Mr. Winn?

Mr. WINN. We talked about LEAA funding. One uses that and one said you wouldn't get your share from the size of your office.

Mr. BUSCH. We finally have gotten some.

Mr. WINN. You have gotten some, but it doesn't do as much in your jurisdiction as it does in Mr. Vance's.

Mr. BUSCH. That is right.

Mr. WINN. We have talked about computers. Is there coordination through the national association where you can compare the programs, or is LEAA supposed to fund in each individual jurisdiction and everybody goes off and does what they think is the best thing?

Do we have anything to tie into it?

Mr. VANCE. Programing of a computer is a very difficult thing and the more I hear about it, the less I understand it. And I don't know

if the fault lies with the computer people or my own ignorance in the scientific areas.

What we do, many prosecutors have been up here and seen the PROMIS system that Charles Work is using and they can take those ideas back. But every law in every State is different and the means of prosecuting the cases, and they vary within the jurisdictions within a particular State and about all you can do is use ideas.

But we share all of the management reports that are made. When this group goes in and makes a management study and they need the use of computers, and this type of thing, all of this information is available and shared.

We have conferences on it where we send people to management conferences and like I send one of my top administrative deputies and I know that Joe has, and they will get deputies from 50 large cities and have somebody talking on here is the way you can use the computer. This is being done. So far as individual programing to be used in all 50 States, I don't know if it is even possible and I would have to plead ignorance.

Mr. WINN. Is NDAA doing anything about it?

Mr. VANCE. The National Center for Prosecution Management that is setting up management studies for prosecutors is part of the National District Attorneys Association. We have something like four of five out of seven members on the board from the National District Attorneys Association, although there are outside persons on the board, like Mr. Ernie Frieson, who heads the State court management center out of Denver. This is primarily an arm of the National District Attorneys Association that has been given this grant.

Mr. WINN. Since you brought up the point that all of the laws are different in the country, that makes it pretty hard for you to put the same information into the computer; and if you don't put the same basic information into the computer then what you get out is not going to be the same and not going to be of great benefit to you on a national scale. How about your own local information based on your local laws?

Mr. VANCE. We found we couldn't even run Houston and Dallas with the same program; and both are in Texas under the same laws.

Mr. WINN. Then should we strive for consistency in sentencing on a national basis?

Mr. VANCE. I don't know. This is even a problem on a statewide basis. A jury in south Texas might think one offense is deserving of probation, whereas a jury in west Texas might want to sentence somebody to prison for a long time. The community standards and sense of values change from county to county. I think that provided you have the same sense of moral values or standards and priorities, the sentencing should be the same. In other words, I should not have any system in my office that allows one prosecutor to recommend 10 years on a given case and another prosecutor, because he feels less strongly on that type of crime recommend 5 years. That would be a bad system. But I don't consider it wrong if Texas might consider one particular offense more seriously than Rhode Island. A person might get more time in Texas than someone in Rhode Island for the same offense, or vice versa. I don't see any thing wrong with that, if the people of those States have different beliefs.

Mr. Busch. One of the things that really bothers people within the system, the criminal justice system, is everyone within the particular jurisdiction being treated in the same way, the judges' sentences. In our State it is an indeterminate sentence, you know. This Rand study, just Los Angeles County alone, shows one judge sends 58 percent of all of the defendants that appear before him on a felony sentence; another judge, only 8 percent.

Now, obviously, that is a cold statistic, but it is a bothersome one. Here we have, either that judge is too tough, or this one is too easy; but we have a maximum or minimum, we don't have the optimum. We don't know what the optimum should be; but most certainly that isn't right.

Mr. Winn. So if the lawyers are smart they read the statistics and try to get assigned to the lower level judge.

Mr. Busch. Absolutely. These are the problems we have.

That is why I really feel prosecutors and court systems and criminal justice systems and through the LEAA should really be using modern methods and techniques and putting things into computers. It can never substitute for the human judgment involved when we are dealing with human beings, but at least to get us to that optimum point where we can feel confidence that there is equality of justice.

Now, in California, possession of marihuana is a felony or a misdemeanor. We call it a wobbler. You can be arrested and it doesn't matter how many cigarettes you have, it could be a felony. The policy of my office for a first offender, up to one ounce of marihuana, which is a lid, is handled as a misdemeanor. That is not true in San Diego County. They will handle more than five cigarettes as a felony.

Well, that bothers me a little bit, within a State, within jurisdictions. The man down in San Diego, he will know that is going to be a misdemeanor sentence, but he is still handling it at a felony level.

These are things that program and funding will help us with.

Mr. Winn. I appreciate you gentlemen appearing before the committee this morning. I think it has been very interesting and I wish we had all day to talk to both of you because I think it enlightens the committee. But I think your testimony points out the inconsistencies the public is now questioning of the law. I think we all agree with it; but what do we do about it.

That is all, Mr. Chairman.

Chairman Pepper. Mr. Sandman.

Mr. Sandman. You may have covered what I am going to ask you but I am curious as to your reaction. How do you feel about the various kinds of immunity statutes in some cases, especially in a conspiracy case?

Mr. Busch. I think immunity statutes are necessary. I like the kind of immunity statute where we can give immunity and force a witness to testify. And although you could never use that testimony against him, if he has committed a crime you can still prosecute him.

Mr. Sandman. Even after you give him immunity?

Mr. Busch. Yes. I can't think of the term they call that, but they have a technical term. The other type is you can never prosecute him. In other words, immunity is necessary where you use it for conspiracy. Sometimes you can't get to criminal activities unless you have people

that are involved in it. So you have to give them immunity. What I am talking about is——

Mr. NOLDE. "Use" immunity versus "transactional" immunity.

Mr. BUSCH. Thank you.

We do not have that.

Mr. SANDMAN. You do have some type of immunity. Almost all States have it. Take the crime of conspiracy to defraud, where you have to have more than two people involved. One is the informer and he is given immunity against the other person.

Now, under your law in California, can you get a conviction of conspiracy against the other person?

Mr. BUSCH. No; we have a corroboration rule in California. An accomplice must be corroborated. That is to say, you must connect the testimony to the crime independent of the accomplice's testimony. That is not Federal rule.

Mr. VANCE. This is true in Texas, and I think the particular rule alleviates one big criticism. For example, if you have the goods on one person, what does he have to gain or lose by saying he will be the key witness to convict somebody else and his testimony doesn't have to be corroborated. Under the Federal law you can be convicted without corroboration.

We have the same rule as California in that you have to connect the defendant with the crime by independent evidence. Therefore, even if you give someone immunity to testify—and it may be very helpful and we do need immunity statutes—we have another safeguard built in with our corroboration rule.

Mr. SANDMAN. Yes; but in the conspiracy-type case, a coordinated effort of more than two people to make an act, do you think it's right for one person, who may be the instigator, which is generally the case to be given immunity and the others who are involved to get convicted, and he cannot be tried for the same thing to which he testified. And this is true in your case, isn't it? Both of your States?

Mr. BUSCH. If we give immunity in our State he cannot be prosecuted for that offense.

Again, it is prosecutorial discretion. What is best in the interests of the community, to have somebody be given immunity, whether it is a murder case, multiple murder case, and not to prosecute him. He must be punished to get to the real culprits. Many times the only way you can prove a case is to give immunity in an important case. But the prosecutor should use sound judgment and make sure you would get the less culpable individual. Like the *Manson* murder case. We had people turn State's evidence. They walked out of the courtroom. Seven murderers—but all of them would have walked free if we didn't let one walk free. So that is a judgment that you have to make when you give immunity.

Conspiracy is a powerful weapon of prosecutors and I don't like to see it abused. Personally, I believe the best way to prove that a conspiracy is not by circumstantial evidence but by giving immunity to one of the conspirators to talk about the agreement and what was involved. But you want to make sure you get the least culpable individual and you are going to do substantial justice by giving that immunity.

Mr. SANDMAN. Yes; but in so many cases the fellow who is mostly guilty is the one that is given immunity.

Mr. BUSCH. I would disagree with that.

Mr. SANDMAN. Isn't that so?

Mr. BUSCH. No.

Mr. SANDMAN. It is not so?

Mr. VANCE. I wouldn't agree with that. The only case I think of occurred in Texas in the Federal court where I thought the kingpin got immunity, but we have not ever had that criticism in the State court and I would never give the instigator immunity to get the lesser person. I think I would let the whole case slide before I do that.

Mr. SANDMAN. This is a typical case. I heard this happen right in the courtroom in my own State. What happened, apparently in this case a contractor went to a particular officeholder in the town, and it wasn't a big town, and he really tried to bribe the man so he could get a particular type of exception in a contract for some extra work, apparently. As the testimony went, he did bribe, there was no question about it. The extra work order went through, which amounted to a sizable amount of money.

Now, the instigator of that crime, in my opinion, is the contractor, not the guy who finally wilted to it and took a few dollars. Right? Because if the contractor didn't go to him it would never have happened in the first place.

OK, the contractor is the one given immunity and the other guy got 3 to 5 years. How can you justify that?

Mr. BUSCH. Well, I would say that was poor judgment on the part of the prosecutor.

Mr. VANCE. If you had the contractor going to many different public officials, I think that is very poor judgment. If it was only one isolated incident, the instigator would not be as bad as the public official who is held to a much higher standard.

Mr. SANDMAN. Couldn't that happen under your law?

Mr. VANCE. Yes, certainly. Like dismissing a case you shouldn't dismiss.

Mr. SANDMAN. Yes. Should we have some sort of a regulation, some sort of a rule where it couldn't happen? That is my question.

Mr. BUSCH. That would not be an accomplice situation. There is a bribegiver and a bribetaker, two different crimes. We don't require that he is not an accomplice in that instance. If he testifies and is given immunity he could be convicted on that testimony alone.

Mr. SANDMAN. Should there be some sort of uniform rule to prohibit the incidents I talked about?

Mr. VANCE. I don't know how you would administer it.

Mr. BUSCH. What you are saying is you want to prohibit the prosecutor's discretion to make a judgment call as to who he gives immunity to.

Mr. SANDMAN. I believe you have to have immunity statutes. I understand it is a great tool. But should there be something where a man who perpetrates a crime should not be given immunity?

Mr. VANCE. You have to have approval by the judge. You have judicial approval. Sometimes it is merely a ministerial act. But no judge wants to put his name to something that was a gross abuse.

Mr. BUSCH. You have the witness take the stand and you ask a question and he refuses to answer on the ground it will incriminate him; and you petition the court for a court order to get immunity for the

witness and the court passes on it. That is the way we have the procedure on it. That is the way we have the procedure in California.

Chairman PEPPER. Mr. Busch, did I understand you to say you had indeterminate sentences in California?

Mr. BUSCH. Yes, sir. Anybody sentenced to the State prison does not go for a set period of years on recommendation of the judge. He is just sentenced to the State prison for the term prescribed by law. If it is armed robbery, it is 5 years to life.

The law says "armed." Then we have an adult authority and after the man arrives at the State prison, they determine how long he shall spend.

Chairman PEPPER. So the court adjudicates with or without the jury that the man is guilty of a certain offense, and the law prescribes a sentence. The judge adjudicates it, he is sent in to the custody of your penal system?

Mr. BUSCH. If he goes to the State prison. But the judge has additional discretion, he can grant probation and not send him to the State prison. He can suspend the State prison sentence.

Chairman PEPPER. If he sends him to prison without probation, then the penal system determines how many years he is committed?

Mr. BUSCH. Right.

Chairman PEPPER. That is different from giving him an indeterminate sentence to be held as long as the executive authority would like to hold him without the law fixing some maximum. In your case, the law fixes a maximum; doesn't it?

Mr. BUSCH. Yes. In other words, take burglary, second-degree burglary. It is 1 to 14 years. Grand theft, 1 to 10 years. They have all kinds of different types.

Chairman PEPPER. What is your idea about an indeterminate sentence without any legal limitations at all of the term served, leaving it entirely up to parole authorities and executive authority to determine how long he stays?

Mr. BUSCH. I have no quarrel with that. I think one of the most difficult things the criminal justice system is faced with is that a judge, or prosecutor, or defense counsel, based on a probation report of an interview that took perhaps an hour, decides how long a person should be incarcerated for a particular offense. Really, what they ought to do is put it under an authority who can study the individual.

I have had the wardens of prisons tell me—like assault with a deadly weapon. It is 1 to 10 in California; with good time off they can get out in 8 years—they know that that individual could be one of the most dangerous men to ever put out on the street and at a certain time they have to put him out. But they know it. A prosecutor can't tell it in the short time we have these individuals under our observation. That is why I have no quarrel with letting an authority such as an executive authority study the individual to determine how long he should be.

Chairman PEPPER. I have heard the question raised as to what is the effect of that kind of system upon the inmates, the feeling he never knows when he will ever be able to get out. There is no legal limitation.

Mr. BUSCH. I imagine it would have an effect upon those that are kept there for many, many years, that they wouldn't participate. It is like giving a man life without possibility of parole. You don't have a

carrot in front of him. He doesn't want to cooperate with the program. What you are talking about, there would still always be the carrot there, some hope for him.

Chairman PEPPER. Mr. Vance, would you care to comment on what type of sentence you have in Texas?

Mr. VANCE. I am opposed to an indeterminate sentence as such. I do think there should be a certain amount of flexibility, but we should look at the rehabilitative aspects of any person and how he does in prison and the whole bit. I think that is very important. But you could take one person who has stolen all of his life and steals a tube of tooth paste and you know he is going to be a thief all of his life; he has been a thief in the past. Under the indeterminate prison structure he would probably be there the rest of his life because if released he would steal in all probability. Somebody else commits murder and the recidivism rate among murderers is perhaps one of the least of all crimes. Under the rehabilitation theory, the murderer would be released. I think you have to reach some kind of balance to rehabilitate people but still keep the punishment somehow related to the crime that has been committed. Maybe this is archaic and old fashioned but I just think people ought to know in advance they will be punished if there is any deterrent to punishment. They should know if they murder somebody, the penalty is going to be severe. This is the best way to deter murder.

I would favor laws, I guess, more like Texas has, where you have certain formulas and flexibility but at least the time served should be based upon the sentence given.

Chairman PEPPER. Does the judge have the law fixed as a sentence for a certain offense?

Mr. VANCE. Yes.

Chairman PEPPER. And the judge can sentence within the limitation of the law?

Mr. VANCE. Yes. Take an average case. Robbery, for example. Robbery carries 5 years to life in Texas. Let's say a person gets 12 years because the judge can sentence anywhere in between. If a person gets a 12-year sentence he is eligible for parole in 4 years or one-third of his time. Actually, sooner than one-third considering credits. I think the parole laws are a little too lenient. But at least a 20-year sentence is going to keep a person there more than a 10-year sentence.

Chairman PEPPER. Does your court in sentencing an individual say maximum and minimum?

Mr. VANCE. Just a maximum.

Chairman PEPPER. Well, one other thing, gentlemen. This correctional system is a very critical part of the whole judicial process if we are going to try and curb crime. All of the expense and effort that you go through and all of the other people related to the court system go through is for the purpose usually of getting them into the penal system, into the correctional system. How adequate would you say the correctional system is today in your respective States?

Mr. BUSCH. Well, I think that probably again there is a great focus on the correctional system. How adequate is it in rehabilitative processes? It isn't too successful because people who earn the joint, people that make State prison, have done something. They have been through the probationary period, the rehabilitative process, and they are not really amenable to it. There is a great deal of recidivism.

Chairman PEPPER. What percentage of the people charged with felonies who come through your offices and into your system are repeaters? Mr. Busch first.

Mr. BUSCH. I would say that when you say repeaters, whether they have prior felony convictions is one thing. But having contact with the law, 90 percent we prosecute have had contact with the law before being charged with a felony.

Chairman PEPPER. Would you say a considerable number have also been incarcerated on previous convictions?

Mr. VANCE. I would guess about 25 or 30 percent in our State have been incarcerated previously.

Mr. BUSCH. Yes.

Chairman PEPPER. A much larger number have been arrested or probably been involved in the law?

Mr. BUSCH. That is right. About 90 percent. Criminals are criminals.

Chairman PEPPER. You say a criminal is a criminal. The reason I noted that is that to a large extent most of the crime in this country is committed by a relatively few people.

Mr. BUSCH. That is true. Only 2 percent.

Chairman PEPPER. If we can somehow focus attention on those relatively few people and find something adequate or effective to do with them we would make a very great step toward the solution of the problem.

Mr. BUSCH. This is a very involved field, Mr. Chairman. I believe in the theory of criminal law in violation of penal laws; when a person is convicted, he should be punished. I believe in that. That is part of our theory of punishment. That is to protect this society and to deter other people. And third, we should try to rehabilitate them. In that sequence we should try.

But we know people who commit crimes have a typical type of personality. They are called sociopaths. They just don't conform. How long you keep them in custody, that is the problem. What do you do? You have a guy and when he gets out of prison he is going to commit some more armed robberies. How long do you keep him? These are very involved social problems of today.

Chairman PEPPER. We are going to have to go in a minute. In California you are getting away from the big centralized institutions and putting people more back in the county systems for incarceration; aren't you?

Mr. BUSCH. In our State we have probation subsidy programs. If you don't send somebody to State prison, the State will give the county $4,000 a year to put them on probation. We call it probation subsidy.

Chairman PEPPER. How is that working out?

Mr. BUSCH. Los Angeles County gets $8 million a year. I don't think it is working out too well, personally.

Chairman PEPPER. Do they have any innovative system for handling these people who are in those probation programs?

Mr. BUSCH. Of course, there are all kinds of programs they have nowadays for supervision and work programs, and work projects. I don't know if they are innovative. They are the same programs that have always been in existence.

Chairman PEPPER. Mr. Vance, what would you say about the correctional system in Texas?

Mr. VANCE. I think, despite all of our laws that need reform, we have one of the best prison systems in the Nation. George Beto was there for years and headed it. I say this based on the fact we have one of the very lowest costs per day per prisoner. Normally this would be a bad statistic to cite, but the reason our cost is so low is the prisoners are self-supporting to a large extent. They raise all of their own food and vegetables. And they build their own buildings and they get involved; they have a barbers college, they have all kinds of training for them and also we have special units dealing with young offenders. I think we probably have given more college degrees and high school degrees to inmates, by far, than any other prison system in the country.

George Beto said, "Teach a man the dignity of work." About 60 percent of the people in our prison system had not completed the sixth grade. They just dropped out of school and they were sort of drifters and they committed offenses. They had a little lower I.Q. Some people you can't do anything with; there is no question about it. They will never reform but a large number never had any discipline in their lives or anybody to take them and say, "Look, given confidence, you can do a certain trade, you can reach a certain skill, you can make it." I think the Texas system achieves this about as good as a prison system can, unless you can go out and hire a thousand psychiatrists and deal with them on a one-to-one basis, which costs would probably be prohibitive and results speculative at best.

Chairman PEPPER. What about the appeals court? We had an early experience in the life of this committee that—I believe Mr. Younger is your attorney general now?

Mr. BUSCH. Yes, sir.

Chairman PEPPER. He was your prosecuting attorney, the district attorney in Los Angeles. He testified here on the frustration that he had as a district attorney on account of the length of time involved in appeals, the uncertainty of a case being fatal. What have you to say about how you are affected by the delay in your appellate system?

Mr. VANCE. Ours is horrible. We have only one appellate court for all cases in the entire State. We are right in the middle of proposals to completely reform the whole judicial system. I think appeals should be handled within a 60- to 90-day period. I think if a person is sentenced by a judge he should not have an absolute right to make a bail. This should be up to the judge. In Texas they have absolute right to make bail unless they get over 15 years. So if a person is convicted of 20 burglaries, and 12 years is the maximum, he comes in and takes his maximum sentence and stays out another year and a half while his case is on appeal. This is deplorable.

I think every State that hasn't done so should clean up the appellate process. We should be like England and process these rapidly.

Mr. BUSCH. I think the greatest indictment is delay on appeal, both Federal and State. We have a rule in our State, cases are supposed to be decided within 90 days of being submitted to the court, but the procedural rules are so slow in getting briefs that the system goes on for years.

I agree with Carol. We should have something similar to the English justice system. You have to decide between 60 and 90 days, briefs in, arguments in, and get it over with.

Chairman Pepper. We are going to have some State and Federal appellate court judges and justices who are going to be testifying about court-adopted innovative things to speed up their process.

Gentleman, I can't tell you how much we appreciate your coming here. You are two of the most knowledgeable men in the country. You have a deep concern with these problems and have been a very great help. We thank you very much.

Mr. Busch. Thank you for inviting us.

Mr. Vance. Thank you, sir.

[The prepared statements of Mr. Vance and Mr. Busch follow:]

Prepared Statement of Carol S. Vance, District Attorney, Harris County, Tex.

First of all, let me introduce myself. My name is Carol Vance, and I am the President of the National District Attorneys Association. Also, I am District Attorney of Harris County, Texas, a jurisdiction of nearly 2,000,000 persons of which Houston is the major city.

My purpose in being here is to discuss some of the innovations which our office is utilizing in an effort to make our criminal justice system and our office more effective.

A few short years ago there was no working blueprint to improve the criminal justice system in our state and my jurisdiction. However, with the help of the Law Enforcement Assistance Administration through our state planning agency, the Texas Criminal Justice Council, we now have significant programs that now are having an impact in our fight against crime.

One reason that the Texas program has been so successful is that a large percentage (approximately 20% for 1973) of the funds has gone into the courts and prosecution. Our county has been a good example of how these funds can be used to combat crime on the streets, and my testimony today will concern itself with actual programs in progress and their impact. Let me give you some specific examples.

I

COURTS

The problem of increased caseload today is known to everyone in every jurisdiction. Frankly, I don't know how we would exist without the support of our Texas Criminal Justice Council and the funds made possible by the Omnibus Crime Act. These funds have enabled our courts to operate more effectively in several different ways.

A. *Speeding up trials.*—One of the most exciting and productive programs is a grant that provided for *two additional jail courts* to try cases where the defendant is confined to jail. This helps to relieve an overcrowded jail and provide the Constitutional right to a speedy trial. Often we forget that the State, as well as the defendant, is entitled to a speedy trial. These two courts, manned by two visiting judges, began operation April 3, 1972. During the first nine months of operation which ended on December 31, 1972, these two courts disposed of 1400 indictments and approximately 650 defendants. While the planned population of our jail is 1650, with the help of these two courts, we have reduced the population of our jail from a staggering 2200 to 1995 in this same nine month period. This operation might well prevent the necessity of building a new jail or adding on to present facilities. It relieves the present courts to a certain extent so that persons on bail are brought to trial more rapidly. I am pleased to say that our present trial settings in most of our courts occur within five months after the commission of the offense instead of over a year as was true just a short time ago.

B. *Court administration.*—Another court funded program has included the hiring of a court administrator and a court coordinator for each of our district courts. These court specialists assist in the setting and programming of cases and trials. Many lay persons have the mistaken notion a judge is only working if he is on the bench and a jury is in the jury box. This is not true. There are many pre-trial conferences, the mere reading of motions filed each week, the consideration of lengthy writs of habeas corpus filed each day, reading records and briefs on cases prior to appeal, not to mention in chamber con-

ferences. Prior to the hiring of coordinators, judges were pre-occupied with dockets and the clerical burdens which are now assumed by these specialists.

C. *Use of computers.*—Another separate grant has been to fund a computer program that is now partly operational and provides the clerk, the sheriff, the district attorney, and the courts with instantaneous information about all pending cases. The computer is of great assistance in keeping persons from being lost in jail and in providing information so docketing decisions can be made.

D. *Pre-Trial release.*—Another court related program funded by LEAA is the personal recognizance program, which has also helped the crowded jail situation. Persons who are not charged with the most serious types of crimes and who are relatively stable will be eligible to be released and will not be held in jail simply because they are too poor to afford a bond. During the first three months of the program, 900 interviews were conducted by people working in the personal recognizance program. Of these 900 people, 213 defendants were released on their own recognizance and not required to stay in jail. Of these 213 individuals released from custody, only 3 failed to show up for a court appearance.

This project alone accounted for release during a six-month span of 455 suspects who otherwise would have been jailed. These defendants were returned to jobs and families while their cases were pending, rather than have them languish in jail at county expense. If the county had incarcerated each of the 455 for six months, it would have cost the taxpayers $250,000. And during the six months the releasees were able to earn an estimated $400,000 and to continue caring for their own families.

Not only is this project credited with enhancing the respect of the suspect for the criminal justice system, but also with increasing his rehabilitative potential by removing him from long term jail environment prior to trial.

II

PROSECUTION PROGRAMS

A. *The special crimes bureau.*—The Texas Criminal Justice Council funded a Special Crimes Bureau for our office on February 1, 1972. It is now in the third month of its second year of operation. This specialized division of prosecutors devotes full time to organized criminal activity, fraudulent financial schemes of highly complicated makeup and other criminal activity that requires the ability of a specialist who can both investigate and prosecute. The Bureau now consists of seven (7) lawyers and one (1) investigator. Three of these lawyers devote full time to the investigation and prosecution of organized criminal activity. They work hand in hand with virtually every law enforcement agency in the area—federal, state, county, and city. It is in this division of the office that most often the "total picture" is obtained on a given person or group of persons' criminal activity.

This is because the lawyers assigned to the division are trusted by the agencies in the community and are able to coordinate the activities of the various agencies for the mutual benefit of all. They have become known as a more or less central area where all sorts of intelligence data is put together from the many contributing agencies. In the first year of their operation, they opened over 250 files on persons, groups, associations and corporations suspected of some organized criminal activity. These opened files resulted in the return of 218 indictments by Harris County Grand Juries, resulted in 33 convictions and 5 civil injunctive proceedings initiated in the District Courts. At the beginning of this second year, the Special Crimes Bureau had 110 investigations pending and since the beginning of the year have opened an additional 49 files.

Just last week, for example, the prosecutors in the Bureau worked with the Houston Police Department in an investigation that resulted in the indictment of two (2) Houston Police Narcotic Officers for the sale of narcotics; opened up a file and began the investigation with the Grand Jury of what will probably turn out to be one of the largest auto theft rings in the Harris County area for this year; received information on an extortion plot involving a narcotics activity from the border and at this time are assisting State Intelligence officers in their pursuance of that matter; were able to obtain sealed indictments on three persons involved in a conspiracy to murder a prominent Houston doctor; investigated and arrested one individual who has in the past been dubbed as the "financial wizard of the Mafia" in one other particular area of the country and who had been in Houston only a few months. This man has already de-

frauded a Houston bank out of $50,000 based on a pledge of nonexistent securities—the man has been arrested, charged and indicted at the time of these remarks.

There is no question but for the Criminal Justice Council grant I would not have been able to spare the talents and resources of these lawyers on a full time basis for such investigations. Prior to the creation of the Bureau and the funding by the CJC, it was all I could do to keep an adequate staff to man the courts and their extremely heavy dockets and case loads. When our Organized Crime Division was evaluated externally by other people in the law enforcement field, they seemed most astounded at the rapid success and achievements of the newly created bureau. More particularly, the evaluators from the Criminal Justice Council and from other law enforcement agencies were astounded at the amount of cooperation between law enforcement agencies that the lawyers in the bureau had helped accomplish.

Unfortunately, certain matters came to our attention concerning our local fire department. This is a fire department of over 2,000 employees and those suspected of criminal activity were from the very top of the department. It took the resources and efforts of two assistant district attorneys from the bureau almost three full months to conclude the investigation which comes to an end this week. This investigation has caused virtually hundreds of man hours to be spent by the attorneys involved in same and has resulted in the return of indictments for conspiracy, bribery, theft and embezzlement.

The Special Crimes Bureau, which includes the Organized Crime Division, is perhaps the most important section of our entire office. This permits our resources to be used to go after the professional criminals, the public corruptors, the masterminds—in other words those who need it most—the biggest fish.

B. *Student assistants.*—Another innovation of our office funded by LEAA is our Intern Program. Houston has three law schools. The program provides for hiring six top quality senior law students on a half time basis. Under Texas law, senior law students can appear in court with a licensed attorney. Typical of these students is one who recently turned down the opportunity to become editor of his school's Law Review to become an intern. They are assigned to different divisions of the office and do substantial work. More important than the work is the chance to recruit the most outstanding students. Not only are these students pleased to become Assistant District Attorneys, but they generate interest with other top quality students. This causes two excellent results. First, we have over 200 applicants at present. Secondly, the entire attitudes of the law schools toward prosecution has changed for the better. In addition to our six regular students, we have 25 to 40 law students working in and around the office and receiving credit hours.

C. *Improved management.*—Our office consists of some 90 lawyers and approximately 170 personnel total. Our budget is close to 2.5 million dollars and in reality more like 3 million dollars per annum considering various grants. I suppose we are typical of many District Attorneys' offices where the District Attorney was chosen on the basis of his ability as a lawyer and gets into his first big administrative responsibility as the prosecutor.

To update the organization of our office and provide for the best management team possible, through LEAA funding our office received a management study grant. This study was conducted for nearly a period of one year by Peat, Marwick and Mitchell. As a result of the management study, our office was able to make major changes in the organization of personnel and the utilization of everyone—particularly our professional talent.

As a part of the management study, we implemented programs for modernized reporting systems, filing systems, communication equipment, programs and publications, community and school projects in crime prevention, and in many other areas . For example, we hired an office manager for the first time so that the District Attorney and First Assistant would not be spending time on hiring of secretarial and other clerical personnel and the assignment of their positions. We instituted a program and publications manager to systematize the various printed material from this office. A new reporting system gives us needed information concerning the workload of each prosecutor in each court as well as a greater breakdown on types of cases filed, time between arrest, indictment, and trial, and other needed information.

Today, a discretionary grant has been provided the National Center of Prosecutor Management, located in Washington, D.C., and this Center provides management services as well as seminars on office management for district attorneys

throughout the country. Management of the District Attorney's Office on a systematized basis is a relatively new creature. Every office should take advantage of these opportunities. We could not have undergone this reorganization and better utilization of our personnel without a management study. The report, that was made available, has been furnished to many other District Attorneys' offices throughout the country.

D. *Screening of all serious criminal charges.*—When a case is filed in our Federal system, the charge is first approved by an Assistant United States Attorney. This is standard procedure throughout the United States. Yet in most prosecutors' offices in this country, there is no screening of cases. Where there is no screening, often police departments, citizens, and others file charges with local magistrates sometimes where there is sufficient evidence to sustain a conviction.

In order to alleviate this situation in Houston and Harris County, pursuant to an LEAA grant, our office received funds for new equipment and personnel to manage a screening division. This now means that when a law enforcement officer gets ready to file a charge, he first brings it to an Assistant District Attorney and briefly outlines the case. If there are sufficient facts, the Assistant naturally approves the charge and begins building his file and assuming responsibility for the case.

This screening division is operated 7 days a week and until 3:00 a.m. on weekends and 2:00 a.m. on other nights. Not only are charges screened here, but the experienced personnel that rotate through this division also give needed advice on warrants of arrest, search warrants, and other highly technical legal problems confronting the officer on the beat and the detective at odd and strange hours.

This system has a way of discouraging officers from filing charges unless there is sufficient evidence. It also provides better communication between prosecutors and police and lets the prosecutor understand the vast and intricate problems of the police officer on the street. Where there is a further investigation to be done, the Assistant on duty can advise the officer to obtain such while it is fresh. This often saves a case that would otherwise die because of the passage of time before the trial assistant would receive the file in the ordinary course of events.

As a result of this system, there is a great saving to the City of Houston. Such action has substantially decreased the number of hours spent in preliminary hearings by officers involved. Houston Mayor Louie Welch noted a $420,000 annual saving merely by reducing the time Houston police officers spend giving testimony. Since its institution November 1, 1972, a total of 11,879 misdemeanors and felonies have been filed out of the 12,268 cases which have been screened. In other words 389 cases have not further clogged our criminal justice system because of this program.

E. *Regional offices and speeding up indictments.*—Our office has beefed up our new Grand Jury Division to better accommodate our twenty-two police departments. Through a grant we have instituted three regional offices whereby prosecutors cover certain geographical areas of the county. This saves police officers and the public up to a 60-mile round trip to the courthouse. Due to increased manpower, the length of time from arrest to indictment has been cut from four months to 20 to 30 days. The three Assistant District Attorneys assigned to the regional areas are also available to give advice to departments in these areas. The additional manpower allowed us to catch up on our backlog of cases pending grand jury indictment, which is a necessity in the State of Texas. We hope to have this time down to 15 to 20 days in the near future in accordance with nationally recommended standards.

F. *Assistance on the State level.*—Texas was the second state in the nation to hire an Executive Director, or as they are called in some states, Training Coordinators. Although the position of Executive Director was created less than three years ago with the help of LEAA funds, approximately thirty five states now have such an office. The Executive Director in Texas has turned our State Prosecutors Association from a twice a year social club to a viable, hard working organization which meets the needs of the prosecutors of Texas. Further, he conducts prosecutor training programs and sends prosecutors to regional training seminars across the country. Each state prosecutors' association needs its own Executive Director to speak for the state's local prosecutors before the legislatures and other bodies where it is necessary for the prosecutor to be heard.

One of the best efforts in recent years to the entire criminal justice system in Texas was the effort of the Texas District and County Attorneys Association in writing a Penal Code. The Texas Penal Code is over 100 years of age and extremely out of date. The Texas Prosecutors Association drafted a Code that was so effective that over 95% of their recommendations were approved and incorporated into a proposal by the State Bar of Texas now pending legislative action. We hope for favorable action within the next two weeks on passing a new Penal Code for Texas. The quality of this Penal Code would not have been possible had it not been for a central office to coordinate these meetings, publish the material, and do a substantial portion of the research to accomplish these goals. Every state needs executive offices for their prosecutors. Such has been recommended by the National Council on Criminal Justice, the American Bar Association, and the National District Attorneys Association. The smaller prosecutors' offices stand to gain the most from a central office that can provide legal advice, monthly bulletins on changes in the law, and other central services.

III

CONCLUSION

We have instituted many other fine programs in Harris County and in Texas. For example, our local probation department received a grant from the LEAA which allowed them to double their staff. This grant permitted the hiring of some 45 new probation officers, thereby providing people on probation with better supervision. The probation department is now better able to effectively counsel with and give guidance to persons convicted of crimes and who are thought by the public and the courts to have an opportunity to make decent citizens of themselves.

This same grant has provided federal funds for the establishment of a community services program. This program refers individuals to Alcohol Anonymous groups, narcotic rehabilitation centers, etc. This allows individual probation officers and their assistants to spend more time in counseling and directing the future of worthy individuals.

In this era, when we find that the criminal elements of this country are constantly upgrading and refining their criminal techniques in order to make themselves more elusive to law enforcement, we must take the initiative and maintain the same pace.

Every day in courthouses across this country we hear the same question from a criminal's victim and all people concerned with law enforcement. The cry calls out, "Why don't they do something? Streets aren't safe to walk on anymore!" If we ignore this plea, we can never ask this question ourselves because we had the chance to do something and failed.

Whereas several years ago there were few new programs to combat crime on the local level, today, with LEAA funding and new innovations, crime reduction can become a reality. I recommend we keep the basic structure of the Law Enforcement Assistance Administration as it is. The states need planning councils to give direction to proper funding and evaluation, so that the courts and prosecution will not be neglected as they are in many of our states. It does little good to provide more police to arrest more offenders if our courts are jammed and the people's lawyer is inexperienced with far more cases than anyone could reasonably handle. The courts and prosecution need resources and expertise and quality personnel to assume such a tremendous and sensitive responsibility. The National District Attorneys Association has recently asked that 15% of the total funds be earmarked for prosecutors. From my experience with the Texas program, I concur.

It is time we beefed up our courts, our prosecutors' offices and related services if we are to have an effective and well balanced program to reduce the incidence of crime on our streets.

PREPARED STATEMENT OF JOSEPH P. BUSCH, DISTRICT ATTORNEY, LOS ANGELES COUNTY, CALIF.

Mr. Chairman, members of the Committee, it is an honor to come before you today to discuss certain processes of justice in Los Angeles County which hopefully will be of interest to you and which may be adaptable to other areas of the country.

You have expressed interest in the application of law in our state relative to time limits on bringing criminals to trial.

Our 60-day limitation in California is a concept which I enthusiastically support and which does not cause major inconvenience in the trial of criminal cases.

The new Rand Corporation study of criminal felony prosecution in Los Angeles County shows that about half the felony cases are concluded within 60 days and the overwhelming majority (80 percent) are concluded within 90 days.

As a matter of practice, most of those cases which continue beyond the time limit involve motions by the defense and continuances requested by the defense. It is the policy of the District Attorney's Office normally to oppose excessive continuances. It is, of course, usually to the advantage of the prosecution to bring a case to trial as soon as possible, while the incident is still fresh in the minds of the victims and witnesses.

At the present time, we are attempting to achieve state legislation which will combine pretrial motions into an omnibus hearing and further speed the processes of justice.

Statistics on the number of cases which are dismissed as a result of the 60-day rule are not available. However, I can assure you that no important cases are lost because of this time limitation. And, it only operates to the benefit of the system.

It increases respect for the law. It protects rights of defendants.

I should also note that the California Supreme Court has held that state and federal constitutional provisions for speedy trials are self-executing and do not depend upon statutory schemes. Defendants are not limited to rights enumerated in statutes.

I should also note that the prosecution may refile a case which has been dismissed for lack of speedy trial, subject only to the statute of limitations for the particular crime.

The Committee also indicated interest in diversionary programs which may exist in California.

Under new state legislation (California Senate Bill 714), we began in March a new program of narcotics defendant diversion. This program provides for the diversion of persons arrested on narcotics violations who have no prior records and were not involved in a crime of violence at the time of arrest. Under this program, criminal proceedings are suspended and the defendant is diverted to a rehabilitation program.

If the person fails to respond to rehabilitation, criminal charges may be reinstated. Successful completion of an assigned rehabilitation program will result in dismissal of criminal charges.

At this time we cannot evaluate the success of the program. It has only been in operation since March and there are still many aspects of its practical operation which have not been resolved: for example, the question of whether a narcotics case may be diverted without the consent of the District Attorney.

The Los Angeles District Attorney's Office has also begun a pilot program on juvenile diversion involving youngsters who have had their first contact with the law. This program relies on volunteers to develop a one-to-one relationship with the youngsters.

It is patterned after similar successful programs in other parts of the nation. The response to the program has been splendid. We have volunteers of all ages and backgrounds. The police have given us great encouragement.

The program differs from probation efforts in that it attempts to divert youngsters before they get into the system—not afterward.

We will receive our first complete report on the program's operation in June. From my initial experience, I believe that it offers great potential for all areas of the country. It not only acts directly against juvenile delinquency, but also provides a creative outlet for talented and dedicated citizens who want to do something for the community in which they live.

I am also very proud of a program we have operating in the Watts area of Los Angeles. A District Attorney's Youth Advisory Board is composed of students from this predominantly black area. These students are paid to develop programs which will create sympathy, understanding, and respect for the law among the youths of the community. They sponsor rap sessions. They bring members of criminal justice agencies, and even convicts, to high school campuses to spend time talking to students.

They have developed programs to work with gang leaders, including weekend camps where the District Attorney's Youth Advisory members spend two days

trying to cut through the gang psychology and rechannel the thinking of gang leaders.

In Los Angeles, at the present time, we are facing an unusual resurgence of gang activity and an appalling growth in juvenile violence.

At the same time that the District Attorney's Office is working on the streets, we are taking steps in juvenile court to deal with this problem. Cases involving gang leaders are flagged and special attention is given to them. I have completely halted plea-bargaining in juvenile court. I don't believe that youngsters in trouble with the law are helped by the sight of lawyers and juvenile court judges making deals on cases.

We are taking steps in the state legislature to clarify the role of the District Attorney in juvenile court. I don't think California is unique in the fact that its juvenile laws have not kept pace with the new policies set down in court decisions. We are now faced with an adversary proceeding in which the defense counsel has virtually every legal tool available in adult court and the role of the prosecution is really undefined.

This is a most serious problem.

Probably the most startling recent development in criminal justice in Los Angeles County was the release last week of a year-long report by the Rand Corporation on felony prosecutions in the county.

I consider this report a milestone study in criminal justice and one which should receive the attention of leaders in criminal justice throughout the nation.

I commissioned the study shortly after I became District Attorney. It is a detailed statistical analysis of all aspects of felony prosecution from arrest to sentencing. And, it revealed that we do not have equal justice in Los Angeles County.

I wish to discuss the report with you because I believe that the method used in this study has wide, national applications.

First, let me explain that we have the largest local prosecuting office in the nation. There are 450 lawyers in the Los Angeles District Attorney's Office operating out of 23 separate offices. The Rand study concentrated on the eight offices which handle felony prosecutions.

The Rand study showed that a robber, for example, might get probation or a prison sentence depending on what area of the county he was arrested in and went to trial in. We have approximately 50 police departments in our county and their policies differ. Rejection rates of various departments' cases range from 59 percent to 25 percent.

Among the offices of the District Attorney, conviction rates may vary by 10 percent, and the use of certain procedures may vary even more than that—one office had three times as many jury trials as another office, for example.

The study also revealed major differences in judges' sentencing policies, with a range of prison sentences in the downtown court from seven percent to 57 percent, for example.

I am not proud of the disparities in justice in Los Angeles County. But, I am proud that we are the county that conducted the study which revealed these disparities. I am proud that we now have the type of information which will allow us to correct these disparities.

The report also shattered some myths concerning criminal justice in our county. It showed that blacks are the racial group treated most leniently in the criminal process, both in terms of acquittals and in terms of sentences. Mexican-Americans are next in line. And, the defendants who are convicted most frequently and receive the most felony sentences are Anglo-Americans.

In terms of attorneys, the report showed that court-appointed attorneys obtain the highest rate of acquittals and public defenders are most successful in obtaining lighter sentences for their clients.

It is my hope that this study will lead to serious self-examination by all agencies involved in criminal justice in my county. Since the thrust of the report was directed at my office and disparities existing in the District Attorney's procedures, I am already deeply involved in making major changes in prosecution practices.

In addition to pilot programs dealing with sentence bargaining and other prosecution practices, we have obtained a federal grant for a computer-based information system patterned after the PROMIS system which is being used by the prosecutor here in Washington.

The findings of the Rand report clearly underlined the need for such a system if we are to end inconsistencies in justice in our county.

This information system will assure:

—uniformity of office policies;

—consistency of prosecution among various offices;

—measurement and evaluation of performance;

—and, in effect, obtain monthly Rand reports on justice in Los Angeles County.

I believe that our experience in this regard and the changes which we are undertaking to remedy disparities in justice must be studied by all criminal justice agencies.

The federal government should take note of what we are doing in examining the functioning of the federal justice system. I know that organizational timidity, bureaucratic inertia, and organizational self-protection militate against the type of report which we had Rand do. But it is essential that such reports be done.

The demands on criminal justice and the need to reassure the public that the system can function equally and effectively make such studies a necessity.

I am delighted with the opportunity to appear here today to call the report to your attention and to discuss the aspects of justice in Los Angeles in which you have expressed particular interest.

Thank you.

[Whereupon, at 12:35 p.m., the committee recessed, to reconvene at 2 p.m.]

Afternoon Session

Chairman Pepper. The committee will come to order.

Mr. Counsel, would you call the witness and proceed.

Mr. Nolde. Thank you, Mr. Chairman.

We have with us today, Judge Joseph Weis, Jr. He has been a distinguished member of the bar and practiced law for 18 years; was appointed a trial judge of the Court of Common Pleas in Allegheny County in 1968; in 1970 he was appointed to the U.S. district court; in 1973 he was appointed a U.S. court of appeals judge. Judge Weis has had very extensive experience in the law and he is also in charge of a pilot program at the Federal Judicial Center for the use of video tape.

We are very honored to have you today, Judge, and will be pleased to hear your remarks.

Chairman Pepper. Judge, we appreciate your coming. As you know, what we are trying to find out is what can be done to improve our system for the administration of justice, particularly in criminal law in this country. What we have been doing is looking all over the country for the most innovative and progressive programs and procedures that would make for the more effective administration of our judicial system and we hope would have the effect of reducing and curbing crime in the country.

We heard from the police departments of 13 cities of the country; we heard from outstanding authorities in the country in the field of juvenile crime and correctional institutions. This week we are hearing from innovative prosecutors, trial and appellate courts, to learn what they are doing that does make for a more efficient system in the administration of justice and has the effect of curbing crime in the country.

We are very honored to have you with your splendid background to come and give us your counsel today.

STATEMENT OF HON. JOSEPH WEIS, JR., JUDGE, U.S. COURT OF APPEALS, THIRD CIRCUIT, PITTSBURGH, PA.

Judge WEIS. Thank you very much.

I have been interested in expediting trials, too, both during my career as a trial lawyer and then as a trial judge in both the State and Federal courts. Of course, one of the big problems always is the absent witness, or the man that can't get there at the time you need him. Lawyers have been reluctant to use depositions in civil cases and in criminal cases even more so, mostly because you don't get the flavor of the witness' personality, the innuendoes, the inferences, the emphasis or lack of it, from the printed record. Consequently, we have had to rely on the face-to-face and getting everybody in the courtroom: style trial.

The video tape, I think, has made a change in this picture, and I think it is worth using in the criminal proceedings. As you know by now, I am sure, Mr. Pepper, the video tape is simply an inexpensive and simple way of recreating sound as well as the picture of what occurred. Therefore, the old objection that you couldn't see the witness to judge his credibility no longer applies.

I have had the opportunity to sit in on one civil case, where we used video tape on one occasion, and did not use it on another. I was truly impressed by the difference between the presentation of the printed record and that of the picture.

As you are well aware, the Organized Crime Control Act of 1970 provides, for the first time, to my knowledge, that depositions may be taken by the prosecution. Up to that time it had been available only at the instance of the defendant. The case of United States versus Singleton, which is shown in the notes which I filed, indicates that the court of appeals, at least for the second circuit, has approved this procedure. But the dissenting opinion of Judge Oakes in that case points out the problems that have traditionally been raised in connection with depositions, that the witness couldn't be seen by the jury, that the opportunity for cross examination and reaction, therefore, was limited.

Video tape, I think, answers a great many of these objections.

I have also indicated in the notes of my testimony here that the use of video tape in criminal proceedings to my knowledge has been rather limited at this point. You heard from some police officers and I hope, perhaps, they mentioned to you that at least in Denver they have used video tape rather extensively in drunk driving cases. To my knowledge, it has been used in the West in connection with the confession of a defendant in a murder case. It has been used by a U.S. judge in California, in dealing with the problem of the material witnesses particularly in the immigration cases. They have had to remain in jail for months at a time. Now a magistrate will have a hearing, take the testimony of these witnesses on video tape and then excuse them and let them go on about their business.

The most startling case that I can think of in the use of video tape occurred in California just a few months ago when, at the trial, the prosecution showed on video tape the deposition of a witness in a murder case. At the time of the trial he was dead. His testimony had been taken by video tape in November of 1972. He was in the hospital

in Florida at that time with terminal cancer. His vocal cords had been removed and he was unable to speak, so the video tape deposition was taken with a lipreader present on the screen interpreting what the witness' words were which he was forming with his mouth. This case resulted in a conviction. There has been no appeal yet, so we don't know, of course, what is going to happen to it. But it certainly is a dramatic example of how video tape can be important in a criminal proceeding.

I was noticing in a newspaper just the other day, the complaint of a prosecuting witness in a case that he had been required to come to the courthouse five or six times before the trial finally proceeded. I think we impose on our witnesses too much in criminal proceedings. We don't show them enough consideration. If that man's testimony could have been taken by video tape, he would have been spared all of that trouble and justice would have been done, I am sure, just as well.

I would like to mention, too, just briefly, that I forsee in the very near future the use of the picture phone, or closed circuit television, in the courtroom, also. I had an occasion to call a case for trial about 2 months ago. I believe it was a narcotics case. In any event, it involved the testimony of an expert retained by the FBI at its offices here in the District of Columbia. When we were ready to go ahead with the case we found that the expert was not available, he was testifying in another city in another part of the country, and therefore, we had to put ours off. Consequently, more delay.

When we get to the point where the picture phone is available, we will simply be able to have that witness testify, remaining in his home city and have him appear on the picture phone. The companies now have a screen at least 13 inches wide which can be used for this and I understand the screen is being enlarged even beyond that. So the witnesses can be seen in the courtroom, the defendants can be there, the jury can be there, and they will question this man hundreds or thousands of miles away, let his picture be on the screen, and he can see what is going on in the courtroom.

Instead of traveling all around the country these experts can testify in four or five cities in the same day. Again, this type of testimony shouldn't be objectionable because there is no emotion involved in it, there is no element of revenge on the part of the prosecuting witness. He is simply describing factual material.

The only objection that I have heard up to this point with the use of the deposition or even the video tape is the constitutional doctrine of confrontation. Originally, I had thought that the doctrine would be limited perhaps to having the defendant present at the time the witness was being interrogated, with the opportunity to cross-examination through his counsel. There have been some decisions, however, which go a little farther than that and say not only must these defendants be present, but the jury also. You can see that this poses some problems. I would say that that is not absolute, however, because we do have cases on the books where if the witness were not available, then his deposition testimony could be accepted.

So I suppose we have to go through the process of case-by-case basis, fact-by-fact basis, where we have to find out if the video taped deposition of the witness will be considered so far superior by the courts to the ordinary stenographically reported type of transcription,

that we can say that the defendant is being properly protected and being given his rights, if the witness is visible to the jury, even though he may not be in the courtroom at the time the testimony occurs.

Chairman PEPPER. Excuse me, Judge. You mentioned awhile ago about the picture telephone, which I understood would give the right of questioning to that individual from the courtroom.

Judge WEIS. Yes.

Chairman PEPPER. Now, does the video tape do the same thing?

Judge WEIS. The video tape is simply a preservation of an event which occurred before.

Chairman PEPPER. That is what I thought. You wouldn't have an opportunity to cross-examine the witness in the manner in which you could do it if it were picture telephone?

Judge WEIS. That is correct.

Chairman PEPPER. But what you might do is let the deposition be on video tape so you have both sides represented and question.

Judge WEIS. That is right. We take a picture showing the presence of both attorneys and, of course, in a criminal case we would show the defendant being present also, and then the questioning proceeds.

It is still not as good as having every witness in the courtroom for the trial. There is no getting away from that. Because, of course, there might be something come up during the trial that would make the defense attorney want to take a little different tack in cross-examining the witness. It has also been said, you really shouldn't force a deposition on a defendant because the lawyer may not be adequately prepared to cross-examine at that stage of the proceeding. With a few critical witnesses, perhaps that is true, but the run-of-the-mill witnesses presenting what I call neutral data, that isn't really a valid objection.

There is one other area where I think that video tape might be handy and that is preserving the testimony of a witness in an organized crime case where there is some genuine fear that there might be harm to him before the case is called. You can see that if his testimony is "in the can" as we call it, on the tape, there is really no motive for the defendant anymore to try to do him in, because if the witness is not available in person, he is going to be available in the tape.

There is one other feature, too, of the use of the video camera—this is really closed circuit television rather than taping itself—would be in the case of a disruptive defendant in the courtroom. We can have him sitting outside where he can see what is going on, hear what is going on, and really not have an "in absentia" trial, which we really don't like in America, for good reason.

So I think these technological developments are on the way and they are going to be useful before too long.

Chairman PEPPER. Have you considered the use of video tape for making a record for consideration by the appellate court?

Judge WEIS. Yes; that is the third area in which there is a great deal of experimentation going on, mostly, I must say in the State courts in Michigan and Illinois. They have devised a system on having one or two cameras placed in inconspicuous places in the room, recording the trial itself. You can see what a great help it would be to an appellate court to view the judge giving the charge; for example, if there is a claim he was being unfair or biased and used misleading

inflections or emphasized the wrong points. This would be a quick check.

I think that probably the State courts are going to lead us in that field. We haven't done too much work with that in the Federal Judicial Center yet, but I hope it will be before long.

There is one other field, too. Every criminal case nowadays seems to require that there be a hearing before trial on whether the confession given by the defendant was voluntary or not. The Jackson versus Denno type hearing we have, where the trial judge is given a sheet of paper, usually typed out by the policeman, by the hunt and peck, one finger method, then signed at the end by the defendant and notarized.

Chairman PEPPER. Judge, if you will excuse me. We just heard two bells. That is a vote on the floor. We would like to run over and vote and we will be right back. We are sorry to disrupt you.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Proceed, Mr. Counsel.

Mr. NOLDE. Would you please continue, Judge Weis.

Judge WEIS. I believe we were talking about the problems of the Jackson versus Denno hearing. That is where the trial judge usually has a preliminary hearing to determine if the confession is voluntary. Up to now, all I have had to deal with are the typed out question and answer statements to which the witness swears after it is finished. The witness comes into court and he will tell you that he was drugged, that he had been beaten, that he was tired, he didn't know what he was saying, that he didn't understand the question. And you have nothing really to guide you except what he says and the policeman says. It is a one against one credibility test. It is a difficult position for a conscientious trial judge to be placed in because, who knows, who is going to guess right or wrong, and we are always afraid of making a mistake.

If this confession or admission were reduced to video tape the judge would have not only the advantage of what was said, but he would hear the questions being put to the witness, he could see how he responds, and he would have an opportunity to make some judgment on whether the story he is hearing in court is true or false.

I think, too, that if the video tape of these confessions were made available to the defense counsel, in a great many cases we wouldn't even have a motion presented because he would concede the objections weren't valid. On the other side of the coin, too, if the prosecuting attorney were convinced from looking at the video tape that the defendant had been imposed on I would think he would probably withdraw the prosecution.

So again, this would be a help to really determine justice and assist it.

We have a video tape here of a confession of a defendant that I think might give you some idea of what I am talking about. Ordinarily we have our video tapes taken by one of the deputy clerks in our court. These fellows are not professional photographers, they are amateurs, but they become pretty skilled after awhile and turn out, I think, a pretty good quality picture and sound.

But in this one it shows that people are a little bit farther back from the camera than we like, and the picture could be a little bit sharper, but that is just a question of technique. If the policeman who was run-

ning the camera had a little more experience we would get a first-class picture. So I don't want you to think this is the best that can be used with the best equipment on the market.

Mr. Nolde. Before you show the case, I would like you to address yourself to the general issue of appellate delay being caused by sending up the record. By the time it is actually transcribed by the reporter and printed and gets up to the court, as I understand, it is months and months and sometimes years go by. Would you address that?

Judge Weis. This is, of course, a real problem we have. Now that I am sitting on the appellate bench, I can see how it works. The appeal is filed and the attorney could really start working on his brief and have it prepared within, say a month at the outside, if the record were available on the day the appeal was docketed. But the reporters are jammed up, they are backed up, and it takes them weeks at the very least, and most likely months before they can get around getting this transcript out. Because there are others waiting for them to do that.

One of the advantages of video tape—and I think it will be helpful in the appellate process—is that the minute the hearing or trial is over that record is prepared. There is nothing further to be done with that record. The following day you could argue your case in an appellate court and show back the appropriate phase of the trial on video tape.

Again, practically though, I don't know that the appellate courts are going to take the time to sit through the playing of a tape of a trial. I think they are going to insist that appropriate parts be transcribed. But you can see that this is a tremendous saving in not requiring that the whole transcript be prepared and just printing perhaps the testimony of parts of one witness' story, or the trial judge's charge to the jury, something of that nature. And in appropriate circumstances, as I say, if a critical witness' credibility is at the heart of the appeal, I would think that the appellate judges would like to see that video tape.

But I would say the shortening of the time required to file a record in an appeal of the proceedings can reduce the appeal time by months.

And as I mentioned to you, Mr. Nolde, during our little recess in the third circuit we have started the practice of entering judgment orders on the day that the case is argued. When we find that there are no complicated legal issues involved and no precedential issue to be obtained by writing an opinion in that case, again we have taken 2 months off the process and the case is now ready for final disposition.

Mr. Nolde. In other words, in those cases the court issued the decision on the same day oral argument was made?

Judge Weis. That is correct. I believe the second circuit issues them directly from the bench at the conclusion of arguments.

Mr. Nolde. That would be comparable to the British system.

Judge Weis. Yes. Of course, in the British system, they don't have the complicated preparation of briefs or records that we have and I must confess, I am a little baffled how they can do that, unless they devote a great deal of time to the arguments to develop all of the facts in the case, because if the appellate judges are completely unfamiliar with the background of the case it is pretty difficult to rule on a legal point.

Chairman Pepper. They don't require transcript of records or briefs.

Judge Weis. I understand they do not.

Chairman Pepper. I heard cases argued before the British Court of Appeals.

Judge WEIS. Their arguments are quite a bit longer than ours. They will go on for several hours or perhaps a day, whereas we would limit the argument perhaps to 15 minutes a side. Of course, with the written briefs we have we shouldn't have to listen to too much oral argument.

Mr. NOLDE. What is your view on the absolute necessity of having written briefs? Would it be feasible to eliminate them as a generality in most criminal cases, except as required by the court?

Judge WEIS. I think in selected cases that could be done. But again, we have a practical problem that perhaps is not generally recognized. Most of the criminal defendants in Federal court, at least, are represented by court-appointed counsel. We have been getting an increasing number of suits filed by the prisoners after the conviction, against their counsel, claiming that they were inadequately represented and asking for damages. Now, you can see that in order to protect himself from a suit, plus his own feeling of doing a conscientious job as an advocate, an attorney has an added incentive, in fact, almost a necessity to file every possible type of motion that the defendant can think up afterward and take every possible step to make sure his cases are cited and considered by the appellate court, or he is subject to criticism later on.

We have to modify this process somewhat.

Mr. NOLDE. As a practical matter, couldn't the court really best have a one- or two-page recitation of the case precedents, a short statement of the issues and a statement of error that would be an adequate basis on which to decide the case?

Judge WEIS. I think so, yes. I think we can shorten our briefs.

Mr. NOLDE. And I take it the briefing process is quite a lengthy and time-consuming process in itself?

Judge WEIS. Yes, it does take time. Of course, the research that goes into the briefing takes even longer and I don't know whether we can shortcut that, too, and still have the advocate do a competent job.

But again, if the argument on the appeal is held not too long after the trial concludes, it is fresh in the lawyer's mind, and he will have done a great deal of research and preparation for the trial itself.

Mr. NOLDE. And if you gave sufficient emphasis to the oral argument, presumably the lawyers would be prepared. And if they had 2 or 3 hours of oral argument, they could deal with the issues in the case adequately rather than going through this tremendous briefing process.

Chairman PEPPER. Excuse me, Judge. I might say we had a letter from an old friend of mine, Chief Judge Brown of the fifth circuit, and he was telling us how they had been able to reduce, I think he said by 60 or 65 percent the number of oral arguments, which has expedited the disposition of the case.

Judge WEIS. Yes. We followed that procedure in the third circuit, too, Mr. Pepper. We review every case about 2 weeks in advance of the date set for argument. If we feel the issues are set up clearly enough in the briefings, we dispense with the oral arguments. In many of those cases we enter a judgment right then and there, too. So it is shortened.

I don't know too much about the background of this case, as I was told it was a subject that came to the court of appeals of the eighth circuit on the question of whether the trial court or State court, I believe, properly admitted this video tape deposition of the defendant.

Mr. Nolde. Yes. that was the case of *Hendricks* v. *Jensen*. in which the U.S. court of appeals for the eighth circuit in 1972 upheld the use of this confession as constitutional, in the face of a challenge on fifth amendment questions.

Judge Weis. I would like to see the FBI use this in every case where they take a statement from a witness, a defendant. And the local police, too. It would help.

[At this point the video taped proceeding was shown.]

Judge Weis. I think you can agree when the trial judge was called to rule on the voluntariness of this confession or the condition of the defendant, he was in much better position to do it after seeing a tape like that than relying on oral testimony on a printed sheet of paper.

Mr. Nolde. In that same vein. I take it the use of video tape in such other areas as police lineups would also be valuable in showing the visual aspects of the lineup that are so crucial?

Judge Weis. That is right. I have seen a tape prepared by the California police. They used it on a raid. They have portable cameras and recording units that hang on the strap over your shoulder and a little camera that looks like a movie camera. They have one scene showing the troopers running in the house and arresting people and you can see what powerful evidence this could be if they said later the police beat them over the heads when they walked through the door. They have positive evidence one way or the other.

The cost of the tape might be an interesting item for you, too. Ordinarily, an hour's worth of tape costs about $25. I understand from an article in the New York Times, within the past few weeks, that some American manufacturers are now talking about using phonograph discs, flat plastic dics, instead of the tape. They claim the charge would be reduced from about $25 to less than $1 per hour. So you can see how this would wipe out any cost problem at all within a very few years, hopefully.

Mr. Nolde. This tape could also be used to record the entire hearing. We have seen a tape here today as used for a confession. I take it that for use as the record of a hearing it would be a tremendous improvement.

Judge Weis. Yes. And you could see a stack of flat records wouldn't take up very much room, either, from a storage problem.

Mr. Nolde. What safeguards are needed for such tapes?

Judge Weis. The one most frequently recommended is the use of a clock in the picture to show that the camera has not stopped and the proceedings have not been interrupted. The clock keeps going around. Some people recommend the use of a digital clock, one which flips numbers from second to second.

The Supreme Court of Pennsylvania adopted some procedure within the past 2 weeks allowing for the use of video tape depositions in civil cases. One of the things they insist on is that digital clock in the picture.

But again, I am told by experts it is more difficult to doctor a video tape because you have the job not only of dubbing the sound but also the picture. And trying to coordinate an alteration of the two they say is almost impossible to do so as to pass detection by somebody who knows about it.

Mr. Nolde. I think particularly where you have a closeup view of the defendant and seeing his mouth move.

Judge Weis. Correct. The lack of synchronization would show up quickly.

That is one thing, too, you note about the picture. Had the camera been moved in a few feet closer, I think we would have gotten a better closeup of the defendant.

Incidentally, I mentioned the picture phone a little bit ago. We have the picture phone with Bell Telephone Co. operating within a small area of downtown Pittsburgh and they show a picture on a monitor about 6 inches wide, at the present time. But they carry a very high fidelity picture. And I saw the picture phone transmit an X-ray of a tooth in regular size, and then focus it down to the point where you could see decay in that tooth on the other phone to which the picture is being relayed. It is tremendous.

Mr. Nolde. Judge, would there be any reason why this video tape couldn't be used to record the entire trial? Is there any risk of disrupting the trial?

Judge Weis. No. The experiments that have been carried on, as I mentioned in the Midwest mostly, in Michigan and Illinois, have shown what they call the "bugaboo" of distracting the jurors and the witness and the judge and the lawyers really doesn't exist. The parties will perhaps notice the camera for the first 5 minutes of the proceeding and then they ignore it. The cameras are, of course, very small, not much bigger than the movie camera; that is, 1 foot long and 3 inches thick and 6 inches high, being something of that nature. They are very small and inconspicuous. You can hang one on a little bracket and nobody will ever notice them. The operator can be in a separate room operating by remote control.

Mr. Winn. Shouldn't they be told they are on video tape?

Judge Weis. This has been raised by some people who think there may be an invasion of privacy if testimony is video taped without his knowledge or consent. I have a little difficulty accepting that because if a witness goes on the stand in a public trial he has no privacy about what he is testifying to. In fact, that is the very idea of the public trial, to take away the privacy. But some judges have been exceedingly careful to video tape only with the consent of the party being photographed.

Mr. Winn. Was this young man asked for permission to do this?

Judge Weis. It doesn't show on the tape. I would suppose he had been. Again, the police usually do put that at the beginning, right after they give him his rights, and say, "Do you understand it is being taped," or "Do you consent to it." I think they did mention it was being taped at the beginning. I don't recall if they specifically asked.

Mr. Winn. They said it is being taped. He identified himself and identified the young man and the officer, and "also in the room" so and so. I took it that might be the operator.

Chairman Pepper. The camera.

Judge Weis. He did refer to the fact that the camera was there.

Mr. Nolde. Would there be any difficulty in picking up side bar conferences in your courtroom?

Judge Weis. This is a mechanical problem I think could be handled without a great deal of trouble. They would have to have a camera positioned in such a fashion as to be able to pick it up. The problem you have of the jury overhearing it would be very simply resolved by having a separate microphone over at the place where the bar conferences were held so it would not go through the public address system in the room.

Mr. Nolde. Judge, turning to some other issues now, based on your experience as a State court judge, as well as a U.S. district court judge in Pennsylvania, who should control the calendar? Is it the district attorney or the court?

Judge Weis. I have had both. In the State courts the district attorney controlled the calendar and in the district court, the Federal court, the judges control the calendar.

Mr. Nolde. Which is preferable?

Judge Weis. I prefer having the judge control the calendar. I think that once a case gets presented by indictment it becomes the business of the court. It is the court which should look after getting that case up for trial and disposed of. The district attorney, of course, is a public officer, but yet he is a party to litigation in a sense, too. It always seemed a little strange to me that one party to the litigation would control when the case is called up. It is a little inconsistent with our idea of equality before law that one litigant sets the date for the trial.

Mr. Nolde. It would seem to me if the judge controlled it, if he were put in charge himself or had an administrative judge who had overall supervisory responsibility for getting cases through the system, that it would greatly expedite the process. I just wondered what possible justification there really is for having the district attorney control it.

Judge Weis. I think in many jurisdictions it is a matter of tradition. In Allegheny County, for a great many years, 20 or 30 or more, the district attorney has controlled the calendar. It probably came about because there was a rotating system of judges who went to the criminal court on rather rare occasion, and we had a lack of continuity to administer the business of the court. That has been remedied in the past few years, but I think historically that may have a lot to do with the district attorney having taken over the necessary work of making up the trial list for example.

Mr. Nolde. So, traditionally, we have had slow justice.

Judge Weis. I guess we can't always blame it on the district attorneys. I am sure they have a few comments on that.

Mr. Nolde. Do you favor the individual calendar system?

Judge Weis. It depends on what kind of a workload you have in the court and what type cases you are dealing with. In the federal courts we have an individual calendar, and I was very pleased with this. I like to work with it from the standpoint of knowing what my job was and being able to schedule the cases as best I could. It works well for serious cases. I would think that probably every court should adopt it for the serious type case. But when you have a mass of minor cases, perhaps many which should not even be in the court, you will find that the individual calendar may become unwieldly and unworkable and at times, for that type of case, the master calendar is the most efficient.

Again, it depends on the makeup of the court's inventory and which system they find works best. I don't think we can say flatly one system or the other is the absolute best in all circumstances.

Mr. Nolde. Do you favor voir dire examination of juriors by the judge?

Judge Weis. Absolutely. I think there is a tremendous waste of time that we have when the attorneys are given free rein to interrogate jurors. I find no justification for that at all. And again, I guess it is a matter of tradition and history. In our part of the country, for the last 30 years or so, interrogation of the jurors except in cases where the death penalty was involved has always been carried on by the judge or court clerk. The attorneys do not ask questions directly. Our voir dires generally do not take more than 20 minutes to an hour. When I read about these voir dires going on for weeks and months, I just am not used to that type of procedure at all and can't really see why it is necessary. The parties are entitled to an impartial jury without any obvious bias or prejudice, but I don't think they are entitled to people they would like to have on every jury.

Mr. Nolde. The latter is what has really been at the heart of these lengthy examinations.

Judge Weis. Yes.

Mr. Nolde. What about the use of the grand jury? Do you feel that is necessary as a routine way of initiating criminal cases, or should it be reserved only for limited kinds of situations?

Judge Weis. The chief value of the grand jury, as I see it, is in the investigative field. But in the routine criminal case, the use of the grand jury often does little more than delay the proceedings in the case. We have constitutional problems, of course, so we just aren't free to do as we would choose in this area. But I am rather impressed by the English system which requires a preliminary hearing in the criminal case, at which time the prosecution furnishes to the magistrate affidavits from the prosecution witnesses and establishes a prima facie case in this manner.

At this preliminary hearing the defendant finds out what the case is against him. He gets a measure of discovery there. I would think that it would speed guilty pleas, for example, if the defendant was aware that there was an overwhelming case against him. On the other hand, if the defendant is innocent, it certainly would be a great help for him to prove his case if he knew at the preliminary hearing what it was that the government was relying on. With the grand jury system, of course, that testimony is secret and the defendant doesn't know what is being asserted against him.

Mr. Nolde. And it also results in some further delay and, in fact, I take it the grand jury really doesn't exercise much of an independent judgment. It almost invariably goes along with the prosecutor.

Judge Weis. I have never been in a grand jury room but I have heard that charge made many times.

Mr. Nolde. Mr. Chairman, I have no further questions at this time.

Chairman Pepper. Mr. Winn.

Mr. Winn. I have no further questions. I find it very interesting and I think it may well be part of our judicial system in the future.

Thank you, Judge.

Chairman PEPPER. Judge, we both agree that there is no reason why the improved techniques that are invented from time to time could not be employed with proper safeguards in the judicial proceedings, as in other activities. I just would like to ask you a very few questions.

How long did you say it takes in your court from the time a case is docketed before it is disposed of, ordinarily?

Judge WEIS. I have to be honest, Congressman Pepper. I have been on this court now for a month and I haven't gotten all of these statistics down yet, so I can't give you an accurate answer. So it is probably better if I didn't give you any.

We consider ourselves current in the criminal appeals. We are not as up to date in the civil field as we would like to be, but hope to arrive there by November or December of this year. But I can't give you figures right now.

Chairman PEPPER. I just returned from a conference in England where we were at the Ditchley Park Foundation site. We were discussing correctional institutions, penal institutions, and I mentioned to that group that in this country we had a great variety of sentences imposed for the same offense by different judges; that sometimes prisoners would get talking to each other and it would be disclosed that one had gotten a much heavier sentence for relatively the same offense than the other one had received. Do you find that to be true in your judicial system generally?

Judge WEIS. It is a problem. There is some disparity in sentencing, there is no question about it. But so long as we have the human element involved, both from the standpoint of the judge and prisoner, I think there is bound to be some variation.

It is true the same crime may have been committed by two different individuals and their sentences may be quite different, but perhaps a review of the presentence report would show you that one had a lengthy criminal court record, that the reports from the neighborhood were he was a dangerous person, verging on psychotic, for example, and the other man perhaps is involved in a first offense, he has come under a bad influence, that there is hope of rehabilitating him, and it is felt a long sentence would only insure his total loss to society where a short term might be enough to jolt him back into the right path.

So that enters into the picture. It is true, there is no getting away from it, that some judges regard some crimes as being more severe than others. We are trying to alleviate that by having sentencing institutes for the judiciary. We meet every couple of years or so and sit down and talk about what would you give in a sentence like this, what is the average sentence on a national scale, what is the average sentence in this circuit, for example, for that crime.

Chairman PEPPER. Would you say your court would exercise some sort of general overall supervision of the variety of sentences in what appear to be similar situations? So that if you found a sentence you felt too severe for a given offense, the court might on that ground alone either modify the sentence if you had sought to do that or send it back?

Judge WEIS. I am a little hesitant about getting the appellate courts into the sentencing process, because this is an area which traditionally has been reserved for the trial judge. There are many things a trial

judge knows about a defendant from sitting there through the trial, from having followed that case through indictment until it is terminated. A lot of these things he can't possibly translate into words, he can't put down in a report accurately, but has a real feel for the case that someone reading the cold record would never have. In all candor and fairness to some of my appellate brethren, they have never sat on a trial court and never had that experience of seeing how a sentencing works and what can enter into the situation.

If there is to be a review of sentencing by someone other than the sentencing judge, it would seem to me preferable it be done by panels of trial judges who are in that field daily and who could have some effect in moderating and evening out a disparity between sentences. If there was to be a review, that is where I would prefer to see it rather than the appellate court.

Chairman Pepper. What is your view on indeterminate sentences?

Judge Weis. When I first got in the field I thought it was a great idea. It seemed to be the ideal way of letting the probation and parole authorities keep the man in as long as need be until they thought he was ready to get out. But I found to my surprise, that the prisoners were the ones who were most upset with it because they would much rather know they have a fixed sentence, 5 years for example, that they can look forward to getting out, than have an indeterminate sentence which might let them out in 3 or 4 years. They want some element of certainty, I guess, and some ways to pace themselves and get adjusted to it.

Now, I find it hard to dispute that.

Chairman Pepper. Would you find it desirable for the court to impose the maximum sentence therefore?

Judge Weis. Again. I would have to look at the case. I would like to know how that maximum sentence is going to affect this particular person. Is it going to ruin him? Is it going to take away all hope that he might have for coming out and straightening out? Or is it necessary for society to give the maximum sentence?

I just can't generalize on that too well.

Chairman Pepper. What you have said borders on the question of the type of penal or correctional institution we have in the country. What observations would you make about the type of institutions we ought to have in this country for corrections?

Judge Weis. I think this is one of our greatest problems. A trial judge does a great deal of agonizing over what kind of sentence he is going to give. If he has a young fellow who has been convicted of a nonviolent crime, who nevertheless must be given some kind of punishment, you know it is pretty difficult for the judge to see this young fellow and send him away to a penitentiary where he is going to be confined with hardened criminals who will wreck whatever opportunity there was to straighten the kid out. They really ruin him and he will come out far worse than when he went in.

I think we need more different types of institutions. We have to have more classification so we don't put the violent psychotic man in with the person who can be saved. The person who commits a nonviolent crime shouldn't be in the same category as murderers and people who assault and kill and ruin people.

This bothers judges. If they know that a young fellow in front of them is going to be sexually assaulted when he is sent away to a

penitentiary, do you want that responsibility on your shoulder? I tell you it really makes you stop and think. We just don't have the assurance which we would like to have that when we send a person into the system that he is going to be properly protected.

We have some leeway and we can pick out some institutions and that weighs a great deal in our sentencing. Again, this is one of the factors that may not enter apparently into the disparity of sentence, but if one judge feels this man can weather a lengthy sentence at any kind of institution, he is tough enough to take care of himself, he might not feel quite the same, he might not feel quite the same if a young, slightly built person who is obviously going to be the victim is standing before him. It is a serious problem.

Chairman Pepper. I agree with you. One of the most serious problems we have today is what to do about the correctional system, as we call it, that we now have. You know very well, of course, the reputation for recidivism that most institutions have. The brutalizing effect most of them have on the people who go there, the assaults to which so many are subjected.

I remember we discussed the other day as to whether or not an individual, say a young man who in all probability would be assaulted when he entered the old-type prison we have today, might get an injunction. From all he knows about this institution it is going to mean terrible agony and anguish.

And while the system has a right to incarcerate him, even to punish him, he does have a right to protect his person against such brutality. And unless he can be given assurance of competent character that he will not be so subjected, he asks the laws to protect him. That is not part of his punishment. It is not part of his sentence to experience such sort of an ordeal.

I would like such courts to begin to grant such injunction and tell the authorities you can't put a person like that in an institution unless you can assure that person of protection from all other persons there. The individual protection to which he is entitled.

Judge Weis. What we get so often are the facts that the institutions are so overcrowded now and there is no place to put the prisoners and not enough opportunity to properly supervise them. It is an area badly in need of correction.

Chairman Pepper. In my State, the authorities publicly called upon the courts not to send any more people; that they didn't have any more room for them.

But I am hoping that this committee will recommend to the House that the Federal Government pay at least half of the cost of helping the States to establish some of these new, small institutions, modern in character, with relatively few provisions for maximum security, where they will be in an area reasonably proximate to the area where the man came from; where his family and friends presumably live; where there will be opportunity for some community contact and where there would be job opportunities available. It costs a lot of money to set up a system of training in an ordinary institution. They can train in a reasonable number of trades or skills, for example, but inside of the community those skills are available and accessible to the individual.

My hope is that the Federal Government can help the States start building these institutions; that once they get it going the States will find they are desirable; they get a better record there of behavior on the part of the inmates, less recidivism and the like. And once these institutions are finally established the States will be able to bear the cost problem rather than the Federal Government, although I wouldn't personally object to that.

Just one other thing. You do feel that one of the great needs of our judicial system is to try to prevent as many young people as possible from getting embroiled in the system? In other words, to keep them from being school dropouts, try to teach them the necessary skills, try treatment, or if necessary limited incarceration in the areas from which they come and the like?

Judge WEIS. Absolutely, Congressman Pepper. As I said a number of times, trying to blame the judges for causing a crimewave is like trying to blame the surgeon who cuts away the cancer for causing the disease. Once it gets to us, things have gone too far in far too many cases. We have to start long before they get into court to correct these problems.

Chairman PEPPER. You are so right. The courts, as a matter of fact, simply are taking the refuse of society as it were.

One last question. Do you find in your trial experience, as a State and Federal trial judge and as an appellate judge, a great rate of recidivism among the people that come up for serious offenses before the court? Are most of them people who have been in trouble before?

Judge WEIS. Yes. We find really not a very large percentage of first-time offenders. They have had brushes before and they keep coming back. Again, it gets back to the point you made before. I think, the lack of a proper correctional system.

I would like to again endorse what you said about having smaller institutions. I think the idea of having large warehouses is a mistake, a big mistake.

Chairman PEPPER. Several of us on this committee went up to Attica and we saw the conditions there, heard the complaints of Mr. Oswald. He knew how to do better but he didn't have the money, he didn't have the means.

Judge WEIS. That is right.

Chairman PEPPER. Governor Rockefeller, when we conferred with him on the way to Attica, said, "Nobody knows better than I what it takes to modernize the penal system, but where is the money coming from? It costs $100 million to $200 million to do it." So there we are. We are just spinning our wheels, turning them in and out.

Judge WEIS. It might be a good investment if we did spend some money, because if we could cut down the cost of crime in this country we have done a good job.

Chairman PEPPER. We have had witnesses here for the last 2 weeks who were telling about the new method of dealing with juvenile offenders which costs much less than the old methods and have been much more effective. They pointed out in some cases they were spending as much as $12,000–$20,000 on an individual, and in a few instances up to $36,000 a year per individual confined. Somebody pointed out you could not only send the inmate to college, send him abroad every summer and save money at that rate of expense and get a very much better result when they adopt new methods.

Mr. Counsel, have you any other questions?

Mr. NOLDE. Thank you, Mr. Chairman.

Judge Weis, the problem of frivolous appeals seems to be inundating our appellate courts. What techniques do you utilize to deal with this problem?

Judge WEIS. We have the two techniques I mentioned before, the screening of the case in advance of the time set for argument, if we find it is frivolous we do not even have argument. We decide it on briefs and we decide it with a judgment order, which is simply a recitation that we affirm the result below without any opinion. So I think those are pretty effective ways of disposing of the frivolous appeal efficiently in as short a time as possible.

We can't cut it off completely. They are entitled to an appeal and if they have something, we want to take a look at it first to make sure.

Mr. NOLDE. What about having a single hearing appeal procedure, in which all issues and all appeals are to be heard, so as to prevent continual reassertion of further issues?

Judge WEIS. This is a real problem. I would say it would be great if we could have only one appeal per prisoner, for each defendant, and that would end it. But there have been a few instances where on a habeas corpus or post conviction hearing some fact which did come out which hadn't been developed before, indicated a wrong had been committed. I am not quite willing to say we will have one appeal and one appeal only in each case.

But there has to be something done to limit the repetition. When I left the district court, one man, one prisoner, had 12 or 14 cases pending there before me. I consolidated them and I kept them all together, because I could not afford, in fairness to the other litigants and the other people on my docket, to hear every case of his as it came in. He would file a complaint with the court whenever anything went wrong in the prison. If the doctor didn't show up on time that week, the following day we would get a complaint. If he wasn't treated by an ear specialist when he had an earache, in would come a complaint. When they wouldn't let him play the piano one day, in came a complaint. We are just flooded with that kind of material.

We had another who filed no less than 40, perhaps 50 petitions, trying to get out, repeating the same things over and over again. We have to do something.

Mr. NOLDE. That is right. What can be done? That tends to really demonstrate the frivolous aspect which still takes up the court's time when you have to screen those cases.

Judge WEIS. I am in favor of some type of ombudsman to whom all complaints of the prison would be referred before they are allowed to get to court. If it is a frivolous thing like they didn't get their meal, somebody wasn't permitted to visit them, or a thing that could easily be corrected by the prison, it should be done by the administrative officer before the court gets involved.

Mr. NOLDE. Are there any other ways of dealing with the issue of finality, to really achieve once and for all disposition of these cases?

Judge WEIS. Again, I would like to say yes, but I don't know of any answer, because I am afraid if we shut off all avenues of appeal to somebody, we may just be keeping somebody in jail who shouldn't

be there. I am willing to spend extra time looking at a serious case, a serious question, if it is important. It is just the frivolous ones I don't think we should have to deal with.

Mr. NOLDE. What about the use of unsigned memorandum opinions by the court?

Judge WEIS. We are doing that quite a bit. Per curiam opinions in some cases, and these judgment orders I referred to before, are simple orders.

Mr. NOLDE. Does that help to speed up the process?

Judge WEIS. It helps speed up the process and also helps to cut down the proliferation of printed opinions which I feel are really overwhelming us. It makes research more difficult. We have too many opinions saying the same thing over and over again without developing anything new.

Mr. NOLDE. Particularly in criminal cases?

Judge WEIS. Yes. Many of these are just the same problems repeated over and over again. In civil court cases, too, we have too many opinions published.

Mr. NOLDE. Dealing with the speedy trial issue, are the bills that are presently pending which provide for a mandatory dismissal if the trial is not brought within a 60-day period, capable of being implemented by the courts? Would you need more resources? How feasible are they?

Judge WEIS. I am a little afraid of those bills because I can see an instance where a case might go past the 60th day or get to the 65th or 70th day and there may have been good reason why it hasn't been reached for trial but it hasn't been and the law says it must be dismissed. So you are letting a serious criminal walk out on the street if for some reason his trial wasn't scheduled.

I see too much possibility of harm in that type of situation. Our courts in western Pennsylvania adopted a plan just about 3 or 4 months ago, where we are working—and I keep saying "we," I am not in that court any more—the district court plans to try every jail case within 60 days and every other case within 180 days. They are doing a good job of keeping within those guidelines, but they have that flexibility of taking care of that unexpected situation that may arise, where to free the man because of an arbitrary time limit would work a gross injustice on the community. I think that that type of scheduling and time problem is better left to the court to handle itself and the judges are well aware of the need for speed, and I think, are doing a conscientious job of getting those cases up and disposed of just as soon as possible. Certainly in the Federal system they are. As I say, I am dubious about the desirability of legislation putting inflexible limitations on it.

Mr. NOLDE. Unless you had some exception?

Judge WEIS. Once you put the exception in, aren't you throwing it right back to the district judges anyhow, where it is now?

Mr. NOLDE. The problem is that under the present system, there are great delays.

Judge WEIS. Not too many avoidable delays, I don't believe, in the Federal system. I was a member of the Metropolitan Chief Judges Conference of the District Court which met on three or four occasions to discuss this problem of delay in criminal cases. The Federal Judicial

Center put on a number of meetings in the past 2 years and we reviewed the major district courts in the large cities, New York, Pittsburgh, Chicago, San Francisco, and so forth, and we found out where the delays were, what it was that was causing them, and what it was that could be done to improve it. Most of the members of that conference went back to their local courts with plans and new desire to get within those limits and it has been successful.

Mr. NOLDE. As I understand the Judicial Center study, in the busier district courts delays average 350 days between arrest and trial.

Judge WEIS. That is not the usual case.

Mr. NOLDE. It is in the busier courts.

Judge WEIS. Even there it would not be an average case. Whenever you get involved in a complicated criminal matter, such as a securities problem or wiretap gambling case, for example, these require a great deal of preparation and it would be impossible, from the cases I have handled in the wiretap gambling field, to get that out within 6 months. Because the time required to prepare transcripts of all of those tapped phone conversations often takes 3 or 4 months of stenographic time before the attorneys have a chance to look at it and we have time to schedule a preliminary hearing and pass on all of the legal issues involved. So some cases just have to take time. We haven't got the mechanics to do it any better.

But the routine cases I think are getting out faster.

One of the points that impressed me on that was the time it takes from the day of a plea of guilty or finding by a jury to the imposition of sentence. This is the time devoted to preparation of presentence report. Now, this spread of time is regulated almost completely by the number of probation officers who are available to do that report. We have a shortage of probation officers. When they have to take care of their regular case load and prepare presentence reports in addition, that time just stretches out. The only way to cure it I know of is to get more help in that particular area.

Mr. NOLDE. I have no further questions.

Chairman PEPPER. Judge, we thank you very much for coming today and giving us your very enlightened and very encouraging testimony. You were very kind to come.

Judge WEIS. Thank you. I enjoyed being here.

[Judge Weis' prepared statement follows:]

PREPARED STATEMENT OF HON. JOSEPH WEIS, JR., JUDGE, U.S. COURT OF APPEALS, THIRD CIRCUIT, PITTSBURGH, PA.

Every trial lawyer likes to have his witnesses appear in front of a jury to give their testimony. Similarly, most trial judges prefer to have everyone connected with a case present in the courtroom during the whole of the trial. In this respect, the common law legal profession has traditionally been hostile to the procedures utilized in most continental European countries of having all or most of the testimony submitted by means of written affidavits.

However, the adversary system in civil cases at least has long recognized that there do arise circumstances where it is simply impossible, as a practical matter, to have a witness present for a particular trial and in those situations a deposition has reluctantly been permitted. In a few instances in criminal cases, at the instance of the defendant, a deposition has been utilized.

The resistance to use of a deposition in civil cases has been due mainly to the inability of the ordinary stenographically recorded transcript to convey the subtleties of expression, mannerism, tone of voice, inflection, and appearance of the witness which so often have been strong factors in evaluating the credibility

of the deponent. My experience, both as a trial lawyer and as a trial judge, have convinced me of the validity of this objection to use of depositions.

There has been more resistance to the use of depositions in criminal cases than in civil ones, based on constitutional grounds as well as matters of preference of the trial bar.

For example, just a few years ago, the Committee on Revision of the Federal Rules of Criminal Procedure recommended the use of depositions by the prosecution but this was rejected by The Supreme Court.

Nevertheless, The Congress, as you know, in 1970 passed the Organized Crime Control Act, whose Title VI authorized the use of depositions by the prosecution in cases where appropriate certification is made by the Department of Justice that the case involves organized crime.

This provision of the Act was upheld by the Second Circuit of Appeals in *The United States* v. *Singleton*, 460 F. 2d 1148 (1972), where the witness was too ill to leave his home in Alabama to come to New York to testify.

The dissenting opinion of Judge Oakes emphasized the two main objections to the use of depositions in criminal trials:

(1) The fact that there is the possibility that the defense may not be prepared properly to cross-examine because it has not heard the rest of the prosecution's case, and

(2) That the witness's testimony had not been subjected to the scrutiny of a judge and jury in a solemn impressive atmosphere of a federal court which might cause the testimony to be given with a little more care, deliberation, and accuracy.

Judge Oakes relates the second condition to the constitutional right of confrontation which implies not only the presence of the accused, at the time of interrogation of the witness, but the jury as well, so that they may look at the witness, and judge his demeanor upon the stand and the manner in which he gives his testimony in forming a judgment on credibility.

Judge Oakes' opinion is interesting because it expresses the expansive view of the right of confrontation.

The use of depositions can have an effect in speeding disposition of criminal trials. Every trial judge is familiar with the all too frequent request for a continuance because of the unavailability of a witness. It is a reason which must not be lightly disregarded and even though judges are reluctant to countenance delay, they must never forget that an injustice speedily administered is no substitute for justice, albeit delayed.

About two years ago I became privileged to conduct a pilot project of The Federal Judicial Center on the use of videotape in court proceedings, with the main emphasis upon the use for recording depositions.

I'm enthusiastic about the use of the new means of recording depositions and predict that it will do much to revise our traditional methods of trying cases. It should be clear that I recognize that the preferable method is to have the witness present in the courtroom. If he can't be, videotaped recordings are the next best thing.

The use of videotape offers a suitable means to afford the parties the advantages of giving a jury more opportunities to assess the characteristics of deposed witness than that offered by the stenographically recorded format presently used and at the same time reduce the incidents of delay because of witness unavailability. Videotape recording will also have a bearing on the constitutional objections since the jury can see the witness and make its judgments almost as well as if he were present. Still open for decision would be the question of the accused's rights to have the witness in the courtroom. If the requirement of unavailability were met, then that objection would seem to be answered.

Insofar as the public trial aspect is concerned, every spectator in the courtroom would have the opportunity to be present to view the presentation of the deposition and, thus, insure this constitutional facet of the trial, if indeed it does apply to deposition testimony at all.

The other objection cited by Judge Oakes in the *Singleton* case—that of lack of opportunity to adequately prepare for cross-examination—is of much narrower application. It is not every witness who is critical in the sense that a thorough understanding of the prosecution's case is essential to adequately cross-examine. Indeed, many witnesses in criminal trials supply only neutral, albeit necessary, material, e.g., chain of custody of evidence, identification of documents, of signatures, laboratory analyses, etc. With this type of evidence, any reasonably competent defense lawyer would have little difficulty in preparing an adequate cross-

examination. If the deposition of a critical witness is to be taken, the trial judge should consider the problems of the defense and require adequate disclosure by the prosecution before granting the right to proceed by deposition.

I repeat that a deposition is, of course, not as good as actual attendance at a trial. No one maintains that it is. But we must recognize with our increasingly mobile society and the demands upon the time of so many people that attendance of all at a trial has become an increasingly complex and difficult matter. Videotape presentations are an improvement over old methods and may well be adequate enough to safeguard the rights of the defendant without impairing the rights of the public.

I've had the privilege of sitting through a civil case which was tried twice, the first one ended in a hung jury, and utilized only the old fashioned stenographically recorded type of deposition. The second trial used videotape. The difference between the impressions gained between hearing a mere reading of the old fashioned deposition and watching and listening to the videotape recording was startling. If I had ever had any doubt, this trial convinced me of the necessity and the desirability of viewing the witness while he gives his testimony.

In another case that I tried, the parties had gone to the precaution of having a court stenographer prepare a transcript during the videotaped deposition. I read the transcript before the trial started and, again, was amazed at how differently I was affected by the visual presentation. Statements that seemed clear and positive on the printed page became defensive, argumentative and equivocal when seen on the monitor. I must admit that my view of the testimony changed from the time that I had read it in the deposition to when I had seen it on the video screen.

We are not very considerate of the witnesses in criminal proceedings. They must often wait for days to be called, oftentimes they will appear at the courthouse only to find that the case has been postponed at the last minute. Witnesses often appear before a Grand Jury, a preliminary hearing, and the trial itself. Indeed the innocent victim often is inconvenienced as much if not more than a guilty defendant in a criminal prosecution. Videotape offers a way to limit the number of appearances of witnesses at court trials.

The critical witness in organized crime cases also offers an opportunity for utilization of video. The Organized Crime Act already authorizes depositions in such situations. Can't you see though, how the fact that a witness had testified and his evidence was in "The Can" on tape would tend to remove an inducement to do away with him before the trial. What would the organized criminal gain by killing the witness when his testimony is readily available to the jury in any event. The accused would be doing little in such a case to help himself and would be merely adding to his troubles.

I have sat through a number of *Jackson* v. *Denno* hearings whose object as you know is to determine if a confession was voluntary. Some of these proceedings pose difficult factual questions. This is a particularly important area of the criminal law because we all have heard of cases where confessions have, in fact, turned out to be coerced or inaccurate. I can't help thinking that most of the questions would have been far easier to decide if the confession had been put on videotape instead of being typed out by the police officer by the painful, hunt and peck, one finger, method. Indeed I suspect that many of the hearings would not even have been held at all if counsel had had the opportunity to view the tape in advance. Videotaping of confessions by the police should not only be encouraged but in fact, in my view, mandated.

Surely the use of a closed circuit T.V. to cope with the disruptive defendant situation is a far better solution that gagging him or removing him from the courtroom with no access to what is transpiring during his absence. It offers a way of allowing the proceedings to continue in an orderly manner and yet eliminate the "In Absentia" type of trial which is so offensive to American tradition.

While there has been an encouragingly frequent use of videotape in civil cases, there has been little activity in the criminal field. One interesting case which happened recently, however, is worth describing. Last November a witness who had terminal cancer and as a result had his vocal chords removed was videotaped in the hospital with an interpreter using lip reading technique to vocalize the witness' testimony. By the time the case came to trial in the California state court just a month or two ago, the witness was dead. The trial judge, however, permitted the use of the testimony and the defendant was convicted. This case, of course, has not yet been up on appeal but the fact situation is certainly very interesting.

I understand that one United States magistrate in California has been successful in persuading the attorneys to take the videotape deposition of material witnesses in some immigration cases so that these witnesses may be freed from jail far in advance of trial.

The videotape equipment presently on the market is very portable and its use in describing the scenes or incidents of crimes has not yet been utilized to any degree. There is one film which I have seen of some California police during the course of a raid on some premises. The police in Denver, Colorado for some years have used videotape as an aid to conviction in drunk driving cases. But I think it is obvious that if instead of the ordinary still pictures we could have the videotape record of what the police see on their first visit to the scene of a crime, the matter would be much clearer for both judge and jury.

I tried a criminal case just a few months ago where the description of a staircase and its location within a cellar was of vital importance. Although a number of witnesses testified to this fact, I was unable to understand the critical facts and adjourned the case for a half day so that I could travel to the scene of the premises. In this particular instance not a great deal of time was lost since the premises were not far from the courthouse. It would have been different, however, if they had been many miles removed from the place where the trial was held. Again, a videotape presentation would have saved many words, conveyed the idea clearly, and saved considerable time.

Presently available on a limited basis is the picture telephone which shows the image of the parties as well as carries their voices. It won't be too long before we will be able to take a witness's testimony in a distant city and flash his picture on a screen in the courtroom. Whether we use the telephone company cables or some species of closed circut T.V. is still to be resolved but the advent of the picture phone and its use in the courtroom is very close.

The advantages of not being required to bring in a witness from a distant area are obvious. Particularly useful for this type of presentation would be that testimony of an expert witness, for example, which we so often encounter in cases brought in the Federal Court. The FBI refers matters to its experts in Washington, perhaps for an opinion on handwriting or chemical analysis and so forth. I have had to continue cases because the expert was testifying in another court in another city at the particular time that we needed him in my courtroom. This type of delay would be eliminated when we can have the man in Washington make an appointment to appear on the picture phone at a certain hour on a certain day. He would be able to testify in three or four cities on the same day without leaving the District of Columbia.

These technological developments being utilized and contemplated for use in the courts are really small steps, as I see them, but they do indicate that the courts are receptive to modern technology and do realize that they can be helpful in helping us perform our task more efficiently and in less time, without sacrificing the quality of the justice being administered. The demands upon the judicial system today require that we be alert for every opportunity to improve our work through modern scientific methods. I am convinced that properly utilized and with appropriate safeguards, technology can be helpful without impairing constitutional safeguards.

Chairman PEPPER. The committee will adjourn until 10 o'clock tomorrow morning in this room.

[Whereupon, at 3:55 p.m., the committee adjourned, to reconvene at 10 a.m., Thursday, May 3, 1973.]

STREET CRIME IN AMERICA

(Prosecution and Court Innovations)

THURSDAY, MAY 3, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:20 a.m., in room 1302, Longworth House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Brasco, Mann, Rangel, Steiger, Winn, and Sandman.

Also present: Chris Nolde, chief counsel; Robert Trainor, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

Mr. Counsel, will you introduce the first witness.

Mr. NOLDE. Thank you, Mr. Chairman.

We are pleased to have with us this morning, Judge Halleck of the Superior Court of the District of Columbia.

Judge Halleck is a graduate of Williams College and the George Washington University Law School. Judge Halleck served as an officer in the U.S. Navy for 4 years. He clerked for Judge Alexander Holtzoff of the U.S. district court, was an assistant U.S. attorney in the District of Columbia for 2 years, was an associate of the well-known Washington law firm of Hogan & Hartson.

He was appointed to the bench in October of 1965. He is now a judge in the Superior Court of the District of Columbia.

Judge Halleck, we are pleased to have you here this morning.

Chairman PEPPER. Judge Halleck, I would not want the time to pass without saying that I had the honor of serving in the Congress with your distinguished father, who has been my friend for a great many years, and I think you render most favorable service on the bench.

We are delighted to have you here. I appreciate your coming.

STATEMENT OF HON. CHARLES WHITE HALLECK, JUDGE, SUPERIOR COURT OF THE DISTRICT OF COLUMBIA

Judge HALLECK. Thank you, Mr. Chairman.

Recently there has been a plethora of rhetoric about law and order and crime in the streets which, unfortunately, seems to have generated a good deal more heat than light. The criminal justice system has come under increasing fire for its alleged inability to deal with the problem of crime in the streets, and more frequently are we treated to the spectacle of various elements within the system heaping blame on other

elements of the system in order to avoid any responsibility for apparent failures. It is important at the outset, then, to define the problem and the system intended to deal with it.

"Crime in the Streets" has become a convenient catch phrase of dubious value. Viewed from the perspective of the citizenry, it represents the source of gnawing fear that makes people afraid to go out at night, that makes people watch over their shoulders, and turns homes and businesses into armed camps behind locked and bolted doors. Essentially crime in the streets is urban crime; it is big city crime in the inner or core areas. It is crime committed by the poor, the addict, the underprivileged, and the minority groups. And this is so because of societal, cultural, and economic problems which cry for solution on a vast scale. Yet, these are problems which call for solutions manifestly beyond the power of the criminal justice system to provide. Police cannot eradicate poverty. Prosecutors and defense lawyers cannot improve education; nor can judges train the disadvantaged or provide jobs for them. The Department of Corrections cannot erase prejudice. The problems of urban blight and continuing inner-city decay are beyond the ken of probation officers, be they either soft or hardheaded. But it is, I think, essential that we realize that it is inner-city crime that we mean when we talk of crime in the streets, and it is the larger cities of America that pose the real problems. Finally, in defining the subject matter, it is equally important to bear in mind the kinds of crimes that the citizenry fear when crime in the streets is discussed. People stay in their houses at night because they are afraid of the depredations of those perfect strangers who may commit a crime of violence. Robbery, theft, pocketbook snatch, and to a lesser extent rape and physical assault, are the crimes the citizens fear.

Burglaries, auto thefts, store holdups, bank robberies, strong-armed larcenies, and other types of violent economic crimes against property by persons previously unknown to the victims are the crimes that put dread in the hearts of our law-abiding citizens. In essence, these are personal and economic crimes committed by strangers. Crimes which place in jeopardy the person or the property of the victim are the crimes which the public fears and which the public properly expects the criminal justice system to deal with most efficiently.

Unfortunately, the public expectation frequently exceeds the ability of the system to perform, and the result is a cacophony of excuses and blame shifting designed to win public approval for the efforts by the part of the system under fire, and to cause the disenchanted public to cast about elsewhere for a convenient whipping boy—I rather hesitate to use the word "scapegoat" these days, Mr. Chairman.

Politicians too easily play upon public concern about the state of crime in the city streets in order to win voter approval for promised, but not particularized, efforts to do something about it. The criminal justice system itself is essentially an adversary system, in which various parts are constantly pitted against each other in a search for truth. Unfortunately, the very nature of the beast militates against cooperative efforts. As a result, the public seldom, if ever, gets a real overview of the whole system, and in large measure is led to believe that this or that particular shoring up of this or that segment of the system will produce a Christlike miracle, a delusion frequently fostered

by the part of the system that is the recipient of public money at the moment.

A major and distressing fallout from this sort of piecemeal approach is a tendency, ultimately, to cast blame on permissive courts, or lenient, softheaded judges. Perhaps we judges are in part at fault for the fact that too often we are blamed for the ills of the entire criminal justice system, because we tend to remain aloof from all attacks, neither answering nor casting blame on others. We are expected to remain detached and silent on our benches, while we observe the frequently insoluble problems whirling before our eyes.

We must apply the laws written by others for the benefit of the guilty and innocent alike, and yet we must suffer in silence while others exhort the public through the medium of roadside billboards to impeach us or, at a more mundane level, seek to blame the judges for allowing so many people to be released into the community on bond, probation, or parole that 80 percent of the robberies in this city could be halted if we would but lock everybody up. I am here neither to defend myself, nor to cast blame on others. I would hope to be able to point out that we are all part of a much larger system, and that only through our concerted efforts at educating the public to our respective roles, obligations, and limitations, can we expect public support and confidence in our fight against crime.

Essentially, the criminal justice system begins with the citizens, and includes the police, the sheriff or marshal, the juries—both grand and petit—prosecutors, defense lawyers, judges, court support personnel, probation officers, departments of correction, parole boards, and parole officers. Citizens play a major role, as both wrongdoers and victims, witnesses, and jurors.

Without the full understanding and cooperation of the citizenry, the system simply cannot function. Witnesses are necessary, and citizen efforts to prevent crime are indispensable. There simply are not enough policemen to play the criminal man-to-man, or one-on-one. When citizens allow Kitty Genovese to be murdered, they can scarcely be heard to complain about crime in the city streets.

Consequently, citizen support of police and the court system is essential. Constant carping at the courts undermines that citizen confidence, and is, then, in the final analysis, counterproductive. Rather, the police, the prosecutors, the courts, and corrections must seek to understand and appreciate each other's functions and limitations, and join in explaining the system frankly and honestly to the general public. Community relations is not something that should be left solely to the police by default.

When we recognize the real nature of crime in the city streets, it should become apparent that we are too often diverting our police from efforts to prevent and solve such crimes. In many of our major cities, fully 50 percent of the arrests made by police, with the concomitant expenditure of money and time by lawyers, courts, and prisons, are for victimless crimes. Public drunkenness leads the parade.

Fortunately, in the District of Columbia, police no longer arrest for public drunkenness, and there has been no noticeable change in the number of drunks on the public ways, while the criminal justice system has been relieved of huge numbers of "criminals" whose only victims were themselves.

Similarly, the expenditure of large police, court, and corrections efforts to abolish gambling in the District of Columbia seems incongruous when compared with a State supported and run numbers game in the neighboring States of Maryland and New Jersey. The public soon understands that gambling is not wrong, it is just that certain kinds in certain places are supposed to be wrong. Selling taxpaid whisky out of the back door after liquor stores close is hardly in the forefront of crimes which prevent citizens from leaving their barricaded homes. Vast numbers of police, as well as the additional services of courts, are used in a continuing effort to enforce some vague standard of morality upon the sexual activities in private of willing, consenting adults.

The standard of public morality should not be enforced by police and prosecutors, particularly where there is no victim who has been wronged and who makes no complaint to police. Manifestly, if we are to focus our resources and our attention on crime in the city streets, as I have defined it, in our efforts to make our cities safe, then we must remove victimless crime from the ambit of the criminal justice system. While I certainly do not, for example, condone the use of marihuana by young people, if the wherewithal to wage war on narcotic traffic is limited, then it would seem that police and prosecution efforts should be directed at halting the importation and distribution of hard drugs, such as heroin.

Perhaps the most essential ingredient in the criminal justice system is public money, for it is the tax dollar which pays the bill. Police, prosecutors, and by virtue of recent Supreme Court rulings defense attorneys, as well as judges and all supporting court personnel, and the entire probation, corrections, and parole functions must be paid for by public funds. The taxpayer is not a bottomless pit. Therefore, priorities must be established in the use of such tax dollars. Only through public understanding of the relationship of all parts of the system, and their perspective limits, can such priorities be established wisely.

Some examples may illustrate this thesis. Recently, Police Chief Jerry Wilson, in testimony before this committee, attributed some 80 percent of the robberies in Washington to persons who were at the time on some form of bond, probation, or parole. The implication is that the courts, therefore, are responsible for 80 percent of the robberies. Putting aside the fact that the police only solve one out of five reported robberies, so that they could hardly know who committed the remaining four out of five robberies, the statement highlights my premise.

Included among court-released robbers are many for whom the court many months earlier issued a bench warrant calling for their immediate apprehension, arrest, and presentation to the court. Those warrants, unfortunately, go unserved. The problem of failure to execute bench warrants is one that plagues all city courts, and in New York City, for example, the problem has reached monumental proportions.

Let me interject at this point, I don't wish to be criticizing Chief Wilson unnecessarily. I think we have the finest chief of police that any city could have and he has done an excellent job here. There has been a lot of talk about whether or not crime has really been reduced in

the District of Columbia. There have been lots of accusations about a numbers game being played with the crime figures.

Mr. Chairman, a couple of nights ago I rode with a police sergeant in an unmarked car during the 3-to-11 p.m. shift, in the Third District, which is supposed to be one of our high-crime areas. I was amazed at the lack of calls that were coming over the police radio indicating crimes being committed. It was quite an eye opener to me to find that indeed the number of reported serious crime is way down in the District of Columbia.

Now, I think Chief Wilson deserves a lot of credit for that. I think the Narcotic Treatment Administration under Dr. Robert DuPont deserves a major amount of credit for that. And if I may not be accused of being a little too overzealous, on my own behalf, I think that Chief Judge Greene and our court deserve a lot of credit.

However, in regard to this bench warrant problem, I think the dynamics of the problem can best be illustrated by an actual case.

On October 20, 1972, one Julia E. Wade was arrested and presented before a judge of our court. She was charged with having forged a credit card sales slip in a local store. On the basis of the limited information presented to the court, she was released on third-party custody in accordance with the Bail Act provisions in the D.C. Code. She appeared and was given a preliminary hearing 1 week later. Then on November 1 she was indicted on five counts including burglary, grand larceny, forgery and uttering.

The indictment was assigned to me for trial. However, on November 4 she was arrested on a city street and charged with a narcotics law violation. The prosecutor, for no articulated reason, elected not to prosecute and ordered her released. I was never notified of this fact. Ultimately, she failed to appear before me on November 10 for arraignment, and I issued a bench warrant for her immediate arrest and presentation before the court. At about this time I was engaged in a series of letter exchanges with the U.S. marshal, the U.S. attorney, and the chief of police, as well as the bail agency, regarding an excessive number of outstanding bench warrants in felony cases assigned to me.

The result of that extended correspondence was essentially that none of the parts of the system were willing to accept any responsibility for the problem, and were instead earnestly attempting to shift the blame to someone else. It developed that the police took the attitude that since they had locked the people up once, they were not going to look for them again, and suggested that the fault lay with the lenient courts who erroneously released the defendants in the first place.

Of course, the court must follow the statutes, the eighth amendment, and rely upon information furnished by the bail agency, the prosecutors, the police, and other parts of the system. For some reason, the prosecutors do not use the preventive detention provision which has recently been put on the books. The U.S. marshal, a division of the Department of Justice, is simply too understaffed and overworked to serve bench warrants. Indeed, they are occasionally hard put just to provide required sevices in the courthouse.

The bail agency is understaffed and underfinanced to the extent that it cannot perform all of the functions assigned to it by statute. The prosecutors and police are unable to provide enough information quick-

ly enough to enable a judge to have adequate help in setting bond. In short, the various statutory schemes exist, and provisions are made for the performance of these various functions within the system, but when push comes to shove, there is inadequate funding and staffing to carry out the statutory mandate.

Consequently, all parts of the system, recognizing the seriousness of the problem, and the bad image that disclosure of the extent of it will create, busily engage themselves in blame shifting and justification for inaction. Meanwhile, defendants who have been ordered arrested and brought in through the issuance of bench warrants remain at large. In Miss Wade's case, she remained at large until March 13, 1973, at which time, by her own alleged admission, she apparently robbed one Houston businessman at gunpoint in the Mayflower Hotel, and 45 minutes later shot another Houston businessman to death in a parking lot a block south of the Washington Hilton. She was ultimately arrested for armed robbery and felony murder on March 26.

It belabors the obvious to say that if she had been sought out and arrested during the 4 months the bench warrant was outstanding, a murder and an armed robbery would not have occurred. It is also interesting to note that the police solved the subsequent crimes, and then located and arrested the woman in less than 2 weeks. It might not be amiss to ask why that diligence was not applied to the bench warrant case. I mention this to show that when the chief of police suggests that the lenient judges and probation officers are responsible for releasing persons who commit 80 percent of the robberies, that figure does not disclose how many of those persons had already been perceived a potential violator by the court or parole or probation officers, and for whom a warrent had already been issued.

The large number of unserved warrants are an acute embarrassment to any part of the system affected by them, but it does not serve the cause of reducing crime in the city streets to disclaim responsibility for the problem while at the same time blaming others. This type of blame shifting numbers game that is played by police and others is but another example of what I am talking about. I commend to you, in this regard, a report of a Subcommittee of the Criminal Justice Coordinating Board in the District of Columbia which deals particularly with this situation of the "number game."

I have a copy of it, Mr. Chairman, which I would tender to the committee for your convenience and for your information.

Chairman Pepper. We thank you for it. It will be included in our record.

[The report referred to was retained in the committee files.]

Judge Halleck. Thank you.

There is no question but that we in the District of Columbia have made major inroads in the crime situation. Yet, we must, I think, devote more of our limited resources to attacking the type of serious crime that occurs in the inner city streets, and less of it to victimless crimes, and crimes at the lower end of the spectrum of criminality. In this connection, I would heartily recommend a long delayed overhaul and modernization of the District of Columbia Criminal Code, much as the President has called for such a modernization of the Federal Criminal Code. Only in this way can we bring modern methods to bear on realistic crime problems.

I should like to close by taking, on behalf of the recently reorganized superior court and the District of Columbia Court of Appeals, a little credit for some of the success in the fight against crime here in Washington. I would commend to you the latest annual report of the courts which discloses the current status of our calendars in spite of dramatically increased caseloads.

Again, I brought an extra copy of it along, Mr. Chairman, which I would provide for the committee at this time.

Chairman PEPPER. Thank you very much. We will put it in our files.

[The information above-referred to will be found in the committee files.]

No greater force exists for effective crime control than prompt, fair, and efficient justice. I only wish that as much emphasis could be placed upon the needs of corrections, for I am sure you will share my concern with the paucity of viable alternatives for a sentencing judge who, as I in 1972, sentenced 1,600 defendants after conviction of serious misdemeanors or felonies.

I might add, I am only one of 44 judges on our courts. My own caseload in 1972 resulted in 1,600 sentences, carrying maximums of anywhere from a year to life.

Chairman PEPPER. 1,600 cases?

Judge HALLECK. 1,600 sentences, Mr. Chairman, not cases. Those were convictions of individuals I had to sentence. Bear in mind, that is more people than currently constitute the population of Lorton Penitentiary. If I had sent everyone of them to jail for at least a year, somebody would have had to build a second Lorton Penitentiary to accommodate them. I don't think the general public realizes we just simply can't put everybody in jail.

Mr. Chairman, our commitments are large, our resources limited, and our satisfactions often seem insignificant. Only through realistically, pragmatically reordered priorities which recognize the true nature of the problem of crime in the city streets can we make meaningful progress. Hopefully, an enlightened and informed public, rather than a propagandized electorate, will appreciate the true situation, and offer its support to a unified and mutually supportive criminal justice system.

That completes my prepared statement, Mr. Chairman. I would be only too happy to try and answer any questions which the committee might have.

Chairman PEPPER. Mr. Winn, do you care to inquire?

Mr. WINN. I would like to pass at this time, Mr. Chairman, and come back a little later, if I may.

Chairman PEPPER. Mr. Steiger.

Mr. STEIGER. Thank you, Mr. Chairman.

Your Honor, I think the chairman of the committee should know that Judge Halleck married me.

Judge HALLECK. No. I performed the wedding.

Mr. STEIGER. My wife would be happy about that.

Chairman PEPPER. That is one of the sentences that apparently worked out very well.

Judge HALLECK. That is a life sentence with the possibility of parole at any time.

Mr. STEIGER. I would like to know, because I know you are famous for your candor, just what exactly has happened to you. There must be something in this process of your tenure on the bench.

I view the statement in which you, I think, have properly pointed out that the various elements of the criminal justice system are at odds with one another. Then you go into a three-page detail in which you point out that the courts are great and the U.S. marshal is messing up, and the prosecutors are fouling up, and if only everybody would do what the courts are doing, we would be in good shape.

Nobody understands the need for self-aggrandizement any better than the people in this body, and I don't dispute that, but for you to belabor the victimless crime on the one hand—and I think you get a lot of sympathy here—and in the same paragraph you refer to this lady's, Miss Wade's, problem as either narcotic addiction or involvement in some kind of narcotic offense.

Hard drugs has to come under the category of victimless crimes, at least as far as the willing victim. You are not exempting, I gather, the diligent prosecution of hard-drug traffic?

Judge HALLECK. No, indeed.

Mr. STEIGER. Do you consider that part of the victimless crime process?

Judge HALLECK. No, indeed, I do not, Congressman. I don't want to be misunderstood in that connection.

It seems to me that we have seen a tremendous reduction in hard drugs in the District of Columbia. We have seen a dramatic decrease in the amount of drug-related crime. Now, I attribute that to a number of things. First of all, I think the President's emphasis on shutting off the importation of heroin and going after the major traffickers is exactly what is needed. It doesn't solve the basic problem of the importation of heroin into this country to walk up and down the streets arresting every individual who has a small amount of heroin for his own use.

All you are doing there is dealing with the ultimate symptoms. The emphasis properly has been placed, in my view, for this administration, on shutting off the neck of the funnel. Now, when it comes to heroin traffickers, persons that are dealing, importing, selling drugs, as far as I am concerned those people deserve long-term sentences and the serious concern of the prosecutors, the police, and the courts.

But what I am trying to say, Congressman, is that I am just not sure that we have enough policemen and enough at our disposal to be able to get after that serious part of the problem and at the same time have dozens of undercover officers walking up and down Georgetown trying to arrest every kid who is smoking a "joint." Because the kid that is brought in for smoking a "joint" is going to take just as much time and cost just as much in terms of bringing him through the system, putting him to trial, and ultimately doing something with him in the field of corrections, or parole, or probation, as a more serious seller of heroin.

This is not to say that I condone for a moment the use of marihuana. I don't.

Mr. STEIGER. You made that clear.

Judge HALLECK. But what I am saying is, it seems to me that if we have a limited resource, as indeed we do, then we have to put it to work on the more serious aspects of the problem.

For example, many, many cities spend perhaps a third or a half of their police effort arresting drunks, and yet they have major problems with robbery, burglary, auto theft, and crimes of that nature. What I am trying to say—perhaps I haven't made it clear—is that it seems to me the system itself ought to be focusing on robbery, burglary, auto theft, housebreaking, bank robbery, things of that sort, where it comes to having to make a determination as to where we put our effort.

Mr. STEIGER. All right. You cite 1,600 sentences which you accomplished in your court in 1972. How many of those were the direct result of plea bargaining with regard to the collaboration of the prosecutor and the defense attorney and yourself?

Judge HALLECK. None. I do not engage in plea bargaining and no judge in my court does, to my knowledge.

Mr. STEIGER. How many of those were the result of plea bargaining between the prosecutor and defense attorney?

Judge HALLECK. Let's define what we mean by "plea bargaining."

Mr. STEIGER. I would tell you my definition. Plea bargaining is where the defense and the prosecutor agree on what the accused will plead guilty to, and both agree, prosecutor agrees not to offer whatever other charges might be pending against the accused and the defense counsel accepts that agreement. That is my definition of plea bargaining.

Judge HALLECK. Well, on that basis, a number of them come up that way and I will come back to that.

The reason I asked you what you mean by plea bargaining is this: Many people are under the impression that plea bargaining involves what is done in other major cities, New York, for one, that I am told, or at least I am told exists there, and this is where some arrangement is made about what the sentence is going to be.

There was an interesting survey done under the auspices of LEAA in Connecticut, in which prisoners were interviewed extensively about what their impressions were of the criminal justice system. And in Connecticut, in the New Haven area, the major impression that the prisoners gave was that the judge was nothing more than a rubber stamp for the prosecutor.

Now, hopefully, in my court, and throughout the District of Columbia courts, that cannot be said. There are numbers of instances in which a defendant pleads to one or two charges and others are dismissed. Let me give you an example.

The prosecutor gets someone charged with stealing an automobile in the District of Columbia. That is essentially unauthorized use of a motor vehicle. He is caught driving down the street in somebody else's car by the police and he is removed from it, and he is brought in. Unauthorized use of a motor vehicle in the District of Columbia—and I might say, all provisions of the District of Columbia Code are passed by Congress, so if they are not right, I guess this is the place to go to change them—is a 5-year felony.

The indictment comes down, they charge the man with unauthorized use of a motor vehicle, receiving stolen property, and grand larceny. They have three counts in the indictment. The actual crime is unauthorized use.

In many instances, individuals are overindicted in just that fashion. I would suggest that one of the reasons is that it makes it possible for the prosecutor to go to the defendant and his attorney and say, "Look,

if you plead to unauthorized use, we will drop those other two charges."

Now, those other two charges are unrealistic anyway. In the first instance, you can't be guilty of receiving stolen property and stealing it. It has got to be one or the other. So that is essentially no deal at all.

But the defendant is not quite so sophisticated enough frequently to understand that. So he ultimately winds up pleading to unauthorized use and two counts are dismissed.

Mr. STEIGER. Excuse me. I don't mean to interrupt you, but I understand what you are saying. I think for our purposes, it would help if we had some kind of quantitative look at this. Of the 1,600 sentences you imposed, how many were the result of a guilty plea?

Forget plea bargaining, since you really have no way of knowing actually how many of those were the result of agreement. How many were the result of a guilty plea?

Judge HALLECK. I can only give you the figures for the 6-month period when I served in felony court. The vast majority of those 1,600 were misdemeanors because I sat in misdemeanor court for a long period of time; and those involved sentences where the sentence could be any time from 1 to 3 years.

As to the felony court assignment, I recently finished a 6-month assignment. I cleared 270 felony cases in 6 months. That is just about the number that got sent to me. In other words, I was keeping even. I was making a little inroad because I had a somewhat larger caseload turned over to me than I turned over to the next judge. But essentially, that is about keeping even.

Of that 270 cases, exactly 27 went to jury trial. That is one out of 10 cases and that comports with about the average throughout the country. It is my understanding that at one point, Ramsey Clark, when he was Attorney General, made some surveys and he was on a television program up in Boston one time with me and used the figures that throughout the Federal System about 90 percent of the cases were disposed of by pleas of guilty.

Mr. STEIGER. OK. Excuse me. You will be interested to know that also corresponds to the national average for disposal of felony matters in State courts also. All right.

Now, given that understanding, recognizing that——

Judge HALLECK. May I interrupt? Of those 270 cases, 175 pled guilty.

Mr. STEIGER. You have 27 that went to jury, 175 were guilty pleas, which would bring us up to 202. What happened to the other 68, or whatever it was?

Judge HALLECK. There were about 10 nonjury trials in there and the balance of the cases were disposed of either by some sort of dismissal by the prosecutor or the court.

Mr. STEIGER. All right. Recognizing that—and your experience is in keeping with the national average—recognizing those 175 guilty pleas, it is only realistic to assume there was some discussion between the prosecutor and defense. It is not reasonable to assume there wasn't. We had some eloquent testimony here yesterday as to the mechanics of plea bargaining. It becomes very obvious that without it the breakdown in the system would be fantastic. The caseload would be prohibitive.

From your experience and recognizing you are as equally concerned about the causes of crime and the social implications as you are with

the victim and the criminal himself—you have demonstrated that amply over the last 4 or 5 years—with that in mind, do you feel that an orderly system of plea bargaining, whereby all of the plea bargaining was laid on the table, where the court was consulted after the prosecution and the defense had reached an agreement, and the court was privy to all of the facts in the matter privately, and the plea bargaining was a matter of record, and included in the plea bargaining then would be sentence bargaining, do you feel that that would be useful? Would it constitute justice? What would your reaction be to a formal procedure of what is now clearly in many courts, both Federal and State, at least an informal practice?

Judge HALLECK. I believe that the plea bargaining aspect of it, as you have described it, ought to be on the record, or ought to be at least available to the judge and he ought to know about it.

Mr. STEIGER. Was it in the 175 guilty pleas?

Judge HALLECK. Yes. As a matter of fact, we have in our system what we call "status calls" in which the prosecutor and the defense are called in before the judge. In felony court, the cases are assigned to us for all purposes. It is an individual calendar system. What I do is call in the prosecutor and the defense lawyer in open court, in a status call, with a reporter there. Everything is on the record. And the defendant is there. At which point you ask the prosecutor, "What is your case all about? Tell me what you have got."

You ask the defense lawyer, "What is your opinion on this? What is your defense, if any?

Then you ask them, "Are you willing to plead to anything and, if so, what?" You ask the prosecutor, "Are you willing to take a plea to anything and, if so, what?"

Now, many times you get a situation in which there may be a number of counts in the indictment, one or two of which are "locked" and the others may be questionable. All of that is right on the record. And to a certain extent, I participate in that, in that I make the parties discuss the matter right there in front of me, put it right out on the table. Much like you do a pretrial in a civil case. Out of that frequently comes a plea.

Now, I don't believe that a judge ought to agree at that juncture exactly what the sentence is going to be. And as far as that phase of plea bargaining goes, my own personal view is I am not for it.

In my court, when the individual defendant gets ready to plead to whatever it is the prosecutor and the defense lawyer agreed is an offense he is going to plead to it in the indictment, when he pleads in front of me I make it clear to him on the record that no matter what may have been told to him by anybody, I have made no deals and no promises about the sentence. The maximum penalty is "x", perhaps 10 years, 20 years, life, whatever it may be. And I haven't made any deals about it and I am going to get a probation report and I am going to look into this matter, and the only thing I can promise you is I will try to be fair and I will look into it and find out about you and find out about the crime, get all of the facts; but I am not going to make any deals about the sentence.

One of the ways that works is that I had a young man in my court plead guilty to two counts of armed robbery out of about six or eight counts and his counsel thought that he was going to get a break. I made it abundantly clear to him at the outset, the maximum penalty was life,

and as far as I was concerned he would get anywhere from a suspended sentence to life and I wasn't making any deals.

He wound up getting the first life sentence from me that was handed down in the superior court.

When I looked into the matter and found out about his long history of institutionalization, followed by armed robbery followed by more institutionalization, followed by more armed robberies, I made the conclusion in my own mind, as the sentencing judge, that here is an individual that has become an institutional problem. I gave him 15 years to life. That leaves it up to the parole and corrections department when he reaches a state when he may be safely released back in the community in some fashion.

Mr. STEIGER. Be eligible for parole in 5 years; is that correct?

Judge HALLECK. I don't believe so.

Mr. STEIGER. A third of a minimum.

I yield to the gentleman from New York.

I want to say at the outset, if your statement was restricted to what was written, I certainly support it. The plea bargaining is always such an intriguing contract to me, that, when you say you don't make a deal, you make that clear to the defendant, that you are not making any promises to him, reminds me of something I heard the other night when they said, "I take full responsibility for whatever happened, but I am just not a part of it."

Judge HALLECK. You don't want me to comment on that, do you?

Mr. RANGEL. No; but somewhere along the line you are assuming this defendant has been talking with the prosecutor through his lawyer.

Judge HALLECK. I know he has.

Mr. RANGEL. And they have talked with you.

Judge HALLECK. No; I make them do that on the record. Nobody comes in and talks to me individually.

Mr. RANGEL. On the record, but the defendant wasn't there.

Judge HALLECK. He is there. He is standing right there beside his lawyer.

Mr. RANGEL. If you don't make any deal and the defendant comes in with the possibility of facing 20 years, what possible incentive would he have to plead guilty rather than take the risk that the prosecutor or the State may not, whatever you call it, the district attorney may not be able to prove his guilt beyond a reasonable doubt? He always has that going for him.

Now, when he comes before you, what are you offering him so that he should not take his gamble before the jury?

Judge HALLECK. A fair shake.

Mr. RANGEL. Well, sometimes that is not what the defendant wants.

Judge HALLECK. I understand that. But you see, in a lot of instances the prosecution case is so strong there is no question about it. You take somebody who is in an unauthorized use of an automobile case. The police get him driving down the street after a chase and they get him out of the car and it has been hot wired. There is no defense. It is an open-and-shut matter. There is no question about it.

Mr. RANGEL. I am in total agreement with you, Judge. Confession, eyewitnesses, everything, he comes to you; there is a maximum of 20 years. And you tell him, "No deal."

Judge HALLECK. Well——

Mr. Rangel. He knows that with 12 jurors, there just might be a psychotic, sympathetic member of that jury and he has got his "deal" and he walks away.

Judge Halleck. The only thing I can say to you is it doesn't happen that way.

When I was defending, and for a long time after I left the prosecutor's office and came on the bench, one of the things I did as a private lawyer was to defend a great many people charged with crime. Back in those days we got assigned by the court to do it and we didn't get paid anything. We were out of pocket for all expenses. There was no money involved.

The thing has gotten so vast now that the Criminal Justice Act has undertaken to furnish counsel for indigent defendants and at this point, perhaps I should make a plug somewhere along the line for the Criminal Justice Act funds or some comparable funds for the District of Columbia.

If we don't have decent, good lawyers, young lawyers, being paid to come in and defend people, we are going to shut down. Because the Supreme Court has placed such a tremendous burden now on the court system to provide counsel for every defendant and we don't have them available and they can't be paid, they just simply won't come down and we will be in real trouble.

Mr. Rangel. Was that the local system or that Federal courts would not release the money available to them?

Judge Halleck. No. The problem is there is some belief that the Federal Criminal Justice Act no longer is going to apply to the District of Columbia, to the Superior Court of the District of Columbia.

Now, if that is so then Congress has got to appropriate special funds for it; it has got to be put into the District budget; it has got to come from someplace. And if it doesn't the only thing I can say to you is the court is going to be in real trouble.

As Congressman Steiger was talking about, if we don't get pleas, we break down. If you can imagine, in order for me just to keep current, I tried to a jury about—well, just exactly 10 percent of the cases that came before me. If I had to try 50 percent of the cases, I would be in real difficulty because I was getting indictments at the rate of 9, 10, 12 a week.

Mr. Steiger. Charlie, I am going to take back my time for just a second.

I am not going to debate you on the propriety of the sentence being involved in the plea bargaining. I must tell you I share Mr. Rangel's view that a prosecutor who bargains without any basis of sentence isn't really bargaining at all. So we are saying on the one hand that the plea bargaining is valid, but on the other hand we are not going to support it. But, obviously, we asked for your view.

What I do want to know specifically is the manner in which you have these pretrial sessions on the record. Is that a matter of your own discretion, a policy of this court, or a matter of law?

Judge Halleck. I would say that there is a basic policy of the court embodied in our rules involving the status calls, and to a certain extent it is within the discretion of the judge in what manner he wants to handle that.

Mr. Steiger. Do all members of this bench handle them the same way?

Judge HALLECK. I don't know. I never sat in anybody's court but my own, Congressman, and that is one of the difficulties.

Mr. STEIGER. You don't know how the others handle it?

Judge HALLECK. I suspect Mr. Work can give you a better answer than I can. I think basically they are.

Mr. STEIGER. But you never discussed it with other members of the court?

Judge HALLECK. Yes; but not in that much detail. As far as I know, in the felony branches of our court, where the judge sits in felony, by and large they are handled pretty much the same way. It may vary a little bit.

Mr. STEIGER. Some judges may get involved in sentence bargaining?

Judge HALLECK. I don't think anybody gets involved in sentence bargaining. Some judges will simply ask whether or not there is going to be a plea in this case and if the answer is no, they set it down for trial. When that happens, we just get further and further behind. The judge has to, it seems to me personally, become involved to a certain extent in order to keep the thing moving.

Let me tell you this, and it may answer both of you in terms of this question about plea bargaining. You may get somebody that is charged with armed robbery and he may be allowed to plead to robbery instead of armed robbery. The difference is the maximum penalty becomes 15 years instead of life. And that, I suppose, really gets down to a question of whether there is any value in having a maximum penalty of life available in so many cases.

You know, every offense now in the District of Columbia where the individual perpetrating it—serious felony cases, almost all of them—has in his possession or available to him, closely available to him, a gun or other dangerous weapon; it is not limited to guns. It could be knives, blackjacks, clubs, all manner of things. He can be charged with an armed offense. For committing a crime of violence while armed with a weapon, that puts the penalty up to life. If he is a third-time felon, or in other words, if he has been convicted twice before of a felony, he may be subject to life imprisonment.

I will give you an example of how absurd this can be. We had a felon convicted a couple of times before of minor felonies, unauthorized use or grand larceny of $120 in amount, something of that nature, and he gets involved at a hotel with an unpaid bill that grew out of some sort of party they had and he apparently got stuck with it and didn't pay it. He got charged with unpaid board bill over $100, a felony, and the U.S. attorney filed life papers on him for that.

Mr. STEIGER. Of course, the chances of that man receiving a life sentence are slim or none.

Judge HALLECK. Congressman, what it comes down to, I suppose, is this: You asked me earlier what had happened to me.

Mr. STEIGER. Yes. I really would like to know.

Judge HALLECK. Let me tell you.

Mr. STEIGER. He used to be tough.

Mr. RANGEL. He looks pretty tough to me.

Mr. STEIGER. Defendants fight for him.

Judge HALLECK. You see, after you have been around there awhile, you begin to see people coming back. You begin to wonder what you are doing, and why. You begin to learn a little something about corrections and about a lot of the problems of criminology and penology.

You know, it is an interesting thing. You get to be a judge without any background or knowledge in those affairs. I was an economics major at Williams College. I was in the Navy for 4 years. I studied law under the Case Book method, no practical experience. I went up and practiced law, did a lot of court of claims work, workmen's compensation work, some criminal work, a variety of things like that.

Then I came on the bench. I started out with this "Get tough, law and order" approach.

Then I began to read and to look at the people, to go down to the jails myself. I spent a couple of days down there during a conference, locked up in Lorton as a prisoner. I have gone around to the various institutions that I send people to and looked to see what it is they are doing and what is happening.

You begin to realize that the vast majority of people that you have to sentence, if you send them to jail, are within a reasonable period of time going to come back into the community. Long felony sentences, in my personal view, ought to be reserved for perhaps 10 percent of those people that come before us, who in essence really deserve it, who become, if you will, institutional cases. The others ought to have an option of serving a certain amount of time and then, within the Department of Corrections or the Board of Parole, becoming ultimately eligible, as they demonstrate their ability to conform, ought to become eligible to come back into the community under some sort of supervision, with that Sword of Damocles of backup time hanging over their head, if you will, but with the option to reintegrate into the community.

My idea about corrections is what we really are doing is trying to socialize, not in the political sense, but in the sociological sense, to try and socialize these people we send down there. In essence, that is what probation is all about, what parole is all about, what correction itself is all about. The vast majority that get into difficulty need that kind of approach.

I think the President himself has indicated that in recent speeches he has made, in indicating that we have to put new emphasis on corrections. The President spoke favorably about rehabilitation. That is a convenient word; although I don't like it because it presumes a prior state of habilitation you are trying to recreate, and in many instances the people coming before me simply never had it in the first place.

If somebody comes in, for example, charged with armed robbery, and he could get life and he pleads to robbery and he gets 15 years, if I give him, for example, 3 to 15 years that doesn't mean that he is being turned right back out on the street. What that does, in essence, is shift a certain amount of the responsibility ultimately over that individual to people that are much better equipped to judge him, to determine when he is rehabilitated and when he is able to go back in the street. The function is shifted to parole boards and departments of correction, which hopefully are sufficiently staffed and sufficiently well paid so they have good people there doing the proper job.

It seems incongruous to me that a judge at a given instance should look at somebody and say,

Well, Mr. Offender, I realize the rehabilitation is what we are after and I recognize all of these things you are up for, and I decide right now, based on no experience on my part in these fields, except just a gut reaction or a hunch, I recognize right now and I am telling you it is going to take you at least 10 years to get yourself together and 30 years at the maximum.

Now, I just don't believe that I am equipped to do that.

Sentencing is a very, very difficult thing for a judge. What most people don't realize is about 90 percent of our time, 90 percent of the cases we deal with, the most important decision we have to make is sentencing. We have to deal with people's lives.

There are a number of things that are supposed to go into that equation. Punishment, deterrent effect, rehabilitation. Those are the three major categories.

Punishment is viable and in many instances very definitely enters into the picture. The question gets to be how much should the punishment be—50 years or 2 years? Most of the investigators and the writers on the subject indicate that the punishment aspect of it reaches about its maximum effect after 2 years, give or take. You put somebody in jail for much more than that and the whole punishment idea is over and done with and all you do then is turn him around and really turn him against society, so ultimately when you let him out he is going to be 10 times worse then when you put him in.

If we are going to accept the idea there is a deterrent effect, then I think we ought, realistically, to look at who it is we are trying to deter and how we are trying to do it. Street crimes, the major street crimes that people are really afraid of, crimes in the streets, if you will, are committed by the individuals within the inner city who generally are in a milieu that involves a lot of criminal activity of one sort or another, antisocial activity.

Take robbery in the District of Columbia. Four out of five of them go undetected.

Mr. Steiger. Unreported.

Judge Halleck. Well, I am talking about the reported ones. There may be a lot more that are unreported, so the average is way down. But the young fellow out on the street knows that he has maybe only a 15-percent chance of ever being arrested for a robbery if he commits it.

I am a little bit reminded—it may be an Apocryphal story, I don't know—I heard this many times. Just before the troops went over to Normandy to land on Omaha Beach there were some speeches given by senior officers. At one time, one of the generals, addressing some of the troops just before they left, indicated to them that one out of three of you soldiers will be dead by the time this operation is over. Another one out of three of you will be wounded and only one out of three of you will come through unscathed. At which point every man in the line turned to the fellow on his right and the fellow on his left and said, "I am sorry about you two."

I suspect the same sort of approach goes on in the street. Nobody commits a crime expecting he is going to be caught. So when we talk about deterrent effect, you have to recognize right away the people we are trying to deter have a better idea than we do about how many people are doing it and getting away with it. So right away the idea crops up into his mind, "It doesn't really make any difference that Willie got 40 years for that the other day, because if I do it they are not going to catch me anyway."

So that comes into the equation.

The other factor is this: It doesn't do any good if I belt some defendant with a real severe sentence, hoping it is going to deter others, if others don't know about it. Hundreds and hundreds of sentences, thousands of sentences get handed down in the courts every year, and no-

body knows what they are, unless you are actively engaged in it or make some survey or some efforts to find out. So it seems to me that unless there is some real publication and wide dissemination of the fact that so-and-so got a stiff sentence and a tongue lashing from the judge, the deterrent effect may be somewhat suspect.

I am not suggesting there isn't a deterrent effect. But I would suggest to you that the greater deterrent is the prompt apprehension, prompt trial, and in the case of the guilty, prompt conviction.

Now, we have come to that point here in the District of Columbia. We have come to it in large measure because the vast number of the criminal cases that come in are disposed of in some way other than by trial. The reason we now have all of these cases is because it was assumed that our Superior Court is going to be able to move them more expeditiously than the U.S district court did. The district court got to the point where they were a year and a half behind in trying people. We can try them for a felony within 6 weeks after indictment.

Somebody who is apprehended by the police, brought in, indicted promptly, tried promptly and sentenced, it seems to me, is going to be an example that will serve as a much greater deterrent than the individual who is the one out of five who gets caught and brought into court, and then walks around on the street for a couple of years before his case comes to trial.

I can't think of anything worse in terms of deterrent effect, or any worse spectacle that the criminal justice system ever got involved in, than when 13 years after the fact they ultimately executed Caryl Chessman. It just made no sense to me as an individual. And I can imagine the deterrent effect of that, whatever it may have been, was so far removed from the offense that by the time they executed him that nobody remembered what it was he had done.

I don't know whether I have answered your question or not, Mr. Steiger.

Mr. STEIGER. I think I appreciate the depth of both the question and the answer. I would hope some of my colleagues would get into the bail bond situation here, but I have been monopolizing a lot of time, Mr. Chairman.

I thank you for your indulgence.

Chairman PEPPER. Mr. Rangel.

Mr. RANGEL. Judge, you probably will never make it, because you just make too much commonsense about the whole thing.

I think a problem that we face—and I say this as a lawyer and former Federal prosecutor—is that in dealing with the social problems there are such strong traditional barriers. Just as you say, "No deal." I can understand now in listening to you talk, and listening to my colleague, that there would be no need for any lawyer to ask for a deal when you have displayed a sense of fairness and justice that is truly equitable.

But when you say that your prisoners have such an attitude about justice so that they feel that the courts are just a rubber stamp for the prosecutor's office, to a certain degree, as far as a layman is concerned, they are right and it is so. Judges sometimes in the State of New York are forced to lie. They force the defendant to commit perjury. If someone pleads guilty to a lesser crime, there is nothing wrong in saying some type of "deal" has been made. Not an illegal deal, not a suppressive deal.

Obviously, the district attorney has laid out his case and persuaded the defendant that he should plead guilty to a lesser crime and he was persuaded to do it because he is guilty of the crime.

We have in New York judges asking defendants whether or not anyone promised them anything. And the defendant looks to his lawyer, whether he has been appointed or not, and the lawyer tells him, "No." Seldom, far more seldom than I can understand, the defendant doesn't say, "What in the heck are you talking about? Why am I pleading guilty if you haven't arranged something for me, rather than a life or 15-year sentence?"

I do hope, I guess I am not asking you a question, that from this committee we will have the opportunity to talk with people like you and we might be able to find some vehicle to disseminate this type of information, to bring all parts of law enforcement together. The lawyers are still talking Latin to each other. To walk into a New York City criminal court and hear a defendant pleading one of his rights is absolutely ridiculous.

I have been very impressed with your testimony before this committee. I hope that it is representative of the judges here in the District of Columbia. I would like to say I am a member of the D.C. Committee and we did have eloquent testimony as to what the cutoff of these funds for the defense counsel would mean. That committee is aware of what the effect of it would have on the judicial system generally.

I want to thank you for taking time out and coming here. I don't know whether we need a lot of lawyers on the bench or whether judges have to really apply the old common law traditions. I think society has changed and perhaps we are a little behind lawmakers as well as those who interpret the laws.

Again, thank you for coming.

Judge HALLECK. If I might make one comment to what you said. Before I take a plea from anybody, I don't ask him whether he did it. I say, "Tell me what happened," and I have him tell me in his own words—and I won't let his lawyer interrupt him. I have him tell me in his own words what he did, on the record. And on the basis of that, on the record, I can then make a judgment as to whether or not what he is telling me constitutes the elements of the offense to which he is pleading guilty. I will not take a plea from anybody who has not committed the offense to which he is pleading guilty. I do not allow him just simply to admit, "Yes, I did it." Instead, I have him tell me what the facts were and what is involved.

I think that is generally the case with most of the judges in our courts.

Mr. RANGEL. It protects the court from further appeals.

Judge HALLECK. Yes.

Mr. STEIGER. Would the gentleman yield?

Mr. RANGEL. Yes.

Mr. STEIGER. Do you address the interrogatory before you accept a guilty plea and before you pass sentence? Do you investigate the interrogatory—have you been promised anything in exchange for the guilty plea?

Judge Halleck. Yes. I generally put it this way and I don't go through a lot of formal rote and it gets me in trouble sometimes because I guess some people think I am not formal enough to be a judge. But in some respects it seems to me that the defendant and the people in the court system really don't understand it when, as the Congressman indicates, we talk Latin to each other.

I will generally say to the defendant something along these lines:

That I want you to understand that you are pleading guilty to this particular offense. I haven't made any deals about what the sentence is going to be. It can be anything from suspended sentence up to the maximum, which is so-and-so. And no matter what may have been told you, whether your lawyer or anybody else has told you I made any promise about what kind of sentence you are going to get, I want you to understand right now that I have not, and I will try to be as fair with you as I can. I will get a probation report, but I am not going to make any deal about the sentence.

I make that clear before I accept the plea and if he has any problem about it he can back off.

Mr. Steiger. Do you ask him, then, if he has received any promises of anything, or received anything—I have forgotten the ritual.

Judge Halleck. There is some question by rote asked him have you been made any promises; have you been coerced into a plea; and that sort of thing.

Mr. Steiger. Do you address that, or something like that?

Judge Halleck. Generally, I try to cover it.

Mr. Steiger. Do you accept the answer when he says, "No, I haven't"?

Judge Halleck. I don't want to put him in a position of having to lie to me.

Mr. Steiger. It is so obvious because you know here is a guy with five counts, pleading guilty to one and regardless, whether there has been a deal on sentence, there is a deal to drop the other four. You know it and he knows it.

Judge Halleck. I generally tell it to him. I say, "You are being allowed to plead guilty to one charge. The maximum penalty to that is 10 years, 15 years. If you went to trial and were convicted, the maximum could be 10 years on each of four counts."

A lot of times, the rule of leniency applies and there are many instances where the sentence has to be concurrent. I believe the Supreme Court came down in one case, where a man pointed a shotgun at several Federal officers in a car. He was charged with assault with a deadly weapon on a Federal agent as to each individual in the car. When it came down to sentencing, he was given a series of consecutive sentences, and the court ruled, "No, one act, one sentence," whatever the act is.

You may pile up a lot of different counts on the indictment but in essence what the individual has done is commit one particular act which is criminal in nature, and he is entitled to be sentenced to something for that act, not have it piled up on top of them. That enters into it sometimes.

Mr. Steiger. The thing that concerns me is the necessity, as I get it under case law, for the judge, in order to protect the court record, to ask for and receive some assurance from the defendant that he wasn't given anything in exchange for his guilty plea.

The king with no clothes. Do you think we should retain that as a matter of case law or simply a matter of practice and, if not, what is the remedy for it?

Judge HALLECK. I think what we ought to do is be perfectly frank and honest with the defendant and with the system. In other words, the judge knows that the man is pleading guilty to one count or another count and they are dropping other counts. It ought to be right on the record and the judge ought to tell the defendant, "I recognize this is what is happening and to that extent there is a benefit to you." At the same time, there is a benefit to the prosecution in your entering the plea of guilty, because, as the Congressman points out, some psychotic on the jury might turn him loose.

Lightning always strikes. When I was a defense counsel, I never pled to the indictment because I figured that was the worst they could convict my man on. So in order to plead, you have to get a little something.

Quite frankly, and to be perfectly pragmatic about it, we just simply cannot provide a jury trial for everybody in the court system. We have got to have dispositions in order to make it work.

Chairman PEPPER. Judge, apparently you are making the distinction that was made here yesterday by an outstanding prosecutor in the country, Mr. Busch from Los Angeles County in California, with 400-odd lawyers in his office, a population of 7 million people. He emphasized the difference between plea bargaining and sentence bargaining. That he would not participate in sentence bargaining, but he would participate in plea bargaining. It does, as you suggest, allow the defendant to plead guilty once instead of three times, with the knowledge that he would not be prosecuted or held responsible on those other two counts.

So you do apparently take that into account:

You pleaded guilty on count 1, let's say. There are two other counts, but I want you to know that the law provides you could be sentenced from 1 to 15 years on count 1, and while we are going to accept your plea to count 1 and the prosecuting attorney advises the court that upon your plea of guilty on count 1 he dismisses counts 2 and 3; I want you clearly to understand that it is up to the court to determine your sentence, which may be under the law from 1 to 15 years as your punishment for pleading guilty to count 1.

Is that about what the position is you take?

Judge HALLECK. Yes, sir; very definitely. There is one other thing.

Mr. RANGEL. Would you yield?

In the criminal courts I have been everything except a defendant, and that may come, too. But I think it is safe to say that when one is arrested, and we get away from the myth about your innocence until proven guilty, there is a feeling the man is going to go to jail. You know. I don't care how the judge handles it or how his lawyer handles it, and I am not particularly concerned whether you reduce the charges or reindict or file a new complaint.

If, in fact, my maximum sentence under the indictment is 20 years, and I come before the judge with a maximum sentence of 5 years, my sentence has been bargained.

Judge HALLECK. That is true. But here is another thing about it. Many times you will get a man that is indicted, for example, for four or five different robberies. There will be three or four different armed counts and a lot of lesser counts on down the line. He may plead,

out of a 20-count indictment, to one armed count. That is a big deal for him. But, by the same token, if he pleads to one armed count, his maximum sentence in the District of Columbia could be life imprisonment. It doesn't matter if he has got 75 other counts behind it, life is the most I can give him.

There is only one—and I might bring this to your attention since you are on the District Committee and maybe you can do something about it—there is one flaw in our code. "Accessory after the fact" is still retained as a separate offense. "Accessory before the fact" becomes a principal. But accessory after the fact is a separate offense and the punishment for that is one-half of the maximum sentence the principal offender could have received.

We have got a host of crimes in the District of Columbia for which the principal offender can receive life. How do I tell somebody who pleads guilty, as I had a young lady plead guilty to me to accessory after the fact to an attempted armed robbery, and attempted armed robbery carries a maximum of life for a felon. She pled guilty and there I was trying to tell her what the maximum penalty would be. In that case, I choked.

It suddenly dawned on me the maximum penalty is one-half the life of this other fellow. If we put them together, she may kill him and walk out.

It was a very unusual situation. I pondered a bit as to how you could go ahead and put that kind of sentence in. An indeterminate sentence up to one-half of somebody's life—I would like to be a defense lawyer and file a habeas corpus. You would have her out in a minute. I resolved it by sentencing her under the Youth Corrections Act on an indeterminate sentence up to 6 years, really not counted as prison time.

That is something, perhaps as a lawyer and on the District Committee, you might look into. It seems to me we ought to have the maximum penalty not to exceed 10 years for accessory after the fact.

Chairman Pepper. Mr. Winn?

Mr. Winn. Thank you, Mr. Chairman.

I have two questions. Judge, you pointed out the fact that you gave the court credit for reduction of the use of hard drugs and drug-related crimes.

Judge Halleck. I gave the Narcotics Treatment Administration and the Chief of Police and the President's program to combat the importation of drugs into the country the credit.

Mr. Winn. I see. I misunderstood you. Along that line, you did make a statement which we have all have heard many times. I heard it again Monday night from my chamber of commerce people when they were here for their meeting this week. They were afraid to go out at night and two of the women were actually afraid to come up on the Hill to see Congress in action.

Judge Halleck. What I am trying to say in my prepared statement, Mr. Congressman, is this. You have to examine clearly what it is they are afraid of and what, realistically, they are afraid of. You know, murder is not one of those crimes that ought realistically to be something you are afraid of, because 75 percent of the murders are committed in somebody's house between family members and friends. It isn't something that occurs between strangers.

A very large number of rapes, it turns out, are committed by that same sort of relationship grouping.

But the problem is the pocketbook snatch; it is robbery; it is breaking into your car. You know, essentially what women are afraid of and what women are really afraid of, if you examine it, is they are going to be held up or yoked or robbed or dragged back in the bushes.

Mr. WINN. I think they know what they are afraid of. I don't think there is any question about it. The point is, why do people come in or hesitate to come in to the Nation's Capital from all over the country, or even other parts of the world? Why do we have that? That is the point of my question.

How do you get the policemen to spend more time trying to divert a bank robbery? How in the heck do they know when there is going to be a bank robbery?

But the perennial call, annual or hourly, although it is down. I agree with you. I used to be on the District of Columbia Committee and have ridden in the car several times at night, but I disagree thoroughly that the police ought to be in other directions. I think they ought to do something about the crime on the streets. That is the gist of all of these hearings.

Judge HALLECK. I hope that is what I have been saying. I hope in my statement that is what I made clear. Sometimes my intent gets a little bit blurred.

Mr. WINN. Maybe the rest of them understood it that way, but the way I read your statement was you felt that the police were spending too much time on these small insignificant crimes that you referred to. Maybe I am wrong.

Judge HALLECK. Well, what I am trying to suggest——

Mr. WINN. They ought to spend more time on the bank robberies, and things like that.

Judge HALLECK. As I understand, Chief Wilson came here and indicated that on a given shift about 600 of his 4,900 men were on the street patrolling at any given instance. Now, it seems to me if the police were relieved of a lot of inconsequential chores, they could have more people out on the street patrolling. They could do more tactical force patrol, toward actually being out there doing something about halting street crimes.

In my view, Mr. Congressman, what the entire criminal justice system needs to do is to devote more of its attention to the protection of the citizens from the street crime and to the resolution of those crimes once they have been committed, and the courts should be spending more of their time addressing themselves to those serious cases.

And in all major cities, not just the District of Columbia, they should be spending less time going around picking up drunks off the street and taking them down and filling the courts with them and bringing the policeman down there.

You know, we have vast numbers of policemen every day who sit around in the traffic court over parking tickets, one thing and another. It seems to me we ought to be able to develop some sort of administartive procedure for handling that sore of thing. Get it out of the courts and not have policemen, who should be spending their time solving burglaries and apprehending robbers, passing out yellow tickets.

Mr. WINN. That, I agree with. I agree with you thoroughly on that. What you are saying, like the many heads of police departments that appeared before us 2 weeks ago, is we ought to have more men on the streets, more men protecting the citizen on the streets, basically being seen, making more rounds, so they are available.

But the thought in my mind is, that if there is an assault, if there is a pusher selling drugs to kids, if there are some of these things that have to be followed through—I agree we ought to improve the system—then we still ought to make an effort to get those people that are dealing with the small people on the streets instead of the banks.

Judge HALLECK. That is true; no question about it. But you see, you get down to the question when the policeman is riding along, and they see a crap game going forward on the sidewalk, which is against the law, or he sees somebody standing out in front of a house on the public sidewalk drinking beer out of the car, which is against the law, does he spend a lot of time on that?

Mr. WINN. He has to pick his priorities.

Judge HALLECK. Does he make that arrest and take himself out of service for 2 hours and take the fellow and book him and come down the next day to court for hours and sit around, or does he let that go on the theory that isn't really hurting anybody, although it may be technically against the law, but spends his time on patrol trying to make sure your pocketbook doesn't get snatched and burglaries don't occur?

It seems to me it is the reordering of priorities and to that extent, hopefully, the members of the District Committee can see their way clear to appropriate money and get the long-delayed review of the D.C. Code in the mill. We would all be a lot better off. I think way back in 1967 that was supposed to have been done and nobody ever appropriated the money and followed through on it.

Mr. WINN. I think the committee would have understood your point better if you had said reorder the priorities. I have a better understanding of what you are trying to say. I am still concerned about the safety of the small guy on the street a lot more than I am the reputation of a bank robber.

My last question is, Do you base some of your decisions on your sentences on the fact that the penal institutions are full, are rundown, or not serving a rehabilitational purpose?

Judge HALLECK. Yes, sir; you can't help but do it. From the point of view of a judge who cares, and who is concerned about where he sends people and what he is doing to them, other than simply sit up there and deal out sentences like some sort of emperor who sentences everybody, "Off with their head," but when he begins to think seriously about what he is really doing and where he is sending people and what the result is going to be, he cannot help but fashion a sentence on that basis, or have it enter into the problem of sentencing. For example, if you send a woman to jail she is going to wind up down here at the Women's Detention Center, where it is overcrowded in a little small place, with literally nothing to do but sit around. She doesn't go down to Alderson where you hope she is going to go.

She may sit there for 2 or 3 years. That is pretty harsh business. If she could go down to some institution like Alderson or somewhere else, where something could really be done, then she would benefit.

You know, we delude ourselves so many times. We salve our conscience by writing on the commitment, "psychiatric help ordered," "psychiatric assistance ordered for the defendant," because we recognize he needs it.

I had an individual recently attending a conference, who came down from New Jersey, and pointed out when he was in charge of a prison in New Jersey he had 6,000 inmates and one psychiatrist. All of these commitments come down requiring psychiatric help. When you get down and look at what is going on in the prisons you find out that the promise is a far cry from reality. They are supposed to be training them to be auto mechanics down there. They have room for maybe a half dozen or 8 or 10 men in the program and an old beat up automobile to work on.

And down at Lorton, if you don't have at least a 3-year sentence you don't even get into any of those programs. You just do dead time down there.

Mr. WINN. The woman that you mentioned, I don't know what she was charged with. If she was charged with assault and battery——

Judge HALLECK. Make it grand larceny, $150 fur coat.

Mr. WINN. Grand larceny. So you set down a decision, because of the facilities in the District of Columbia—which I know, I have toured them, are very bad—and you don't want her to sit there for 2 or 3 years until she gets a sentence or decision, but isn't it possible that the same woman, if she was in some other State, let's say California, where they may have a country club type of facility for grand larceny for women, isn't there quite possibly inconsistency in what your sentence might be and what it might be out there?

Judge HALLECK. Yes, indeed.

Mr. WINN. Based only on the institutions that the taxpayers pay for?

Judge HALLECK. That is right. One of the problems we have in the District of Columbia, Mr. Congressman, and I suppose you probably know it as well as anybody, as Congressman Steiger says, sometimes I get a little blunt, and I have got to be blunt with you gentlemen.

The Department of Corrections of the District of Columbia has to look to the Congress for the money to function. And you gentlemen have to go back home to your districts in order to get reelected. If the people in your district get the idea that you are spending a lot of the Federal taxpayers' money to build country clubs for criminals, bearing in mind 98 percent of the people down in Lorton Penitentiary are black and come out of the inner city, when you go back to your districts, if your opponent begins to get that idea, he is going around the district and he is going to remind the voters.

He will claim you are squandering the Federal taxpayers' money on this sort of business for all of those kind of people up there that don't deserve any kind of break anyway. After all, they committed a crime, didn't they? And they are in minority groups generally; they are the poor, underprivileged, and dispossessed.

It is a fact of life. We see it coming through. So when I tell you about how the people are that come in, and we can all go down to the jail and look—you can go down yourself and look. You hardly see a white face down there. If you have to go back to some district in the South and try and explain that to a lot of folks back there, or go back out to my dad's former district, I tell you I am sure you gentle-

men know his replacement, who is a colleague of yours. I don't suppose Mr. Landgrebe would earn very many votes back in the Second District of Indiana if he were to devote a whole lot of the taxpayers' money to something of that nature.

That is a political fact of life we have to deal with here. And as a judge, I have to recognize it pragmatically. I know that these deficiencies exist. I know what the problems are. I know, looking into what I am trying to do and trying to be, reasonably fair both to the victim and to the community, and recognizing the individual has to come back to the community sometime. I have to take all of these things into consideration.

Mr. WINN. Thank you, Judge.

Chairman PEPPER. Mr. Brasco?

Mr. BRASCO. Thank you, Mr. Chairman.

Judge Halleck, I listened with great interest to your initial statement. I thought it was quite good. I suppose I find myself in that position, having spent some time with the Legal Aid Society in New York and over at the district attorney's office, so I understand your flip-flopping back and forth. Maybe it should be a tough line one day and another day maybe we should be looking at the greater picture.

Just getting back to one of your comments—and I agree with that wholeheartedly, that justice should be swift in order to have a deterrent effect. I would also add to it, "consistent and under an atmosphere where the defendant understands and appreciates that there is no hypocrisy."

Particularly, the thing that disturbs me, and I think it does everybody, is the whole question of plea bargaining. When I was with legal aid, we got right down to situations where the defendants turned around to the judge and said, "But later on, could they prosecute me for perjury for the things I am saying here?" It is very difficult to get a defendant to understand that he is admitting to the commission of a lesser crime but sometimes a different one.

I think everybody understands that and the defendant very well thinks he is part of a charade at that time, whether he says so or not.

But one of the things I mentioned was consistency and it is very often that I found a man would get x years by one judge and if he were fortunate enough to be down the hall in another courtroom for the exact same crime, exact same background and circumstances, he would get a suspended sentence. So one of my questions to you is, Should there be and can there be any guidelines set up in terms of that limitation: consistency of sentence with the same defendants committing the same crime and relatively from the same background?

Judge HALLECK. One of the things we have done in our court—Chief Judge Greene is essentially the one that pushed it, and the Board of Judges adopted it, we do it in felony—we adopted a system of what we call sentencing councils. On every felony sentence, three judges of the court are assigned in panels, three judges review the probation report, review the facts, go over the entire gamut of material that is available, and discuss what kind of a sentence seems appropriate in this case.

All three judges give their input into it. Ultimately, the sentence is the responsibility of the sentencing judge, but before he imposes the sentence, as I said, in the preceding week before the man is up for

sentence, it is reviewed in the sentencing council and two other judges give him the benefit of their views about this particular case and what they think, and there is serious discussion about it.

Many times sentences, the original sentence perhaps that the judge who has to impose sentence may have been thinking about, or may have considered might be appropriate, gets modified either up or down, depending upon the views of the other judges.

What that does is lead to more consistency. You know, it is a strange thing, particularly among the judges of our court.

Mr. Brasco. Not to interrupt you, Judge, but I wanted to get to something specific. The point is—and I am not questioning the propriety of it—but I gathered from my colleague, Mr. Steiger from Arizona, that you might be inclined to give a lesser sentence than the judge down the hall for the same crime.

What I am saying is my experience has been that this has a deleterious effect on the system. Now, that is not to say the other judge wasn't too severe. I am not pointing out you should raise yours or he should lower his. The question is how that affects the overall administration of justice. I just think it is a bad situation in terms of not building any confidence in the individuals who come before the judges and therefore you have not only plea bargaining but you have judge shopping.

Judge Halleck. I can't agree with you more, but you see what actually happens is that the judges are really not that far apart in sentences. We have these sentencing institutes periodically and included among them are sample cases that we are given with all of the information. Each judge goes over it and puts down what he thinks a sentence ought to be.

You would be surprised how much unanimity there is. Everybody is pretty much in the ball park. There may be one or two sort of far out, off-the-wall-type sentences, but by and large, most of them are pretty much in the ball park. I am sure you will know, if you have been a prosecutor and defense lawyer both, that very often sort of an aura exists around the judge and he gets a reputation which may not necessarily be commensurate with what he actually does.

For example, while I get accused of being a little on the lenient side and a little on the liberal side, it surprised everybody when I passed out the first life sentence. When you go back and review, you find I have a higher degree of sentences for time to work release, or something else than the national average. I am about in the same percentage category for that sort of thing as other judges.

I may vary it; for example, if I give him 10 years, I give him a 1-year minimum, because I happen to believe he ought to have the opportunity to get himself rehabilitated within a short period of time and have an opportunity for parole. But Judge Murphy, who is right next to me in chambers, has a reputation for being one of the toughest judges down there, and yet he and I were on the sentencing council all through felony court and our sentences were almost identical in every case.

Mr. Brasco. I didn't mean to be critical of that.

Judge Halleck. I agree with your statement in general.

Mr. Brasco. I am personally arriving at the opinion that I don't think you can rehabilitate anybody if he is sentenced to a long period of time. I suspect you can take a prisoner and put him up in the best

hotel in Miami Beach and give him room service and say, "You stay in this room for the next 15 years and look out at everybody on the outside and never leave this room," and I believe you will have the same kind of effect, in my opinion, emotionally and socially, as 5 or 10 years in a penitentiary.

So I think we have to work on a better way of dealing with the defendant once he is incarcerated. I am particularly unhappy because I don't know all the answers. If we talk about rehabilitation, however, long sentences don't rehabilitate anyone. If we talk about just putting someone away on the shelf away from society to give society that kind of protection, that is a different ball game. But they are two different things.

Judge HALLECK. The one thing we have the least of and need the most of is empirical data to support what we are doing or not doing. There just aren't any realistic surveys, nothing is being done to come back and feed back to a judge, after he has been there for awhile, whether what he is doing is right. Whether putting people in jail for long periods of time is the answer, whether he is more successful on probation.

The closest thing I heard to come to statistical surveys recently was at the sentencing institute—and I think I have my figures correct. I may be a bit off—but Massachusetts, as you may know, recently deinstitutionalized its juvenile justice system. They stopped putting kids in jail. But before they did that they figured they had a lot of public objection they were going to have to meet. And they ran some control groups and got some statistical information. They discovered if they brought a juvenile into the court, brought him through the process, convicted him, and sent him home with the minimum of supervision by a probation officer, the recidivism rate of those that went right out of court and back home to their own neighborhood and own home with some supervision and care, the recidivism rate, I think, was 17 percent.

But of those that they put in institutions and locked up for a year or more, the recidivism rate was something like 98 percent.

Mr. BRASCO. I am not surprised at that.

Thank you, Judge.

Mr. NOLDE. Judge Halleck, do you have any high-level support for your ideas on so-called victimless crime?

Judge HALLECK. I published several opinions recently to try to take some of the victimless crimes out of court, and I guess the next highest level is our court of appeals. I don't know what they are going to do with it. Mr. Work is here; his office is appealing it.

Mr. NOLDE. I was referring to, particularly, a high government official. I believe you have it in front of you there.

Judge HALLECK. Yes. I will give this pamphlet to you. It is a publication by the National Council on Crime and Delinquency, and in here they quote President Richard M. Nixon, who says:

> We have to find ways to clear the courts of the endless stream of what are termed victimless crimes that get in the way of serious consideration of serious crimes. There are more important matters for highly skilled judges and prosecutors than minor traffic offenses, loitering and drunkenness.

Mr. NOLDE. Thank you, Judge Halleck. And that is a direct quotation from the President of the United States, Richard Nixon?

Judge Halleck. Yes. I would suppose that is about the highest level support you can get. This is an interesting publication, called "Crimes Without Victims: The Two-Billion-Dollar Problem That Blocks Effective Crime Controls." It is published by the National Council on Crime and Delinquency.

[The publication referred to can be found at the end of Judge Halleck's testimony.]

Chairman Pepper. Judge, you are known as being a very understanding, dedicated, and passionate judge. What would your suggestions be, if you were asked by the President and the Congress, as to what recommendations you would make if you had ample money and authority to reduce the rate of crime in the District of Columbia.

We are proud of all of the innovations we have had. There has been a reduction in the rate of increase of certain crimes and we are disturbed there has been a slight increase in index crimes. But we would like very much to have your views and counsel, out of your experience and out of your concern with the subject, as to what could be done to reduce crime in the District of Columbia, to give a greater sense of security to the people of this area.

Would you be kind enough to write out and send here for inclusion in the record, a summary of what your proposal and recommendations would be if the President and/or the Congress were asking you for your recommendations as to what could be done to reduce crime further?

Judge Halleck. I would be happy to do that. I can give you one answer very quickly. Jobs.

Chairman Pepper. Thank you very much, Judge. We thank you for the valuable contribution you made here this morning. We wish you godspeed in your effort.

[The following information, previously referred to, was received for the record:]

[Excerpt from "Crimes Without Victims: The Two-Billion Dollar Problem That Blocks Effective Crime Control," National Council on Crime and Delinquency, August 1971]

Victimless Crime

Victimless crime is defined as crime based on moral codes in which there is no victim apart from the person who commits the crime. The commonest examples are drunkenness, drug addiction, voluntary sexual acts, vagrancy, grambling.

The acts of someone who commits victimless crime are in most cases socially disapproved, but none of them is criminal in the real sense. Whatever harm occurs is to the offender himself and not to society. In some cases—vagrancy, for example—there is no harm to anyone. The typical victimless crime, therefore, is a health, moral, or social matter rather than a criminal one. But it is now dealt with by our criminal justice system.

Drunken driving is *not* a victimless crime, nor is the robbing of a bank by an addict. These are real crimes and they produce real victims.

The Impact of Victimless Crime

Victimless crime is so overwhelmingly pervasive throughout the country that dealing with it through criminal penalties misuses our policeman power, congests and makes a travesty of our courts, and jams the jails. It so preoccupies the criminal justice system that it prevents it from dealing effectively with real crime.

Some measure of how large a problem this is may be gauged from these three facts:

One-half of all arrests by the police are of victimless crime offenders.

One-half of all the people in jail are charged with or have been found guilty of victimless crime.

One-third of all arrests are for drunkenness.

Granted that many of those who commit victimless crime indeed cause society concern, the question remains: Should such offenders be the responsibility of the criminal justice system—of police, judges, and jailers? Or should they receive therapeutic help from health or social service agencies?

Before answering the question, we ought to take a look at how well the system now manages these problems.

Take drunkenness, for example. Dealing with a drunk requires a police arrest, transportation to a precinct house, detention, booking, photographing, arraignment, trial, and, finally, jail for terms ranging from five days to six months. Such a process involving police, courts, and jails is very costly. Does it work? The answer is no.

A Washington, D.C. prison committee in 1957 reported that it had found six men who had been arrested 1,409 times for drunkenness. Collectively they had served 125 years in penal institutions! These drunks were obviously not rehabilitated. Coping with these six men through criminal penalties cost the public an estimated $60,000, and never dealt with their illness—alcoholism.

THE USE OF CRIMINAL PENALTIES

The imposition of criminal penalties has proved to be ineffective in controlling victimless crime behavior. The laws dealing with victimless crime are commonly disregarded. Alcoholics continue to drink; addicts go on using drugs; gamblers persist in betting; vagrants wander as they will.

Imprisonment is no deterrent and it is no rehabilitation. Quite the contrary. Instead of being reformed by jail such men come out embittered, unemployed estranged from their families, and, too often, criminalized.

THE SIDE EFFECTS OF CRIMINAL PENALTIES

Dealing with the victimless crime offender through criminal penalties not only fails to deter or reform him, it also has a catastrophic impact on the country. For, in addition to drastically lowering the capability of the criminal justice system to control real crime, it has the following effects:

It lessens respect for law.—Since the laws relating to victimless crimes are so often disregarded, there is a diminished respect for laws in general. To illustrate: Millions of people gamble illegally every day. The law is powerless to stop them. There is no benefit from laws that are disregarded by the public and unenforceable by the authorities. On the contrary, there is much harm. (We should have learned a lesson from Prohibition.)

It enriches organized crime.—Organized criminal groups spring up to profit by providing the illegal goods and services desired by many people. Gambling is now mainly an illegal business whose net income is estimated to be in excess of ten billion dollars a year.

Thus, by giving organized crime a virtual monopoly in these goods and services, we have helped build one of the most ruthless and destructive social forces in our history. No part of American life is now uncontaminated by the far-reaching power of organized crime.

It fosters corruption.—The victimless crime offender carries out acts which the police and other public officials are pledged to prevent. The illegality of these acts fosters corruption. Crime syndicates pay an estimated two billion dollars a year to public officials to permit such activity to continue without serious interruption.

It causes crime.—In the case of the addict, the ban on his drugs and his inability to obtain them cheaply cause him to commit crime. More than one-half the crime in some cities is traceable to addicts seeking money to pay for drugs.

A MATTER OF DOLLARS AS WELL AS LIVES

The American criminal justice system—police, courts, jails, prisons, probation, parole, legal aid—costs the public an estimated six billion dollars a year, not counting depreciation or interest costs. Victimless crime is responsible for at least one-third of the effort made by our criminal justice agencies. Thus, victimless crime as now dealt with through criminal penalties costs the American taxpayer more than two billion dollars a year.

And for that two billion annually there is no positive gain.

A NEW APPROACH TO VICTIMLESS CRIME

The National Council on Crime and Delinquency urges that laws relating to crimes without victims be removed from the criminal codes. NCCD does not condone the acts of victimless crime offenders. It contends that, for many of those now prosecuted under such statutes, the appropriate measures are not the sanctions imposed by police, courts, or jails, *but the voluntary services offered by health or social agencies.*

Currently, all legislatures are faced with demands to allocate huge sums for more manpower and bigger institutions to control crime. The need to examine our present costly and futile approach to victimless crime is, therefore, imperative.

NCCD is joined by many public officials, law enforcement specialists, judges, and penal experts in asking the diversion of the victimless crime offender from the criminal justice system.

President Richard M. Nixon says, "We have to find ways to clear the courts of the endless stream of what are termed victimless crimes that get in the way of serious consideration of serious crimes. There are more important matters for highly skilled judges and prosecutors than minor traffic offenses, loitering, and drunkenness."

New York City Police Commissioner Patrick V. Murphy says, "By charging our police with the responsibility to enforce the unenforceable, we subject them to disrespect and corruptive influences, and we provide the organized criminal syndicates with illicit industries upon which they thrive."

Says Norval Morris, Director of the University of Chicago Center of Studies in Criminal Justice, "We should stop trying to enforce morals. It did not work with the Volstead Act that produced prohibition and opened the door to a widely profitable criminal era. . . . Drunkenness, use of drugs, gambling, and homosexuality are distasteful to most of us and harmful to the person involved, but these activities, in and among themselves, neither hurt other individuals nor destroy property. So why use our police, courts, and jails trying to stop them? Use them instead to fight real crimes, especially crimes of violence."

James Vorenberg, Director of President Johnson's Commission on Law Enforcement and Administration of Justice, says, "The real need is to reduce the number of laws. . . . The prime area for such action is in relation to 'crimes without victims' such as sex, liquor, and drug crimes."

Chairman PEPPER. We will take a brief recess while I make a purely personal statement.

[Brief recess.]

Chairman PEPPER. I ask the committee to come back to order and I ask Mr. Brasco to preside.

Mr. BRASCO (presiding). I understand our next witness is Mr. Charles Work, Chief, Superior Court Division, Office of the U.S. Attorney, District of Columbia.

STATEMENT OF CHARLES R. WORK, CHIEF, SUPERIOR COURT DIVISION, OFFICE OF THE U.S. ATTORNEY, U.S. DEPARTMENT OF JUSTICE, ACCOMPANIED BY WILLIAM A. HAMILTON, PROMIS MANAGEMENT INFORMATION SYSTEM

Mr. WORK. I have with me Mr. William A. Hamilton. He has been associated with me for the past 3 years in the establishment of our PROMIS—management information system—that I am here today to tell you about.

Mr. BRASCO. You may proceed, Counsel.

Mr. NOLDE. Thank you, Mr. Chairman.

Mr. Work is a graduate of the University of Chicago Law School and has a master's degree from the Georgetown University Law Center. He was an E. Barrett Prettyman fellow from the Georgetown legal intern program, has been an assistant U.S. attorney in Washington, D.C., for the past 7 years.

He is presently the Chief of the Superior Court Division of the U.S. Attorney's Office in the District. He is a member of the Judicial Conference of the District of Columbia and a member of the American Bar Association Committee on Court Modernization. He has authored numerous articles and received a number of awards.

We are very pleased to have Mr. Work, who has done such a superb job in effectuating the PROMIS system, and who is here on behalf of Mr. Harold Titus, U.S. attorney for the District of Columbia. Mr. Titus is certainly one of the most outstanding prosecutors in the United States. We are anxious, Mr. Work, to learn about your innovative PROMIS program, which has been put into effect and is designed to identify certain offenders in the system, and give them expedited treatment. You may begin with your opening statement.

Mr. WORK. Thank you very much.

Thank you, Congressman Brasco, Mr. Mann, Mr. Nolde.

It is a privilege to be here today to appear on behalf of the Department of Justice and Mr. Harold H. Titus, Jr., the U.S. Attorney for the District of Columbia.

If I may, I will, instead of reading from my statement, highlight it. I think that you will find that more instructive and I think you will find it more interesting if I do it in that fashion.

[Mr. Work's prepared statement appears at the end of his testimony.]

Mr. WORK. You are all too familiar, hearing from Judge Halleck and other witnesses, with the scene in the District of Columbia, and in other major courts in the country, in the major urban areas. By that "scene" I mean the scene of the mass-produced, assembly line environment, where there are thousands and thousands of cases processed by courts that have insufficient resources.

It is that scene that has prompted us to do some of the work with respect to the PROMIS system I am going to talk to you about today.

For instance, one of the things that has troubled us the most in that mass-produced assembly line scene is the recidivist, the major offender, who can be lost in that assembly line scene.

The major offender has anonymity there that he would not have in a small town prosecutor's office. He can have, for instance, several cases pending in the court at the same time, assigned to several different prosecutors, and not of those prosecutors know there is in fact another case pending against him in the system at the same time.

Among other things, the PROMIS system is an attempt to help us alleviate this situation.

There are other problems in this environment. The lack of control over files. Mr. Brasco, you must have experienced, in your time as a prosecutor and public defender, going to the fileroom and the frustration of not being able to find anything, much less an inadequate incomplete file.

Prosecution supervisors in this environment have very little sense of what goes on. I sometimes say that big city prosecutors manage their offices by newspaper. They go out in the morning and read the morning paper to see who has been shot or assaulted and they go to the office knowing that is one of the cases they will be concerned about.

Then they pick up the afternoon paper and see what happened in the courts during the morning. They wait for one of their assistants, perhaps, or perhaps a newspaper reporter, to run into their office and say:

Mr. Work, or Mr. Supervising Prosecutor, lo and behold, there is a very serious case down in Courtroom 20, and wouldn't you know it, it is being tried by your newest assistant prosecutor—who just came on 2 weeks ago in the office, and it just came up to him in the ordinary course of business in that court.

What we wanted from automation, what we wanted from a management system, was a system that would help us with this environment, a system that would give us an early warning about a crucial case coming up, a system that would help us to know in advance when we were going to have a problem, to enable us to react to it in a systematic rational way.

I think that it is this scene more than anything else that led us, back in 1969, to begin work on more than just a system that would index cases, more than just a system that would show us what the calendar was for a given day, although PROMIS does both of those things. But instead, a system that would help us accomplish the objective of identifying in advance in this mass of cases the serious and important ones, that would help us make certain that these cases were treated, and all of our cases were treated, in an evenhanded and in a consistent fashion.

We wanted a system that would help us set the different priorities that should and ought to be established by the prosecutor's office in a major urban center that has a limited number of resources.

That is what we are talking about. We are not talking about the smalltown prosecutor who has a feel for his caseload, who knows what the serious and important cases are, who knows what kind of experience he has in his staff. We are talking about, here, the prosecutor's office in a major urban center. We have 70 attorneys and we had last year over 12,000 serious misdemeanors prosecuted and we had about 2,500 major felonies prosecuted.

Now, in this environment, what we attempt to do with our automated system was establish a system that has as its core several key concepts. The first and perhaps the most important is our standardized rating system. The idea that we must find in this mass number of cases the case that involves the recidivist, the person with the major serious criminal history.

And the case that involves the serious offense, a serious injury, a serious amount of property damage. To develop this rating scheme, we called upon the field of criminology and found there are two different rating systems. The first, which rates the seriousness of the offense—really, it measures, Congressman, the harm done to society—is a scale developed by the criminologists, Thorsten Sellin, and Marvin Wolfgang, and I will show you just a little bit later in my testimony how we use that scale and how we feed the data from that scale into our system.

The second scale characterizes the scope and the quality of the defendant's criminal history. It was developed for the California penology system by a team of criminologists headed by D. M. Gottfredson.

In addition, as I said before, to help us locate the recidivist and help us locate the serious cases, it also is designed to help us give cases that have similar ratings, similar kinds of treatment and attention.

It is a matter of setting priorities. In this mass produced environment, where you cannot assign an individual prosecutor to an individual case from beginning to end, the prosecutor has to establish priorities. He must not just stuff each case through the limited judicial resources as they come up in chronological order. Chronological order is not a sensible way to establish priorities.

He has to make differentiations and he has to be responsible to his constituency and the public for the differentiations.

For a moment, Mr. Chairman, I would like to show you how this is being done. I will call upon Mr. Hamilton to pass you a set of our materials. If I may, I will take you through how we process a case in order to help us establish these priorities.

We have several other copies here, Mr. Chairman, for members of the audience if they care to follow along.

The first document that you see as you open this folder is a police form, and the police form we call the 163, after the number on the form. The thing I want to call your attention to here is that one of the first priorities that we had is we needed to get in the routine case, in the standard street crime case, a certain amount of uniform information about every single case.

In 1969, when we began to worry about this problem, we had a three- or four-line form. The rest of it blank. That constituted the standard police form. You could not open a file at that time with any confidence that the information you were seeking would be there.

A standardized form, in fact, even a manila folder, was in 1969 a management improvement of tremendous significance. We were at that time taking that three- or four-line form and we were wrapping it up in a piece of paper, folding it up several times, and I am sure you understand, Mr. Brasco, where that went was inside the coat pocket and home and then perhaps to the cleaners.

One of the first things we did when we took over this responsibility in the superior court was that we inserted these police forms into a folder.

What we wanted was, and we had to really start from scratch with this, was not only an automated system, but we had to have a manual system first. Automation is just a part of the sex appeal of this program, but it is really rooted in having information on which you can make intelligent prosecutorial decisions and it is getting that manual information into the hands of the prosecutor's office. That was our first and perhaps our most important challenge.

Now, the police officers fill out this form, Congressman, and the items that are automated are indicated on this form by the small triangle in the left of each blank.

Mr. Brasco. Let me get that.

Mr. WORK. In the left of each blank is the indication that this particular item is automated.

I call your attention, first of all, to item No. 3, just as an example. We carry in the automated system the identification number for each one of the persons that comes through our office. This identification number is a fingerprint-based number and he gets that number every time he comes through the system. This is vitally important because, as you are well aware, there is a significant alias problem in the criminal justice system.

This enables us to say this is the same man that has been through several times before.

Mr. BRASCO. Basically, that is his prior record?

Mr. WORK. That reflects his prior record.

That particular number is crucial to the development of our system and gives us the ability to trace the defendant through each one of the steps in the criminal justice process. We, in developing this system, conceived of it originally as a subsystem of a system for the entire criminal justice process in the District of Columbia, that would enable the offender to be traced from his first contact with the Police Department, through the prosecutor's office, through the court, and through the Department of Corrections. PROMIS is, in effect, a subsystem of this concept.

We can track not only the defendants through this tracing concept but we can also track criminal events, and we can also then finally track the case through to its ultimate disposition.

The way we track criminal events is through the No. 2 item up there, the complaint number. The complaint number is the number that is assigned to a particular bank robbery. That enables us to do a number of things. If two people commit a particular bank robbery, it enables them to be tied together because they carry the same complaint number and it enables us to also measure our workload much more significantly.

Criminal statistics are a very important byproduct of this system.

Mr. BRASCO. Excuse me. You are losing me just for one moment. Let me see if I can understand. When you talk about multiple defendants as related to box No. 2, would not the complaint indicate the number of defendants?

Mr. WORK. Yes, it would. But let me get, if I may, to the point.

Mr. BRASCO. Because I was missing your point.

Mr. WORK. I understand.

The point I was trying to make is simply this: From time to time I am sure you have been confronted with it right here in your responsibilities on this committee. You will find some organizations reporting to you that they processed so many cases last year. By "cases," Congressman, they might mean the number of defendants they processed, the number of counts in an indictment they processed, the number of indictments that they processed.

They can mean anything about a variety of statistics and they all would be honest and fair statistics, but they would be counting in different universes. So you have New York counting counts of indictments, you have the District of Columbia counting cases, you have Virginia counting indictments, and criminal statistics mean very little.

What we have developed in the PROMIS system is a way of counting in all of these modes. In other words, if someone in the police

department wants to count the number of defendants, we can count the number of defendants in our system. If you want to count the number of counts, we can count the number of counts. If you want to count the number of indictments, we can count the number of indictments. If you want to count the number of criminal events, that is where this complaint number comes in, you can count the number of criminal events.

That enables us to compare to Chief Wilson's statistics about the number of crimes that were committed. We can then count the number of criminal events that came into the system. We therefore can have a uniform set of statistics about each one of those problems.

In other words, it makes no sense to say that x number of crimes were committed in the District of Columbia, and x number of defendants were prosecuted. The first glance at that is that it is a comparative figure. That is not a comparative figure. You have to go back to x number of criminal events prosecuted in order to have the comparative figure. Because every time a crime is committed by two people, that throws your comparison statistics off.

What I am saying, the PROMIS system is a significant advance in the ability of the prosecutor's office to keep track of what actually is going on.

Now, the next form I would like to call your attention to—and I am not going to go through this whole packet, Mr. Chairman, but this one and a couple of the reports—is the PROMIS case evaluation form. I call your attention to just a few of the questions in the first column on the inside, because it is primarily this first column that constitutes the Wolfgang-Sellin seriousness scale.

And I think that you will see that they really derive from commonsense. This is not an esoteric, academic exercise. This is something that can appeal to a prosecutor who is working on the front line. The amount of harm that is done, the amount of property damage that is done, it is these commonsense factors that go into rating how serious the offense was.

Over in the last column—you will see that this is column 7—you will see the characterization of the offender. You will, again, I think, be struck by the commonsense factor involved in this last column. You will see that we are concerned about his arrest record. You will see we are concerned about whether he was on some form of conditional release. You will see we were concerned about his status at the time of papering or screening.

Not every one of these questions goes in the rating at all, Mr. Chairman. The ones I referred to are the primary factors in rating whether or not this is a serious offense or how serious the offense is and rating the person's criminal history or record.

Now, the way this is used, is reflected in the item—the second item down, you will find in your package, which looks like this. It is a report that comes from the computer system.

This report represents a middle page of a daily report that I, as the manager of the Superior Court Division receive and is received by several of the other supervisory people in my division. You will see that it reports a variety of things to me. It lists the cases. First of all,

in order of the seriousness of the defendant's score. You will see there, for instance, in the first one, No. 13 on the calendar for that day, it has a 15-defendant score. That means that that is a shorthand for, and it is a representation that I understand that is based on the facts that were gathered at the initial screening process and checked off in this first screening form.

Mr. Brasco. Is that high or low?

Mr. Work. You will see if you look at the top, it is above average. You will see up at the top, the year-to-date average scores and the daily average scores. This is for the misdemeanor trial calendar. You will see on this particular day, May 2, that the average defendant's score was 9.52, and the average defendant's score, which includes both felonies and misdemeanors for the year, is 10.69.

Interestingly enough, we sometimes have misdemeanor days that come up higher than the felony days, because the mere fact the person committed a misdemeanor doesn't mean he doesn't have a significant and very bad, very serious criminal record.

So here is a case that involves a gun, carrying a deadly weapon, gun, the first one, and it has already been especially assigned to one of the assistants in our division, and it has been continued one time under that number of continuances column. We have the continuance reason recorded there in the last column.

The final thing I wanted to call to your attention, Mr. Chairman, on this report, are the *X*'s that you will see over on the right-hand side. The *X*'s represent a significant management improvement for us in our office. The *X*'s mean that that person has another case pending in the system. And if it is over to the left of that column, it is a misdemeanor. If it is over the right, it is a felony.

That is all the more significant, because our court system is one of the most current court systems of any major city in this country. We are trying misdemeanors in approximately 8 weeks. We are trying felonies in approximately 100 days from the day of arrest, and this type of recidivism occurs within that span of time.

I did not bring with me the sheet that would have been the first sheet, which has the most serious defendants, the ones with the most serious records. And that is usually where the *X*'s are concentrated.

Chairman Pepper. You mean by that, that during that interval of 100 days that they committed other crimes?

Mr. Work. That is correct, Mr. Chairman. It is a problem that is a terribly significant one nationwide and only a system like PROMIS is in a position to measure. It is in a position to measure it because we capture that fingerprint-based identification number. So it is not just on the basis of name we are matching up, that this is the same person, but it is on the basis of a fingerprint identification.

Mr. Brasco. It is a terribly interesting program. I haven't been in court now for some years, but I might say I was assistant district attorney in Kings County, which is a rather large county in New York City. We had a fingerprint record system there and I suspect it has been there for quite a number of years, but the rest of this is a most significant improvement with respect to keeping statistics and something that is very worthwhile and can give up-to-date statistics with respect to the entire case.

Not only that, with respect to your entire workload, I suspect, in a very short period of time.

Mr. WORK. Yes. I have, in fact, with me, Congressman, a set of statistical reports I could pass up. It is typical of the kind of work we can do with our system. It can be highly detailed.

Mr. BRASCO. You gave us the figure 6 to 8 weeks' trial, disposition, for misdemeanors, and approximately 100 days in felonies. I assume you are including all of your cases.

Mr. WORK. That is correct.

Mr. BRASCO. Is that an average?

Mr. WORK. I am sorry, that is an average.

Mr. BRASCO. Something like 8 months or a year?

Mr. WORK. That is right. An average figure.

Mr. BRASCO. That goes into the overall average?

Mr. WORK. That is right. But one of the things we are proudest of in terms of our accomplishments since we have received the full local jurisdiction in the Superior Court of the District of Columbia, has been a substantial reduction in time. For instance, you take the time in our grand jury. Before court reorganization, the time was upwards of 95 days between arrest and the return of the indictment. We have reduced that time in the superior court—as I am sure you appreciate, it is the prosecutor's office that has responsibility for the processing times in the grand jury—we have reduced that time now in our last set of returns to 32 days.

We have been running our average times in the last 4 months between 30 and 40 days, which is, of course, a substantial reduction from 95 days.

It is the PROMIS system that enable us to keep track of these cases. And if I may just turn your attention then to the clipped-together print-out. Let me tell you how that does it specifically with relationship to time.

If you will turn to the middle of this handout, or rather the back, you will find a page that comes up and says, "The following grand jury felonies have been pending at least 30 days." We have a terminal in our office connected to the computer of which we can ask many questions. We can ask at the present time five different questions but they are questions of great significance. We can ask the computer to lift out for us any case that has been pending over any number of days in that particular section. So we can walk up to the computer and say, "Give me a list instantaneously of cases pending more than 30 days in the grand jury."

Mr. BRASCO. And you would have the assistant assigned to that matter?

Mr. WORK. That is right.

Mr. BRASCO. So you have a good gage as to productivity, also.

Mr. WORK. Exactly.

Mr. BRASCO. Let me ask you this in connection with this system, and I suspect that is another advantage of having such a system. You then have an opportunity based on your entire work product in terms of your scale in the procedure, of the ability to assign certain types of cases to certain assistant U.S. attorneys, obviously predicated on experience and expertise.

Mr. WORK. Absolutely.

Mr. BRASCO. Which is a distinct advantage. Then, I see, also, that even predicated on this information, you can have one assistant in

court on the arraignment, present the case to the grand jury, and ultimately try the case.

Mr. WORK. That is right.

Mr. BRASCO. Which is a distinct improvement as opposed to having separate assistants handle each part——

Mr. WORK. That is right.

Mr. BRASCO (continuing). Of that criminal process.

Mr. WORK. There is scarcely a part of the management of the prosecutor's office that PROMIS doesn't address itself to or attempt to improve. For instance, we get calls from witnesses in the mass-produced environment and the witness will call up and she or he will say, "My name is John Doe. I am a witness in a case and I have forgotten the day I was supposed to be at court."

We ask if you know the name of the person who assaulted you or the name of the defendant, and they will say, "No, what would I want to know the name of that person for"? I would then ask them perhaps, grasping for straws, "Do you know the name of the police officer that assisted you," and sometimes I will get a "No" there. If we get a "No" there, under our old way of operating, there was no way I could tell that witness what day his or her case was up. With an automated case system, we merely plug in the name of the witness in the system and it flashes up on the screen on a response that shows this witness is in such-and-such a case and this is the date.

A valuable tool for public relations in the prosecutor's office, a valuable tool for convictions.

Mr. BRASCO. That is very interesting.

Is your office here in the District of Columbia set up in various bureaus, in which cases were, basically by virtue of their category, assigned to relatively a small number of assistants: namely, homicide, robbery, and so forth.

Mr. WORK. We are not as specialized as some of the New York offices are, Congressman, but we have in the Superior Court Division, which is essentially equivalent to a local prosecutor's office, as I am sure you understand, three separate divisions.

One is our Felony Trial Section, another Misdemeanor, and the other is the Grand Jury Section. We are fortunate in that we also have on the Federal side our Office of Major Crimes, an Organized Crime Section, and we have a Fraud Section.

Because of the unique relationship of the U.S. Attorney to the District of Columbia, in that my superior of the U.S. Attorney is both the local and Federal prosecutor, he is able to use both the local and Federal statutes to the complete advantage of the citizens of the District of Columbia, and therefore is able to see his Organized Crime Section in the Federal side of his Office and Fraud Section in the Federal side.

But our Fraud Section will prosecute cases in the Superior Court Division or in the superior court as well as in the Federal court. As will our Organized Crime Section.

Mr. BRASCO. In terms of statistics, this is a very great improvement over some of the things I have seen in local prosecutor's offices. One of the things that always disturbed me in terms of statistics, and for the sake of discussion, a defendant may be charged with grand larceny of an automobile, and the same officer might charge the same defendant

with being an unlicensed operator, with being someone who was operating a motor vehicle without the proper insurance and right down to and including traffic infractions.

I suspect you could pick out for the sake of statistics, that this was only one transaction.

Mr. WORK. That is exactly the function of that number I was explaining to you before. That number is the transaction number and that ties everything together. That transaction number, that particular criminal event number, enables us—I am sure you are familiar with circumstances where an indictment would have to be dismissed and rebrought for technical reasons. That dismissal and rebringing under some statistical systems would be counted as two cases. It is not, in fact, two cases: it is one case, and it is that transaction number.

Mr. BRASCO. How much does this cost?

Mr. WORK. Congressman, I have here, anticipating your question, a sheet that sets out exactly the funds that were set out for this system and Mr. Hamilton will pass them up to you here.

It cost, under LEAA funding, $304,000.

[The funding information referred to follows:]

GRANT FUNDING OF PROMIS

Grant number	Date	Grantee	Purpose	Amount expended
70-DF-047	Completed, Dec. 31, 1971	Office of Crime Analysis	Contract awarded by OCA to Peat, Marwick, Mitchell & Co. for design and programing.	$60,000.00
72-A-111 (subgrant 72-13).	Sept. 1, 1971 to Jan. 31, 1972.	U.S. Attorney's Office, Superior Court Division.	System maintenance; interface with office manual operations system; improvement of source document filing.	42,328.40
71-DF-1120	Jan. 25, 1972 (initial award of funds) to Mar. 31, 1973.	do	Amended to make Institute of Law and Social Research grantee.	[1] 202,395.00
Total				304,723.40

[1] Extension of PROMIS to felonies. Redesign of subsystem.

Mr. BRASCO. That is for equipment?

Mr. WORK. No. That is for the development of the system. It has not been a terribly expensive development process. The equipment, we are fortunate in that the Department of Justice, of course, has a computer center. But we are not unique in that regard. There is hardly a major jurisdiction in this country that doesn't have a county or city computer center and usually there is hardly a major jurisdiction in this country that doesn't have an underused county or city computer.

In fact, in my experience in talking to other district attorneys about this, what you might think ordinarily in commerce and business would be a most important hurdle is not, in fact, a hurdle at all—computer time. There are computer centers that are underused and dying to be used and the prosecutor usually can find a computer center that is going to run for him very reasonably.

Mr. BRASCO. Do I understand you developed this system?

Mr. WORK. Congressman, that would be a gross overstatement. I was one of the leaders of the team that developed this system. Mr. Hamilton, to my left, was also a leader of that team.

Mr. Brasco. Both you and your colleagues in absentia are to be commended. I think it is a very fine system.

Did you ever give any thought to using a similar system for prisoners who have been incarcerated and are serving their sentence, in terms of trying to match up things to produce a better system of rehabilitation? Possibly the work records, backgrounds, habits? Because it seems to me it is part of the committee's work.

This is one of the things we think is lacking in terms of meaningful rehabilitation programs—the name is probably good, too, "Promise—with an "e" on it. This could be used to correlate all the information one needs to know about a defendant in order to rehabilitate him. It seems to me to be a tremendous way to coordinate the data that is necessary to try to fit him into a proper work program or training program.

Mr. Work. Even more important than that is evenhandedness of approach. I have had some correctional experience as a law student. I was an intern for a summer at Leavenworth Penitentiary. One of the things that sticks in the craw of prisoners time and time again is someone will be able to get into a college program and others won't be able to get into a college program. They say, "My record isn't as bad as his and I didn't commit as bad a crime, and I have more promise than he does, and yet I am not in this kind of program."

Evenhandedness is not just a problem for the courts or prosecutor or judges: it is a problem for corrections. And a system like this can help this. It can help management monitor this kind of problem right here, say in the Federal Bureau of Prisons here in Washington.

But I am happy to say the same gentleman who developed the scale we used, D. C. Gottfredson, with respect to persons' criminal history and background, is also working under contract to the Federal Bureau of Prisons to develop a system much like the one you have just hit upon here in your discussion this morning.

This type of practical application of a theoretical approach, we are just scratching the surface on it in our field. There has too long been a broad separation between the theoretical innovative thinking and the actual practice. There are a variety of reasons for that, including the lack of resources on the practical level.

You know, I sit down and talk to some of these local prosecutors about developing a computer system and I say, you know, developing a computer system is very hard work for your management team and you and the other people in your office are going to have to spend some time on it. They throw up their hands in despair and say:

> Where am I going to find the time? I almost have to go to court myself in order to move the cases through the system. I can't afford to be thinking about the future. I do not have the resources, do not have the ability to do anything but cover the courts.

That is one of the real tragedies of the prosecution in major cities today. We are really fortunate in the District of Columbia in that we have perhaps a larger number of prosecutors per population than any other city in the country.

Mr. Brasco. Maybe you can answer this, Mr. Work, or our chief counsel. Would this kind of program come under funding of the local prosecutor's office, where we can send in a team to develop the concept? Would it come under LEAA?

Mr. Nolde. Yes; it is, in fact, funded by LEAA.

Mr. Brasco. The problem is no money?

Mr. Work. LEAA has in fact helped promote the PROMIS system in other jurisdictions. The past administrator, Jerris Leonard, sent out a letter to all of the prosecutors in the country last fall telling them about this system and telling them that they would be available and another organization called the National Center for Prosecution Management, which has been funded with LEAA funds, would be available to assist them in making an application for this type of system for their office.

I ought to stop here and just say a few words for the National Center for Prosecution Management. The head of the National Center is Mrs. Joan Jacoby, an extraordinarily talented person, who helped us develop this PROMIS system, who worked with me in my office for a period of more than a year and a half. I asked her to come with me today so I could introduce her, but she was too modest to come.

The three of us really worked on the developing of these concepts in their earlier stages and she has taken what she has learned in those initial years now and applied them in her position as the executive director of the National Center for Prosecution Management.

In addition to that, we have had some very good response from a number of other prosecutors' offices in the system. As you heard yesterday, Mr. Busch from Los Angeles is installing the PROMIS system.

Chairman Pepper. Have you had any inquiry from the Miami district attorney's office, Mr. Gerstein?

Mr. Work. I have had some inquiries from the Miami office. I don't know how far along they are, but I will say this, a number of jurisdictions in Florida are moving right along in the computerization field and are doing some very good work down there.

Mr. Brasco. I feel like I am on a busman's holiday here.

Let me ask you this. In terms of this fingerprint record that you run, how many jurisdictions have that?

Mr. Work. Only the District of Columbia, Mr. Brasco, and that is a problem.

Mr. Brasco. That would be a problem. You would never know whether or not this individual had committed a crime in another State.

Mr. Work. That is a significant national problem and one I think probably should concern this committee very deeply. We also have room in our system and we do carry, when we get it, the FBI number, which is also a fingerprint-based number. So whenever we have a match on a FBI number that will also occur.

Mr. Brasco. Couldn't you use just the fingerprint of the FBI without a number?

Mr. Work. I am not certain. I am not expert enough technically to be able to conceptualize this for you, but I have the hope that someday we will be able to have a universal fingerprint number identification system, that will be crossjurisdiction. This problem is magnified in larger States, such as your own, where one city will have a defendant on one fingerprint number and another city will have him on another fingerprint number and never the twain shall meet.

I t hink we are going to be coming up—with the NCIC system, National Crime Information Center system—with an answer to this,

hopefully in the relatively near future, but we are years away. Unfortunately, even though we are getting the theoretical basis, we are years away from the full-fledged practical application.

Mr. Brasco. In New York, if I remember correctly, it might be a trifle more advanced in terms of the collection of information, because what would happen, the fingerprint request would go to 100 Center Street in downtown Manhattan, which would include the entire city of New York. Then a second request would go to Albany, and under the system, all jurisdictions report whatever fingerprints they have in terms of the relationship to a defendant and his criminal actions to Albany. So we get the benefit of that. And then send the copy of the prints to Washington.

Mr. Work. Right.

Mr. Brasco. So that we get a pretty good gage of whatever was available. Obviously, there are gaps in between, but I think with your system, you could develop the kind of network that would stop the gaps and would be more meaningful in keeping the necessary data.

Mr. Work. The key is that instantaneous access. For instance, we can go in when we screen that case, and before we make the bond representations, through our terminal and get instantaneous access to that fingerprint record and see what the pending cases are against the person and whether or not there are any existing warrants out for him, which are so important in this coordination respect and so important with respect to making adequate recommendations to the judge or magistrate about the bail recommendations we would submit we would need.

Chairman Pepper. Excuse me just a minute. How much would it cost and how technically difficult would it be and how long would it be after you get the money to provide that kind of a system on a national basis that you have here for the District of Columbia?

Mr. Work. Well, Mr. Chairman, we have here, and I think Congressman Brasco has the figures, the figure that shows how much LEAA money went in the sytem so far, $304,000. It takes a long time because not every jurisdiction, as you know, is like every other jurisdiction.

Chairman Pepper. On a national basis, you wouldn't necessarily have to have all of the items which you have in your local report. You give pretty generally what the record of that party charged with a crime in a given case was in the country, his rate of recidivism, instance of recidivism, his incarcerations, and crime, and what cases were pending against him perhaps in other parts of the country, and the like.

How much would it cost and how long would it take to set up that kind of system so you have access to it here in the District and other parts of the country?

Mr. Work. Let me suggest this: We have just recently been awarded a grant of $89,000 from LEAA to develop a series of modular software packages that can be lifted out of our system and transported to another interested prosecutor's office. One of the first customers these sofeware modular packages is going to be the prosecutor in Cobb County, Ga. He has already sent his people up to begin working with our software people to enable this system to be transported into other interested offices throughout the country.

That is going to save a lot of time. We have been working on this system and developing the concepts behind this system since late 1969.

Chairman PEPPER. Why couldn't the FBI develop this kind of a system on a national basis? Of course, where it would depend on use only by the local jurisdiction that have these systems to feed it in, but why wouldn't the FBI set up up a comprehensive system of this sort to bring in data from all over the country and it, in turn, would be accessible to all of the prosecuting offices or the courts in the country?

Mr. WORK. I think that is in fact the goal of the NCIC system, Mr. Chairman, and I think that kind of planning is presently going on.

Chairman PEPPER. Have you had any estimates from anybody as to how much it would cost to do it and how long it would take?

Mr. WORK. Mr. Chairman, I just don't know how much money is budgeted for the NCIC plans or how much they project will have to be used in the future for developing such a system. But it all depends ultimately, Mr. Chairman, on developing the subsystems in the prosecutors offices themselves to feed that information.

One of the things our system is going to be doing in conjunction with the Wales system is feeding data into the NCIC's District of Columbia repository. We are linked in. We have in our system what they call the project search codes, which are the NCIC Codes of Criminal Offenses, and we carry those search codes so we can link them with NCIC and provide the automated base for NCIC queries for the District of Columbia.

What we have to do is build the subsystems in the major prosecutors' office throughout the country that will link into NCIC, and all of a sudden, I think, and within the next 5 or 10 years, it is going to be very interesting. We are going to be faced with an information explosion in the criminal justice field.

Right now we have an information famine. But once these systems get developed, once they get linked up, we are going to have a great deal and the ability to do a great deal of significant research we just don't have now.

Chairman PEPPER. Suppose X is convicted here in the District of Columbia of some serious crime and there is a probation inquiry about that individual so it would be background for the judge's sentence. What access do you have at the present time as to information about that man's record?

Mr. WORK. At the present time—and maybe I should take this moment to do what I was going to do at the end of my remarks, take this moment to invite you to come down and see how it actually works. You will see what we can do. We can type in the man's name and ask what his status is right at the moment at any stage in the proceedings as he goes through the system.

For instance, if we have a man that comes in— and we check every single one that comes in on a new arrest—and we found out—well, let me give you an example.

I was working with the system myself just this last week and I ran into a case as I was working with it, where the defendant was on two different probations. He was on probation to the U.S. District Court in the District of Columbia and he was on probation in the Superior Court of the District of Columbia. He had just been rearrested and come into our system again.

Now, the likelihood, although I of course do not know it for a fact, the likelihood is great because those probations were very close to each other, that the information was not given to each probation officer and each judge, that he was on production somewhere else.

To answer your question more directly, we can type in his name and see whether or not he is on probation. We will, of course, have to call for his file because all the computer does is alert us to the fact he is on probation.

Chairman PEPPER. I know, but information is available only in the district you are talking about.

Mr. WORK. That is correct.

Chairman PEPPER. I am talking about in the whole United States.

Mr. WORK. I know of no other place that information with his kind of depth——

Chairman PEPPER. When the judge is sentencing that man, he doesn't know whether he just got out of a prison in Florida or some other place, or whether he served half a dozen prison terms, et cetera.

Mr. WORK. Our only hope is that we will have the FBI rap sheet in the file and the FBI rap sheet is in fact accurate and complete.

Chairman PEPPER. You mean every time a man is fingerprinted in a State that information is given to the FBI?

Mr. WORK. That is it, presently.

Chairman PEPPER. Every time he is sentenced and spends incarceration in a jail or penal institution, that comes to the FBI?

Mr. WORK. That is right. It is supposed to.

Chairman PEPPER. Have they got it on a computer over there?

Mr. WORK. I believe it is computerized, Mr. Chairman. The difficulty goes not to the FBI system, but right back to the heart of the local systems. If the local system isn't good enough to know they have that man in there several times, which we know they are not, they are also not good enough and accurate enough and complete enough to get the information to the FBI. Because it all goes back to the local criminal public system.

It all rests at their door. If they are not feeding accurate information to their own files, they can't get accurate information to the files of the FBI.

Several other aspects, if I may continue.

One of the most important things we have done with this system, and it is very unique, is that we record in this system the reason for the actions that we take. We don't just record that we have nol-prossed a case or dropped a case or the case has been dismissed. We put into the system the reason for the action.

I think this is one of the most significant improvements that we have made in this, in the problem of recordkeeping for a prosecutor's office. How many times has an experienced prosecutor been faced with going to a file and perhaps not even being able to tell from the file itself what the reasons were the case was dismissed or dropped.

This makes, I think, a very telling and important point. The prosecutor is responsible to the public, the people, for these reasons. He therefore should have these reasons at his fingertips, should be able to get them instantaneously. The court, of course, when they automate, only write down a nolle or dismissal. They don't know, they haven't got the information why the case was either screened out, why it was dropped, why it was nolled, and dismissed. We collect that information. We have standardized reasons and you will see perhaps in that larger report, the one that is on—actually, my working paper. Not that report, Congressman. The one that is on real computer paper, not Xeroxed paper.

You will see on that report a table of dismissal reasons.

You will see reasons that relate to witnesses, nonappearance. You will see where we record reasons that relate to search and seizure. We are putting down why we are taking the actions that we are taking, and we are putting it down in a way we can retrieve it quickly so that we can make reports, so we can evaluate it.

Another product of that, for instance, is that we were able to feed back information recently to the police department with respect to a type of case that the police officers were having problems with. The police officers were not using the correct procedures in handling knife cases. They were not making correct arrests under our statute that relates to knives.

We were able to identify that because of our information system and feed back to the police department that information. They issued a special set of directives that related to knives. We have already, then, begun to see the salutary effect coming back through the arrests with respect to knives.

Mr. BRASCO. I see you have one that indicates witnesses not being available.

Mr. WORK. That is a terribly significant problem.

Mr. BRASCO. That would be an interesting thing for a prosecutor to know if the man comes back into the system with respect to problems that might have been experienced before with witnesses.

Mr. WORK. We recognized this as a problem and it was the data base that first pointed it out. You can see witnesses were a problem. We didn't understand the gravity of the witness problem until we began to see it statistically. As a result, we have applied for and received a grant from LEAA to do a witness survey of witness problems in the District of Columbia, and we are going to do a study not only of the data in our data base, but also we are going to conduct an actual opinion survey of our witnesses to see what kind of problems they have.

Mr. BRASCO. I think the general public would be very interested to see that independent statistic with respect to the witnesses' availability and cooperation.

Mr. WORK. It is very important.

Mr. BRASCO. To indicate that an integral part of the prosecution system is the availability of the citizens who will come forward.

Mr. WORK. No question about that.

Chairman PEPPER. By the way, one of the witnesses we had this week said they had arranged to have sessions at night so that it would be more convenient for witnesses to come at night rather than losing time from their work or maybe not being able to get off from work. Of course, the other thing is, the witness having to come maybe two or more times and not getting to testify because of some other delay.

Mr. WORK. That is a very serious problem. Both of them are serious problems. With respect to the latter, we continue to have a serious problem with the multiple appearances by witnesses. That is not only an inconvenience to the witnesses but it is also very costly, as I am sure you know.

Chairman PEPPER. Do you have any night courts?

Mr. WORK. We ran an experiment about 3 years ago now, Mr. Chairman, with night court. My office, however, is open every single

night until 10 o'clock. We keep a district attorney on duty until 10 o'clock every night to receive citizen complaints, to hear from witnesses if they have problems, but the court is not open.

Chairman PEPPER. We don't have any night session?

Mr. WORK. No. When we ran this experiment about 4 years ago, the conclusion was that for a variety of reasons it was not beneficial to the court. One of the reasons, I believe, was that in fact we had very little interest in it. We made the time available for particularly nonjury trials. If a person wanted a nonjury trial, he had the option of having it at night. Unfortunately, we did not get very many callers for that particular service. I think one of the reasons was perhaps it was just nonjury. We felt reluctant to keep the jurors on into the night hours. We have a very high percentage in this jurisdiction of jury trials. Jury trials are the rule in the district, rather than nonjury trials. So I think that may have been a factor and it has not been as successful as it might.

Our small claims court operates at night and pretty successfully.

Chairman PEPPER. That is one of the things worth keeping in mind.

You developed a magnificent system here to give you full information within your own area here, within your court system, as to what is going on. What do you have comparable to the service rendered by the New York system, so favored by Mr. Justice Ross, who is the administrator of the court, and whose job it is to correlate all of the component parts of a court proceeding, to see the witnesses and prisoners and the defense and prosecuting attorneys and the courts and all of the other component parts of the judicial proceeding are present at the same time and available so that the machinery may move ahead? Do you have anything like that?

Mr. WORK. We do in our court system have a court executive, Mr. Chairman, and that court executive was set up pursuant to the Court Reorganization Act that Congress passed in 1970. It has had one important salutary effect that is analogous to the situation you cite. The chief judge in the court executive established an interagency task force that deals with interagency problems. We have never had that kind of a realtionship before. The interagency task force meets regularly and we discuss problems of interaction between all of the agencies and try to make systemwide improvements with the many kinds of problems we have.

Chairman PEPPER. But in New York, the chief judge, the senior judge designates, and apparently they all know he has the support of the court and if somebody doesn't cooperate then the court can take action by way of recommending to some agency that they try to get their people to participate in this or some of them may be within the jurisdiction of the court system itself, so that the court would have authority to do something about it.

We were holding a hearing in San Francisco and the Federal district judge told us concerning a case that was supposed to be tried on a given day, he couldn't proceed because the defendant wasn't there and no other case was set up and the judge was idle on that day.

I know Justice Clark told us he puts more emphasis on having proper administrative support for the court than he does upon naming an additional judge.

Mr. WORK. No question about that, Mr. Chairman. In fact, the same kind of difficulty applies to the prosecutor's office. I think essentially what we are talking about in the criminal trial is a significant staging and logistics problem. You have to get all of these participants there at exactly the same time and I, in the days I was actively appearing in court, had many experiences where I was sitting waiting for one or another one of the participants to arrive there before this whole event could come off.

There is no doubt that it is a significant problem and I think it sounds like a great idea.

Chairman PEPPER. Before they put this system in effect, a lot of times jail authorities would be delayed in getting the defendants there. All sorts of delays would arise.

Is somebody giving consideration to that in the District's system?

Mr. WORK. As I mention, Mr. Chairman, we are trying to deal with that with our executive officer as the head operative agent and one of his assistants presiding. We are trying to deal with it as a committee rather than an individual assigned the responsibility. We are having a fair degree of success. But it is a significant problem and I don't pretend to have any magical answer to it.

Mr. BRASCO. I was wondering if you have any experience in the data system of yours, PROMIS, with respect to being able to schedule the trial of the case, for the purpose of not having witnesses and/or the police officers come down to the courthouse, thinking that they may be on for some court procedure that day, only to find they have to go home and come back the next day. And with respect to witness availability especially, one of the most discouraging aspects and probably one of the most single factors, along with some others, but that single reason given by most citizens is that "I am not going to be involved in that court system; I will lose my job, more than a day's pay." And from a police officer's point of view, he can be out in the street rather than standing around waiting for the court to call him to present his testimony.

Have you had that experience with this in terms of any beneficial fallout?

Mr. WORK. Congressman, we have not. The system does have some relationship and information to offer with respect to these problems but we are not in our office responsible for calendaring in any part of the court, except in the grand jury part of the court. The court manages the calendar in every other part.

But as you say, there is information in a system such as ours that has a hearing on these matters.

Mr. BRASCO. You can tie it in quite easily, could you not?

Mr. WORK. There is no question about that. We have not culled that data out of our system. This brings me to another point I am really interested in making.

There are more than 160 separate items of information about each case in that data base. There are more than 30,000 cases now in that data base. There is a wealth of research potential in there for a variety of problems, and we have applied for a law enforcement assistance administration grant to try to get at some of that research.

We have had a variety of institutions that have come to us that have been interested in helping us get at it. I hope within the next few years we are going to be able to tap it.

But I think you will be interested in our priorities in that regard. We set out in the grant application we have written, our first priority is going to be operationally based research. In other words, research that will help us improve our operations. And the things you touched upon, calendaring, is one of those items we set forth as an example of where this research base could help us.

I think another thing that is important about this is as similar systems are developed in other prosecutors' offices—and here this committee can be of enormous help by endorsing this concept—as other systems are adopted in other prosecutors' offices like this, attention ought to be paid to the potential cross-jurisdictional research, so we have data elements in common, so in effect the computers can speak to one another.

By setting up sort of minimum standards for a system such as this, we will be able to do significant cross-jurisdictional research. I don't think LEAA or any other segment of the Federal Government should be in the business of funding those systems or helping to fund those systems, unless there is the ability to address national crime problems and do the kind of cross-jurisdictional research that prototype systems like this, if followed elsewhere, will enable us to do.

It is hard to explain or to overemphasize how dramatic the effect has been of building this system. I thought when I started out in 1969, I was developing something that was going to help our office. But I really didn't realize the project I was undertaking was the project, really, of rebuilding and rethinking, not only the administrative operation of the office, but rethinking policies, priorities.

Thinking through and updating every stage of our procedures. Weeding out procedures and numbers and things like that no longer meant anything to us and the variety of things that resulted from that. Not only have we improved our conviction rate with respect to particularly these major offenders in our mass-produced environment in particular, but this has led us to develop a much better and more comprehensive training program.

It has made us realize that we have problems in the office of discrepancies between attorneys. As a result, we are beginning to set down and put in writing our training directives. We have already put in writing our screening policy, what we call our case papering policy. We have had to really rethink and bring up to date, because of this system, each one of the steps and all of the processes we go through.

I think that more than anything else, perhaps that this stage, because it is so early in the stage, that getting there, becoming automated, has been a substantial portion of the benefit, because it has made us rethink in a rigorous directed kind of fashion, what it is exactly we are supposed to be doing here in our office.

That has been a tremendously important exercise and one we didn't really realize we were getting into when we began the project.

I think the final thing I would like to say, if I may, is really a word of caution. Building a system like this is a tremendous task. It takes a long time and there are lots of problems. Having had no experience with computers before and only being a line-type prosecutor, I said to myself, tomorrow I am going to have a computer system and I will know everything I need to know and I will have this information at my fingertips.

It is not a matter of tomorrow. We have come to regard PROMIS as a 5-year project and we are only in year three. There are people who look at the system and pull out a case today and say, "Oops, there is an error. The machine made a mistake."

The machine didn't make a mistake. It was somebody who fed the information into the machine that made the mistake. But the system has growing pains and growing problems, and it takes a long time to make a system like this work.

Perhaps as I look back on it, we made the system operational too soon. We didn't spend enough time in the management development phase. For that reason, among my own assistants, the system in its initial stages developed a serious credibility problem, because there were so many errors in the system initially.

I tell other prosecutors' offices when they come to see me about this, one of the biggest challenges you are going to have is convincing your own people there is another way, that a new system ought to be tried. We have found that to be one of our biggest problems.

I think, however, if you will come down and accept my invitation and, believe me, it is earnestly offered on behalf of myself and the U.S. Attorney, and the Department of Justice, if you accept my invitation to come down and see it, I think it will be worth your trip. I think you will be interested in it and I think you will then be able to understand a little bit more about why we are enthusiastic about it. It will not take long. We are only 10 minutes away. I can get you in and out in an hour. We would be deeply honored if you would come down and visit us.

Thank you very much.

Chairman PEPPER. Thank you. We will certainly be interested in it and we will certainly see if we can't work out a visitation sometime soon.

I assumed, coming in while your presentation was in progress, that all of the information you told us about was available to the court. I find from counsel this is primarily for the prosecutor's office.

Mr. WORK. It is the prosecutor's office that feeds the information in here but let me assure you of this. This information is public information. If the court wants to see it, we will provide it to the court. If the defense counsel wants to see it, we will provide it to the defense counsel. There is nothing secretive about the system and the only thing we try to do is this: We try to protect the names of the people, as you will see in my handout to you.

We are conscious of privacy and whenever we have a visitor or something of this sort, we eliminate all of the names. The defense counsel, for instance, can't come in and wander through all of the names of all of the defendants, but he can certainly see anything pertaining to his defendant. Or the defendant can get anything that pertains to himself. We cross out all of the names when we hand it out. Strictly for privacy reasons.

Chairman PEPPER. I would think the court, in passing sentence upon the defendant, would profit by having all of this information. For example, he asks for bail and if he can pull the files of this man he might find out the last time he was on bail he committed two crimes; and it might influence his decision to grant bail.

Also, the probation officer would have great difficulty in collating all of this information you have; in response to the judge's direction he gives him a background report on this man. Do the probation officers have access to your data?

Mr. Work. They certainly do. We make available, in fact, not only this data available but the whole file. Our whole file is more important than the automated data to the probation officer.

Mr. Brasco. It really is intriguing. I think certainly a most worthwhile project. I got a call from my office the other day, from a young fellow who was taking an examination for a policeman in an adjoining county, Nassau County, and he had some problems when he was 18 years old and he would like to find out the disposition. He wanted to have his record complete and sometimes they are so difficult to find.

It may sound strange, but I am sure you know they can have 15 guys going around looking for it and throw up their hands in disgust and say, you just can't get it. I am sure, that in your system you have that information in terms of what was the disposition of a case at your fingertips.

Mr. Work. That is in the future for PROMIS.

Mr. Brasco. You don't have that?

Mr. Work. We are developing that. Since PROMIS began on January 1, 1971, we only have things from that day forward. We did not go back and automate the entire history.

Mr. Brasco. I am talking about the concept. I suspect the workload of feeding the information in——

Mr. Work. The concept covers that, no question about that.

Chairman Pepper. Mr. Work, you have certainly done a magnificent job in setting up this system and getting it into operation. We know you are going to proceed in the perfection of it. I just hope we can get your example adopted, emulated by other prosecuting officers all over the country, and we can establish a national system of similar character so that all component parts of the administrative process for the administration of justice will have access to all of the information that should be available on every matter that comes before any part of that system.

We want to thank you very much for being here.

Mr. Brasco. I am going to send this to my good friend, the district attorney of Kings County.

Mr. Work. Fine. Thank you very much, Congressman.

Chairman Pepper. Mr. Work, counsel suggests I ask if you would like to make any comment on anything said this morning by Judge Halleck.

Mr. Work. Thank you, Congresman; if I may.

I would like to give you a further statistic. Judge Halleck mentioned that his conviction and plea rate was, as I recall it, about 10 percent trials and about 90 percent pleas. Judge Halleck does get a great number of pleas. However, the overall felony plea rate is somewhat different from that and I think the record ought to reflect that.

The overall felony plea rate in the Superior Court of the District of Columbia for fiscal year 1972 was 65.2 percent. For fiscal year 1972, we tried in our felony cases, 26 percent of the remaining cases. That is a substantial number of trials. We try a higher percentage of cases than almost any other major jurisdiction in the country.

We feel this reflects creditably on our system. We don't feel anyone is forced to plead guilty. If he doesn't want to plead guilty he can get a trial in our jurisdiction. As a general rule, and I think it is quite safe to say, a person is not penalized for going to trial in our district.

I should also say, while talking about figures, we are very proud of our conviction rate in the superior court. We are running a conviction rate of approximately 86 percent. Last month it was 87.4 percent of our felonies. We think this is an important figure, especially in light of court reorganization. As you know, the mandate of court reorganization was to increase the number of felony prosecutions. We have more than doubled the number of felony prosecutions but our conviction rate has not, in fact, dropped. We think that is very significant.

Mr. BRASCO. That conviction rate includes pleas and trials?

Mr. WORK. It does include pleas—that is right.

Mr. BRASCO. Would you have a separate one for trials?

Mr. WORK. Yes, we do. Last month, cases won after trial were 81.3 percent. We are very proud of that statistic.

Chairman PEPPER. I thought a very serious matter was presented by Judge Halleck in pointing out the large number of cases where the law enforcement authorities had not executed bench warrants issued by the court. He told us of some instances where homicide and robbery had occurred on the part of somebody who had already been subject to being brought in by a bench warrant.

He added—as he understood it—that the Police Department said it was not part of its duty to serve bench warrants and the U.S. Marshal's Office is so overcrowded with work it takes a long delay to get the bench warrants served. What comment do you make about either of those matters?

Mr. WORK. Yes; I would like to comment on that.

Let me say, first, that the bench warrant problem has been a problem of long standing in the District. The way the bench warrant responsibility broke down initially was that, years ago, the old court of general sessions bench warrants—misdemeanor warrants—were served by the Police Department, and the Federal court warrants were served by the marshal.

I am trying briefly to give you a little history of it. When court reorganization came about, that distinction between felonies and misdemeanor responsibility continued. So the Police Department felt it did not have the responsibility for the felony bench warrants and that continues as of today.

Our Office has taken some steps to try to alleviate this impasse, and this is what we have done. We have taken on the responsibility for putting into the Wales—Washington Area Law Enforcement Computer System—each one of these existing bench warrants. So if someone is stopped for a traffic violation, or if there is a hit on Wales, the person is arrested. That is presently our most fruitful way, believe it of not, of handling bench warrants. And even though it is not the responsibility of my Office to go out and execute it, we are just the prosecutor, we did assume and voluntarily assumed, because we wanted to get this issue off dead center, the responsibility for putting those bench warrants into the Wales.

That part of the system is working quite well and we are quite happy with that, and we hope through a process of working with both the Marshal's Office and the Police Department that we will be able to persuade them to resolve the problem.

Chairman PEPPER. Why can't either the municipal level or Congress simply make it the duty of the Police Department to serve these bench warrants?

Mr. WORK. There is no question that it could be legislated, Mr. Chairman.

Chairman PEPPER. It could be done by the City Council or the Commissioners of the District?

Mr. WORK. I think it could be done, certainly done, by the Council of the District or the Commissioner.

Chairman PEPPER. I tell you, as far as I am personally concerned, I would like this to be made a matter of record, if the District authorities don't make it clear that it is within the duty of the Police Department as well as the Marshal's Office—of course, that would have to come through Federal directive—that the Police Department is obligated to serve these bench warrants, which is part of the administration of justice system, that we will see if we can't get Congress to pass a law directing that they do so.

Mr. WORK. Let me assure you the U.S. Attorney's Office shares your concern. I should say one other thing about it. We have made an informal arrangement whereby certain priority bench warrants are given priority attention, so the problem is not quite as bleak as Judge Halleck painted it to be, and we are working on it.

Chairman PEPPER. Thank you very much, Mr. Work. You gave us extremely interesting and valuable information today.

[Mr. Work's prepared statement follows:]

PREPARED STATEMENT OF CHARLES R. WORK, CHIEF, SUPERIOR COURT DIVISION, OFFICE OF THE U.S. ATTORNEY, U.S. DEPARTMENT OF JUSTICE

Mr. Chairman, members of the committee, my name is Charles R. Work, and I am an Assistant United States Attorney for the District of Columbia. I am Chief of the Superior Court Division of the United States Attorney's Office.

It is my privilege to appear before you today on behalf of the Department of Justice and the United States Attorney for the District of Columbia, Harold H. Titus, Jr., to describe to you our management information system, known as PROMIS (Prosecutor's Management Information System).

THE PROBLEM TO BE SOLVED

In the District of Columbia, the United States Attorney is the prosecutor for common law crimes as well as federal crimes. Like local prosecutors in most major urban areas, the United States Attorney in the exercise of his local jurisdiction must prosecute thousands of cases on an assembly-line, mass-production basis.

As you are all aware, from 1958 to 1969 the number of serious felonies in the District increased approximately 600 percent. During this period, however, there was virtually no increase in the number of judges, prosecutors and defense counsel; backlogs grew and felonies were downgraded to misdemeanor status for trial.

In 1969 the President proposed a comprehensive court reorganization plan to cope with these problems. After careful consideration, Congress on July 29, 1970, passed the District of Columbia Court Reform and Criminal Procedure Act of 1970 (P.L. 91-358). In addition to restructuring the Court system the bill provided for more judges, revamped the Bail Agency and the Public De-

fender's Office. The staff of the United States Attorney was also subsequently increased.

Simultaneously, the United States Attorney at that time, Thomas A. Flannary, saw the necessity for internal management improvements to insure that the new resources would be used efficiently. One of the most important of these improvements was the development of an innovative management information system known as PROMIS (Prosecutor's Management Information System).

With the aid of a grant from the Law Enforcement Assistance Administration a team of prosecutors, systems analysts and a criminologist was assembled.[1] The initial design was completed and the first phase of the system was made operational on January 1, 1971.

THE PROMIS CONCEPTS

As it is used in Washington, D.C., PROMIS is a computer based information system. However, to understand PROMIS, it is important to disregard the computerization attribute momentarily and to examine some of the assumptions, concepts, and policies which are embodied in PROMIS.[2]

Implicit in PROMIS is the notion that the prosecutor must have a way of objectively evaluating his workload. In a small town, a prosecutor can become intimately familiar with each case in his office and know how each compares to the other in terms of the seriousness of the crime and the criminal career of the accused. However, in the large cities, one case becomes virtually indistinguishable from another because of the huge volume of cases and the large number of assistant prosecutors. What PROMIS does is attempt to recreate the small town prosecutor's knowledge of his caseload through the use of modern technology. Standardized rating schemes, developed by criminologists and statisticians, are applied to each case and each defendant to provide numerical ratings that give visibility to the differences among cases and defendants. With these ratings, the chief prosecutor in a large office can do consciously and deliberately what the small town prosecutor does more naturally and spontaneously: he can decide which matters deserve most of his time and concern. That decision, in a big city office, translates into special, intensive case preparation and monitoring for serious crimes and habitual offenders.

The standardized technique for rating crimes and defendants also helps solve another problem of the prosecutor, whether he is from a big city or a small town. These ratings give the prosecutor an objective basis for assuring even-handed justice. He can assure that defendants with comparable criminal backgrounds who commit offenses which are comparable in terms of the amount of harm done to society are given equal treatment.

Another concept which underlies PROMIS is that the prosecutor is one of the key administrators in the criminal justice system. What PROMIS does in relationship to the administrative responsibility of the prosecutor is to collect in standardized fashion, performance data for statistical analysis. By routinely collecting and analyzing this data, the prosecutor can identify problems not only in his own office but in the relationships of the various component criminal justice agencies as well.

In fact, as I shall make clear later on in my testimony, the performance of the criminal justice system can be measured in PROMIS through an analysis of three of its primary units of work: the crime, the accused, and the criminal proceedings.

---

[1] The team was headed by Joan E. Jacoby, then Director of the Office of Crime Analysis of the District of Columbia, and Charles R. Work, then Deputy Chief of the Superior Court Division of the Office of the United States Attorney, Washington, D.C. The project manager was William A. Hamilton, then Senior Consultant, Peat, Marwick, Mitchell & Company. Other team members were Sidney H. Brounstein, Robert H. Cain, Joyce H. Deroy, James M. Etheridge, John L. Gizzarelli, Fred L. Lander, III, Soo Lee, Dean C. Merrill, Stanley H. Turner, Frederick G. Watts, and Robert Whitaker. Mrs. Jacoby and Mr. Etheridge are presently the Executive Director and Deputy Executive Director respectively of the National Center for Prosecution Management.

Mr. Hamilton and Mr. Merrill are presently the President and Vice President, respectively of the Institute for Law and Social Research.

[2] See generally Hamilton, "Modern Management for the Prosecutor," 7 The Prosecutor 472 (1971); Watts & Work, "Developing An Automated Information System for the Prosecutor," 9 Am. Crim. L.Q.—1970; Work, "A Prosecutor's Guide to Automation," 7 The Prosecutor 479 (1971); Merrill, "Using the PROMIS Tracking System for Criminal Justice Evaluation," Proceedings of the International Symposium on Criminal Justice Information and Statistics Systems 231 (1972).

A DESCRIPTION OF THE PROMIS SYSTEM

The types of information contained in PROMIS on each case include:

Information about the defendant.—(Name, alias, sex, race, date of birth, address; facts about prior arrests and convictions, employment status, bail status, and alcohol or drug abuse).

Information about the crime.—(The date, time, and place of the crime, the number of persons involved in the crime, and information about the gravity of the crime in terms of the amount and degree of personal injury, property damage, and intimidation).

Information about the arrest.—(The date, time, and place of the arrest, the type of arrest, and the identity of the arresting officers).

Information about criminal charges.—(The charges originally placed by the police against the defendant and the reasons for changes in the charges by the prosecutor, the penal statute for the charge, the F.B.I. Uniform Crime Report name for the charge, and the Project Search name for the charge).

Information about court events.—(The dates of every court event in a case from arraignment through motion hearing, continuance hearing and final disposition to sentencing, the names of the principals involved in each event, including the defense and prosecution attorneys and judge, the outcome of the events, and the reasons for the outcomes), and

Information about witnesses.—(The names and addresses of all witnesses, the prosecutor's assessment of whether the witness is essential to the case or not, and any indications of reluctance to testify on the part of the witnesses).

As mentioned earlier, one of the key features of the PROMIS system is the automated designation of ratings for pending criminal cases. Based on these ratings, priorities are assigned by the computer. The ratings are, in turn, based on an evaluation of the gravity of the crime and the criminal history of the defendant.

The gravity of the crime is measured in terms of the degree of harm done to society rather than in terms of the legal nomenclature. A scale developed by the criminologists, Thorsten Sellin and Marvin A. Wolfgang, which assesses crime gravity in terms of the extent of personal injury, property damage, and intimidation, was modified for use in the PROMIS system.[3]

The gravity of the criminal history of the defendant is assessed by a modified version of a scale developed by another team of criminologists headed by D.C. Gottfredson.[4] That scale examines factors such as the frequency of prior arrests, the number of previous arrests for crimes against persons, the use of aliases, and the use of hard narcotics.

In the District of Columbia Superior Court, the calendar is set and controlled by the court. PROMIS produces an advance list of the cases scheduled by the court for each calendar date, and ranks the cases according to their priority crime and defendant ratings. A special team of attorneys intensively prepares and monitors the cases which are given high priority ratings.

Another key feature of PROMIS is the ability to track the workload of the criminal court system from three separate vantage points.

From the vantage point of the crime or criminal incident.—This is accomplished by including in PROMIS the complaint number which the police department assigns to a reported crime. With this number, it is possible to follow the full history of the court actions arising from the crime even though those court actions may involve multiple defendants, multiple cases, and multiple trials and dispositions.

From the vantage point of the accused person or defendant.—This is accomplished by incorporating in PROMIS the fingerprint-based number which the police department assigns to the individual following his arrest, and which is used again by the department if the same individual is subsequently arrested. With this number, it is possible to accumulate criminal history files on offenders and to note incidents of recidivism.

---

[3] See T. Sellin and M. Wolfgang, "The Measurement of Delinquency," John Wiley and Sons, New York (1964). The modifications made to the Sellin-Wolfgang scale were minor.

[4] See D. Gottfredson and R. Beverly, "Development and Operational Use of Prediction Methods in Correctional Work," 1962 (Proceedings of the Social Statistics Section of the American Statistical Association, Washington, D.C., 1962); D. Gottfredson and J. Bonds, "A Manual for Intake Base Expectancy Scoring," April 1, 1961 (Form CDC-BEGIA), California Department of Corrections, Research Division, Sacramento; Gottfredson and Ballard, "Differences in Parole Decisions Associated with Decision-Makers," 3 J. Res. in Crime and Delinq. 112 (1966). Scale modifications were minor.

From the vantage point of the court proceedings.—This is accomplished by including in PROMIS the number which the court assigns to the matter pending before it. With this number, it is possible to trace the history of any formal criminal action from arraignment through final disposition and sentencing and to account for the separate fate of each count or charge.

The inclusion of these three numbers is very significant. The numbers provide an "instant replay" capability to trace the criminal incident, the defendant or the court actions. PROMIS was designed in this fashion so that it would become the central link of Project TRACE (Tracking, Retrieval, and Analysis of Criminal Events), a system designed by the District of Columbia Office of Crime Analysis to provide a basis for communication among the agencies of the criminal justice system and the ability to track offenders from arrest through incarceration.

Another important aspect of the PROMIS system is that explanatory data is deliberately included to indicate the reasons for each event and disposition. This reason data is acquired as a by-product of the collection of data for the system's day-to-day operational support functions. For example, PROMIS not only records the date and the fact that a case was screened out, continued or dismissed, but also records the reasons the case was screened out, continued or dismissed. The analysis of reason data enables the prosecutor to study in much more detail the effectiveness of various prosecution policies and procedures.

MANAGEMENT IMPROVEMENTS INDUCED BY PROMIS

The development of the PROMIS system has led to the adoption of a number of other significant improvements in the management of the office.

One of the primary benefits of developing any information system is that it forces management to describe and define the key office functions the system must support. In the process, weaknesses and redundancies in operations are made visible and can be corrected. For a PROMIS-type information system, this forced exercise in descriptive analysis takes on even greater importance because the system is meant to be used as a tool for actively enforcing office policies and priorities. Thus, not only are functional weaknesses exposed, but also strategies and tactics of prosecution management are subjected to rigorous definition and review.

An example of the benefits wrought from this process is the Special Litigation Unit. A special six-man unit was formed within the prosecutor's office to provide special attention to the high priority misdemeanor cases. This unit provides continuous, concentrated monitoring of all cases identified as having high priority by the PROMIS system. Once a case has been flagged as a priority case by virtue of a high defendant criminal history rating, it is assigned to a member of this unit. That assistant prosecutor contacts the witnesses, interviews them and personally arranges for them to be present on the trial date. He reviews the periodic PROMIS reports on the case to determine whether there are any other pending cases against the same defendant and, depending upon his finding, may also contact the defense counsel to ascertain if a plea can be negotiated. The conviction rate for the priority cases which receive this intensive attention from the Special Litigation Unit is approximately 25% higher than for the misdemeanor cases processed routinely.

Other improvements which have been induced by the process of developing and operating the PROMIS system include:

Paralegal Program.—The PROMIS system exposed some important weaknesses in the recording of precise and accurate explanations of case decisions by assistant prosecutors. Even without a computer-based system, it is imperative that prosecution records contain a full accounting of all transactions and the reasons for the discretionary decisions. With the emphasis in the PROMIS system on recording reasons for all prosecutorial actions, it soon became apparent that this requirement for full documentation was not being met satisfactorily. The visibility that PROMIS gave to this problem led to the creation of paralegal positions in the office. Paralegals have been assigned to the calendar courtrooms to aid the prosecutor, particularly with regard to the documentation of reasons for trial dates, continuances, nolle prosequi's and dismisals. Other paralegals are assisting attorneys in the coordination of continuances, the notification of witnesses, the interviewing of citizens who wish to file complaints, and the preparation of the necessary documents at the intake and screening stage.

Comprehensive Training Program.—The PROMIS system has also given visibility to performance problems. Disposition rates can be displayed in a variety of ways which expose training deficiencies. A natural outgrowth of this exposure has been the development of a comprehensive training program on prosecution skills and administrative and management skills. A careful examination of the training needs has been completed for four types of staff: the management level prosecutor, the line prosecutor, the paralegal, and the administrative support staff. A curriculum design has been completed for each of these staff types and case studies, lecture materials, video tapes and other audio-visual aids are being developed. The curriculum design includes a comprehensive range of subjects from an overview of the prosecution and criminal justice systems to specialized prosecution skills.

Directives System.—PROMIS has heightened the consciousness in the office of policy development and implementation. Consequently, a directives system is being developed to provide a conceptual framework for the determination and promulgation of policy and procedures.

Operationally-based Research.—It is expected that another significant benefit from PROMIS is still to be realized: a research program on the PROMIS data base. The PROMIS system currently contains complete case histories on approximately 30,000 closed cases. In addition, the data base is growing by approximately 1,200 criminal cases per month.

PROMIS II

In February 1973, the United States Attorney for the District of Columbia, Harold H. Titus, Jr., made the decision to upgrade the PROMIS system so that case information could be instantly obtained via terminals placed throughout his office. This new phase in the development of the system has been designated as PROMIS II. PROMIS II is different from PROMIS in that it is on-line, real-time system. That is to say, certain pre-formatted questions may be asked directly of the data base and the answer is flashed back instantaneously on a TV-type screen. Moreover, PROMIS II is designed to be useful not only to the prosecutor's office, but also to the police department.

PROMIS II is presently being operated as a part of a real-time metropolitan Washington criminal justice communications network which includes a number of other systems, such as a wanted persons file and a stolen vehicle tag file, and which is directly linked to the NCIC (National Crime Information Center) system.

The PROMIS data base contains more than 160 separate items of information about each case prosecuted in the D.C. Superior Court. Thus, numerous real-time queries could be designed which would be helpful to the prosecutor and/or the police. The queries which have been developed thus far are:

The defendant query.—This query makes it possible for the prosecutor or the police to determine whether or not a given defendant has any other cases pending in the court system. The fingerprint-based identification number assigned by the Metropolitan Police Department is entered via a terminal and the computer flashes back on a screen the docket numbers and status of each of the defendant's pending cases. With this status information, the police can identify those persons who are arrested for crimes while on some form of pre-trial conditional release. If the identification number is not available, the defendant's name can be used as the basis of the query.

The court docket number query.—This query enables the prosecutor or police officer to instantly apprise himself of the pertinent facts and status of any pending case. For docket number queries, the computer flashes back the following information: the defendant's name and bail status; the charges; the arrest date, time and place; the offense date, time and place; the names of the police officers on the case; the number and reasons for any continuances in the case; the crime gravity rating; and the defendant criminal history rating.

The police officer query.—This query enables the prosecutor or the police officer to determine the number and status of all cases a given officer has pending. By entering the officer's badge number, one can obtain on the screen a list of all the pending cases in which he is scheduled to testify and the next court dates for each case.

The case aging query.—This query enables the prosecutor to monitor delay at each stage in the criminal proceedings. The prosecutor can specify the type of case he is interested in, such as misdemeanor cases, cases bound over to the

Grand Jury, or felony indictments, and then enter via the terminal any aging factor of his choosing. For example, he can specify that he wants a list of all cases which have been awaiting Grand Jury action for more than thirty days.

The witness query.—This query enables the prosecutor or police officer to enter the name of a witness in any pending case and immediately determine the docket number, current status and next trial date for the case.

Other pre-formatted queries are being planned. Another query to be developed in the immediate future will enable the police district commanders to request a list of their personnel due in court on an given day. This will enable the commander to plan and use his staff more effectively.

CONCLUSION

We want to emphasize that we regard PROMIS as a long term project. A system such as PROMIS in an office as large as ours takes literally years to establish. This is not to say that the system will not have any short term payoff; it will. The long term payoff does not come quickly, however.

Inevitably, attempts to substantially revamp concepts, strategies and methods of operation are not accepted with equal enthusiasm by all. There are some who decry these new approaches and insist that the only solution to the problems at hand is to have enough skilled, experienced prosecutors to handle each case carefully and methodically in the style of the idealized small town prosecutor.

We are quick to agree that there is no substitute for skilled, experienced prosecutors and we are emphatic on this point. What we are saying, however, is that in major urban centers it is unlikely that there will ever be enough skilled, experienced prosecutors and thus we must provide supplementary tools such as PROMIS to assure the proper level of performance.

Chairman PEPPER. The committee will recess until 2:15.

[Whereupon, at 1:30, the committee recessed, to reconvene at 2:15 p.m., this same day.]

AFTERNOON SESSION

Chairman PEPPER. The committee will come to order, please.

Let me start with the introductions of our two distinguished witnesses who are to appear this afternoon.

First, Mr. Daniel J. Meador, professor of law, University of Virginia Law School.

Prof. Daniel Meador, in addition to being a fellow Alabamian with me, which we discussed at lunch, has had a distinguished legal career.

After receiving his master of laws degree from the Harvard Law School, Professor Meador was appointed law clerk to Supreme Court Justice Hugo Black. He subsequently practiced law with an eminent firm in Birmingham, and was later appointed dean of the law school at the University of Alabama. For the past 3 years Professor Meador has been James Monroe Professor of Law at the University of Virginia Law School.

Professor Meador has been actively involved in researching, developing, and testing various techniques designed to streamline the criminal appellate process in the country.

Professor Meador has recently authored a book entitled, "Criminal Appeals—English Practices and American Reforms." The stated purpose of this publication is not to advocate the adoption of the English appellate system, but merely to reveal the actual functioning of the English procedures to interested judges and lawyers to enable them to make informed decisions as to what procedures could possibly be incorporated into the American system.

Professor Meador, under the auspices of the National Center for State Courts, is now conducting a demonstration project to determine

the effect that a well-managed, professional research staff would have on increasing the productivity and alleviating the backlog of the appellate courts. This project is currently in operation in Nebraska, New Jersey, Virginia, and Illinois. Professor Meador indicated that while a final evaluation of this program has not been conducted, he does believe that this system will prove to be a vital component to an effective and efficient appellate process.

Our other distinguished witness to honor us with his presence here this afternoon is Judge Albert V. Bryan, Fourth Circuit Court of Appeals, Alexandria, Va.

Judge Bryan has had a long and distinguished career as a member of the Federal bench, beginning with his appointment in 1948 to the Federal district court. In 1961 Judge Bryan was appointed to sit as a member of the Fourth Circuit Court of Appeals, a position he currently retains.

Throughout the course of his career, Judge Bryan has advocated the streamlining of the appellate process.

By the way, it was on the recommendation of another esteemed friend and jurist, Justice Tom Clark, that we first learned about the very fine work of Judge Bryan, and he is accountable for the fact we were able to get in touch with the judge.

It is his firm belief that in order to reduce the time period between the filing of an appeal and the decision of the court that several commonly accepted procedures should be revised or eliminated.

Initially, Judge Bryan would eliminate filing all briefs on appeal, unless opposing counsel deem them absolutely essential to the case. In short, Judge Bryan believes the automatic filing of extensive briefs in every case is a most time-consuming process and should be abolished.

In those cases where written briefs are not filed, Judge Bryan proposes that the appellant be required to file a condensed list of points made against the order from which the appeal is taken, but that such list not contain argument of the various points. Inherent in Judge Bryan's plan is the requirement that the trial judge file with the appellate court a copy of his charge to the jury, or his findings of fact and conclusions of law in a nonjury case. Such a requirement, Judge Bryan urges, would alleviate the need, in most cases, for the trial court proceedings to be transcribed, usually a case of lengthy appellate delay.

Incidentally, we just had Judge Weis of the Third Circuit Court of Appeals testify here yesterday and he was calling to our attention the use of video tape as a method that can be wisely employed by the court.

Judge Bryan further proposes that if all of the papers or exhibits filed or lodged at the trial level are forwarded to the appellate court that there would be little need for any additional written documents to be brought to the attention of the court.

Under the plan advanced by Judge Bryan, oral argument would become a vital component of the appellate process.

May I add, in writing to a good friend of mine, John Brown, chief judge of the Fifth Circuit Court of Appeals, he told me about their having reduced by 60 percent the number of oral arguments. They try to eliminate oral arguments as much as they can.

At that time, the opposing counsel would have a full and complete opportunity to argue their cases, highlighting any facts they think crucial to the determination of the case.

Counsel, have you anything to suggest?

Mr. NOLDE. Thank you, Mr. Chairman.

I also wanted to add that Judge Bryan was the rector of the University of Virginia, and it is interesting to note that the first rector of the university was Thomas Jefferson.

Professor Meador, we are delighted to have you today, with Judge Bryan; both of you are eminent and distinguished authorities. We will be pleased to have an opening statement from you first, Professor Meador.

STATEMENTS OF DANIEL J. MEADOR, PROFESSOR, UNIVERSITY OF VIRGINIA SCHOOL OF LAW, CHARLOTTESVILLE, VA., AND HON. ALBERT V. BRYAN, JUDGE, U.S. COURT OF APPEALS, FOURTH CIRCUIT, ALEXANDRIA, VA.

Mr. MEADOR. Thank you very much.

It is a great privilege to be here and have a chance to participate in the discussions. I am honored, also, to have Judge Bryan sitting here at my right hand. I will have to say that a good many of my ideas and some inspirations for others have come out of Judge Bryan's ideas, to which the chairman has just made reference. So I am indebted to him.

I think I can most usefully contribute to the discussions by outlining an experimental idea that has been put forward now in more than one quarter, but has not been actually tried anywhere. I might say first that I have submitted a brief written memorandum for the committee's use. I will not read that verbatim.

Chairman PEPPER. Without objection, the memorandum that you have offered will be printed in full in the record and you may proceed to sumarize it in any way you wish.

[The memorandum from Professor Meador, above referred to, will be found following the testimony of this panel.]

Mr. MEADOR. Thank you.

The aspect of it I would like to discuss, subject to the committee's pleasure and any questions about other parts of it, is that portion which deals with what is called a unified review proceeding of criminal cases.

This proposal can be found in what will be chapter 6 of a report on the courts that is being published currently by the National Advisory Commission on Criminal Justice Standards and Goals. That report is at the printers now. It should be coming out in another month or so. The same basic scheme can also be found in the book which the chairman cited on "Criminal Appeals, English Practices, and American Reform."

The central notion there is that we should structure the review process in criminal cases so that there is a single review of the conviction and the sentence. This idea is derived, or inspired by, I should say, the English practice. In the English system there is no new trial motion filed in the trial court; there is an appeal available, but there is nothing on the order of the postconviction proceeding. There is no

collateral attack later in the sense that we have it. In other words, there is a single review proceeding.

Chairman PEPPER. Excuse me, Mr. Meador. I learned last week at a conference in England that the defendant goes, if he is sentenced to prison, he goes right on to prison and, as I understand it, he is serving in prison while his appeal is being considered.

Mr. MEADOR. Correct. A very, very small percentage—almost to the point of zero—of defendants, will be on bail or out pending appeal. That is another reason I suppose why there is the great pressure to accelerate the process that is characteristic of that system. The idea of this single review is that the reviewing court, in order to have a single review and to make it fair, as well as final, necessarily must go outside the record made at the trial court.

We go outside of the record in this country now on new trial motions and on postconviction proceedings. We do not go outside the record on the direct appeal. The proposal of the unified review proceeding is simply a consolidation of existing review. It is a blending into one proceeding of everything we now do in at least three different proceedings—the new trial motion, the direct appeal, and postconviction proceeding.

It is a novel idea to American lawyers and judges to think about going outside of the record on an appeal. But I think the novelty of it goes away somewhat if we stop and think that we do go outside the record now, although not on direct appeal. We do it in these other two ways, new trial motions and postconviction proceedings.

In order to implement fully this concept, it would be necessary, I think, for the reviewing court to have a staff of lawyers to assist it because it will be necessary to probe the case, to go beyond the issues that are asserted by the lawyers, later on, a postconviction proceeding.

That is the basic idea. There are details about which some questions might he asked.

If I might say another word about the staff idea, apart from the unified review proceeding the idea of using a staff of lawyers in an appellate court is an idea that is growing in this country. It is relatively new. The Michigan Court of Appeals pioneered this idea. In that court, there are a total of 22 staff lawyers working for the court.

The California Court of Appeals for the First District, which sits in San Francisco, has a central staff of lawyers. There are a few others around with small staffs. This, again, is an idea that derives from the English appellate practice, where there is something known as the criminal appeals office, which consists of approximately 20 or so lawyers working for the court in a central research staff.

What a staff does can vary a good deal. Basically, what staffs are doing so far in this country, in Michigan and in California and a few other places, is to assist the judges by preparing memorandums on the appeals when they arrive at the court, and in some cases draft-Also, they are recommending the oral argument be dispensed with in ing proposed per curium opinions by which the case can be disposed of. certain cases where it is not thought to be helpful, and so on. All of this is by way of assisting the judges, making recommendations to the judges. They are not designed to displace the judges' role. The judges still retain full decisional power.

Now, the project that the chairman mentioned, under the aegis of the National Center for State Courts, has placed staffs in the four appellate courts that he mentioned, in Nebraska, Illinois, New Jersey, and Virginia. This is a year-long experimental and demonstration project. The purpose of it is to determine the utility of staffs in appellate courts, how they can best help judges without eroding the judicial function.

Reports on that will be written late this year, late in 1978, and we hope those reports will contribute to our better understanding of exactly what the utility of the staff is, what are its pitfalls as well as its benefits.

Mr. Chairman, I think that might be adequate for a general opening statement, but I would be very happy to elaborate in response to questions.

Chairman PEPPER. In the first instance what you are suggesting is the defendant will be put on notice that if you have anything to bring up at any time that would impair the judgment which has been rendered against you, you must bring it to the attention of the appellate court while your case is being considered by that court, or you are precluded thereafter from bringing up the subject?

Mr. MEADOR. Yes, sir. Not only would he be put on notice, but he and his lawyer might actually be interrogated, in a sense, by the staff who is working for the appellate court to be sure there aren't lurking issues around that aren't getting out.

An analogy to this could be the omnibus hearing that has been tried at the pretrial stage, in which the judge has a kind of checklist of possible issues he goes down, to be sure he ferrets out every possible defeat that might later surface.

Chairman PEPPER. In other words, he wouldn't be permitted after the case had been finally approved by the appellate court to come back after he had been in prison and bring up a petition of habeas corpus on the grounds he didn't have counsel in the trial court?

Mr. MEADOR. My view of that is that habeas corpus and all other collateral remedies could be drastically contracted if we had a unified review proceeding of this kind. However, for myself, I would not urge habeas corpus be totally foreclosed. I would leave it available for a very few and narrow, extraordinary situations, in which there had been a total miscarriage of justice or some defect which totally undermined the integrity of the whole proceeding. But certainly it would be contracted greatly over where it is now. The level of finality of the conviction would be lifted following the unified review proceeding. The degree of finality would be much greater.

Chairman PEPPER. In the English system, is there any other proceeding permitted at all after the final confirmation of a judgment by the appellate court?

Mr. MEADOR. Only in two ways. There is a very narrow ground for a further view in the House of Lords. That is a discretionary review and is rarely granted. I believe something like three or four cases a year out of thousands will be heard by the House of Lords. So it is almost a nonexistent further review. Besides that, though, there is only the executive clemency. Nothing else judicial is available.

Chairman PEPPER. In the first place, please tell us how do you get the right to an appeal after the British sentence is imposed? Does the trial court have authority to allow or disallow an appeal?

Mr. MEADOR. Most of them come by application for leave. The system is basically a discretionary appeals system which the defendant would activate by filing application for leave to appeal, within 28 days of his conviction. There are a few cases that go up on certifications from the trial judge, no more than a handful a year, though. Basically, 90 percent plus of all of the criminal appeals come by way of leave of court granted on the application or the defendant.

Chairman PEPPER. What sort of a record is presented along with petition for leave and what is the leave itself? How long a doctrine is it and what does it contain?

Mr. MEADOR. This is reminiscent of Judge Bryan's ideas. There is a good deal of resemblance between what goes on there and what Judge Bryan proposes. The defendant will file an application which is an informal document, something like Judge Bryan's statement of points. It sets out very briefly the contentions of the defendant as to why his conviction or sentence ought not to stand. When that is filed, the trial court will immediately send forward all of the documents that are in its files, whatever they are. The papers simply go forward. The court reporter will type up what is called the "Trial Judge's Summing Up to the Jury," which is analogous to his charge to the jury in this country, although it tends to be more elaborate, because the summing up in England is a summary in detail of all of the evidence offered.

It is what he tells the jury in addition to stating the law. That is typed up immediately and sent forward to the appellate court. The staff at the appellate court then, on that basis—the basis of the summing up and the trial documents and the application—decides to what extent a transcript of the evidence might be desirable. Many cases are disposed of without a transcript of the evidence at all.

The trial judge's summing up gives a good picture of the proceeding and the facts. If the staff thinks some testimony is necessary, even the whole record, it can be ordered and is ordered in a fair number of cases.

But it is a court decision, a staff decision, not the lawyers' decision, as to how much of the transcript gets typed up and sent forward.

Chairman PEPPER. Is oral argument heard in support of that application?

Mr. MEADOR. Not as a matter of routine. There is a practice there I dare say would violate the equal protection clause in this country. If the defendant has engaged his own private legal counsel, that counsel will be permitted to make an oral argument on the application for leave. If the defendant does not have his own counsel, the application for leave is passed on by the judges without oral argument.

Chairman PEPPER. Is that the final consideration of that case by the court, or is it kind of like a petition for writ of certiorari, if they grant the petition they send the case up? That is the case before the court?

Mr. MEADOR. Yes. Let me take it in two routes. The application is initially passed on by a single judge. If he denies it, the defendant may, at his option, renew the application, as they say, and then two other judges will pass on it. If they deny it, that is final.

Chairman PEPPER. Three court of appeals judges?

Mr. MEADOR. Yes. Three judges would have looked at it and if they deny the application for leave, that is final. That is the end of the case. If the application is granted, either by the single judge or on renewal before the two others, then it is set for the full-blown oral argument before whatever panel of three judges happens to be sitting on the day it is set. Normally, they will not be the judges who passed on the application, but it will be a random roll of the dice as to what three judges happen to sit.

Then there will be oral argument. Then you have what they call appeal: the application has been granted. It is an appeal fully on its merits, argued before three judges by counsel for the defendant and the prosecution, and decided then and there at open court. That is another important characteristic of that system.

Chairman PEPPER. They decide right there before the court adjourns?

Mr. MEADOR. Yes, sir. The court, in effect, is sitting in conference throughout the oral argument. They may remain huddled in conference up there on the bench, however long it takes them to reach conclusions.

Chairman PEPPER. And they write an opinion: the case rests and they write an opinion later?

Mr. MEADOR. They deliver the opinion orally from the bench then and there. Only about 15 percent of the opinions are ever printed. There is a committee that selects for printing those that have some significance to the law. Most of them do not; that is also true in this country, although we print them anyway.

Chairman PEPPER. That is very interesting. They are able, therefore, to dispose of cases much more quickly and more expeditiously than we are here.

Mr. MEADOR. Yes, sir. The system has a lot more flexibility to it. It isn't in lock step. There are no written briefs, no time is used for the writing of briefs. The immediate decision from the bench obviously expedites the disposition.

Chairman PEPPER. I wanted to ask, also, I have heard some of those arguments but I have forgotten how long the oral argument takes place.

Mr. MEADOR. There is no fixed time. It is however long the judges find it useful. My observation is, from sitting in on them, in the criminal cases the entire proceeding will occupy perhaps an hour to an hour and a half. That is both sides, plus the court's deliberations in an appeal.

Chairman PEPPER. Thank you Professor Meador. Well, judge, suppose we ask you to proceed and then we can make further inquiry.

Statement of Hon. Albert V. Bryan

Judge BRYAN. All right, sir.

Really, what I deal with is the mechanics of the appeal rather than the legality or the scholarship of this step.

For years I have simply had an obsession against the time that is required from the termination of the district court's proceedings until the case gets on the court of appeals' docket. I have submitted to you,

along with my statement, certain amendments I would hope would somewhat cure that situation.

Chairman PEPPER. Without objection, your statement submitted will be printed in full in the record. You may summarize it as you will.

[The prepared statement of Judge Bryan will be found following the testimony of this panel.]

Judge BRYAN. Thank you.

I submitted this to the Federal Judicial Center. That is when I think Mr. Justice Clark heard it. I thought your question was going to be if they are so good, why weren't these suggestions adopted by our own circuit?

Now, my only answer to that is, my powers of persuasion were inadequate, I hope.

Chairman PEPPER. Great ideas sometimes take a long time to get accepted.

Judge BRYAN. My amendments would transfer the case to the appellate court within a few days after the district court has finished with it. My aim is to put the case on the appeals docket for argument within 60 days instead of the present 4½ months, which is permissible and which is the minimum under the present rules.

To give you a step-by-step account of what are the mechanics when you finally get a decision in the district court, the appellant has 10 days for filing his notice of appeal. That is if he is a non-Government appellant. The Government has 30 days in which simply to note it. In either event, that may be extended for excusable delay, so that you can see that it can go up to 60 days before a notice of appeal is even filed.

Then 40 days is the time limit for the transmission of the record from the trial to the appellate court. This may be extended to 90 days.

Then there is 40 days from the transmission of the record given the appellant for filing his opening brief; 30 days is then given for the filing of appellee's brief, but that does not commence until he has received the appellant's brief; 14 days are allowed for the appellant to reply.

Now, in those steps, I want to dwell more on the transmission of the record from the trial court insofar as the record must include a transcript of the proceedings below.

If you add those steps, you get 134 days, or 4½ months, or it may be extended by such extensions as I have already indicated, to carry way beyond the 4½ months.

But the most serious delay of all, and really the obstacle in the way, is the preparation of the transcript of the trial proceedings for inclusion in the record.

On my way over here I met one of the district judges and he asked me where I was going, and he said, "For goodness sakes, get rid of the transcript of the evidence."

The blame for this is not attributable to the trial court, nor to the attorneys, nor to the reporter. It is attributable to the inability of the reporter to make the transcription, inasmuch as there is only one reporter for each judge.

Since the reporter is required to attend daily sessions of the trial court the transcript can only be prepared in his spare time. It is in his

inability to do that, that defers the schedule fixed by the rules. It just isn't practicable to comply with them.

The point I am very anxious to make is that the transcript of evidence be not required at the time the case goes on the docket. As Mr. Meador has just said, it can be dispensed with without harm or hurt to anyone. It certainly ought not to be prepared until after the case is on the appeals docket because only then can it be seen if it is important.

Now, the late Judge Parker of our fourth circuit said it wasn't any use in having the transcript of evidence anyway because nobody looked at it. That has been by experience and I think it is the experience of most appellate judges. It is the rarest thing that you look at the transcript. We certainly don't need it before the argument because you have got in the record at that time the pleadings in the case, and if a criminal case, the indictment. You have in a civil case the findings and conclusions of the district judge. In both cases you have the judge's charge to the jury, in which he outlines generally what the facts are and what the legal issues are and what the conflicts are, so the jury may more readily resolve them.

So my really first point and almost sole point of emphasis is to do away with this requirement of the transcript of the evidence unless and until it becomes vitally necessary. And that will be very rare.

Now, the argument opposed to that would be: what are you going to do if the matter on appeal is a motion to set aside the verdict for inadequecy of the evidence? That trouble is more apparent than real. Because, if the review goes to the adequacy of the evidence, every practitioner knows that does not embrace all of the evidence, including all of the exhibits. The points made on that motion are as to certain particular parts of the evidence—their relevancy, their admissibility, and their general connection with, their germaneness to, the case.

These would appear, these points would appear, in the exceptions taken to the charge. You would note right there what part of the evidence was in dispute. Rarely will it be the content of the evidence. I would say, but rather the point of the evidence and that could be argued without looking at the whole record. If need be, after the argument of the case, the court could send for those parts.

Not only that, there would rarely be difference between counsel as to what was the evidence on a point. Generally, the debate is whether it should have come in at all, and next, what connection it has with the case.

I am just anxious to accentuate, or rather accent, that the transcript should not be called for until after the case has been heard in argument.

Another point of objection is, what are you going to do when there is a change in counsel between the trial level and the appellate level? And that frequently occurs in indigent cases—habeas corpus cases—when the appellant will say he was not represented competently and he wants a new lawyer.

Well, the first answer to that is there should not be a too-ready release of counsel by the trial court. All sorts of charges are made against you when you are representing one of these fellows, and every time one makes some criticism, he certainly should not be entitled to a new lawyer. It is the obligation of the first lawyer to stay in the case until it is prejudicial to his client to remain.

But if a new counsel is brought in, the substitute counsel may obtain a summary of the case very readily by looking at what is already in the record. If it is a criminal case, he sees the indictment. And also in a criminal case, he reads the issues that the judge has presented to the jury, which indicates to him what the case is about. In a civil case, he has the complaint and he has the answer and he has the exhibits and almost everything that will apprise him of the content and substance of the case.

There is really no reason to put the Government to the expense of writing up an enormous transcript that wouldn't be used. Nobody will look at it and I doubt that the new counsel, himself, will look at it. He will have the trial briefs, memorandums that are submitted on the motions to set aside the verdict, or motions to modify the findings. All of that will convey to him the nature and character of the case.

But even further than that, the fraternity among lawyers is such that the first lawyer is perfectly willing to give to his substitute full information of what the case is all about.

So it seems to me that objection is exaggerated.

Now, in my—not mine—but in the proposed rules, the appellant is required to file immediately a statement of the issues. That is not any hardship on him because the present rules require in preparation of the briefs that that very statement be embodied. So it is simply a question of putting it first or putting it last. And that is another paper that would bring to the attention of the appellate court what the case is all about.

I have been asked several times, well, how would the court know what the case was about? The court would know perfectly well from the pleadings and from the statements of the issues, from the exhibits, from the charge, and all of the papers that no appellate judge would be confounded by for a moment. It could look at them and take the case up from there.

Another important step in expedition is in reducing the time for filing briefs. You will recall that the present rules fix 40 days from the transmission of the record as the time for the filing of the appellant's brief.

Well, now, the record is supposedly available within 40 days, so appellants 40 days for briefing do not start until that date arrives. Then there is 30 days for the appellee to file after that expiration, and it seems to me it is a rather prolonged time, but he has 30 days from the time he receives the appellant's brief in which to file this. Then added to that, the appellant has 14 days in which to file a rebuttal brief.

As I say, all of this comes to 134 days. So that the preparation of the transcript and the preparation of the briefs really are the time-consuming steps in this interval.

I am hopeful that the briefs, as Mr. Meador has just mentioned, could be in time disposed of. When a case is appealed, immediately upon its conclusion is the time at which the lawyers are most aware of what is in the case. Their knowledge of it is at the very best at that time. As a matter of fact, they are just burning with the cause. They have argued motions to set aside the verdict, or to grant certain charges, and they have lost.

Now, they are full of that just as soon as they come out of the courtroom. If you meet them on the steps, they will tell you all about it. That will cool after 134 days and then they will need time to prepare the briefs.

My hope is that just as soon as the case comes to an end in the district court, the papers will be sent immediately to the appeals clerk, together with the statement of counsel as to what are the issues. The court of appeals will then be in a position to examine it—that will just be a matter of a few days—and hear argument

But as an alternative, if the first suggestion—the absolute omission of briefs—is a little too radical, it seems to me that you could adopt a system of simultaneous briefs. I have been in cases as counsel that have lasted for months and at the end of the case, instead of having 40 days in which to file an opening brief and then 30 days for reply, for each side was to be given 30 days in which to file a brief simultaneously.

The appellee knows what the appellant is going to argue because he has already heard the argument in the nisi prius court. Appellant knows what the issues are. He can argue his case in his brief exactly like he finished arguing it in the district court.

The appellee is at no disadvantage in that he knows exactly the same thing. He knows what the appellant is going to put in his brief.

As a safeguard, I would suggest in addition to that, each side be given 10 days to reply to the other's brief. With the dispensing of the necessity of printing of briefs, he can very readily prepare one brief in 30 days and another in 10 days, when he is full of the case, as he will be immediately upon the cessation of the trial.

Chairman PEPPER. Excuse me, Judge. Within what time did you recommend that the appeal be lodged in the appellate court?

Judge BRYAN. Just as soon as the clerk can compile the papers that are on file there, and just as soon as the judge files his findings and his charge. All of which will be right in his hand. And just as soon as the appeal is noted, he will hand those over to the clerk; the clerk may require a week or 10 days to compile what he has there, then put it in the hands of the appellate court.

So it ought not to be more than a week or 2 weeks before the court, the appellate court, has everything that it needs.

Chairman PEPPER. And the appellant would file, send up to the appellate court, a simple notice of appeal?

Judge BRYAN. He would have to file his notice of appeal, and then these proceedings would begin after he filed his notice of appeal.

Chairman PEPPER. Along with his notice of appeal, would he file points of appeal?

Judge BRYAN. I give him a few days after that to file them. But the whole thing wouldn't take more than a couple of weeks.

If we can just get over the obstacle of the transcript of the evidence, that alone would accomplish a tremendous curtailment of this time.

I have taken the liberty to outline here what I think would be a fair and reasonable time schedule for these steps to be taken. First, to allow 7 days for filing notice of appeal. I think as lawyers, we have to begin to commence thinking in a few days, rather than 30, 60, and 90 days. Give him 7 days for filing the appeal. It is a simple process. Why give

the Government 30 days, with an extension of 30 more, or 60 days? They know right from the time the verdict is brought in if either side is going to note an appeal.

Chairman PEPPER. What about the motion of the defendant for new trial?

Judge BRYAN. The motion of the defendant for a new trial would have been disposed of.

Chairman PEPPER. By what time?

Judge BRYAN. Before the time you get to the appeal.

If you allow 7 days for the filing of appeal, rather than possibly 60 days, and then 7 days thereafter for filing the statement of the issues, and 5 days more for the judge to file the jury charge or his findings and conclusions, these are very generous, I think, allowances of times. And 30 days for simultaneous briefs, and 10 days for each side for reply briefs. That would bring it to a total of 59 days, which is certainly an improvement upon the 134 days. There may be some extensions here but it is down about 60 days.

I am thoroughly convinced, although I am quite partisan on the subject, that it can be done, even if it may be a radical idea. Most lawyers are not used to making radical changes, but it seems to me that the time has come when we have to think along those lines.

Chairman PEPPER. What about the oral argument in the appellate court.

Judge BRYAN. In the fourth circuit we allow 30 minutes to a side.

Chairman PEPPER. Did you allow oral argument as a matter of right?

Judge BRYAN. As a matter of right, unless it appeared immediately from the initial papers that there was really no substance to the case and that it was not entitled to argument. Then we put it on what is called a screened docket, and it would be presented to three judges and if they come to the same conclusion, an order is then entered, either affirming or reversing, and the case does not go on the call for oral argument. It is only those cases that can get through the screening that come on the argument calendar.

I am delighted to answer any question that you may have.

Chairman PEPPER. Judge, as I mentioned earlier yesterday here we had Judge Weis, who gave instances of the valuable use of the videotape. He had an exhibition here on a TV set of the use of one of these videotapes in respect to a deposition that was taken by the prosecuting attorney interrogating the defendant in a case.

The defendant's lawyer was there and the defendant was notified that the machine was operating, and the videotape was being made. He pointed out how that could be used to enable the court—that was, of course, the trial court primarily: but it could be used in the appellate court, too—to pass his own opinion as to whether or not that statement was voluntarily made, and the like.

He would have a chance to see the person making the statement, in addition a confession was being questioned. The videotape exhibited the prosecuting attorney and the police official and the defendant's attorney. In that case, there was not a defense attorney in the room, but he previously agreed that the interrogation might be had and he gave the statement.

Then he suggested the uses of it, that it might well be you could make a tape recording of a whole trial and the court could just look at it, take the testimony. He pointed out how you could save all of this transcribing time. All of that would be on videotape and it would be available immediately.

Judge BRYAN. It would be a tremendous improvement.

Chairman PEPPER. The question came up on the appellate court, for example, that some particular part of the evidence was very pertinent. It could be turned to and they could see it and hear what the testimony was.

In other words, he was proposing to make use of the best techniques we now have available mechanically to aid the court also in determining and expediting procedures.

Do you know of any instance where your court has ever considered that sort of thing?

Judge BRYAN. No. We have considered the possibility of recording the case on tape, as the proceeding. Not with TV. The difficulty there has been to indicate who was talking. The reporter has to sit there and say, now, Mr. A, and then he would be interrupted suddenly, and Mr. B would come in, and you just couldn't really intelligently follow it.

But with the video, you would see who was talking and I would think it would be a great improvement. That would overcome the big obstacle that has been worrying the judges, and that is the preparation of this transcript of evidence. That would be dispensed with. But I don't know if that will ever reach that point.

Chairman PEPPER. When you were speaking about the briefs, did you have in mind printed briefs?

Judge BRYAN. No, sir. I just meant it would be typewritten briefs, just so they were clear and understandable. We have that rule now. You need not have your brief printed. That saves a lot of time and would save that span that is now allotted for the filing of briefs. So much of that is taken up in the printing.

Chairman PEPPER. Well, there are two aspects of what both of you gentlemen have said that occur to me. One was, the district attorney for Los Angeles County appeared before this committee in the latter part of 1969, at some of our early hearings. He confined his testimony to the frustration that the district attorney had about a case under our system ever becoming final. It took a long time to get the appeal lodged and then more extensive time to get it disposed of, and then when you thought the case was finally all settled, then along come some more collateral attacks upon the validity of the judgment and the like.

He was strongly emphasizing the necessity of trying to finalize the disposition of the case, the final adjudication of the case.

Then the other thing was: Whereas in England you don't have the question of bail because the defendant, if he is sentenced to prison, is incarcerated immediately. You don't have the bond question.

Reducing the bail problem, itself, has considerable difficulty about it. There have been differences of opinion about what you ought to do about bail. But it is imperative that if you don't have to wrestle with the problem of what to do about bail, and you keep these people from

being liable to the commission of other offenses, you reduce this time between the adjudication of the case in the trial court and the final disposition of it, so the defendant will go on to prison.

Under our federal system and in several of our States, after the court of appeals, I believe you can take—it has been a good long while since I handled a case—I believe you have 90 days to file writ of certiorari for the Supreme Court, and that takes some more time. You have more time for that. So a lot of times defendants use all of these time allotments as a way of delaying going to jail, going to prison.

Judge BRYAN. You put your finger on the very point that has spurred my interest in this, and that is the public's reaction. They read about a trial, a heinous offense, and it is very important, and there is a verdict of guilty, and then the last paragraph in the paper says, "Defense counsel has noted an appeal." Then the public thinks that is the end of it. Then they never hear of it any more. It is going into oblivion. It is most discouraging.

If that case could be gotten into the court of appeals within a short time, 30 or 60 days, the public would not be so critical of our processes.

Chairman PEPPER. Well, now, could the appellate courts, if we could simply file some of these procedures that you gentlemen have suggested here, keep relatively current on their dockets and things?

Judge BRYAN. I think they could, but at least you keep the cases from being stale. There is nothing worse to work on than a cold case. I think that the judges would make extra effort to be just as expeditious as the process.

Chairman PEPPER. I think Judge Brown of the Fifth Circuit Court of Appeals told me that his court tries to get the final opinion out in a case before that court as near 30 days after the case is ready for consideration in the court as possible, and they seldom go beyond 45 days. They try never to go beyond 45 days from the time the case is ready for consideration in that court.

Is the fourth circuit relatively current with its docket, Judge?

Judge BRYAN. Yes, we are. The median time in the fourth circuit from the notice of appeal to argument is 143 days. The median time from notice of appeal to decision is 191 days. So they decide the case in the difference between 43 and 91—within 48 days.

Chairman PEPPER. Well, now, it is difficult for me to understand how anything so rational and so desirable as you gentlemen have just presented here today should take so long to get favorable acceptance in the American Bar Association and Judicial Conferences, and the Congress and various public authorities who deal with these. Everybody is talking about crime and the polls show it is considered by most people as the No. 1 problem in the country. And yet these things relate directly to dealing directly with the problem of crime, and why is there so much inertia about taking a more judicial look at it? What would you say, Mr. Meador?

Mr. MEADOR. In the last year or two I have run into that problem in the various projects and researches I have been trying to do. I do notice, repeatedly, in different parts of the country, in different types of courts, a national pattern that judges and lawyers are simply extraordinarily reluctant to try something really new. They tend to want to see it already working somewhere else. So the question is who goes first with something. Nobody wants to do it first. This is why I have

developed the idea that the most practical way to bring about a lot of these changes may be through the provision of money. If enough money is made available through some kind of funding or grant scheme to a court or to a prosecutor or public defender's office or all of these together, perhaps the temptation and the availability of all of those funds will more readily persuade some of the groups and lawyers and judges to try things, at least experimentally.

There is also a reluctance to think about experimenting in the judicial process. Experimenting is a novel notion to lawyers and judges. There is a legitimate concern about not wanting to play fast and loose with a person's rights in a criminal case. Nonetheless, I think there is room for carefully designed experimentation which will not prejudice anyone's rights and yet will reveal to us whether something will work or not work.

I wonder, Mr. Chairman, if I might take just a minute or two to elaborate on a comment of Judge Bryan's?

Chairman PEPPER. We would be glad to have either one of you comment on the proposals made by the other, if you would.

Mr. MEADOR. Judge Bryan's review of his proposals, as I said earlier, strikes a very sympathetic chord with me. I might point out to the committee that his notion of lawyers on fire with their case at the close of the trial and therefore in better position right then than any other time to come forward with the appeal has been picked up by Judge Shirley Hufstedler of the U.S. Court of Appeals for the Ninth Circuit. She has come along with a proposal for a very accelerated review process in which the lawyers who conducted the trial would appear promptly before the reviewing court, usually without a transcript, and present an oral argument.

This has many similarities to some of Judge Bryan's ideas. There are two places where her ideas are set forth. I might just cite for the committee's information in the record. One is in 44 Southern California Law Review 901, and the other is in 46 Los Angeles Bar Bulletin 275.

The other comment I wanted to make has to do with the transcript. In my work over the last year or two around the country, I have indeed found that what Judge Bryan says is certainly true, that one of the biggest points of delay in the appellate process of the criminal cases is the production of the transcript. I generally share Judge Bryan's notion that many, many appeals could be very fairly disposed of without a transcript. My view of that is reinforced by what I see to be the practice in England. However, I should add here, that when I have broached this idea around the country with judges and various groups, I find there to be a good deal of opposition to that. Many judges and lawyers seem to have some deep-seated sense of insecurity in proceeding with an appeal without a full transcript. Whether or not they in fact are going to need it, they seem to want it there to reassure them that they are dealing fully and fairly with the case.

Judge BRYAN. It is a fetish with them.

Mr. MEADOR. It is a kind of security blanket. Because of that, a number of judges and lawyers say that rather than try to construct a system in which we can get by without all of the transcript, a better approach would be to provide whatever resources and money are necessary to get the transcripts produced quickly. In other words, they

argue: Let's just accept that the majority of American lawyers and judges want that transcript, and therefore let's just provide whatever resources it takes to get it, if it is hiring more court reporters, more typists.

A new idea has been developing here that may provide some solution to this, and that is the computer. I don't know whether the committee has been exposed to the idea of computerized production of transcripts.

Chairman PEPPER. We haven't discussed that. If you have any comment, we would be glad to have it.

Mr. MEADOR. I have seen demonstrations of this, and the committee might consider looking at the demonstration. Here is a place where some funding might achieve a real breakthrough. The process has been perfected fairly well, as I understand it. The process employs the regular court reporter with a stenotype keyboard, that type of keyboard. The data from the stenotype keyboard is fed directly into a computer bank. There is a translation mechanism in there: a vocabulary is set up in the computer. A transcript is available immediately on printout. There is a system for correcting errors in it, which can be performed in a matter of minutes, the error-correction process. So an hourly or daily transcript can be had. A transcript of a very lengthy trial can be had at the close of the trial within less than a day's time. There is one company and maybe others working on it and it has been developed fairly well. I think in the funding, it is expensive.

Chairman PEPPER. I was in a case one time, a big civil case, where it cost $1,000 a day to get a transcript of the record during the night so we would have it to use late in the night and the first thing the next morning. Think what a saving it would be if such a thing were made available.

Mr. MEADOR. A demonstration of this was made last August at the American Bar Association meeting in San Francisco. It was sponsored by the section of judicial administration.

Now, another aspect of the transcript, another approach to the transcript problem, is being taken in the southern district of New York, U.S. district court. There, at the close of a trial, if a guilty verdict is returned, and if the U.S. attorney is of the view that an appeal is likely, he immediately orders the transcript the day the guilty verdict is returned. He orders afull transcript without waiting to see whether the defendant will in fact take an appeal. He makes a prediction an appeal is likely, and it turns out his prediction is accurate to a very high degree. This means the transcript preparation process gets launched immediately and the court of appeals there gets the transcripts usually within 30 days. That is another approach.

There are some statistics on that in a report, a document which I could supply the committee if it desires to see it. This document is a brief report on criminal appeals made by a newly created entity called the Advisory Council on Appellate Justice. This is a body of judges and lawyers and law professors that acts as an advisor to the Federal Judicial Center and National State Court Center on appellate matters. If the committee desires, I can supply a copy of that report.

Chairman PEPPER. We would be pleased to have you do it, unless we can conveniently get it from the Library of Congress.

Mr. MEADOR. I doubt it is readily available. We can send a copy with no difficulty.

Chairman PEPPER. Counsel tells me we already have this.

Anything else?

Mr. MEADOR. No, sir; that concludes my comments at the moment.

Chairman PEPPER. Judge, have you anything to say about any of the suggestions made by Professor Meador?

Judge BRYAN. Yes. What he said brought to mind, we have a rule. I have forgotten exactly how it reads, that a transcript must be asked for if it is to be sought, within a certain time. I don't know if it is as prompt as Mr. Meador has experienced. But even with that, you have one person that can get it out. That same person has to go into court day after day, and he or she, when do they have a chance to get it out.

The funding of it would, of course, help to have at least two reporters. It would cut down this obstruction of transcript that we now are confronted with.

Chairman PEPPER. I wouldn't want to displace all of these very competent court reporters we have, but they pointed out here yesterday it costs relatively little to make these video tapes. Just assuming you set the thing up in the room or set it up here so it would be recording what was going on in the course of the trial, for example, and then that could simply be set up, that video tape, and you could have one of those reproducing machines in the appellate courtrooms. If the lawyer says so and so and so an so is relevant, I guess there would be some way somebody could turn it to that. He could give notice about that, what part he thought of the court proceeding—and take example and play it—that was obviously intimidated during the time he gave the confession and the like, and the lower court was in error. And he could show it, how the man looked.

The last thing I would like to ask is, Do you think this matter should be left to the courts and to the agencies that are already working toward the process of expediting the criminal justice system structuring or should Congress in the Federal area, the legislatures the State areas, try to cut through the reluctance of the courts and lawyers to do these things and to try to provide for it by legislation?

Judge BRYAN. I think the present chief justice is very, very concerned with it. He would welcome any views this committee formulated.

Chairman PEPPER. I know the chief justice has taken a great interest in trying to improve the system, and as you say, I am sure would welcome any proper procedures that we expedite.

What do you think, Professor Meador? Have you tried to get some regulation to accomplish some of these things?

Mr. MEADOR. Well, that is a little difficult to answer in general, or in abstract. The kinds of proposals Judge Bryan makes could better, I think, be handled through the rulemaking power of the courts themselves, if they will do it. The problem there is how does that machinery get activated. How does the inertia get overcome? My own disposition would be to try to get action wherever it could be gotten. Certainly in those matters that take funding, the Congress or the State legislatures would have to act, and as I said a moment ago, it may be provisions of funds will get us to a breakthrough better than anything else.

I don't know quite the kind of legislation I would have in mind that would provide funds, but I am sure something could be devised that would make funds available possibly to the State as well as Federal courts for various kinds of experimental procedures.

The LEAA through its block grant program is doing some of that. There is money flowing to the State courts through that channel, and we are getting some innovative programs and some efforts taking place there.

Any restructuring of the machinery obviously would take legislation. For example, the experimental unified review notion I outlined at the beginning would probably take legislation because it restructures the channels of review.

Chairman PEPPER. Well, this is the final passage from a bill we have on immigration. Gentlemen, I want to apologize to you that we didn't realize there were going to be as many amendments as offered on the floor this afternoon, and the other members, I know, had expected to be here to hear most of you. But this is one record our members are going to read, because we have to make a lot of recommendations to the Congress about it.

I just wanted to ask, finally, are you getting more responsiveness from the judicial conference and the other judicial agencies about these innovations, Judge Bryan? Are they beginning to be more attentive to such suggestions as yours?

Judge BRYAN. I can't say that they are. I do know that the Chief Justice has endeavored to develop interest in the subject. And getting back to your earlier question, a lot of these things may require more flexible action than legislation could provide.

Chairman PEPPER. I agree with you that it would be desirable to have it by rule of court and then you could notify the rule as experience dictates.

Judge BRYAN. But some action from Congress would certainly help it.

Chairman PEPPER. Maybe we can stimulate and encourage the process.

Gentlemen, I do want to thank you very much.

Mr. NOLDE. Professor Meador and Judge Bryan, we are very impressed with your ideas expressed today. I am sure that putting them into effect would tremendously improve on our appellate process.

One of the things that seems to bother judges in proposing to eliminate briefs and transcripts, from the cases being decided on appeal, is the question what does the judge need to have in front of him upon which to base his decision on appeal. Would you address that issue?

Judge BRYAN. I covered that in this memorandum. I think he does have enough basis upon which to decide the case, without lengthy written briefs. He has everything that the lower court had. Then he has the points in issue that gives him the contents of the case, and then in the arguments he will see what is stressed and what is to be considered. Then at the end of that, he has his tape recording after argument that can refresh his mind.

Mr. NOLDE. Professor Meador, do you have an opinion as to the British system on that point?

Mr. MEADOR. It could be structured in various ways, but for illustration, he would have the defendant's statement of points, or statement of issues that Judge Bryan refers to, which I said a moment ago is analogous to the application of leave to appeal filed in England. This would be not a totally bare bones listing of points or issues, but might have a paragraph accompanying each one, which would set out in a nutshell the defendant's argument of what his theory was. In other words, there would be a few sentences of explanation; a capsule argument in effect would be accompanying each point.

This document would not be over two or three pages in total length. So the judge could see the essence of the arguments that were being thrust upon him. Then he would have all of the other papers that Judge Bryan mentions. Then he could have the oral argument, at which the matter could be developed.

Now, in my ideas that I have developed here, I would introduce a lot of flexibility by having a staff lawyer there to make suggestions and recommendations to help the judges. For example, if upon examining the statement of points that had been filed, and looking at all of the other papers, it appears that some issue was such that a written brief is desirable, a point needs more elaborate or further development, and the court needs the help of the lawyers at greater length, a brief can be ordered. The lawyers could be instructed to file briefs.

It seems to me it is important to have a flexibility about it. The problem with the present system is that it is sort of a lock-step system, having no relationship to the complexities or difficulties of the case. The simplest case goes through the same long, drawn-out elaborate procedure as the most difficult, complex case. So I would introduce flexibility, dispense with briefs when they aren't really needed, order them when they are. Then you can order them filed simultaneously by identifying the issues to be addressed, which would save more time.

Mr. NOLDE. I suppose where briefs are filed automatically the tendency is for lawyers to file 60-page briefs and nearly always go into every detail of the case.

Judge BRYAN. Then you have such a duplication. You have it in the briefs and then you have it laid before you orally, and most lawyers follow their briefs verbatim.

Mr. NOLDE. Under the British system they don't file written briefs?

Mr. MEADOR. No written briefs at all.

Mr. NOLDE. And it seems to be working?

Mr. MEADOR. Yes. You do have to keep in mind in evaluating that, they have a smaller body of law to work. They do have fewer complexities in that they don't have a Federal system, for example, where you have the constitutional interplay. So you do have to keep those things in mind. But even so, there is enough there to warrant some modified experimentation with it.

Mr. NOLDE. You wouldn't feel it would place an undue burden upon the person making oral argument to be a very effective oral advocate.

Mr. MEADOR. I think it would improve the quality of oral argument if the lawyer knew this was his one and only time to communicate with the court, that he had to develop his case there. I think a lawyer would pay more attention to it.

Mr. Nolde. And you feel our bar could rise to the occasion?

Mr. Meador. I think so. I think lawyers in the main do what is expected of them.

Judge Bryan. The explication that is given to the circumstance that there are no briefs, is that the appeals court in England does not limit the time or argument. That is said to make up for the absence of briefs.

Mr. Nolde. Speaking of pressures, does the fact that defendant in England remains in prison pending appeal contribute to expediting the appeal process?

Mr. Meador. I think it does to an extent. It also removes what I think we have in many of our courts, and that is an artificial incentive to appeal. I don't have data to prove it. We are collecting it now in the appellate justice project. But I have a suspicion a number of appeals are taken merely to prolong the day of incarceration. The availability of bail pending appeal is an artificial inducement to an appeal in many cases, I think.

Mr. Nolde. Would you recommend in our country that defendants go to jail immediately after sentencing, pending appeal?

Mr. Meador. I am not prepared to recommend that fully. My approach is to try to expedite the process greatly. I haven't come to a conclusion in my own mind about what I want to recommend about bail or no bail pending an appeal.

Judge Bryan. One instance, to get at my thought on it, a friend of mine who was the proprietor of a motel was attacked one night by two men who threw him to the floor and drew knives on him and so on, and they were arrested. He met them on the street 2 or 3 days after that. They had been bailed immediately.

Mr. Nolde. Regarding the central research staff, which seems to me a fundamental aspect in the British system, what is the primary reason we haven't been able to put such procedure into effect here? I know they are doing it in Michigan. Is it because of a reluctance on the part of judges to try new things, or a lack of funds? It would seem that this would be an obvious improvement which we should be accepting almost automatically. If we can get some professionals to come in and do screening, why not just go ahead and do it if you have the money?

Mr. Meador. Certainly a lack of funds is an obstacle and maybe not a minor one, but more fundamentally, I think, there is a legitimate concern here about the erosion of the judicial function, or at worst, abdication of it by the judges. There is that specter around.

My hope is the appellate justice project of the National State Court Center will contribute toward a greater understanding of the proper role of staff and will delineate how staff can be utilized without eroding the judicial function. That is an important and difficult question, and I don't have firm conclusions myself about it. Judges though for years have used individual law clerks. They no longer worry about abdicating their function merely because they have a law clerk working with them, so why not a central research staff providing certain kinds of assistance?

Mr. Nolde. The judge should really concentrate his own time on the most important aspect.

Mr. Meador. I do think we need to be careful about too fast a movement, too much of a movement in that direction, until we know a little more about it, and I hope the project will shed light on it.

Mr. NOLDE. How is the project working?

Mr. MEADOR. The Michigan judges like it very much. This hasn't been scientifically and objectively evaluated. The judges believe they get a lot of valuable help. They do not think they abdicate their function. They also think it increases their productivity and expedites the time.

Mr. NOLDE. Judge Bryan, do you have a comment?

Judge BRYAN. No. My concern is just to get some movement.

Mr. NOLDE. Are you worried about all of the technicalities?

Judge BRYAN. Get this thing rolling, so to speak. You know all of the committees, and we have had a lot of committees. As you mentioned a minute ago, it just doesn't seem to take hold. I really think it is due to the conservativeness of our judges. As one of them, I know I am pretty slow to take on new ideas.

Mr. NOLDE. Professor Meador, what is your position on plea bargaining?

Mr. MEADOR. You mean am I for it or against it?

Mr. NOLDE. Yes.

Mr. MEADOR. I am somewhat on the fence personally. I suppose I should state, just to keep the record clear, that the courts task force, which I chaired, formulated a set of recommendations for the improvement of plea bargaining, which were similar to those of the American Bar Association in its "Criminal Justice Standards." However, the parent body of the courts task force, the National Advisory Commission, took a position clearly against plea bargaining, advocating its total discontinuance and abolition within 5 years from now.

In the meantime, it said that the recommendations of the courts task force for improving it were all good, and they should be followed but simply as interim measures looking toward the ultimate demise in the practice. The view was that it was so inherently fraught with evils and unfairness and disadvantages to society, the only cure for it was to abolish it completely.

I have never firmly enough made up my mind on that issue to take a position myself. I see the arguments. I don't work intimately with prosecution and defense work. I feel I am not well enough informed to have a firm position on it. Certainly, I think from what I do know, the process needs drastic improvement at the very least. I think the various recommendations that have been made by the ABA and the courts task force are all good.

Mr. NOLDE. Gentlemen, what is your opinion on the effect rule 50(b) has had in actual practicality in speeding up of the trial process? Has that really done any good; have the courts really come up with plans that are actually working to speed up the appellate process?

Judge BRYAN. Just what is 50(b)?

Mr. NOLDE. Rule 50(b) is a Federal rule which requires district courts to come up with a plan within 60 days to expedite the trial court process.

Judge BRYAN. I haven't seen any effectuation of it.

Mr. MEADOR. I don't have any information about that either, enough to be of any help. I don't know what effect it had. I haven't had occasion to inquire into it.

Mr. NOLDE. Do you have an opinion on the speedy trial statutes which are now being considered, which pose a mandatory 60-day pe-

riod within which to bring a case to trial after arrest, subject to dismissal?

Mr. MEADOR. Again, if I can cite the court report, that report takes a position that 60 days should be the norm in felony cases from arrest to commencement of trial. However, it goes on to say that it is simply saying this is how the system ought to function, it ought to be so organized and so staffed that this is what happens generally. It expressly stops short of saying anything about the sanction if it doesn't happen. The report does not recommend there be a dismissal.

On that issue, again, it is highly controversial. There are arguments both ways. I do not feel well informed enough about day-to-day criminal trial work to have a firm view myself.

Mr. NOLDE. Judge Bryan.

Judge BRYAN. I don't think you can lay down any fixed rule. I think if the judge has control of his docket as he should have, that he is the one who should and can control it.

Mr. NOLDE. Our problem is they haven't.

Judge BRYAN. I don't think legislation is going to make them do it without loss to the public interest.

Mr. NOLDE. Well, of course, implicit in that is the necessity of additional resources being provided for funding for more prosecutors, more judges, more court facilities, more court resources to prevent injury to the public interest where defendants are turned loose.

Judge BRYAN. If you answer it that way, it seems to me it might work.

Mr. NOLDE. That is an important caveat.

Judge BRYAN. Yes. But I think judges have got to show a little backbone on this situation.

Mr. NOLDE. Judge Bryan, your proposal, I take it, although on its face is applicable to civil as well as criminal cases, would seem to be designed primarily to speed up the criminal cases on appeal.

Judge BRYAN. Yes. That is what I was more concerned with, because that is what the public looks to. They don't look to an important civil case, no matter how interesting the constitutional point is, or anything of that sort.

Mr. NOLDE. What constitutional questions might have already been raised or could be raised in connection with your proposal?

Judge BRYAN. In connection with this? I think it is not vulnerable to constitutional attack. It is a matter of procedure just so that nobody is prejudiced by it. If prejudice is shown, there is room for expansion of the rule. But if a man knows he has got 30 days in which to note his appeal, he is not going to note it until the 29th.

Mr. NOLDE. Right.

Professor Meador, could you give an opinion on the constitutionality of Judge Bryan's proposal?

Mr. MEADOR. I see no constitutional difficulty at all. It seems to me a convicted defendant in a criminal case should have, and perhaps under the Constitution has, a right to present his appeal to another forum. That embraces a right to communicate in some fashion to the forum, to the reviewing forum, the reasons why he says the conviction should not stand. Whether that be done orally or in writing, I do not see to be of constitutional dimension.

Also, I do not see a constitutional dimension to the problem of how much of a transcript you have, or what kind of papers you have, so long as there is a channel of communication to the appellate court about what went on below, and what the appellant's arguments are, so the reviewing court can meaningfully pass on them. If that is satisfied, then I don't see a constitutional problem. I think there is a very wide leeway and flexibility, in structure and procedures, without violating the Constitution.

Mr. NOLDE. Do you feel this would fully comply with the requirement of due process of law?

Mr. MEADOR. Yes, sir.

Judge BRYAN. As I recall, there was no appeal in England in the criminal case until 1891.

Mr. MEADOR. And not in the Federal court in this country until about the same time. In England, it was 1908.

Judge BRYAN. I don't think the right to an appeal is a constitutional right.

Mr. MEADOR. Even if it is, my view is it is satisfied so long as you allow the man a means of communicating what he complains of, and communicating enough information about what went on below, so the court can pass on his contentions.

Mr. WINN. Some of us have been quite disturbed in the discussion about the inconsistencies of sentencing from even one courtroom next door to the other one, from New York or Washington, D.C., to California. I wonder if you would care to discuss that just briefly and give us your opinions on it. What can we do and what can be done to try to get more consistency in our sentencing?

Judge BRYAN. I think there have been discussions with which you are more familiar than I, to have a commission after a conviction, and having the extent of the punishment determined by the commission. I am not thoroughly in accord with that. I think the local judge is really in the better position than anyone to see what the quantum of the sentence should be, what is fair.

There are circumstances that would indicate a sentence is cruel and those same circumstances would say the man has gotten no more than he deserved. But all of those are factors with which the trial judge is familiar, and it doesn't carry through in the printed record to whoever is going to reexamine it.

You know very well how varied the verbal word is from the written word. You ask a witness a question and he will say, "No," with some sort of a nuance and then you take another witness and he will say positively, "No." That nuance doesn't show on the record at all.

Now, I think the same is true in deciding what is an appropriate punishment. Another way, of course, would be to let the sentences be reviewable, and that is the closest remedy that I can see to it.

Mr. WINN. How would you do that? What system?

Judge BRYAN. It would come upon appeal. As it is now, if the district court judge gives a sentence within the limits that Congress has fixed for it, there can be no appeal from that. The answer is: Now he has a right to give that sentence; and we cannot interfere with it. I think Congress, your body, has given a good deal of study to whether there should be that review.

Mr. WINN. That just drags it on?

Judge BRYAN. That just drags it on.

Mr. WINN. The procedure ought to go further, which is what you are trying to get at, and most of us agree.

Judge BRYAN. Some years ago you passed an act which allowed a judge to pass—and is still on the books—the maximum sentence and then he refers it to the appropriate body, the parole board.

They will come back with a recommendation after study. He does not have to accept that. Ordinarily, he will accept it, or he can say if it is a 5-year sentence and they recommend 3 years, he can say, well, I will sentence him to 5 years, but suspend the balance of the 2 years. It is something I think that primarily should be left to the trial judge. He sees the man and he sees the persons who have testified against him, and he has got cozier knowledge of it than anybody else has.

Mr. WINN. Do you think the human element then of the judge to the defendant is extremely important?

Judge BRYAN. Very important. I think it is really vital.

Mr. WINN. Do you think there is anything to the theory that a certain percentage—it would probably be very small—of criminals go to certain areas of the country to commit their crimes, or to commit further crimes, because the prosecutors are lenient, judges are lenient, the court system is weak, or there is not enough room in the institutions to put them in jail? Do you think this theory has any credence?

Judge BRYAN. Yes, I do. I think, to put it around the other way, they stay out of certain States because they know there that their punishment will be more severe.

Mr. WINN. Their communications system is pretty darn good, isn't it?

Judge BRYAN. Yes.

Mr. WINN. Particularly among the real pros. They have been in and out of institutions and they talk about, "Don't go to this area, don't go to that area, because that judge is tough, or the prosecutor is a tough one."

Judge BRYAN. It is undoubtedly true that they know where and at what stateline to stop.

Mr. WINN. How would you say that Washington, D.C., fits into that picture?

Judge BRYAN. I don't know, really.

Mr. WINN. I am not trying to put you on the spot.

Judge BRYAN. The general reputation of Virginia is if you get over there, you are going to catch it.

Mr. WINN. In Virginia?

Judge BRYAN. Yes, I think they beware of Virginia when they can.

Mr. WINN. Washington, D.C. has been referred to by some elements in the crime field as the melting pot of all of the troublemakers in the country. When they get in trouble in their home area they go to the District of Columbia because there are so many of them there, they can't handle the court caseload, their institutions are full, and so you get a pretty liberal treatment.

Judge BRYAN. That could get around very quickly.

I remember as a district judge, I had the Eastern Shore of Virginia, which is the peninsula coming down, and we would have criminals coming down from New York City that were used to committing far

greater crimes than the country people on the Eastern Shore of Virginia were used to. With a few pretty severe punishments, that ceased. So I believe that is a prevention. On the other hand, you don't want to be so cruel that your desire to supress a crime or to prevent a crime overreaches justice in the case.

Mr. WINN. I suppose this would be true in some cases where the prosecutors and the courts and the judges sort of set themselves up as if we are enough, we are really tough, we won't get the flow into our area if it is near a big city.

Judge BRYAN. Yes. A lot of them have the idea very, very severe sentences are deterrents.

Mr. WINN. What is your feeling on that?

Judge BRYAN. I think that varies. I don't think you can deter a homicide arising from domestic difficulties through severe sentences. The fear isn't there. I think you can deter bank robberies and things of that sort. But when it comes to personal considerations, it just doesn't count.

I remember a case that I prosecuted years ago. I don't know if you are familiar with Alexandria or not, but in the middle of the town was the George Mason Hotel and this husband came up and shot his wife right through the head, standing in the lobby of the hotel. Well, right on its face it looked as if it was certainly a cold blooded, premeditated, first-degree murder case. But when the evidence came out, it showed there had been a great deal of bickering between the husband and the wife, the in-laws had joined in, and they had formed sides. So that no amount of punishment there would deter such a crime.

Mr. WINN. Then your philosophy would be, again as you stated in your prepared remarks, swifter sentences and not particularly more severe sentences?

Judge BRYAN. Yes. That is a tremendous factor in deterring. It is the certainty of punishment that deters.

Mr. WINN. Another one of our concerns is the bail system, which seems to have about as many arms as an octopus and seems to be involved in many cases under the table as much as on the table. I wonder, in the District of Columbia they have a bail agency. In some places the bail firms are right next to the courthouse, right across whatever the location might be, and those people have been accused of political payoffs. What can we do to clean that up? I come from Kansas City, which doesn't have the greatest reputation, certainly in the past, for clean politics in the Kansas City area. But what can we do to have a more efficient and cleaner operation, more honest?

Judge BRYAN. Yes; that is a difficult question. Now, that is the professional bondsman.

Mr. WINN. Yes. Bondsman.

Judge BRYAN. It isn't so here, but there are places where a professional bondsman is just a godsend.

If you were driving through some very strange State and had an automobile accident and the police charged you with manslaughter, you have either got to go to jail or give bond. And if there wasn't a professional bondsman there you would go to jail.

In large cities, I just don't know how it could be handled, except if you required proof by the bondsman of solvency and not just simple

proof, but sound proof of it, you would probably be getting into the bonding business a better class of person.

Mr. WINN. That is pretty hard to do because a lot of the bondsmen in some cities are front men in some cases for the syndicate.

Judge BRYAN. Who can prove their solvency. If he comes up to give bond, he is examined and he qualifies.

Mr. WINN. That is right.

Judge BRYAN. You have a big problem there. I wish I would give you some helpful answer that you don't already know of yourself.

Mr. WINN. I don't know. I am just concerned about it because I have seen some examples in the past from other cities—where the bondsmen have been accused and charged and indicted for payoffs with the night clerk or whoever is involved, the different people that might be involved, and I think the public, maybe the more sophisticated public that probably can afford to put up their own bond, is well aware there is sort of a stinking mess in the bail system in this country.

Maybe it is not as bad as the press would lead us to believe. I don't know.

Judge BRYAN. No, but the public has that idea, undoubtedly. It is sort of a low-class business.

Mr. WINN. Thank you very much, Judge. I am sorry I missed your earlier testimony, but I will look forward with interest to reading your prepared remarks.

Judge BRYAN. I feel flattered to be invited to appear here.

Mr. NOLDE. I have one more question. Was there a study by the Federal Judicial Center of the constitutionality of your proposal?

Judge BRYAN. No.

Mr. NOLDE. Was an informal review made of your proposal?

Judge BRYAN. No. Actually, I am trying to excuse my lack of persuasiveness. It was quite a large group that were listening to different subjects and nobody really felt or had the initiative to go into questioning of the subject. I don't suppose I had more than two or three questions.

There were just too many for concentration.

Now, the administrative office has recently circulated these suggestions among the executives of the 11 circuits. I don't know what response they have gotten on that. They are particularly interested in the saving of funds that would result from omitting these transcripts.

Mr. NOLDE. As far as attorneys representing defendants both at the trial and appellate level, of course, it is obviously better to have the same attorney. Would you make it mandatory in the general run of the cases to have the attorney at the appellate level be the same one as the trial attorney?

Judge BRYAN. Yes. I think that is a fair imposition upon the trial attorney, that he expect to carry the case through. The change is only permitted when his client raises—and they do it all of the time—dissatisfaction in the way he is being represented. Now, I don't think that a judge ought to take that right on the face of it, that he has been inefficient, because it is quite a slur on the lawyer if that representation should be accepted. That is the reason so many lawyers don't like to take those assignments, because they know they are going to be criticized by their own clients and they don't care to be subjected to that.

So if the judge is a little stiff on releasing an attorney—just like he would be in a civil case, wouldn't allow it in the middle of a civil case, the attorney to withdraw, because it might cause a mistrial in the case—but I think he could exercise that same power by looking into this question of inefficiency and if he comes to the conclusion it is unfair accusation, he can refuse to make the change.

Mr. NOLDE. Thank you, Judge Bryan and Professor Meador.

We have been honored to have you today and we are delighted to hear of your innovative proposals.

[The prepared statements of Professor Meador and Judge Bryan follow:]

UNIVERSITY OF VIRGINIA,
SCHOOL OF LAW,
Charlottesville, Va., May 2, 1973.

Memorandum

To: Select Committee on Crime, House of Representatives, Congress of the United States.

From: Daniel J. Meador, Professor of Law, University of Virginia.

The National Advisory Commission on Criminal Justice Standards and Goals is publishing a series of reports spanning all segments of the criminal justice system. Collectively these reports are designed to provide a strategy for the reduction of crime in the United States over the next ten years. The Report on Courts is one of this series; it was prepared by a Courts Task Force, of which I served as chairman. While not comprehensive, this report is addressed to the more pressing problems of delay, inefficiency, and unfairness which currently afflict the judicial process in criminal cases. The report contains many standards and recommendations for improving the courts' performance. Many of these, if implemented, would substantially accelerate a final determination of guilt or innocence; others would upgrade the quality of justice, even though they might have no direct impact on efficiency.

This Select Committee should review carefully the Report on Courts, as it contains a rich array of ideas for new procedures, experimental programs, and research. The report is available, as of this date, in galley proof. The published volume will be available in the near future.

The following are set out as an illustrative sample of proposals in the Report on Courts which have a direct bearing on the expedition of criminal cases and which merit consideration by this Committee:

1. Eliminate the requirement of grand jury indictment in felony cases. (Standard 4.4)

2. Create a new offense of failure to appear, for cases of "bail jumping," with a penalty the same as the penalty for the offense with which the defendant was originally charged. (Standard 4.7)

3. Establish a system of priority scheduling in trial courts so that certain cases can be moved to conclusion with minimum delay. (Standard 4.11)

4. Restrict voir dire examination of prospective jurors to the trial judge. (Standard 4.13)

5. Experiment more widely with the video taping of trials, with edited video tapes shown to juries. (Recommendation 4.2)

6. Increase utilization of computers in court administration and operations, including computerized production of transcripts for use on appeal. (Standard 11.1)

7. Experiment more widely with automated legal research, with remote terminals in judges' chambers, prosecutors' offices, and public defenders' offices. (Standard 11.2)

8. Experiment with a unified review proceeding which would consolidate into a single review all of the review which currently takes place on new trial motions, direct appeals, and post conviction proceedings. (Standards 6.1, 6.2, 6.3, 6.4)

The idea of a unified review proceeding is also discussed in a recently published book, Criminal Appeals: English Practices and American Reforms (University Press of Virginia, 1973). This book is based on a study of criminal appeals in this country and in England which I did under a grant from the Law Enforcement Assistance Administration. The proposed unified review proceeding was suggested

by the English practice, but it is not an exact copy. The basic idea is to have a probing review of the case, not confined to the "record." A professional staff of lawyers would be provided the appellate court to assist the judges in ferreting out all defects, whether raised by the lawyers or not, so as to settle finally the validity of the conviction.

If the unified review procedure should prove successful, the Report on Courts recommends that collateral review, both state and federal, be contracted, so as to increase the finality of convictions. (Standards 6.5, 6.6, 6.7, 6.8)

Other ideas for expediting judicial handling of criminal cases are suggested in Criminal Appeals: English Practices and American Reforms. For example, the trial and appellate processes might be rendered shorter, fairer, and more professional by adopting the English custom of a trial bar which rotates interchangeably in prosecution and defense work. (See pages 114–116). This could be done experimentally in this country in a given city or county, where there is a steady volume of cases, by establishing an office of Criminal Justice Attorneys. Each lawyer in the office would represent the prosecution for a while—three or four months—then he would represent the defense (in indigent cases) for a similar period. Such a continual rotation might develop a better atmosphere of detached professionalism and prevent ideological or emotional attachments to a "side" or a "cause." In turn, this would make for expedition.

The use of a central staff of lawyers in appellate courts is another idea gaining momentum in this country. A staff is a key feature of English criminal appeals (See pages 28–43). More experience is needed in American courts to determine to what extent a staff can increase an appellate court's productivity and expedite the cases, without impinging on the judicial function. The National Center for State Courts is currently conducting an Appellate Justice Project designed to gauge these and other aspects of an appellate staff. Under this project, staff lawyers are working experimentally in appellate courts in Nebraska, Illinois, New Jersey, and Virginia. Reports on these experiences will be submitted in late 1973.

Experimental and pilot projects are needed in the courts in order to test new ideas. Judges and lawyers tend to be reluctant to adopt new procedures until they can see that they work. At the same time judges and lawyers are reluctant to experiment. Thus reform efforts are stymied. Perhaps the most promising way to promote experimentation in the courts is through funding provided for that purpose. The availability of money for a court may prompt the court to try a novel proposal which it would not otherwise consider. This may be the best practical way to bring about badly needed reforms in the judicial process.

PREPARED STATEMENT OF HON. ALBERT V. BRYAN, JUDGE, U.S. COURT OF APPEALS FOURTH CIRCUIT, ALEXANDRIA, VA.

RULE AMENDMENTS TO SPEED THE APPEAL PROCESS BY SHORTENING THE INTERVAL BETWEEN THE NOTICE OF APPEAL AND THE ARGUMENT

My objective is to lessen sharply the lapse of available time under the Federal Rules of Appellate Procedure between the notice of appeal and the docketing of the case in the appeals court. Presently, this period permissibly amounts to approximately a *minimum* of 4½ months.

I. I think it is reasonably practicable to reduce it to 60 days. Itemized, the steps and days now consumed in the intervening period are these:

(a) 10 days for filing notice of appeal by an individual or corporation, and 30 days for an appeal by the Government, but in either case it *may be extended* for an additional 30 days for excusable neglect.

(b) 40 days for the transmission of the record from the trial to the appellate court—this *may be enlarged* to 90 days.

(c) 40 days from the transmission of the record is given the appellant for filing the opening brief.

(d) 30 days for filing of the appellee's brief, not to commence until after receipt of the appellant's brief.

(e) 14 days for the appellant to file a reply brief.

Total—134 days or 4½ months, or 154 days for the Government, without extension.

The most serious delay occurs in the preparation of the transcript of the trial proceedings for inclusion in the record. Seldom is the transcript readiable in 40 days. Blame therefor is not attributable to the trial court, the attorneys or the

reporter, but rather to the reporter's inability to write up the transcript promptly, because of the heavy burden carried by each reporter and because the trial judge has only one such employee. The reporter is required to attend sessions of the court daily and, consequently, must take care of the transcribing only in spare time. The English courts, reportedly, have the same difficulty in expediting appeals.

Of overriding importance in the amendments now recommended is the deferment of the call for a transcript until there appears to be a need for it. Judge Parker, a prominent jurist lately of the Fourth Circuit, said that a transcript was of little use for no one looks at it. This is the experience of many appeals judges. Forty days or more would be saved in the appeal process if the transcript were not required.

If the case were argued without the transcript, nothing would be lost. Even should the argument develop a necessity for it, which would be infrequent, then the transcript, or so much of it as appeared needed, could be obtained after argument. Only in two situations, to be explained in a moment, has it been suggested that the lawyers could possibly be deprived of any essential to the appeal.

The sole situations just mentioned as militating against this proposal are two: (1) when the point on appeal is the sufficiency of the evidence and (2) when there is a change of counsel between the trial and the appellate level.

There is an immediate and practical answer to both of these apprehensions. If the review goes to the adequacy of the evidence, every practitioner knows that this does not refer to the whole of the testimony or exhibits. Always there are only two, three or special points of vulnerability imputed to the evidence. These would appear in the exceptions to the requests to charge, or to the jury charge itself, or in the requested findings and conclusions or in those actually granted in a non-jury case, or in the judge's opinion when one is rendered. The *bases* of the alleged infirmity are seldom debatable; the question is not so much the content of the evidence, but rather its admissibility, its relevance and its purpose.

With respect to the second objection—the change of counsel—the answer is that the release of trial counsel should be more sparingly accorded. Moreover, substitute counsel may obtain a summary of the case from the indictment or the complaint and answer, from the charge to the jury, or from the judge's statement of findings and conclusions, or his opinion. Additionally, opposing counsel will generally stipulate the background and context of the alleged failure in the evidence. At all events, no lasting prejudice could result because the court ultimately could require the needed transcript, full or partial.

In summary, the point is that the rules should not demand a transcript of the evidence prior to the argument of the case.

II. The proposed rules require the appellant to list, immediately following the notice of appeal, the issues on the appeal, just as is now required of the appellant's brief by Rule 28(a)(2), Federal Rules of Appellate Procedure. With this outline, plus the indictment, or the complaint and answer, any depositions and exhibits on file, and the charge of the court or its statement of fact findings and law conclusions, the appeals court will be fully apprised of all claims and defenses. The issues will be shaped and laid out by the statement of them. In these circumstances rarely would recourse to the transcript of the evidence be essential. Certainly not before the argument.

III. Another step in expedition could be achieved by reducing the time for filing briefs. Actually, briefs might be entirely dispensed with. If the case is argued shortly after the trial's termination, the lawyers are then in a more advantageous position to argue than at any time—certainly more so than after the expiration of several months. They would have the evidence at their fingertips, having just argued motions to set aside the verdict or modify the findings, etc., when there are no briefs. Counsel are then fired with their cause and will never again be so well prepared for the appeal presentation. The appeals court would suffer no deprivation; it would have the benefit of all the papers which were before the lawyers and the oral argument, with the tape recording of it for later refreshment. As it is now, the presentation is duplicated, first in laborious briefs and then in oral argument.

If briefs are not wholly omitted, simultaneous briefs should be seriously considered. The parties would file their respective opening briefs at the same time and each side would file a reply brief. It is suggested that 30 days be allowed for the first briefs and 10 days for the reply briefs. As briefs need not be printed, there would be no necessity for greater time for their preparation. Such a procedure would cut off as much as 40 days from the appeal interval.

CONCLUSION

The suggestions incorporated in the amendments now offered, including the use of simultaneous briefs, would effect a curtailment of appeal time from 134 to 59 days. The time schedule would be as follows:

(a) 7 days for filing notice of appeal.
(b) 7 days thereafter for filing the statement of the issues.
(c) 5 days for the judge to file the jury charge or his findings and conclusions.
(d) 30 days for simultaneous briefs.
(e) 10 days for reply briefs.
Total—59 days.

PROPOSED AMENDMENTS TO RULES 10, 11 AND 12 OF THE FOURTH CIRCUIT AS REVISED AND SUBMITTED TO SEMINAR IN WASHINGTON, D.C., ON FEBRUARY 26, 1970, AT THE FEDERAL JUDICIAL CENTER

RULE NO. 10. COMPILATION AND TRANSMISSION OF THE RECORD

I. Appellant shall, within 7 days after the filing of a notice of appeal, file with the Clerk of the District Court a statement of the issues presented for review, such as he is required to include in his brief by Rule 28(a)(2) of the Federal Rules of Appellate Procedure. It shall consist of a condensed list of the points to be made against the order from which the appeal is taken, but shall not include argument of the point. A single page of legal cap size typed in double space should suffice. An excusable omission from the list will not preclude reliance upon the point.

II. Each District Judge, for the expedition of appeals, is requested to file with the Clerk within 7 days from the time the judge is advised that a notice of appeal has been filed, the following papers:

A copy of his charge in a jury case, or his findings of fact and conclusions of law in a non-jury case.

III. Except in reviews of decision of the Tax Court and in reviews or enforcement of Agency orders, the record and docketing of the appeal, unless otherwise ordered by the court, shall be at the times and in the manner as follows:

(a) No transcript of the stenographic report or other means used in recording the proceedings at trial, or agreed statement as permitted by Rule 10(d) of the Federal Rules of Appellate Procedure, shall be required of the parties before the appeal is docketed, or be required thereafter, unless before or after argument of the appeal, the court shall require a transcript, or any party may elect to supply a transcript or the parties may desire to supply an agreed statement, provided, however, that in any event the court may shorten the time for filing of a transcript or the agreed statement, and may hear the appeal argument, but *may* defer decision, pending receipt of a requested transcript or agreed statement. Rules 11(d) and 11(a), Federal Rules of Appellate Procedure.

(b) The Clerk of the District Court, *immediately* upon receipt of the notice of appeal, shall inform the District Judge thereof, and without awaiting the filing of the transcript or agreed statement, the Clerk shall forward to the Clerk of the Court of Appeals the following items:

(1) A photostatic or other immediately available copy of the docket entries.

(2) All of the papers and exhibits filed or lodged in the action in the District Court, without copying them.

(3) Four copies of the appellant's statement of the issues, and four copies in a jury case of the charge of the Court, and in a case tried without a jury of the Court's findings of fact and conclusions of law, and at the same time the Clerk of the District Court shall forward copies of these papers to counsel of record.

(4) A transcript of the proceedings, or agreed statement under Rule 10(d), Federal Rules of Appellate Procedure, if either has by then been received by the Clerk of the District Court.

RULE 11. BRIEFS

(a) Unless otherwise ordered by the court, the parties may agree to argue the appeal without briefs or on simultaneous briefs; or any party may waive the right to file a brief. In the absence of any such exception, briefs shall be prepared and filed in the form and within the time prescribed by the Federal Rules of Appellate Procedure.

(b) Briefs need not be permitted. Typographic, typewritten or other good copies from reproduction machines will be accepted, if they are clear.

(c) A copy of this Rule 11 shall be sent by the Clerk of the Court of Appeals to counsel as soon as he receives the papers enumerated in Rule 10, III(b)(3).

RULE 12. APPENDIX TO BRIEFS

Unless the court upon motion or sua sponte shall dispense with an appendix in a particular case as permitted by FRAP 30(f):

(a) Appendices to the briefs shall be prepared and filed in the form and within the times prescribed by FRAP 30(f) but unless directed by the court or desired by the party, no part of the *testimony* shall be included.

(b) If there is a disagreement between the parties as to the testimony, the court may receive, or order produced, after the argument a transcript of the testimony to settle or verify the contentions.

[Whereupon, at 4:40 p.m., the committee adjourned, to reconvene at 10 a.m., on Tuesday, May 8, 1973, in room 2261, Rayburn House Office Building.]

STREET CRIME IN AMERICA

(Prosecution and Court Innovations)

TUESDAY, MAY 8, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 10:15 a.m., in room 2261, Rayburn House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Rangel, and Winn.

Also present: Chris Nolde, chief counsel; Bob Trainor, assistant counsel; Thomas O'Halloran, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

We are very pleased to have sit with us this morning one of the distinguished Members of the House of Representatives, highly respected by all of the Members on both sides of the aisle, one who has honored us by sitting with us this morning to hear some of the witnesses. We hope he can stay through the whole session.

I would like to call upon my distinguished colleague and friend, Mr. Mitchell, if he will introduce our first witness this morning.

STATEMENT OF HON. PARREN J. MITCHELL, A U.S. REPRESENTATIVE IN CONGRESS FROM THE STATE OF MARYLAND

Mr. MITCHELL. Thank you very much.

I am delighted for this opportunity to be here with you. Unfortunately, I will not be able to stay for the entire session this morning. I have a 10:30 appointment. I am very much concerned about the Senate hearings on the confirmation of the new Secretary of the Army.

Before introducing the witnesses, I want to take this opportunity to pay a tribute to the chairman of this committee. I think far too often we fail to recognize men who have dedicated themselves to the areas of human rights and human interests. I know that this distinguished chairman, as both a Senator and a Member of the House, has dedicated his life to the whole principle of human equality and to the securing of the best that a society can offer to human beings.

Let me just take this opportunity to thank you personally and publicly for the magnificent record you have compiled.

Chairman PEPPER. Thank you very much, Mr. Mitchell. I appreciate your remarks.

95-158—73—pt. 3——18

Mr. Mitchell. It is my very distinct honor to introduce two gentlemen, and I will introduce them both at the same time because I have to leave. These two gentlemen from Baltimore represent, I think, the finest and the best in the legal judicial tradition of this country.

I am referring to Mr. Charles Moylan, a very distinguished jurist from the city of Baltimore. It is almost unnecessary to speak about his professional capacity, because he has a national reputation.

What I would like to do in introducing him is to point out the human quality that he had when he was with the State's attorney's office and returns as a judge on the bench; the quality that enabled him to transcend racial and economic lines so he moved freely and with confidence throughout our Baltimore communities. At a time when there is great racial polarization, I would like to point to the fact that Charles Moylan has the respect of the black community because he has integrity, and honesty, and he is a very decent, wonderful human being. I am delighted to present him to this committee.

The second gentleman, a longtime friend and outstanding man in the city of Baltimore, is our State's attorney, Mr. Milton Allen. As you well know, a few years ago, in a historic election in Baltimore City, the city, the citizens of the city, elected the first black State's attorney to head a large urban office. That man elected was Milton B. Allen.

I campaigned with him, supported him fully, and believed in all of the commitments that he made when he was running for office. I am delighted to report that he has lived up to those commitments.

Mr. Allen has been an aggressive advocate. Mr. Allen has been really a tower of strength in the judicial system in the city of Baltimore and the State of Maryland. Like Mr. Moylan, he has won the widespread respect of the entire Baltimore community. The only thing that I can say in closing, in presenting Mr. Milton Allen to this committee, is that he, too, represents the quintessence of excellence that we seek to find in the judicial system of our country.

With those brief introductory remarks, Mr. Chairman, I am delighted to present these two witnesses to you.

Chairman Pepper. Thank you very much.

Mr. Mitchell, we appreciate your introduction of these two distinguished gentlemen.

As you and I know, these hearings are to exhibit to the country and to the Congress the most innovative thinking, the most innovative procedures and programs to be found anywhere in the country in certain critical areas having to do with the administration of our criminal justice system. We started with the police and we had 13 outstanding police departments of the country to come here and tell us about the imaginative and innovative programs which they have employed in curbing crime.

Then came the innovative programs and practitioners, and personalities in the field of juvenile crime and in the field of correctional institutions. One of the sad aspects of the whole program that we have in this country for the administration of justice is the correctional system. So we had people who were especially knowledgeable in advanced thinking in the area of juvenile crimes and delinquency, and correctional or penal institutions.

Then, in the last phase, we are having selected individuals that we consider outstanding in the country, who have done something imagi-

native, creative, and constructive in the field and in the functioning of prosecuting atorneys, and in courts. We have had outstanding courts officials and prosecuting attorneys. We have chosen Mr. Allen and Judge Moylan because, in their respective fields, as I said to my distinguished friend, Mr. Mitchell, we thought they have been outstanding and can give an example to the Congress and the country on how we can further curb crime by imaginative and constructive pregrams such as they have been offering.

We are very pleased to have them.

Thank you for being with us, Mr. Mitchell, and stay as long as you can.

Mr. Counsel, will you call the first witness.

Mr. Allen and Mr. Moylan, would you please come forward, and your colleagues.

STATEMENTS OF MILTON B. ALLEN, STATE'S ATTORNEY FOR THE CITY OF BALTIMORE, STATE'S ATTORNEY'S OFFICE, BALTIMORE, MD.; ACCOMPANIED BY HOWARD B. GERSH, CHIEF, VIOLENT CRIMES LIAISON UNIT; AND HON. CHARLES E. MOYLAN, JR., ASSOCIATE JUDGE, STATE COURT OF SPECIAL APPEALS, BALTIMORE, MD.

Mr. ALLEN. Thank you, Mr. Pepper.

This is Mr. Gersh from my office. He is the man in charge of one of the innovative programs we have in my office You may wish to ask him some questions about how he operates the section.

I would like to say first that I am grateful to find that this committee is considering all aspects of the criminal law picture in these United States.

Chairman PEPPER. First, let me thank you, Judge Moylan and Mr. Allen and Mr. Gersh, for being here with us this morning. We appreciate your coming. We know we will profit from hearing you.

Mr. ALLEN. We appreciate the opportunity to speak to a committee such as this, because I think all three of us are very interested in the heightened activity in the criminal justice field. I am delighted the committee is looking at it from all aspects because street crime simply can't be considered in isolation; and we so often fall into that bad pattern.

It is very similar to the people who think more policemen, more jails, and harder judges will solve crime. Of course, it won't. Street crime is intertwined inexplicably with so many phases of the criminal law picture, including the fact our society apparently has lost the ability to deal with the entire criminal law picture.

The prosecutor system, which is one of my pet beefs, with its apparent inability to cope with crime because of its fascination with part-time, youthful, inexperienced, underpaid prosecutors—part time—is probably one of the largest contributing factors to the failure to curb crime in this country.

The prison system, of course, which much of the time turns out a more highly skilled criminal at the other end, is a contributing factor. The basic unfairness of certain parts of our American system in which

we have not really supplied the criminal statistics, and we find ourselves unable to deal with the thinking criminal contributions.

The overly complicated criminal justice system in which we find ourselves in a situation, after a series of Supreme Court decisions which were forced out of the Supreme Court, in large part by overzealous policemen, unskilled prosecutors, and insensitive judges, such as the Mirandas and Escobedos, and the Mapps and the Browns, and so on, contribute a great deal.

The inability of our criminal justice system, the inability of our States to cope with organized crime and white-collar crime, and consumer fraud and ecological crime, is another contributing factor.

The lack of integrity at the top level of our Government contributes a great deal. There are no simple solutions to it, except a gross revision of the entire system. There are good ideas and good plans and good systems. We have in Baltimore presently existing two good plans that we think work.

The first one is one that we call liaison for violent crimes, which was instituted, thought of, about July of last year, started around September, and really became active around January. Funded through LEAA, the first plan was to have six prosecutors, six highly skilled prosecutors, to work around the clock with policemen in the serious crimes. By being limited in numbers, we confined ourselves to homicide and certain other serious crimes, rapes, and these have involved robberies.

The idea being to get a prosecutor in at the very early stage so that the prosecutorial problems that would arise later would be avoided.

These men make themselves available, although we only have four instead of the six we should have had, make themselves available around the clock; they work as much as 30 hours a day with a rough case, and they process the case from the very beginning with an eye toward successful prosecution. We have become very statistic oriented in this country and very often we are carried away by arrest statistics, when the emphasis should be, it seems to me, on successful prosecution, because in my view nothing damages the system more than an unsuccessful prosecution.

Every time a defendant is arrested and, as he calls it, beats the system, you have lost another notch, you lost more credibility, and you lost more belief in the system.

Now, these men deal with the police, with confessions; they deal with them on search-and-seizure warrants; they deal with them at the grand jury level, taking witnesses before the grand jury. They give immunity, they plan strategy, they generally supervise the case from a prosecutorial angle.

They handle bail, they deal with lawyers, they get lawyers in the case early, and by this specialized function they have been able to surmount a great many problems that haunt the system. They have been able to shortcut some of the timewasting procedures: the preliminary hearing procedure, the grand jury procedure, which usually adds a month or two in there to the time. They have been able to get lawyers at an early stage through cooperation with the public defender's office. And getting lawyers, under the new requirements of the court, has proven a problem in many States.

We have seen cases where a man was able to avoid getting a lawyer for 7 or 8 months, thus getting his case stale and difficult to try.

We have found this system works. The prosecutors like it, the police like it, it is practical, it is fair, and it has a potential for building respect for the law, order, and justice. It also has a dividend in that we are able to get out of the system, at an early stage, innocent defendants, persons who are innocent who are arrested, rather than keeping them in jail 7 or 8 months and then find we don't have a case.

I can cite you some examples of how the system works and the good it has done. For instance, very recently, we had a "Murder for Hire" ring in Baltimore that had been highly successful in disposing of undesirable people for fees of $600 to $1,500. The police knew who these people were but they simply could never get enough to make an arrest.

My unit got with them and they developed a strategy and we got to the contact man between the hirer and the killers. We took him before the grand jury, we got a lawyer, we cracked the case. We made an arrest and within 29 days we had a conviction.

That does law enforcement a lot of good.

In another case, a very similar strategy worked.

Chairman PEPPER. I am glad you had a speedy trial like that. That is what we ought to have all over the country.

Mr. ALLEN. We aim for 60 days. It is not easy to do, to get a trial in 60 days. But you can do it in this isolated unit because we have men right on top of it at all times.

We had another situation that could not have developed but for this unit. We used a unit in the grand jury and, as a result of the work, the homicide unit was able to make a mass arrest. Valid research revealed the following: Three escaped murderers, three murder cases, 60-some guns that were in one house, the solution to an absolutely clueless murder of a security guard, a double-contract murder in New York that was connected with narcotics that we solved here in Maryland.

And an extra dividend, a very complicated, very quiet, unknown, substantial narcotics operation that is still being developed.

We used the same approach very recently in another case in which a key witness in a fairly minor case had mysteriously disappeared a few days after he testified before the grand jury. Absolutely disappeared from the face of the earth. We used a very similar approach and were able to resolve the case. We found out where the witness went and who sent him there. In addition to that, we got an extra dividend in that case in what has become known as Baltimore's *Missing Heroin* case, something that puzzled and bothered us for some 5 or 6 months. We think we have an answer.

There have been many cases of this nature that we have been able to develop and make cases where there was no case, by virtue of the close cooperation between the prosecutor and the police. Oddly—odd to me because I came, I was originally a defense lawyer. Judge Moylan and I fought many a battle when I was on the defense side, and I was really surprised to learn that Mr. Gersh's operation had attracted so much attention nationwide.

He has received letters from all over the country about the system. I think he is going to write something for the "Notre Dame Lawyer" about it.

I thought this was the way it was done all along. But apparently the policemen and the prosecutors work separately. The police do their part and 4 or 5 months later the prosecutor does his and they may not work together. They may not be on the same wavelength.

We have another unit called Narcotics Strike Force that operates on the same principle. I am reasonably sure it is the only State narcotics strike force that has had any real success. I think they started one in Michigan about the same time, but ours has had, I think, a marked degree of success. This works with a larger force. We have seven prosecutors and seven policemen. These people, we have a "Hot Line," we advise police of warrants, we gather intelligence, we cooperate with law enforcement in other parts of the country, and we operate legal phone taps.

There have been inquiries about that unit. We had a group from Indiana just 2 weeks ago to go over our system. They want to adopt something similar in Indiana. This group has been successful not only in Baltimore but in the information they developed that goes out all over the country. Much to our surprise, about 6 months ago, we—through something we developed in Baltimore—were able to crack a coke case smuggling operation in California, of all places.

As a result of that, we got the largest haul of cocaine they ever got in California. These, of course, are specialized units. I suppose there are six men in this unit, seven men in Peter Ward's unit, who are able to accomplish these things by bearing down on the problem. But I think, to have good prosecution, you must have this type of operation at all levels of police-prosecutorial relations.

The law is much too complicated at this point to ever go back to the old system. We must have prosecutors at the start and right on through, which means it is going to cost money. And it means the Federal Government must take an interest in prosecution over the country. We still have more part-time prosecutors than full-time prosecutors. We still have gross underpayment in the field. I don't know of five offices in this country where you have good pay scales. We still cannot compete with the private bar.

To give an illustration, in my city, the public defender's office, which just started last year, start their salaries at $5,000 higher than I do. I start at $10,000, they start at $15,000. So I can't compete. I can't begin to compete.

Now, the cities, of course, don't have money to professionalize prosecutors' offices. But at this stage of development of our law, when the prosecutor's office is really the key to successful law enforcement—I regard it as the key—and for very little money and by setting minimum standards from the Federal level, you could professionalize the prosecutors' offices all over the country in 10 years.

Chairman Pepper. Are you getting any LEAA money?

Mr. Allen. Yes, sir. Almost half of my staff is financed through LEAA. The liaison program is LEAA, the narcotics unit is LEAA. Judge Moylan, before he left, started the district court system. Believe it or not, we were trying 35,000 cases a year in district courts without a prosecutor. How they did it, I don't know. I never will find out. But Judge Moylan made one of the initial grants when he was prosecutor, and we got prosecutors in the districts.

He started another program which I am carrying on, a pretrial program, designed to get prosecutors associated with the case early.

That is still in existence and it has been revised to get them into the case prior to indictment, which we think is the next best thing to have, for them to have an active charge in the case.

I am hopeful that this committee—I don't know what your aims might be—but I am hopeful it doesn't end up in more laws and stiffer sentences which don't solve anything. I am hopeful they come up with minimum standards for court systems. We have a good court system in Maryland. We have a three-tier system that is fairly new.

Chairman PEPPER. Excuse me, Mr. Allen.

I draw the inference from what you just said that you don't think that stiffer sentences, longer sentences, are necessarily the answer to the problem.

Mr. ALLEN. Absolutely not.

Chairman PEPPER. What do you think is a more effective approach?

Mr. ALLEN. I really think we have to have an entire revision with Federal guidelines of the entire justice system, including the courts. Maryland has a good court system but there are many States that don't. We still have magistrates and justices of the peace all over the country. You need three-tier systems.

I think Maryland is extraordinarily good. We fortunately have two or three very good administrative judges who are really going after this thing.

You must have changes in your prosecutor system. The part-time prosecutor is passé. He no longer can serve this complicated justice system. Whatever is needed to bring the prosecutors' offices all over the country up to par must be done if we are going to have good law enforcement.

You simply cannot deal with the modern complicated case with a prosecutor 2 years out of law school.

Chairman PEPPER. Mr. Allen, I inferred from what you said that the relative certainty, or a greater certainty, of apprehension and a greater certainty of getting some kind of a sentence that will put you in prison is probably more of a deterrent than the lengthy and long-term sentences.

Mr. ALLEN. Absolutely.

The certainty of punishment and the certainty of proper and fair punishment—proper and fair results, I think—is the greatest deterrent we can have. But our system is not able to deliver that. We can't deliver it because, No. 1, we have good police forces in many cities and many States, but not nationwide. And with the way people flow back and forth between cities, counties, and States, you simply must have it nationwide. It does little good to have a good police force in Maryland, or Baltimore, when they just move across the line to Washington.

Chairman PEPPER. Mr. Allen, to bear out just what you said, my wife and I were preparing to go for a long weekend over on the shore and we had a station wagon parked in Washington outside of our apartment. Our best things in there, several thousand dollars' worth of our best things. A little while and everything was gone.

I got in touch with the local police immediately and they came up there, and I finally said, "What are you going to do?" They said, "We

are going to check the pawnshops around here, the usual sources that we have."

A little while later, a few days later, I said, "Did you ever get any leads?" "No."

"Did you check Baltimore?" "No," they didn't check Baltimore. What could have been simpler than anybody just putting all of that stuff in a car and taking it over to Baltimore and running it through a pawnshop or fences there?

We had here last week some representatives of the prosecuting attorney's office here in the District of Columbia. He was telling us about a very fine computer system they have which covers very thoroughly everything that is going on in the District. They find the fellow sometimes being on trial in one court had a case in another court in the District they don't know anything about.

But we brought out just what you said. Have you got that kind of system for the whole country at all?

Mr. ALLEN. No, sir.

Chairman PEPPER. You are so right. We have got to establish in the FBI or some central place, information to give you. If you have a man before you in Baltimore, you can check through that computer and find out everything about that man's record all over the country. Wouldn't that be valuable?

Mr. ALLEN. They have been talking about that for years, but nothing is going to happen until the Federal Government puts enough pressure or enough money in to do it.

Chairman PEPPER. Right.

Mr. ALLEN. We have eight district courts, or nine district courts in Baltimore, plus nine criminal courts, and there have been cases where people have been tried in two or three courts under a different name and we never know who we are trying—because we have no method of getting information back.

Chairman PEPPER. This system is based on fingerprints, so if there is an alias involved it wouldn't make any difference about names.

Mr. ALLEN. That is right. That case like your case might never be solved because the chance of a defendant escaping punishment, escaping getting caught, No. 1, and escaping punishment, No. 2, are very good. That is one of the contributing factors, the fact he has a very good chance of getting away with it. That type of crime, the sneak thief crime, as well as the other type, like holdups.

You don't see people use masks very much any more. The reason is because he knows he has a good shot of getting away with it, maybe 95 to 5, I don't know. So that is why he doesn't take much trouble to disguise himself. Everybody sees him and even takes his picture, but he still gets away, because we simply do not have the equipment to deal with it.

Even if he is caught, the crowded court calendars, the inefficient prosecutors, the young fellows who are doing the best they can, but they are not pros, they are not professionals. The court system that is slow and ponderous gives them a good chance to escape, even forget the right fellow. So there is no certainty of punishment any more.

Organizations like this organization, bodies like this body, have to take a drastic step to revise the entire system. Minimum standards at every stage where it is vital for police, for prosecutors, for courts, and

an acknowledgment. A lot of trouble we have got just because many years ago a series of tough decisions began to come down and we have never been able to adjust to those decisions.

Take one, for instance, the *Miranda* decision. We have never been able to adjust to the fact, at 3 o'clock in the morning, the policeman says to the fellow, "If you don't have a lawyer, we will see one is appointed for you"; the fellow says, "All right. I am ready to talk: get me a lawyer." What is the policeman going to do at 3 o'clock in the morning? Nothing. So he waits until the next morning and it is too late then.

There are any number of situations where we simply have never adjusted to the new Court decisions. I don't know how long ago *Miranda* was—at least 6 or 7 years ago. But still, in Baltimore, we can't do anything unless we happen to know the man's lawyer, which happens very seldom. But the average street criminal doesn't have a lawyer. He says, "OK, get me a lawyer and I'll talk." He knows we can't get him a lawyer.

Take the Wade series. In Baltimore, we have abandoned lineups because we don't know how to handle Wade. When I say "we," I mean the whole system. We don't know how to handle the Wade series and the problems they raise.

We have a case 3 months old up there, an identification issue, and it was never a lineup. Why? Because they couldn't get a lawyer to line up. Why? I just couldn't do it.

So we got a case where identification is crucial, and the man comes—by now his hair is longer and he has grown a beard, and has different clothes on, and it is 8 months later and you might have trouble identifying him. So you lose a lot of cases like that because of the inability of the system to adjust to the change in case law and statute law.

I would urge the committee to think strongly in terms of not only innovative approaches—they will help in one area here and there—but overall, looking at the entire system, to professionalize it and bring it up to the present-day level of achievement we need to have in order to progress in this system.

Thank you very much.

Chairman PEPPER. Thank you very much, Mr. Allen.

Mr. Counsel, what is your pleasure?

Mr. NOLDE. I think we could hear from Judge Moylan and then have questions.

Statement of Hon. Charles Moylan

Judge MOYLAN. Thank you, Mr. Counsel and Mr. Chairman. I also appreciate the opportunity to come down and appear before this committee.

I would say at the outset, Mr. Chairman, although I have enjoyed the relative tranquility of an appellate bench for the last 2½ years, I suspect for purposes of this committee's hearing my credentials are more as State's attorney in Maryland's Baltimore City, as the predecessor in office of Mr. Allen, rather than an appellate judge.

Chairman PEPPER. We would like to hear you in both capacities. We are interested in what the courts can do to speed up the disposition of cases, to move the system more effectively forward.

Judge MOYLAN. I have some thoughts in this area. I would say that as a predecessor of Mr. Allen, in office for 12 years, that between Mr. Allen and myself we can speak for the State's attorney's office of Baltimore City from January 1958 right up to date, with one brief hiatus. I think our philosophies are very similar.

I, first of all, concur very heartily with you, Mr. Chairman. I think the major deterrent to crime in this country today is by no means the length of the sentence, the severity of sentence in a rare and bizarre case where a criminal is actually caught, convicted, and sentenced, but rather if we could ever achieve the sureness and swiftness of some punishment in the vast majority of cases.

I have seen over the last 12 to 14 years two major impediments to that sureness and swiftness of the criminal justice system. One was a problem I shared and I battled along with Mr. Allen, and neither one of us, successfully, has answered that challenge yet, although I commend him on the major efforts he is making, and that is the effort to professionalize the role of the prosecutor.

And I mean the workaday assistant State's attorneys, assistant district attorney, who is actually there in the pits in the court.

When I went to law school, as relatively recently ago as the mid-1950's, the criminal law was considered very much of an intellectual backwater. It was a course taught in the first semester of the first year. The professors were disdainful of it, the public at large and bar associations were disdainful of it. And although we may in some instances have suffered from some of the decisions of the Warren court, in one respect I think that court was a blessing to law enforcement, of the criminal law, because it took what had been an intellectual backwater and made it really the dynamic frontier of what is going on in the law.

And today, with the constitutional law and the criminal law overlapping, it is not only one of the most challenging, but one of the most complex areas of law that any attorney has to deal with.

Chairman PEPPER. Judge, if I may interrupt, I found about the same attitude toward the criminal law when I was at Harvard Law School from 1921 to 1924. My recollection is that criminal law was a half-year course.

Judge MOYLAN. I am sure that is all it was, Mr. Chairman. And yet today it is very different. The attention that is given by the Harvard and Yale Law Review, by professors all over the country. It is an exciting area that young men are willing to go into today. Yet, I can also harken back to when I went to the State's attorney's office as a young assistant, just out of law school in 1958, the attitude of the judges then was, "Well, Charlie, it's a good opportunity. Get in there and make what you can out of it in 2 years, but," and to a man they said, "don't stay too long."

The idea was then to be assistant State's attorney and assistant prosecutor in any of our jurisdictions, it was a good training ground. It was a postgraduate course in trial practice. It was very part time: no one was going to stay for longer than 2 years.

In talking to my counterparts and now Mr. Allen's counterpart in the National District Attorneys Association, all over the country, with a few exceptions, the light that has hit every elected prosecutor, even if he could go out and hire and recruit good people, they are going

to stay with him for an average of 2 years. He is going to turn over almost an entire staff every second and third year.

When you talk about turning over a staff of 80,100 lawyers, you really are crippled before you start. It takes a year or so before the man acquires enough experience to be truly productive, and by the time you have a capable functionary in that office, he is coming in and saying, "Boss, can I have 5 minutes? I just got an opportunity. I told you I would stay with you 3 years, and if you insist I will, but I have the golden opportunity of my life. Are you going to hold me to it?"

And, of course, you can't, even if you could.

Chairman PEPPER. I have a law office in Miami Beach, Fla., and I had a letter written to me, primarily written to me as a Congressman. This young man was graduating in June from the University of Miami Law School, magna cum laude, and the mother was writing me to see if I could help him get a job somewhere practicing law in the Greater Miami area, where he wanted to live.

I imagine he never thought about going into the prosecuting attorney's office, except, as you say, maybe for 2 or 3 years' experience. Yet, that is the kind of young man you ought to have. It is that kind of mentality.

Judge MOYLAN. Completely. That is what we need today with the law being as complex as it is, and yet for several reasons the system is crippled almost before it starts. Ten years ago, of course, the idea a man was going in for just a year or so, even during that year or so, he would be very part time. He would begin building his private practice and was giving at best 4 or 5 hours a day in his job as prosecutor, which is full-time employment to read the latest decisions and try to keep up with the changes in the law.

The thing that crippled us then and is still not eliminated nationwide is the idea the prosecutor's office was always a political forum. You had to belong to the party of the man who was the elected prosecutor. You had to live and vote in that particular jurisdiction. Mr. Allen has made great strides in eliminating that as a consideration, and yet you have to fight an entire system.

A few years ago, as an elected Democrat, I dared to hire a few good qualified young Republicans, although I didn't even know it, I didn't even ask them. It was heresay to the organization, the muldoons around town where, for the preceding 50 years, if you didn't have the recommendation of the local ward boss or local district boss, you didn't even aspire to going into a prosecutor's office.

When we compounded the heresay by hiring not only those of independent or opposite party status, but who didn't even live or work in the city but in surrounding counties, the cries went out from both parties alike.

But the big difficulty is salary. We found in Baltimore City the thing that hurt us so much was not just the starting salary; we have to get it up to where we can compete with the best, but we have got to be competitive with the competing agencies. Raising our salaries a little bit for the young new prosecutor would do us no good whatsoever if we were not competitive with the U.S. attorney's office, the State attorney's office, State solicitor's office, with the better private law firms.

I think what our local governments, State, municipal, and county, have got to recognize is that if this business of bringing the criminal to the bar of justice is important, and if it is as complex as it unquestionably is today, you have got to get out there in that competitive market, decide what it takes to compete for the top graduates, for the "Law Review" people, to get them initially to compete with the better law firms. Once you get them initially, you have to be able to offer the increments to hold them.

When we do take the battle to our own city council in Baltimore, the idea would be, "Well, as long as you can pay attractive salaries to hire initially out of law school, why worry about the raise you can take them to a year later or 2 years later, because you don't expect to hold them more than 2 years, do you?

And with that prevailing attitude, no incentive was given to keep a man in the system.

In my experience in traveling nationally, there are two areas I commend to the committee's attention, but I suspect they have already testified before you. One is Los Angeles, under the excellent direction of Joe Busch.

Chairman PEPPER. We had him last week.

Judge MOYLAN. I know Edward Younger, now attorney general of California, revolutionized that office some 10 years ago.

Chairman PEPPER. We had Mr. Younger in 1969, when we started, in the first year of this committee's life.

Judge MOYLAN. He could certainly offer a lot because they pioneered what a prosecutor's office ought to be nationwide.

The second example that really shines in my mind is Detroit in Wayne County. What happened just in the last 5 years in Detroit has really brought them up on a par with Los Angeles, and I think the two together represent the best salary structure in the country. Not simply in terms of initial recruiting, but also in terms of taking the men up, the 2-, the 3-, the 4-year veteran, to where they can move up in that chosen subdivision of the legal profession, just as they could move up in any other area of government, or indeed in the private sector.

William Cahalan, the county prosecutor I believe his title is, in Detroit, I was having dinner with him several months ago and he indicated that out of a staff of 110 attorneys in Wayne County, 80 of them, who have 5, 6 years experience or more, 80 of them are at a salary level of $20,000 a year or above.

Chairman PEPPER. Good.

Judge MOYLAN. With that type of enlightenment, they are holding, Los Angeles and Detroit are holding their people 15–20 years, and not turning them over every 2 years the way most of us in the United States suffer.

Both Joe Busch and William Cahalan offered a second thought. They thought in holding their people it was not simply the salary, though salary was unquestionably a significant consideration, but also the fringe benefits. They were oriented to holding people for years and, as a result, be it contributory by the State, the Blue Cross/Blue Shield, good pension programs, the job vesting some sort of tenure, of security, to be on probation for a year or so, but to feel if you then commit yourself on that third or fourth critical year to a career in

the office, you will not 12 years later be bounced out simply because there has been an electoral change at the top.

There was job security and both Los Angeles and Detroit feel that is a factor in holding good people.

So this is an area I think with national correction, prosecutors' offices—the prosecutors know this is the way they have got to go with their local supporting legislative bodies and county commissioners and city councils, that need to know that that is what is needed.

The second thought—and I don't want to trespass on the committee's time—is something that occurred to me during my years in the prosecutor's office, and my experience on the bench simply confirmed it, that the greatest impediment I have seen nationwide to a sureness and the swiftness of the criminal justice system has been the congestion that makes it literally impossible nationwide for the system to handle the vast caseload that has fallen upon the shoulders of that system today.

Although neither Mr. Allen nor I can claim any innovative credit, I can at least offer one experiment that Maryland may have to show to the rest of the Nation. It is really not an innovation on anyone's part, but a historic accident, and that is this: as we look around the country, one of the scourges of the system, a full 90 to 95 percent of the cases never come to trial. They are swept under the rug or dealt with summarily, in what is called the plea-bargaining process. You take 5 to 10 percent of the cases in a lucky jurisdiction to the trial table, and in the system we talk about, a full 90 to 95 percent are bargained away, and in a place like New York City, bargained away in a bargain-basement fashion. Not simply where you compromise a potential 20-year felony, let us say, of armed robbery down to a 10-year maximum felony of unarmed robbery that may be a legitimate compromise, but to compromise it all the way down to a 1-year misdemeanor of simple assault, I think is criminal in and of itself.

In most of our big jurisdictions, the cities, at least the metropolitan counties, simply cannot handle the caseloads. The defendants know it, the defense attorneys know it, and almost any kind of a shoddy offer of a guilty plea will be accepted, though for a 20-year armed robbery you are taking 6 months for the misdemeanor of simple assault.

I was shocked when I took office some years ago now, to go up and figure I would learn from my senior counterpart in New York City. In talking with some of the people in one of the best offices in the country, traditionally, Frank Hogan's in the County of New York, Manhattan, I was shocked to learn, despite the quality of the trial, they indicted in Manhattan in the late 1960's some 8,000 to 9,000 felony indictments per year at that time. I said, "How do you dispose of them?" And he talked about the cases they took to the trial table and, lo and behold, my jaw dropped when I learned they were trying between 80 and 120 cases per year out of 8,000 to 9,000. That over a decade they had been trying.

I don't mean to single out any one jurisdiction, it was typical of the large cities. They would go to the trial table with between 2 and 3 percent of the cases per year and plea bargain away 97 to 98 percent.

Now, in Baltimore City, in Maryland, we have never had to do that. Where the figures nationwide would be 80 to 90 percent of the cases disposed of on plea bargain, 10 to 20 percent of the cases taken to the

trial table in Maryland, with the exception of the Washington suburbs of Maryland, would seem to follow the national pattern rather than the ancient classical Maryland pattern, we have typically taken to the trial table 85 to 90 percent of the cases and only plea bargained away 10 to 15 percent.

Chairman PEPPER. I imagine you have the highest percentage of trials in the country, don't you?

Judge MOYLAN. I think we do by far, Mr. Chairman, because we have a system that is unique among American States. And I understand in all of the common law jurisdictions of the North American Continent north of the Rio Grande, we share the experience only with the Province of Ontario. They seem to have inherited the same accident that we did.

But that accident is what makes it possible to take 85 to 90 percent of the cases to the trial table. Even the 10 to 15 percent which end up guilty pleas are not really bargained away: it is simply the defense attorneys virtually forced the guilty plea upon us. They are coming in and throwing down their hands: they are capitulating, not literally, not really bargained.

The thing that has made that possible is not that we work longer hours, or our judges work longer hours, but rather we have had from the earliest day of the proprietary colony under Lord Baltimore, a system where the typical Maryland defendant and typical Maryland defense attorney will exercise his election of saying "Court Trial" instead of "Jury Trial."

I went through the experience 10 years ago, and Mr. Allen, coming over this morning, tells me he subsequently has gone through it, of having our colleagues from around the country look at us as if we were some type of freaks when we tell them we try most of our cases to the court and not to the jury.

We, of course, have in our constitution, as well as the national one, the right to a jury trial, but the mere right to the jury trial does not mean everyone or 99 percent of the defendants have to exercise that right.

Chairman PEPPER. It can be waived by any defendant?

Judge MOYLAN. Further, Mr. Chairman, we try to shy away even from the phraseology "waiving it" with the idea that implies the superior, the accepted trial mode is waived, and you then accept a secondary or lesser trial mode.

We prefer to think of it as an election between two equals.

Chairman PEPPER. I see.

Judge MOYLAN. And we have for 300 years and the most definitive tracing of it, I would make reference to an article by a former chief judge of Maryland, Carroll Bond, back in 1925, in the American Bar Association Journal referred to the Maryland practice of trying criminal cases by judges alone, without juries. Where he traces this through colonial times, and it is just the accepted practice in most of our cases.

As State's attorney of Baltimore, I did a survey 3 years ago of the cases that came through the Baltimore office between 1952 and 1969. During that period, in the early part of the period, we were having our grand jury hand down indictments in felony or felony equivalent cases in some 4,000 cases per year. Toward the end of the 17-year

period, we were up between 8,000 or 9,000 cases. So we are dealing with 8,000 or 9,000 felony cases a year.

Over that 17-year span guilty pleas accounted for some 14 percent of trial dispositions. During that 17-year span some excess of well over 100,000 felony cases, 86 percent of the cases were disposed of at the trial table in actually contested trials.

Again, during that 17-year span the percentage of jury trials of those thousands per year ranged between 1 and 3 percent.

We had a couple of tough judges on the bench, and we were up toward the 3 percent. With the softer judges on the bench, down closer to 1 percent. But during all of that span we ran between 1 and 3 percent jury trials and, conversely, of course, between 97 and 99 percent court trials.

Mr. Allen did indicate to me that in the last couple of years it has gone up and probably the contested trials, the percentage of jury trials, is closer to 10 percent today. But even though it represents to me a shocking increase, to the rest of the country, it might be the God-send that would save the system.

I would point out further—and I hope the Supreme Court, if the case ever get to them, will be cognizant of the fact, although they may be disdainful of the court trial versus the jury trial in looking at most American jurisdictions, they should look at Maryland in terms of what the court trial represents there. Because in most American jurisdictions, submitting to the court is tantamount to throwing yourself upon the mercy of the court. It is in all the technology a guilty plea or a nolo contendere plea. Where, in Maryland, our court trial is really a hotly contested trial.

I have over the years, and with Mr. Allen on the other side of the trial table, taken cases to the trial table, capital cases, first-degree murder cases, rape cases, kidnaping cases, before not one judge, but sometimes panels of two and three judges, where we were battling everything from insanity pleas to the admission of evidence, to the admission of confessions, consuming sometimes 2 to 3 weeks at that trial, fighting every step of the way, tooth and nail, and yet court trial, not jury trial.

At even long, 1- or 2-week trials, of course, represented before the jury 4, 6, or 8 weeks. But even the hotly contested cases, be it short or long, inevitably has to consume approximately one-fourth or one-third of the time without the jury that would be involved before a jury.

It is this historic accident that has made it possible for us to take our cases to the trial table traditionally instead of plea-bargaining them away in a plea-bargaining basement.

And how long it would take to inculcate a habit in defense attorneys in 49 other States and 13 other Canadian Provinces where they haven't been doing it that way, where we have, Heaven only knows. But short of that, there may be some alternatives that one could do, even where jury trials are taken.

What the Federal System, I understand, has done and what we have done in Maryland, that is, at least abbreviate the jury selection process, don't consume, as so frequently done in California—and it always shocks us—2 to 3 weeks just to pick a jury. That you don't have to go through a voir dire examination with the defense attorney and prose-

cutor each getting an individual crack, almost unlimited biographical, psychological exploration of each potential juror almost endlessly, with hundreds and hundreds of jurors.

Our system, and I understand the Federal one, is you propound the questions, letting the judge propound them collectively for both attorneys, after they have been worked out in chambers.

Furthermore, that you direct the questions to a jury panel en masse and not individually. Furthermore, even with that truncation, you limit the questions to those things, as in our State, would go to establish challenge for cause and do not allow this voir dire selection process to be an extensive biographical and, indeed, almost psychoanalytic fishing expedition.

It may be as the Trial Advocacy Institute would indicate, the Lee Baileys and Henry Rothblats expound in 2 or 3 days' trial advocacy seminars, this is the perfect way to try a case. It may be, if we are dealing in a system that has only one case but, as I indicated in a recent opinion, talking about the Maryland system, I indicated that in macrocosm, perhaps three court trials represent more fundamental fairness than one lengthy jury trial, plus two negotiated guilty pleas. You have to look at the whole system.

Chairman PEPPER. I wonder what actual difference it makes in the result of a case that they have those 3-week-long voir dire examinations of prospective jurors? I know they try to find out the slightest predeliction on the part of the juror in one direction or the other, disposition or something. But human nature and the influences of one's colleagues upon one's own judgment and decision, and the like, I doubt if it makes a great deal of difference to either side.

Judge MOYLAN. I would think not.

Chairman PEPPER. Whether they selected the jury 1 day or whether they take 3 weeks to select the jury.

Judge MOYLAN. Because if you have two equally good attorneys, it is a balance of terror, what one man wants and vice versa, and you finally end up with the same resolve.

Furthermore, again for the trial of the century, maybe it is fine if, again, we were up at Harvard in an Ames Club competition, to go ahead and let it go on endlessly. But if, looking at the system as a whole, what it represents is the so-called perfect trial for defendant A, means defendants B, C, D, E, and F will never even get to the trial table, then something is slightly out of joint with the entire system.

Chairman PEPPER. That is right.

Judge MOYLAN. That really would be all I could cover. Again, we cannot claim any innovation.

Chairman PEPPER. Mr. Allen used the word "pretrial." I believe we are having Judge Spears. I wondered if we could apply more to criminal cases the pretrial techniques we use in civil cases. What is your opinion?

Judge MOYLAN. I would think so. During the days, not when I was State's attorney and was sort of kicked upstairs to be the principal administrator, but back in the "fun" days at the trial table, I used to like to sit down, and if the judge were enforcing it, it could be done in every case, with the defense attorney, and say, "Look, let's don't spend hours contesting that which really is not in contest. Let's see what we can agree upon."

Chairman PEPPER. That is right.

Judge MOYLAN. And if we agreed the woman who was burglarized did indeed live at that house and owned it for 30 years, let's don't take 20 minutes developing what is not contested. Let's zero in on the issue and slide as quickly as possible through all of the noncontested areas and then concentrate on what is really in issue.

Chairman PEPPER. Do the judges ever have those pretrial conferences between prosecuting and defense attorneys now?

Judge MOYLAN. I am going to defer to Mr. Allen. We tried several years ago. We were thinking in those lines and made several efforts—I am afraid abortive efforts—to get that going.

Mr. ALLEN. It has been tried twice without success. Judge Miles tried this many years ago, just one judge, on an experimental basis and abandoned it. Judge Cole tried it last year with good success in his court, but he couldn't convince the other judges it was a good thing.

It is a good thing, but you have to be able to manage the criminal bar, No. 1. You have to get them there. And then you have to have a judge who is willing to do that.

You know, judges have a remarkable independence when they get that robe on, and with some of them it is hard to order them around. If you get the judges to do it, and get the defense lawyers to come there, but you have to have rules to do this. You have to change your whole procedure.

In Detroit, they do have a forced pretrial, but without the judge. There is a judge in charge but it is handled with some highly skilled, professional State's attorneys, who have something like 15–18 years' experience and get paid almost $30,000 a year. Three fellows out of the whole Wayne County handle pretrial and there is a pretrial judge. He very seldom sees the combatants but they must come to the pretrial, the defense lawyer. He comes by summons on a certain date set by a judge, and when he comes there he deals with the prosecutor, the defense lawyer, and sometimes the policeman. Every case is pretried in Detroit.

I have never seen the Los Angeles system, but the Detroit system, to my mind, which they have been working on for about 12 years, is as close to a perfect prosecution system as I can imagine, in my opinion.

I understand Los Angeles has a similar system, but they do have a pretrial. They do have a plea-bargaining session, but I don't think it is like some of the other jurisdictions where you plea-bargain in self-defense. You either plea-bargain or you can't try the case. I think they make an intelligent plea bargain out there reasonably on the facts of the case.

Pretrial would help. But you have to get the States to do it and give them another judge or two more judges and that sort of thing, because they are going to tell you, "We can't afford to do it; we don't have the time and the money."

Judge MOYLAN. It takes manpower and a little judicial arm twisting because you are dealing with two different defense philosophies. Where the defense attorney really wants to get at the truth, you can narrow the issues. But, of course, the vast majority of defendants would not want the truth in the case to come out, and a good solid technique there of the defense attorneys is, "No, we are not going to make anything easy on the State." They are going to rely on the overcrowded

system somewhere to collapse, that the policeman, the witnesses, the attorneys, the judge will not all show up on the particular day; the case will be postponed. Postponed a second time, the third, and to be purely the negative debater—"Go ahead, put your case on, and I will try to shoot holes in it opportunistically wherever you fail to touch a nail."

Mr. ALLEN. Mr. Pepper, Judge Moylan brought a point to my mind. We must not assume the defense lawyer or defendant wants a real fair trial. We mustn't assume that. The defense lawyer and the defendant want to take advantage of every hole and weakness in the system.

Now, we are talking about speedy trial, but I have represented criminal defendants all over the eastern part of the United States, and in every field and I never met one who wanted a speedy trial yet.

Mr. NOLDE. Mr. Allen, your violent crime liaison program is an outstanding program. Is there any reason why this couldn't be implemented in other major city prosecutor's offices?

Mr. ALLEN. There is no reason at all, Mr. Nolde. We worked very hard on this. We worked about 6 months before we really got started in it. It could be used, it could be expanded to other fields of activity. Because of our limited number and financing problems we only deal with homicides and a few other special cases.

We find it is workable. I would recommend that if it is used in other cities that the unit have its own investigators hired by the prosecutor's office to make extended investigations beyond the police investigation.

We don't have such an arrangement. We apparently can't achieve it in Baltimore at the present time.

Mr. NOLDE. Why is that, Mr. Allen?

Mr. ALLEN. Well, our police commissioner feels that the prosecutor shouldn't have his own investigators. That is sort of an interfamily misunderstanding. I think the authorities are with me on the issue, however. Those people who have spoken out about it, the National Advisory Council on Criminal Law, I believe it was, on the courts, that met here January 1, and the ABA, both set out the thought and the theory that an effective prosecutor's office must have its own investigators and under its own control.

Of course, those successful offices around the country like some of the offices in New Jersey, Michigan, and California, do have their own investigators for the whole office, but for a specialized function you must have them because the police theory in this country is entirely arrest oriented. They have such a huge volume of work that once they make the arrest, it is pretty hard to get them involved in extensive investigation.

Some of the investigations we have undertaken have taken months and months. You simply can't get police from other duties involved in such an extensive investigation. If we have to go out at 12 o'clock at night or 3 in the morning, we have to call the man and go out.

In addition to that, the State's attorney's office—the police have no subpena powers; we do. So we can get witnesses there and talk with them. We can do a lot of things and we can use the grand jury, we can use immunity, and so on. In an extensive investigation, beyond just arresting the guy as he leaves the scene, you have to have the extraordinary powers of the prosecutor's office to really get into a deep investigation.

For instance, all of the investigations I have outlined here, plus some more I can't think of right now, have been over an extended period of time that would not have been uncovered had it not been for this unit. I would recommend to any State that has the money and can hire the people—incidentally, these people don't try any cases either because they just don't have time. They don't try any cases and devote full time to this enterprise.

They prepare the case and give it to the trial section. I recommend to any jurisdiction they try something like this. I will give them all the data they might need.

Apparently, it is not done anywhere else as I know of right now. You can develop cases that should be developed. Everything I outlined to you and cases I haven't even told you about are cases that would not have achieved that point of perfection had it not been for this unit working on it.

Mr. NOLDE. What you have said makes a great deal of sense. I am unable to understand the argument against your office having its own investigators. Why is there this apparent reluctance?

Mr. ALLEN. I think the reluctance exists probably in many police departments. You know, traditionally, the police department has been the investigating agency and the State's attorney has been the trial agency. Of course, that theory does not recognize the present status of the law and the present intensity of involvement in criminal cases.

We are dealing with experienced criminals in many cases, people who think before they commit crimes, and the limited tools of the police department, which is the right to arrest, interrogate, and inspect scenes, take pictures and tests, and so on, simply is not adequate any longer for the intense, involved investigation. It is a question of tradition. You have got to have legislators and people pulling the strings who are powerful enough to understand this and make the proper rulings.

Because nobody likes to surrender something they think is their power. The attorneys, the prosecutor-investigator is an anathema to police departments, particularly a strong police department. It is something that is coming and something that is here, and we must live with it to have the effective prosecution, but something the police don't particularly like.

It is something we have got to face. We have outgrown the old system.

Mr. NOLDE. Your drug strike force also utilizes police officers. I understand that the police department reassigned their top men out of the unit.

Mr. ALLEN. They only took one man out, the lieutenant. That was a lieutenant and six officers under him. That force is designed very much like the liaison for violent crimes, and they were doing extremely well until this happened. But I think it illustrates the problem that I am trying to——

Mr. NOLDE. Why did they pull their top man out of that unit?

Mr. ALLEN. I don't know if I can quite answer that.

Mr. NOLDE. What reason did they give?

Mr. ALLEN. We were having another confrontation with the police department about a case in which our lines of authority crossed, which it naturally crossed, and we summoned certain records to the grand

jury for examination, which is our right and the proper thing for us to do. Directly after that, these men were pulled out without notice and the reason given was, "Career development."

Now, that is the only reason that has ever been given.

Mr. NOLDE. That is a reason, I gather, you find hard to accept?

Mr. ALLEN. Well, I have my personal belief, but that was the official reason given—career development. I will have to accept that as the official and proper reason.

But the effect of this—and I only say this to indicate the necessity for one's own investigators—was to stop the strike force effort. We had a grand jury paid $220 a day; they met once or twice a week, and this man was such a powerful investigator that immediately after he left, the investigative effort collapsed and we couldn't get it going again.

Thankfully, he is back now and we hope to finish up with our grand jury maybe in June. We do expect to get indictments, important indictments.

But that is simply an illustration of the reason why an effective prosecutor must have somebody he can control; he can hire them and fire them, select them and do anything he wants with them, and they are absolutely loyal to him.

Mr. NOLDE. Were the police afraid your investigators might start to investigate police operations?

Mr. ALLEN. I don't know that, but it is conceivable. It is certainly conceivable that a normal investigation running its course might touch anybody. It is not unusual for an investigation to implicate police or lawyers or other professions.

I don't know if that was the prime reason. I think it was simply a result of this collision we had about summonsing records. Of course, if my duty calls for me to summons records, I am going to summons them, because that is my duty. Or to call a certain person before the grand jury. I have to do that, too. I can't stop doing it because it is going to hurt somebody's feelings. I either have to be the State's attorney or not the State's attorney.

These collisions and misunderstandings are going to occur because it is necessary to summons before the grand jury—and these records, or get records. A lot of people are not going to like it. I don't guess anybody likes to come before the grand jury, but that is the system we use. I imagine people will be irritated every now and then, but we can't avoid that.

Mr. NOLDE. What did the "Missing Heroin Case" involve?

Mr. ALLEN. That was a very peculiar case that has caused a lot of consternation around Baltimore. It involved one of the largest seizures that have ever been made in Baltimore, by an operation called the stop squad. They seized some 6,000 bags of heroin of a very high quality. I don't remember the exact number, but whatever the number was, when they finally tried the case and they counted the contraband, they found it was 50 bags short, apparently. Fifty bundles short, not bags; 1,200 bags. That caused a great flurry of activity, and all of the officers involved were questioned and put under lie detector and two of them were suspended.

Then, of course, again a search for what they called the "missing heroin" to determine what, if anything, happened to it. That is still

an open case, and it was in connection with that case we summonsed certain records of the grand jury.

Just recently we developed an important piece of information that would indicate what happened to that missing heroin. But this is 4 or 5 months after it happened.

They found, during the course of this, that there was no method by which you could guarantee the quality of seized merchandise after the seizure and after the test, because they don't have any way of making subsequent tests, and if a person could find some method of substituting, he could do it, and that is apparently what happened in this case.

After the material was tested by the chemist, somebody found a method of substituting a noncriminal merchandise for this contraband and apparently disposed of the contraband on the open market. We hope that case is drawing to a solution. But it caused a lot of consternation and has been in the paper often.

I suppose it has been very embarrassing to the police department. We hope that it will be resolved sometime in the very near future.

Mr. NOLDE. How long was the narcotic strike force in operation?

Mr. ALLEN. October 1971. It was a 3-year grant by the LEAA and was designed in its third year to increase in size to about 10 people, 10 lawyers. Hopefully, after the first year, we would be able to get indictments on some of the major figures in the narcotic traffic. The idea was to develop material over a period of a year by investigation, talking to informers, control vice surveillance, and develop conspiracy indictments against the major narcotics organizations in Baltimore.

I think we are going to have a degree of success at that. That is the best I can tell you at this point. While we were at this, another unit, called DALE, which came into being several months after the strike force came into being, also made arrests in the same areas but, of course, with reference to the narcotics traffic, I don't think you can have overabundance of police activity in that area.

We do have two or three major units working in Baltimore and maybe that is the reason the crime rate is going down a little bit. Let's hope so, anyhow.

Mr. NOLDE. So there were signs of success?

Mr. ALLEN. I think we have done as well as we could, working under the conditions we worked under. I think it would have been better if I had my own people working for me, my own investigators. But that is neither here nor there. I am hopeful in the future, with more enlightened thinking on the subject of the major prosecutor's office, the modern prosecutor's office, that officers will have their own investigators. I think I am about the only large city that doesn't have them, really. Most of them have—even a small force—most officers have them and they are very successful.

Gold, in Brooklyn, has 24, and apparently they have a law there that allows him to select his own from the police department, and once they are selected they become his investigators. No more responsibility to the police department. They still pay them, but they are on his staff.

In Chicago, the young man there whose name I can't remember has his own crew. He had a crew like mine. They belonged to the police but they worked for him. But as soon as the Republicans got in, they

were taken from him and now he has his own and he is very happy with them.

I don't know of any other officers, but every major city I have had any major contact with, they have their own and they do very well with them.

Mr. NOLDE. What success has your violent crime liaison program experienced since its inception?

Mr. ALLEN. I think we are too early to give you statistics, but we have about maybe a dozen major cases that we have been able to develop. Mr. Garsh may be able to give you a bit more information on that. We have about a dozen major cases, and we are satisfied that these cases are of such a nature that none of them could have been developed without that liaison. Because they all involve grand jury, they all involve power of subpena, they all involve sometimes depositions. They all involve immunity, and there is something that if you allow a case to develop in its normal fashion, it just doesn't happen.

Mr. NOLDE. Could you describe for us the purpose of that program and how the program is intended to operate? As I understand it, you identify the important cases and concentrate your resources on expeditiously moving them through the system.

Mr. ALLEN. Basically, the police, we work with the homicide unit or with the CID unit which is the criminal investigation department. And they call us when a case breaks and he either sends someone down or goes himself. On the recent murder, involving the murder of a policeman, we had three people involved and they worked half the night on it. They developed the case properly and an arrest was made on the scene. The case was processed within a matter of days. The indictment came down something like the fourth day and, as Garsh points out, the lawyer involved in the case was held in contempt on the fifth day or something like that. It means if you get a prosecutor who has the eventual responsibility of prosecuting that case into the case early and all of the bugs that develop in the case, you keep out of it.

Like improper identification with the statement, problems with certain seizure, your problems of giving witness immunity, problems of taking the witness before the grand jury at an early stage, or problems of taking depositions from reluctant witnesses, or witnesses who are going to disappear on you. Those are prosecutorial problems of fairly recent origin because of the present-day complication of the law. They are prosecutorial problems. But you don't have a case unless you develop these things properly.

So, it is 3 or 4 months later on when we get the case under normal conditions and it is too late to do those things. So, therefore, your case goes out the window.

I want to explain how this unit works. We had a murder aboard a ship in a harbor. We had jurisdiction, the Federal Government had jurisdiction, and, of course, Germany had jurisdiction. Now, if we rushed out and arrested this man like we normally do, and prosecuted him in our jurisdiction, it would cost at least $100,000, maybe more, maybe half a million, to bring the people from all over the world there. It would be 6 months from now to try a case in Maryland and we have interpreters to deal with and so on. It would have been a heck of a case.

This young man beside me conferred with people in Germany and the people on the steamship line and, eventually, he brought two detectives here from Hamburg, Germany, and he arranged to have the prisoner taken back to Germany for trial. This pleased us a great deal because, first of all, we saved the money, which is probably more money than the whole liaison team could cost us a year. We got the case out of our jurisdiction. And that to me is something that would never have been done without this force. Where the poor man would have been arrested, by now been indicted, and we would be worried about how to try a German in our courts, when all of the witnesses were all over the world on a freighter. We may never have gotten the thing tried. That is another case, innocent, the guy is in jail, he can't get out because he is a foreigner and can't post bail. We can't get the case tried because we can't get the witnesses together. Maybe a year from now, he is still sitting there.

We get in a case early and we apply the prosecutorial skills to it where they are needed. We give advice to the police because, as Judge Moylan was pointing out, getting a case that is any part of a legal problem is not easy any more, getting the case prepared. The simple matter of identification of the defendant is now a complicated matter. Confessions, you know the problem with that. And they have been known to call up the public defender and get him down there for a lineup. Which means that the case moves forward as it is supposed to move forward rather than dropping a very important part of the case—identification.

They are expediters, I suppose. Expediter, prosecutors, investigators. And this is the type of thing that has to be done with your good cases if you want to move them. Of course, a good case can collapse. We don't care what kind of an arrest they made or anything like that, but time can erode a good case to such a point it is no good because the investigative procedures and the trial procedures are so intensely complicated now, you must have a prosecutor in the case early.

Take the simplest case: Like you arrest a man running from the scene, but you don't have that in most cases. The case recently made, they worked for something like 4 months and finally made an arrest in the case. A very bizarre murder case and a case involving a very gross fraud. That could never have been developed without the policeman and one of Gersh's men working side by side for 4 months to get this thing developed. We finally made an arrest about 2 or 3 weeks ago.

But I really think that the theory could be applied to other areas, like armed robbery, for instance, which are no easy matter any more. You know, nobody ever uses a mask any more. They go on because identification is such a problem and the police have such trouble with the identification process that it is not a simple matter anyway. You simply don't come into court and say, "That's the guy that robbed me," and expect to get a conviction. I advocate very strongly the application of this theory in a lot of areas in prosecution and law enforcement.

Mr. NOLDE. Mr. Gersh, do you have anything to add to Mr. Allen's remarks?

Mr. GERSH. Mr. Nolde, some of the significant things we can point to, since we started our operation we have not had a single search warrant that we have drawn, been found to be illegal by any court.

Mr. NOLDE. When did you start?

Mr. GERSH. The grant started in July of 1972. It took until September to staff it and until January to work the bugs out of it. So, since January, I would say we have been operational to the fullest extent we can expect to with our limited manpower.

The problems that we looked at and tried to solve were, No. 1, the expediting of the case through the court. What we did in that instance was to make arrangements with the court through the chief judge of the Supreme Bench of Baltimore City to have trial dates that would be reserved, that would be reserved, that would be used by no one else but our unit, so that when a man was arrested, theoretically, a police officer could say, "I have arrested you and you are going to trial on a certain date." In actuality, what it was, because of the delayed dockets in our courts and overcrowded dockets, even if we brought the case to the grand jury quickly, by the time the lawyer got in the picture and we then wanted to schedule a trial and the man wanted a jury trial, there might be a 3-month delay before the first jury trial would be available.

So what we have done is reserve trial dates, so we can move trials much faster. We have an average time now from arrest to grand jury indictment of 1 week, where prior to the preliminary hearing process it might be as much as a month. From the arrest to trial we want to get down to 60 days. We are now down to about 75 days, which is still quite an accomplishment, we feel.

Mr. NOLDE. What is the average time from arrest to disposition in the usual case?

Mr. ALLEN. Approximately, about 6 months, I would think now in my jurisdiction.

Mr. GERSH. Also, what we have done, we have taken the file, the file in any case that this unit is handling, and we have color coated the file. We actually put it in a bright red file so any assistant in our office who handles that file knows it is a priority file; he is to resist all postponements in the case. The idea is to get the case tried and concluded as quickly as possible.

Mr. NOLDE. This would apply to all homicides and violent crimes?

Mr. GERSH. What we have done is we are working through the terms of our grant at the invitation of the officer in charge of the case. And as a practical matter now, we get involved in every homicide in Baltimore City. It might be interesting for you to know that last year in Baltimore City we had some 350 prosecutable homicides. That is exclusive of any self-defense, justified or other types of killing that would not be prosecuted.

We also get involved in armed robbery where we are asked. We got involved in some other bizarre cases where the police have asked us to get involved, such as one case involved the tremendous cache of explosives and weapons. We got involved in surveillance with the police through the search warrants, made the arrest and got the conviction. The case came to trial somewhere around 45–50 days after arrest, and the man was sentenced to 5 years.

We were involved in a kidnaping case. We were involved with one extensive fraud case because the police asked us to get involved with it. Even though it wasn't a violent crime, they asked us and we went.

We have drawn up one or two wiretap orders involved with homicide investigations and they were upheld. We also found that some prosecutors' offices in the metropolitan area have asked us for advice. The Carroll County Prosecutor's Office asked us for help in a bank robbery case, and the Howard County Prosecutor's Office asked us for help in a solicitation of murder case. We also were involved in a case that involved a double homicide on two young teenage girls on the Eastern Shore of Maryland. The State police called us and said they had information the weapon was in Baltimore City. So we drew up the search warrants and went out with the State police, recovered the weapon, the case was tried last week in Annapolis, Md., and this was a successful conviction. A search warrant was properly drawn and upheld by the court.

Some of the other objectives that we have been able to do, one is just the close cooperation between the police and prosecutor. From my experience, I found one of these problems always is communication. That communication gap has been narrowing. We have absolutely no problem between the working police officer, the working detective and the working assistant from our end. We work at the call of the police department.

Several weeks ago, we had, as Mr. Allen mentioned, the homicide of a police officer. It was on a Friday afternoon at 3 o'clock. The police called us and the police were rounding up a number of witnesses. This homicide took place in an open street, in the daylight. There were many witnesses. One of my assistants went to the police headquarters building where witnesses were being taken to be questioned and he was present there. Another assistant went directly to the crime scene and with the officers preserved the crime scene. I, myself, went to one of the district police offices that was acting as headquarters for the investigation.

This took place on Friday afternoon. We worked through the night. Monday morning we indicted. Monday afternoon the defense lawyer filed a motion for a bail hearing, and we were ready to go and we had our bail hearing. You see we took additional witnesses into the grand jury and the next day we had a problem with the defense lawyer and he was cited for contempt.

That case was, from the State's point of view, in the prosecutable position within 3 days after the homicide. Whenever the defense is ready, we are ready to go on that case.

Mr. NOLDE. I take it that this procedure required the cooperation of the defense bar or the defenders office and the judges?

Mr. GERSH. One of the problems in criminal prosecution today is seeing the defendant has a lawyer. The professional defendant will use this as a stalling tactic, because as the case grows old the advantage of the case goes to the defendant. The witnesses disappear, their memories grow hazy, they get intimidated; so a professional defendant will do everything possible to avoid speedy trial, something that I think that is advantageous to the prosecution.

One of his ways of stalling is not to have a lawyer and he cannot be tried in most courts. We make arrangements with the public defender in these given cases immediately. If a man does not have a lawyer, the public defender will get in the case and we supply the public defender with copies of all of the reports and all of the information that he

would normally have to go through in a discovery process to get. We volunteer to give it to him immediately so he can make the judgment. We save him the time and work and it speeds up the process and he is ready to defend in a much speedier fashion.

Also, if a man is not guilty, if he is innocent, it gets him out of the system much faster. Also, some of the things we have discovered, we never even thought about, that didn't enter into the picture, are now beginning to show. We find that there are more pleas in these case and we never even considered that.

We also find, because our unit is in a position to grant immunity or work out deals where necessary, other units of the police department are coming to us. As a result of that, we have a situation in Baltimore where we had a series of robberies that got the nickname of "Bonnie and Clyde" robberies because it was a woman involved with a series of men that were switching off pairs and committing armed robberies. A police officer in one of the districts, the police in Baltimore, arrested the woman. When she was arrested, she said she wanted to give some information and what could the police do for her in return. They contacted our unit and we were talking with her when she described one of the holdups and the description of the holdup that she described to us was so similar to a murder we were investigating. Then we started to ask questions about the murder.

Now, the homicide detective had no idea what was going on in this district with this woman. The district officers had no idea of the homicide investigation, but we were told about both. As a result of that, we did clear a homicide. In that case there were 10 defendants who were arrested, at least 6 of them have been tried and convicted by this time. And 65 burglaries were cleared, a host of armed robberies, and the homicide.

Mr. NOLDE. Have you had an increased conviction rate subsequent to the initiation of this program, or is it too early to tell?

Mr. GERSH. It is too early to tell. I would suspect that we do, but I haven't any statistics with me at this time. I would be happy to work them up and supply them to you.

[The statistics had not been received at time of printing.]

Mr. GERSH. We had another situation, also, just again a side issue, an interesting thing where a defendant was arrested in a robbery case and he took the position, because he was a recidivist type of felon, he had been in and out of jail many years, he didn't want to talk to police officers, and he said, "I will not talk to the police." So the police asked us to come down. We handled the interrogation of this particular prisoner. We took a 30-page statement from him. He told us about several shootings several armed robberies, one homicide in Baltimore, two homicides in New York, narcotic traffic between New York and Baltimore, and then gave us information about the whereabouts of three escaped murderers. We corroborated all of his information we worked with the police for about 30 straight hours, drew search warrants, went with them on the raid, arrested the three escaped murderers and an additional bonus, we got 65 weapons we didn't know about.

This would have never come about unless there was someone other than a police officer who talked to him.

We also found the police bar come to us right away. They now know who to talk to in a homicide. They know there is an assistant immediately available who has some knowledge about the case. You don't have this lag of months before there is someone in the prosecutor's office who is a position to talk about the case and work out something with the case. These benefits we didn't consider in setting up the program, and we find they are working out very well.

Mr. NOLDE. Judge Moylan, I would like to get your ideas on some of the suggestions put forward to eliminate the appellate delays, particularly with regard to the elimination of written briefs. Do you feel judges would be able to expedite the appellate process by not having written briefs filed in every case routinely?

Judge MOYLAN. It is an extreme measure. Again, as a relatively rookie judge, I feel a bit less competent in this area than addressing some of the other problems of State's attorney emeritus.

Frankly, in Maryland, with Maryland being a small State, we have not yet felt the full impact of appellate case congestion that many States have felt. I am on an intermediate court, and it is an intermediate court which is just now in its 6th year of life. This court has provided relief from what was rapidly becoming a congested appellant docket with our former single appellate court, the court of appeals. At the moment, we have not really been hit by the flood. It may be when that day comes, as unquestionably, it some day shall, we will have to go to some of these resorts, the screening processes of taking cases not as a matter of right to the appellant, but with some discretion, some screening discretion being exercised by the appellate court. It may be we will have to resort in some cases, if not all, to oral argument as opposed to the written briefs. But, frankly, in Maryland, this is purely speculative at the moment because we are not faced with difficult congestion at the appellate level.

Mr. NOLDE. Does the delay in getting the transcript constitute a major factor in creating appellate delay?

Judge MOYLAN. It is a factor. One thing that seems to be slowing the system down is waiting for the court reporter in the trial court to type up the transcript. I think the difficulty there is, the court reporters are a dying breed, they are hard to come by, and various lower courts around the State, if not indeed around the Nation, have not been able to get enough of them, where a person can be in court one day, and off typing up the next, or in court one week, and off doing his typing the following week.

The difficulty is that he sits in court taking down his shorthand or stenotype notes all day long for the full working day, and then is expected to go ahead and type up the transcripts or dictate to a typist the transcripts, purely on moonlighting—not, indeed, moonlighting, but on an afterhours basis.

I think our difficulty is we don't have enough court reporters. We are expecting them to fit all of this in their spare time, and there just is not enough spare time.

Mr. NOLDE. On jury selection, do you feel that that constitutes a significant delay to have the extended voir dire that is permitted?

Judge MOYLAN. I think it does nationwide. Again, it does not in Maryland. Not only are we not plagued by the problem of the large

percentage of jury trials that our counterparts around the country are plagued with, but even in the relatively few jury trials we get, we have abbreviated the jury selection process about as far as I think it can be abbreviated. Typically, even for a more serious case, a jury can be picked in Baltimore City and in most of the areas in the State of Baltimore within 30 minutes, an hour and a half at the outset. We are never involved in what to me is almost farcical jury selection processess of, I will mention California just for the sake of example where weeks and weeks, if not indeed months, can be consumed in putting 12 people in the box to hear a case. In Baltimore, it would really be unheard of for that process to ever consume more than an hour or 1½ hours

Mr. NOLDE. In Maryland, do you feel that the system is functioning efficiently without jeopardizing the constitutional rights of the defendant?

Judge MOYLAN. Completely. I think even within the context of an individual case, it is working well without curtailing defendant's right. I think even if some curtailment were involved which, in Maryland, it is not, it would still be worth it in macrocosm because of my belief that half a day in court for three defendants is better than a full day in court for one defendant and no time in court at all for the remaining two.

Mr. NOLDE. What about the use of a grand jury? Do you feel that is called for in the normal run-of-the-mill criminal case, or is that another wasteful tool in terms of time?

Judge MOYLAN. Yes and no. I think the grand jury can effectively be eliminated, not as an investigative arm, but as a screening process if a local prosecutor is given the manpower, quantitatively and qualitatively, to do the screening and preparatory job that in many jurisdictions, Baltimore among them, in the past at least, falls upon the grand jury by default. I think the prosecutor could do it more quickly, he could do it better, but he has got to have veteran-trained prosecutors able to make high-level decisions to go ahead and make those decisions for him.

I would just make it clear that in saying that, I am not suggesting the elimination of the grand jury because I think even if this screening process were taken away from them, even if this process which may involve 98 percent of their quantitative functioning were taken away, the grand jury would still serve a very valuable purpose qualitatively for the investigation of the more serious and more sophisticated cases.

I think it has a role investigatively, even if the typical, routine screening process were eliminated.

Mr. NOLDE. Mr. Allen, do you have a thought on that subject?

Mr. ALLEN. I agree with the judge. So far as an indictment function, deciding on what to indict or not indict, I think the grand jury is useless. I think the grand jury is the most possible investigative tool we have. I sponsored a bill at the last three sessions of the legislature to eliminate the indictment function, or the screening function, and allow the grand jury to deal strictly with investigations.

But I failed the first two times miserably, and the judge and I and Mr. Gersh were just deciding whether we failed the third time or not. They did pass a bill, but it may have done more harm than good. But, I have advocated this even before I was the State's attorney. Charley and I used to argue all the time about the grand jury. He

agreed with me at that time, but there was nothing you could do about it because you don't have any prosecutors down at the legislature. You have a lot of defense lawyers down there. They are adverse to almost anything that the prosecutor wants to do to speed up the process or make it simple for prosecutors. Because that gives them another bite of the apple. Maybe the grand jury will throw one case in a hundred. It is an archaism, the grand jury system, and we don't need it for indicting purposes. We need prosecutors who must be entrusted with the eventual trial of that case, to look at the case and tell, give an honest, fair, educated judgment as to whether the case should go to trial or not.

Mr. NOLDE. In other words, the grand jury really is a waste of time?

Mr. ALLEN. You have 23 citizens who are only there for 4 months, and what can they tell about a case? You can't teach them law in 4 months. A lot of lawyers have been around 24 years and still don't know the law. So you are not going to teach them anything in 4 months. But, let a trained prosecutor look at that, examine the policemen, and make a decision as to whether we should go this way or that way or whether we shouldn't go anywhere at all. That is the modern approach.

The grand jury is all right when you have two or three cases a month. But we send 10,000 cases to grand jury a year in Baltimore City, and we send 20 and 30 in a day. So all they are doing is listening to the policemen read off a report; "OK, indict."

Mr. NOLDE. A rubber stamp?

Mr. ALLEN. That is what some people call it.

Judge MOYLAN. Let me interject. This is one myth I would like to put to rest. I don't think the grand jury is in any sense the rubber stamp of the prosecutor. I think there is an appropriate argument there, it seems to me, but in truth, it is probably nearly totally, independent of the prosecutor, just as prosecution minded, or even more prosecution minded than he is. If the prosecutor wants to indict, you can be sure the grand jury is going to indict. But I suspect it is equally true in the case where the prosecutor would wish not to indict, the grand jury would indict.

Mr. ALLEN. That is true.

Judge MOYLAN. In my experience as State's attorney, there was never an occasion we wanted an indictment we didn't get one. There were cases when we said, "Look, we can't win these cases; he is probably guilty but technically we can't prove it," but they didn't like his looks or what he did, and they said, "We are going to indict him anyway, and let the judge throw it out later on."

Or on occasion, we would go in where a policeman had made a charge of a college student, junior or senior perhaps, with absolutely an impeccable record, picked up for possession, not for selling marihuana, but for possession of a single cigarette, and you knew that the act of indictment alone, whatever happened at the trial level, might well ruin a career for the young person, and you would go in and sometimes attempt to be compassionate with the grand jury, but the typical grand jury did not want to hear that.

I think they only seemed to be the rubber stamps. They are of completely independent motivation, as, or even more, prosecution minded than the prosecutor himself.

Mr. NOLDE. Would you tell us how the system really developed where the vast majority of criminal cases are heard before the court as opposed to before the jury? Why are defense attorneys willing to have their cases tried by the court, where in most places, the defense attorneys feel they have a better chance before a jury?

Judge MOYLAN. All I can say is, it is a practice, a habit, a custom, if you will, that in terms of the reason, the reason for it is lost in the mist of prerevolutionary history. The best tracing of it I have ever seen was an article by the former Chief Judge Carroll Bond of the Maryland Court of Appeals, 1925, in a decision he wrote called *Ross* v. *State*, in that court. An article he did for the American Bar Association Journal, and in that he traced the practice to the courts of the Lords Baltimore, the Lords Proprietor of the Palatinate Colony of Maryland, tracing the practice all of the way back to the 1650's and 1660's. And it has come down to this day, simply as a normal way of doing business for prosecutors, judges, defendants, and defense attorneys in the State of Maryland.

With the increasing awareness of the criminal law and what goes on in criminal cases, we are seeing a slight erosion of that in the last decade, and with the invesion of Prince Georges and Montgomery Counties by outlanders who come to us from other parts through the Federal city, we are seeing those two counties take on national characteristics rather than traditional Maryland characteristics. But it is simply a traditional way of doing things and the Marylander who travels abroad is indeed shocked and surprised to find out what is going on elsewhere, just as those elsewhere are surprised at him.

I can give nothing more than historic accident or custom for the origin of the habit.

Mr. RANGEL. Is there any relationship between the economic level of the defendant who goes on trial by a judge alone and one who demands and procures a jury trial? In New York, the poor generally go before the judge because the lawyer advises him that he can't afford a jury trial in the time involved. Is there any connection at all?

Judge MOYLAN. Mr. Rangel, I think there would be a slight connection, but not completely. It was such a traditional way of doing business in Maryland, that I think through the 1930's, the 1940's, the 1950's, many defense attorneys representing the most affluent clients would feel that it might be counterproductive to inflict a jury trial, which was a rather exceptional thing until recent years, upon the system that really was not expecting a jury trial in anything other than a capital, rape, or first-degree murder case.

Mr. RANGEL. Do you notice any differences in sentences on defendants as to whether or not they were found guilty by a judge, as opposed to those defendants that had put the State to the expense of a jury trial?

Judge MOYLAN. No; I don't know. In my days as State's attorney or a young assistant State's attorney, I think one tended to look with some surprise and a little bit of antipathy, I suspect, to an attorney who would suddenly ask a jury trial in a routine case 10 years ago, where nobody expected it, and I think the glares around the courtroom by

the court clerks and the prosecuting attorney and the policeman on duty, might have been intended to indicate to the defense attorney, "OK, go ahead and do this if you must, but we hope you are going to get it when it comes time for sentencing."

But I think despite the fact in one sense the feeling or threat was there, I think that by the time the judge actually got to the sentencing stage he didn't really carry through with that.

I don't think it was any uniform or overt policy of punishing the person who took the jury trial that kept the system going. I really think it was just that we existed from the 1650's through the 1950's in a little bit of isolation and it was just as natural for the Maryland attorney to think typically of the court trial as a way to handle the routine case, and jury trial as a rather exceptional thing.

Mr. RANGEL. I would like to really study that because it still could be consistent that if, traditionally, historically, there had been the feeling of coercion, it really made no difference what caused the tradition. Like you say, a good defense lawyer would feel, or should feel, obliged to tell his client that if he did ask for a jury trial that he should expect a more severe sentence than if he were found guilty by a judge?

Judge MOYLAN. I am not sure that would happen because the one difference between Maryland and the other States is that in most other jurisdictions, where the jury trial is the routine rather than the exception, the election, the waiving of the jury trial, or, as we call it, the election of the equally attractive alternative, the court trial as opposed to the jury trial, is in most jurisdictions, tantamount to throwing in the sponge. It is all but a guilty plea. It is a guilty plea in everything but name only. It is throwing one's self upon the mercy of the court.

Mr. Allen and I, on different sides of the trial table, were involved ourselves in many hotly contested, hard-fought cases, typically fought out before a court. Sometimes they were first-degree murder cases, capital cases, 10 years ago, and serious enough that we would try them not before one judge alone, but ask for a panel of three judges and go ahead for a week or 2 weeks and battle out the admissibility of confession, physical evidence, the insanity plea, and fight every step of the way. In cases such as that I don't think there was any feeling of intimidation that caused the court trial rather than the jury trial.

As the chief judge back in 1925, whom I never knew, of course, pointed out: There are many cases where tactically, it might be preferable to take the court trial rather than the jury trial if you had a defense which was not a popular or meritorious offense, but a good, typical defense. And if you had a defendant, who because of a record or because he was charged with some particularly inflammatory or inflaming type of offense, sexual exposure to young persons, the pushing of narcotics to teenagers, something like that, you might indeed fare far better with a court trial than with a jury trial.

Mr. RANGEL. I assume you testified on the question of plea bargaining. Based on our experience, not only from my own hometown but in connection with other testimony we received, the option of a defendant as to whether or not he goes before a court or before he goes before a jury deals with the question of plea bargaining. Is this accepted by the district attorney's office with defendants if they plead guilty to a lesser offense?

Judge MOYLAN. As I was indicating this morning, another one of the things that is unique about the rather quaint "Free State," I suppose, is we have never had to rely upon plea bargaining nearly to the extent that the 49 other States have.

Mr. RANGEL. What percentage of your criminal cases are disposed of without a trial?

Judge MOYLAN. Very few. I was the predecessor of Mr. Allen in office, and my last year in office I did a survey—from 1952 to 1969. In that 17-year period, involving some hundreds of thousands of cases, we went to trial on 86 percent of the cases and 14 percent were disposed of by guilty pleas. And even in that 14 percent, they did not represent significantly negotiated pleas, but simply the guilty pleas that came either because you had convicted a person of three armed robberies, and there was no sense taking to the trial table the three to four remaining armed robberies.

Mr. RANGEL. Have any studies been made as to why—is this true throughout the State of Maryland?

Mr. ALLEN. In most of the State.

Judge MOYLAN. It is true in the State of Maryland except for the suburban Washington counties, which by virtue of the Federal City, are taking on more of the typically national characteristics rather than the traditional Maryland characteristic. The only studies I am aware of are, really, historically, the 1925 article by the then Chief Judge Carroll Bond. Also, his decision in a case called *Ross* v. *State* in that same year. 177 Maryland 577, where he traced the history.

What I am plagiarizing from at the moment is my own decision of about a month ago, in which I repeat and amplify that history and tradition, bringing it up to date, particularly based on my own statistics that I gathered as State's attorney, plus one very brief article—and, again, I am guilty of payola, quoting myself—that was printed in the Nebraska, 17, the Nebraska State Bar Journal, 138, a 1968 article called: "Trial of Criminal Cases Before the Court Without a Jury."

Mr. RANGEL. Is your statement in the record?

Judge MOYLAN. No; it is not, although I would be glad to furnish this opinion, which is irrelevant in 60-percent part, and perhaps relevant in 40-percent part.

Mr. RANGEL. Thank you, Judge.

[The material referred to had not been received at time of printing.]

Mr. ALLEN. I wanted to say something in answer to Mr. Rangel's question.

Actually, Maryland is a very peculiar State, Mr. Rangel, and plea bargaining in Baltimore City is really different from the plea bargaining as we know it around the country. People plead guilty, but it is not necessarily plea bargaining as we know it around the country. I would guess that our pleas are maybe 10 to 15 percent of all of our cases. We try most of our cases.

Mr. RANGEL. To get rid of the semantics, what incentives would a person have to plead guilty, when at least, according to tradition, he had the option to go before a judge?

Mr. ALLEN. If he pleads guilty, maybe he had several cases and he pleads guilty in one, several robbery indictments. Now, that might be called a plea bargain but when we plead down from robbery to, let's say, an assault, the kind of plea bargaining we are always talking about,

he might be guilty in two cases, where we know he is going to get more than 40 years anyhow, and we might accept that as a plea bargain. They are plea bargains but they are kind of hard bargains. While he might plead guilty to second-degree murder, where we secretly feel that it is probably a good second-degree case, but it might get manslaughter if we tried it, and the defense attorney secretly feels he knows it is second degree, but he feels it might be first degree if it is tried. So, we parlay a bit and call that plea bargaining.

Mr. RANGEL. That is why I must read the traditions of Maryland. It seems to me we had some judges who said they don't make deals, and if you question them long enough, excluding the witnesses here today, you can find the defendant can walk away with his own feeling in terms of sentence. It is a lot easier for him to plead guilty rather than go to trial. Traditionally, the defendants don't go to trial, they have that option where they may walk away with no sentence.

If I walked in the district attorney's office and you said a hard bargain, minimum 40 years, it seems like I would be obligated to demand a jury trial.

Mr. ALLEN. It depends on the charge. If a man has five armed robberies and we have him cold and he can get 100 years, 40 years might not be so bad.

Mr. RANGEL. It is a different jurisdiction.

Mr. ALLEN. It is different. We claim we don't plead in self-defense because we have to do it, we are forced to do it because we try our cases. When we take a plea the man can either plead or try his case and it might be to his advantage to plead.

Mr. GERSH. It might be interesting for you to know, in Baltimore that is not a policy. We will plea bargain with an attorney from strength when he comes to us and ask for a plea. We do not look for the attorney then to plea bargain and we prepare every case for trial. I would say that where pleas are entered, probably the majority of those pleas are entered at the trial table, when we sit there and are ready to go and the man wants to enter a plea.

When we accept a plea it is generally because we know the weaknesses in the case, or because the man is pleading to the first count of the indictment, or because there are other cases pending that, in our opinion, it would not be practical to try. But this is the difference between our jurisdiction and other jurisdictions.

I think the basic reason is because of the lack of the jury trial. Because, in the lack of the jury trial, we can try a case. In Baltimore City last year, we disposed of approximately 6,000 felony cases and 35,000 misdemeanor cases at the trial table. And when we talk about misdemeanor cases in Baltimore City, we don't talk about cases that in other jurisdictions call for 6 months or a maximum 1-year penalty. We talk about cases that are misdemeanor by classification of statute, but sentencing may be very high.

All narcotic cases in Maryland, with the exception of distribution and manufacturing, are misdemeanors and are punishable by first-time offense of 4 years. But they are disposed of as a misdemeanor trial. A fault which carries quite a high penalty, a common law penalty, is a misdemeanor. So, we are talking about a different type of animal when we talk about plea bargaining and trials in other jurisdictions.

Mr. RANGEL. You probably have something else going for you in terms of tradition that most jurisdictions that have a very high degree of plea bargaining don't have. You find police have a tendency to overstate their case and the district attorneys' offices have a tendency to overindict, so like labor and management, they can reach some kind of negotiations.

Mr. ALLEN. We are trying to develop a realistic system, charge a man with what you can prove and go ahead and try. That is what we are aiming for and maybe by the time I am out of office we will have achieved that. Charge a man with what you can prove and go ahead and do it.

Judge MOYLAN. I know, as bizarre as we must seem to other parts of the country, Mr. Allen's initial reaction parallels mine of a few years earlier, that we sort of looked upon the rest of the country as bizarre. Shortly after I became State's attorney I traveled up to New York City to really, in a sense, learn from the masters. At that point, Frank Hogan's office was the direct successor of Tom Dewey, and was looked upon around the country as the "Garden of Eden" of prosecutors. And when I got up there and learned, not only in the county of New York but in the other boroughs, as well, indeed throughout the State of New York, and I later learned it was epidemic throughout the country, that 97–98 percent of the cases were disposed of, bargained cases, not from 40-year sentence felonies down to 20, but all the way down to simple assault cases. I came home on the train then feeling if we ever did in Baltimore what was done in the best office in the country we would be impeached and ridden out of town on a rail within a month.

Mr. RANGEL. We don't have your high tradition.

Mr. NOLDE. Judge, should a judge participate in plea bargaining, or should he stay out of it?

Judge MOYLAN. Let me confess ignorance. I went from the prosecutor's office immediately to the appellate bench and never spent a a day of my life on the trial bench. It would be presumptuous.

Mr. ALLEN. The judges are split on it, and they argue very vigorously about ther relative positions. There is one faction on our bench that says the judge has nothing to do with it, and another faction says equally strongly he must participate if he is going to make an intelligent decision.

Mr. RANGEL. Another faction says: "I assume all of the responsibility, but I don't know anything about it."

Mr. ALLEN. That is right. I don't know the answer, frankly.

Mr. NOLDE. Mr. Allen, what problems do you have hiring and paying assistants?

Mr. ALLEN. I don't have any problems in hiring. I can get all kinds of people, but I only pay $10,800, and they are willing to come but they aren't willing to stay for what I can pay them. After they get in their 18 months or a year and learn their way around, and find they can't go far, because I don't have a lot of well-paying jobs.

Mr. Gersh heads an entire program that is the first in the country, and until very recently we paid $18,000 a year. Until very recently. You simply can't hold good people at that salary scale. The majority of my people get from $15,000 down. I guess maybe 50 percent get $10,800 up to $14,000. Of course, when they get in that area they are

there about 2 years and they really are good prosecutors where they get started in their prosecuting career and they leave.

What I am doing there, instead of prosecuting cases, I am training lawyers for the bar. Charley did that for many years. He had the same problem. It is like pulling teeth to get the city administration to understand that if they want a strong law enforcement system, they must, first of all, have strong prosecutors: and you have to have pros. I have a few pros on my staff, but there are only about 20. I should have about 60 so that we can handle cases promptly.

We lose cases every now and then, I am sure, because of inexperience. Because we have to face, let's say, the public defender's office that tries 40 percent of the cases. I have to send my men against people with maybe 5 or 6 more years experience, maybe 10 years more experience, and who make $7,000 or $8,000 more a year working part time.

So the image of the prosecutor's office as a training ground for the bar has to be changed, because the situation is entirely different than it was 10 years ago. Entirely different. It is a professional thing, and you can no longer sit there and let the police tell their story, you tell your story, we rest our case. You can't do that any more. It is a complicated, highly technical, very professional operation, extremely difficult. And with the police reactions to many of the cases, it is even more difficult. It is hard as the devil to try a case without a lineup. You have to really maneuver around.

It is hard trying cases before the new computer juries. I call them television juries because they have been imbued with Raymond Burr and Owen Marshall, and they see the prosecutor going out and gathering all of this evidence, fingerprints, guns, and so on, and they come into court and re-present the identification witness who saw the crime and they want to know, "Where is the gun; where are the fingerprints?" You have to learn to try cases all over again before the television jury. You have to explain to them why you don't have a gun or fingerprints and why they should believe certain witnesses and so on.

It is a new ballgame with a modern jury. You have to have a different type of prosecutor if you want to have successful prosecution. I said this morning that I view the prosecutor's office as a key to the justice system. He is the man who determines what cases come up and what people end up going to jail, very often. You have to have a strong man there. You can't have these kids who are fresh out of law school trying to learn how to practice law.

Mr. RANGEL. What percentage of your criminal cases are minority members?

Mr. ALLEN. Very, very large. I would say in the felony level, 85 percent; misdemeanor level, maybe 60 percent.

Mr. RANGEL. What percentage of your district attorney's staff, which enjoys more of a quasi-judicial function than most jurisdiction, would be minority members?

Mr. ALLEN. Of my prosecutors, I have only five or six black prosecutors.

Mr. RANGEL. Out of what?

Mr. ALLEN. Out of 86. I think I have six.

Mr. RANGEL. Do you have an affirmative action program?

Mr. ALLEN. Yes, I have an affirmative action program. I don't know if we have the first or not. First of all, we don't have very many black lawyers around.

Mr. RANGEL. Not for $10,000 a year.

Mr. ALLEN. I can get white lawyers but not black lawyers for that much.

Mr. RANGEL. They can afford the luxury of getting experience sometimes.

Mr. ALLEN. Maybe that is it. There is another thing with young black lawyers, and I almost had a fistfight in Atlanta about this. I was in a roomful of young black lawyers telling them how valuable it is, if they want fairness, to go in the prosecutor's office if they want to do something for the unfairness visited upon black defendants. I finally won the argument, convinced them, but their initial approach was: "I am not going to take any part in putting black folks in jail." Inevitably, that is what I hear from young black lawyers.

But if you talk to them for 5 minutes and they realize that if they really want to be fair and contribute something to prevent that sort of thing, the place to be is in the prosecutor's office. I tell them, as a defense lawyer, how long is it going to take you to right the wrong of one defendant. Maybe 2 or 3 years. I can right the wrong in 2 minutes because I don't have to try a case where a man is improperly charged. I can exercise my discretion. I can free more people who were wrongly charged, or improperly searched, or improperly arrested in 5 minutes than I could in 20 years as a lawyer.

Mr. RANGEL. I can't agree with you more, but it seems as though with your tradition of lacking a jury trial, I would expect to at least find a wider segment of the population participating. It has been my problem in representing Harlem and East Harlem, the greatest difficulty between the defendant and the police officers, representing the so-called establishment is a question of the mores or the traditions of a particular community. What may look like a crime by someone who is not familiar with that community may indeed be just people exchanging greetings in another community.

But the problem of recruiting minority groups in the area of law enforcement, at least in the city of New York and other major cities, has been the fact the private sector for the first time has offered more opportunity, and certainly the opportunity to enter at a higher income.

Mr. ALLEN. The economic aspect is probably one of the real reasons, rather than the philosophical outlook. I remember when I first came in office, I made a very strong bid for a lot of the black lawyers around town who just recently came out of school. I must have had 50 applications from young whites who wanted to apply. They were just flooding the office. I sent for a couple of fellows I knew who came out and one young man came in. We were offering $10,800 of course, and I asked him what about salary. He said, "I have to have at least $20,000 to start." I said, "I hardly get more than $20,000 myself." That was the attitude.

They are being offered these nice opportunities in the big firms and they are taking them. Of course, in Baltimore, you only have about 40 black lawyers. They can make so much money outside—and money is the thing. If they are interested in money they are not going to come into the prosecutor's office.

Judge MOYLAN. I experienced the same thing, frankly, even in governmental ranks. Competition is almost cut throat to the point we were wooing a young black lawyer about a year before he was ready to graduate from law school, also a high school senior who is a good basketball player is being wooed, because you had an attorney general's staff of 80-some people that were falling over backward not to appear lilly-white or almost so. You had the State attorney's office of 70; the State solicitor's office of 60; and local U.S. attorney's office, and the wining and dining and recruiting was really pretty bad and those who turned out to be the lowest in the ability to pay on the totem pole really were left at the church door.

Mr. RANGEL. As the one black member of the Crime Committee, I integrated the whole committee.

Mr. ALLEN. Mr. Rangel, a young man from your State, named David Mitchell, a very bright young lawyer, I practically shanghaied him into my office because I brought him here from New York as a student and paid him a tremendous salary in my office when I was practicing. Of course, when I went over to the State attorney's office, I sort of demanded he come with me. He came and has been a very good prosecutor and has lived there about 2 years. He told me the other day he was going to the public defender's office, Friday of this week, in fact. He is developing into a fine lawyer, but he is leaving because he is making about $18,000 and he can go over across the street and make $19,000 and practice law, which he can't do with me.

Another one I shanghaied was Michael Mitchell, Congressman Mitchell's nephew. He has been there and I tried to extract a promise from him a week or so ago that he was going to stay, but he is a real bright, sharp young man and they are trying to get him. The public defender is after him, and this person is after him, and so on.

But good lawyers are in demand. They are going to take him away, particularly, if the man doesn't have means of his own.

Mr. RANGEL. I would like to apologize to the distinguished panel. It is very unusual so many committees are holding meetings today. Most of us sit on the Judiciary Committee and we had meetings of the Judiciary Committee, the District Committee, annd others

I would also like to introduce the SICA training group from East Harlem, a group very active in New York, who are here to learn what makes Government tick. I don't believe they could have picked a better day to listen to the problems other cities have, and maybe realize that New York is not alone and may be even a little further ahead in solving some of its problems.

Mr. NOLDE. Would you please tell the committee why you gave up a lucrative private law practice to become embroiled in all of the problems confronting a State's attorney?

Mr. ALLEN. I was 52 years old and my children were grown and I guess you get a little community spirit somewhere in your life. I frankly felt at that time, and I still feel, I could make a substantial contribution.

I wasn't contributing anything as a defense lawyer. I was very well known and made a lot of money, but making money, of course, is not the prime mover in everybody's life. Certainly not in mine.

If I have 4 years or get reelected and have 8 years, and can have people talking about the Baltimore office like they talk about

William Cahalan's office in Detroit, that would be a huge success in my mind. I mean, if I go down in history as a good prosecutor, or one of the best prosecutors of Baltimore City, as a top prosecutor's office, then that would mean something.

To be a lawyer; that is not a tremendous achievement to be a good lawyer. Charlie was a good lawyer. I think it is a question of personal pride and my desire to try to make a substantial mark in Baltimore.

I think prosecution is a neglected field of activity. I think making enough noise about it might move it a little bit. I am the only Black prosecutor in the country, so they look at me when I say things. I may get a little more attention than Charlie did. Charlie did a good job while he was there, but he was one out of many complaining about the thing. Maybe they will pay a little more attention to me. I think they are paying a little attention already.

Mr. NOLDE. I think the very fact you are here so indicates.

Mr. ALLEN. I have done two things I think are worthwhile and I have my eye on a couple of other things I would like to do, and there is a good chance I will get a major fraud unit, which will get me into white-collar crime and organized crime, and I will have another fight on that, but I am going to get it. I think this is the type of thing that will eventually bring the office up to par.

I think maybe after awhile I will get some salary adjustments. But if the Federal Government will come along and set minimum standards for these various offices around the country and professionalize the offices, and I contribute just a little bit, just a little thought, I will think I have achieved something.

When I was in the latter years of my practice, I was constantly in contact with Charlie Moylan about this type of thing. I was a great letter writer and used to write long letters to him about practices, and so on. I think I even made a report to one of the bar associations about how the State attorney's office could be improved. And Charlie, I always accused Charlie of adopting some of my suggestions. I don't know whether he did or not.

Judge MOYLAN. Many of them.

Mr. ALLEN. I made a lot of suggestions.

Mr. NOLDE. Now you have a chance to put them in effect.

Mr. ALLEN. All that I made, Charlie adopted before I got into office. I probably never will be rich, and being rich doesn't really bother me a great deal. I have three grown children, and grandchildren, and I am happily married, and I have a nice home and I don't need a lot of dough. So I think I am doing something.

I am very happy with my job, but it is the hardest job I had in my life, frankly.

Mr. NOLDE. I think you are rich in accomplishments and we are pleased you could come, Mr. Allen and Judge Moylan. We found your thoughts provocative, your ideas excellent, and we are just delighted the committee could have the benefit of your great experience and great work.

We thank you again for coming.

Mr. ALLEN. Thank you very much. We are glad to have been here.

[The following material, from Mr. Allen and Judge Moylan, was received for the record:]

PREPARED STATEMENT OF MILTON B. ALLEN, STATE'S ATTORNEY FOR BALTIMORE CITY, BALTIMORE, MD.

The very composition of this hearing and its stated purpose is the best illustration I know of the problem of street crime. A select committee of our highest legislative body has elected to hear witnesses that may give some guidance to what, if anything, can be done to put the brakes on a runaway crime problem.

We simply can't think of street crime in isolation as if we could come up with a magic cure like social penicillin. We are looking at street crime from a viewpoint similar to that held by those who claim more laws, more policemen, tougher judges, and longer prison terms will bring a simple, direct end to America's crime problem.

Open defiance of the law, which manifests itself as street crime, is inextricably intertwined with interrelated problems, such as the inability of society to cope wi th crime. Obviously, the ease with which street crime can be committed and the high likelihood of never being caught, is a crime contributing factor. The inefficiency of many court systems and the difficulty of proving guilt must certainly be another contributing factor.

The prosecutor system, by which most often part-time, youthful, inexperienced, politically active prosecutors are given the awesome responsibility of operating prosecution offices and the fact that it is much easier to simply go along with the existing systems and become case processors instead of prosecutors is certainly a contributing factor.

A prison system that usually turns out a much more highly skilled criminal than it takes in, has got to be a strong contributing factor.

The basic unfairness of the American justice system, in which the have-nots supply the criminal caseloads, while we hardly have machinery to deal with the thinking criminal, must be a strong contributing factor.

The overly complicated criminal justice system, which we brought on ourselves by a series of decisions forced out of the Supreme Court by the activity of overbearing police action, spineless prosecutors and insensitive judges, must also be a part of the pattern.

The smallness of our Nation, as created by modern communication and travel by which a kid in California's ghetto instantly learns of an inciting incident in New York, or a Washington youngster instantly learns of the details of a rip-off in California, adds to the problem.

The virtual disappearance of State and county lines which makes even a perfect system in one area no solution to the nationwide problem, as the criminal simply transfers his activities, contributes.

The inability of the States to cope with organized crime, white collar crime, consumer fraud, and ecological crime, also contributes.

The lack of integrity at the top level of governments and appeals to racism and basic fears of our citizens by our Nation's leaders.

So there are no simple solutions, no quick answers. There are good ideas and good plans whereby one community or State can come up with a good system to affect one particular area of criminal activity. Such ideas or plans of attack, I will discuss today.

In Baltimore about a year ago, I started a homicide liaison unit, which grew into a liaison for violent crimes unit, LEAA financed, about September. This is a system by which an experienced prosecutor associates himself with a serious case early on. The case is processed with a view toward successful and proper prosecution. Too often cases are ended with a successful arrest, the successful prosecution being the State's attorney's or prosecutor's problem. Police have had difficulty adjusting to the series of cases regarding confessions, search and seizure, eye-witness identification, that came down in recent years. Getting lawyers to line-ups and what to do after a defendant says, "I want my lawyer here before I talk," have proven difficult burdens.

The liaison prosecutors are able to supervise witness statements, coordinate search and seizure warrants, give immunity, arrange for appearance before

grand jury, arrange for depositions, arrange for bail, deal with witnesses and lawyers in pending cases, and generally to create a prosecutable case at the initial stage. It is also able to furnish protection to the legally or factually innocent at an early stage, something I insist upon, but is often overlooked somehow in some systems, as I feel that nothing harms the system more than an unsuccessful prosecution and nothing helps it more than a fast, well-planned, proper and succcessful prosecution.

The system works. The police like it. And the prosecutors like it. It's fair, practical and has the potential for building respect for law and order with justice.

I can cite you some examples of how the unit works to illustrate its effectiveness, bearing in mind, of course, that there is some contribution in every case that makes a good case into a perfect case and hopeless case into a good case, or removes the finger of suspicion from an innocent person.

Case No. 1.—A murder-for-hire ring existed in Baltimore, dispatching unpopular people for a fee of $600 to $1,500. The police knew who they were but could never come up with quite enough to arrest. The liaison unit worked with the homicide unit and developed a strategy. They worked on the contact man between the killers and the hirers. The contact man cracked, he went before the grand jury, the two killers were arrested and jailed and in 29 days we had a conviction. Working in similar fashion, using immunity in the grand jury, the homicide unit was able to validly make a mass arrest and valid search that revealed the following: Several escaped murders.

Case No. 2.—The solution to an absolutely clueless murder of a security guard.

Case No. 3.—The double contract murder in New York, involving a narcotics transaction.

Case No. 4.—A quite efficient narcotics operation hitherto unknown to the police that operated between New York and Baltimore.

The same approach, immunity in the grand jury, was used to furnish the answer to an unsolved witness murder that had run into a blank wall 8 or 9 months before. An extra dividend, entirely unexpected, was a final answer to what has become known as "Baltimore's missing heroin case."

These small successes simply illustrate the wisdom of the police and prosecutors cooperatively together in one confined area. It illustrates further the immense possibility of getting professional prosecutors involved in case preparation at an early stage, rather than several months after the fact when it is too late to deal with important questions of witness cooperation, identification, immunity and the sufficiency of evidence to arest and sufficiency of evidence to convict.

In our fingering-pointing society, too often arrest figures assume too much importance, but every arrest for a major crime without conviction diminishes our ability to demand respect for law enforcement.

I have another unit built along similar lines and a similar theory, the narcotics strike force. As far as I could determine, it is the first successful effort at a State level Narcotics Strike Force in the Nation. We operate a hot line, advise police on warrants, gather intelligence, cooperate with law enforcement units all over the country and operate legal telephone taps.

We have had numerous inquiries from all over the country about both these units. A group from Indiana came to Baltimore recently to examine our Strike Force and Mr. Gersh, my Chief of the Liaison Unit, who is with us here today, has been asked to expound on the theory of the liaison of violent crimes unit in the *Notre Dame Lawyer*.

I am frankly surprised at this reaction because it would seem to me, as an outsider, that this is something we should have been doing in prosecution many, years ago and the theory of handling a criminal case from the prosecution point of view, and early involvement of the prosecutor seems to be something that should have been done much, much earlier in the growth of our system.

I trust this is not another committee to examine the crime picture, have various witnesses quoted liberally in the media, and end up recommending the passage of more laws, giving more penalties for more offenses. Passing laws will not affect the crime picture one iota. We already have more laws than we can possibly deal with. Proper law enforcement is what affects crime. Proper means efficient, quick, effective and equal. Proper means giving the police prosecutorial help.

I beseech the committee, in addition to recommending innovative approaches to the solution of crime, that they face the hard fact that most States do not have the proper orientation, interest or financial means to properly combat crime.

Many States have good police systems but the untrained police force far outnumbers the well trained. Some cities have professionalized their prosecutors and at least one State, New Jersey, has professionalized the entire State system but for the most part, the average prosecutor is too young, inexperienced, part-time, under paid, over worked, who quickly moves on to greener pastures. Help from the Federal sources in direction, minimum standards and funding, must come to create a uniform, realistic, fair system nation-wide. Instead of recommending new and tougher laws, I trust the committee will consider the following:

1. Minimum standards for the court systems. Eliminate the magistrates and justice of the peace system in all the States with a unified three-level court system, similar to the one in Maryland.

2. Minimum standards for the police. Require a minimum training period, an in-service training for all police, not just the big cities or the elite units.

3. Minimum standards for the prosecutors, directed and designed to eliminate the part-time prosecutors and replace them with full-time lawyers, with the chief prosecutor being selected at the skill level of a circuit court judge. In this manner, the public would be able to receive representation equal to that of the criminal defendant.

4. Acknowledgment of the necessity for a new approach in case preparation with the police-prosecutor units with adequate staff.

5. Acknowledgment that new case law must be implemented and adjusted to, while new statute law should not be passed unless there is implementation provided.

PROGRESS REPORT OF THE VIOLENT CRIMES LIAISON UNIT OF THE STATE'S ATTORNEY'S OFFICE FOR THE CITY OF BALTIMORE

BACKGROUND

The Violent Crimes Liaison Unit of the State's Attorney's Office for the City of Baltimore began its operation in July, 1972.

On that date, Howard B. Gresh was appointed Project Director and three additional Assistant State's Attorneys were recruited. Since it was necessary to assign experienced prosecutors to this Division, three Assistant State's Attorneys were recruited from the Trial Division of the State's Attorney's Office.

Because of prior trial commitments and vacations, etc., this Division did not become operational until September 5, 1972. Certain problems became apparent immediately and new systems had to be developed in order to attempt to follow the guidelines set out in the Grant.

The first apparent problem was meeting the Grant condition of setting trial dates within sixty days of arrest. At the inception of this Program, Court Dockets seemed to be firm for approximately ninety days in the future and it was impossible to have trial dates within the time specified.

On September 26, 1972 a system was devised with the Criminal Assignment Office of the Supreme Bench of Baltimore City, which allowed this Unit to reserve trial dates and, therefore, attempt to schedule all trials within sixty days of arrest. A copy of the memo setting up this Procedure is attached, hereto, and marked *Exhibit* 1.

Shortly after this Procedure was instituted, another problem became apparent. This second problem involved the Defendant obtaining a lawyer within the "sixty-day period" and, of course, without the Defendant being represented, it became impossible for trials to be set in within the said "sixty-day period". Shortly thereafter, the Public Defender in consultation with the Chief of Violent Crimes Liaison Unit worked out a plan whereby all cases emanating from this Unit were set in for immediate arraignment.

Prior to the set arraignment, the Public Defender was supplied a copy of the offense report and, thereby, was able to make a proper determination of his case and appoint counsel at a much earlier date than normal. Once again, as the new Unit became operational, further problems were encountered.

The next problem encountered also involved the early setting of trial dates. It was found that the police officers necessary for Grand Jury testimony because of other trial dates, conflicting schedules, rotating work schedules and other problems, would sometimes delay the presenting of the case to the Grand Jury for such a substantial period of time that once again, it became impossible to work within the "sixty-day guideline". As soon as this problem became notice-

able, a meeting between the Captain of the Homicide Squad of the Baltimore City Police Department and the Chief of the Violent Crimes Liaison Unit was set up and a new Procedure was instituted. Under this new Procedure, the Assistants in the Violent Crimes Liaison Unit began presenting cases without the officer if necessary to the Grand Jury and all cases began to be presented in the Grand Jury within five days after arrest.

Shortly, thereafter, as in all new procedures, further difficulties were encountered. It soon became apparent that the reservation of trial dates for cases emanating from this Unit were not sufficient to keep up with the amount of cases this Unit was handling. Under the original Procedure, (two cases per week were reserved by this Unit with Criminal Assignment and within a short period of time, all trial dates within the "sixty day period" were filled.)

On November 22, 1972 a check of the Criminal Assignment Office indicated that the first available reserve date was February 20, 1973. A period well in excess of the "sixty-day rule". Immediately after discovering this the Criminal Assignment Commissioner authorized additional reserved trial dates, being made available to this Unit.

In order to comply with the guideline of the Grant in providing twenty-four hour police coverage, it was, of course, immediately known that a Unit consisting of four men and no secretarial or administrative help could not supply physical coverage on a twenty-four hour basis to the Police Department. Therefore, a schedule was set up supplying normal daylight coverage and "on call coverage" for the Police Department at other hours. A copy of the sample schedule for September, 1972 is attached, hereto, and entitled *Exhibit 2.*

Because of the speedy trial objective of cases emanating from this Unit, special red files were ordered and all cases from the Violent Crimes Liaison Unit are inserted into a bright red file folder to call attention to all Assistant State's Attorneys handling a red file; that it is a special file which must have special handling.

A statistics form was devised, which is inserted into each file, and any Assistant State's Attorney handling a "red file" must fill in the appropriate information on the form; a copy of said form is attached, hereto, and entitled *Exhibit 3.*

OBJECTIVES

The basic objectives of the Violent Crimes Liaison Unit is to provide extensive cooperation and coordination between the Baltimore City Police Department and the State's Attorney's Office for the City of Baltimore.

It has been agreed that the personnel of this Unit shall not become involved in the investigation of any Homicide unless requested by the officer in charge of the investigation; but it must be noted, however, that the degree of cooperation between the Police Department and this Unit has been extremely high and cooperation has been requested to this date in the overwhelming majority of Homicide cases. The home telephone numbers of all Assistant State's Attorneys in this Unit have been provided to the Police Department in order for the officer requesting assistance to be able to quickly be in touch with the Assistant. As of this date, police officers have been using the home telephone numbers and contacting the Assistants when necessary.

The second objective of speedy trial is in the process of being attained by the following steps:

1. A special color file has been designed for cases handled by this Unit, so that any Assistant working on this file immediately knows this is a priority file.

2. The Violent Crimes Liaison Unit Assistant is responsible for the presentation of all cases to the Grand Jury, to insure a speedy indictment.

3. All crimes which this Unit has jurisdiction over are "specialed" to the Grand Jury by an Assistant to avoid the lengthy process through District Court.

4. The Public Defender is notified immediately upon indictment of any Defendant for a crime being processed by this Unit, so that the Public Defender may enter his appearance speedily and without arraignment, if possible.

5. Assistants preparing cases for trial are instructed that cases from this Unit receive top priority.

6. It is the policy of this Unit to resist postponements in cases assigned to this Unit, except under the most unusual circumstances.

PERFORMANCE

At this stage, because of the shortness of time that this Unit has been in existence, it would be impracticable to quote statistical data. It is, however, significant to point out some individual cases where the performance of this Unit has resulted in unusual and extremely advantageous results.

Case No. 1

During early August, 1972 a series of armed robberies throughout the City of Baltimore took place by an extremely violence-prone gang who were immediately nicknamed "Bonnie and Clyde".

The Police Department on August 17, 1972 arrested one Charlene Hopkins and immediately ascertained that she was involved with these series of armed robberies, etc. Police Officers immediately contacted this Unit and arrangements were made for Assistant State's Attorneys from the Violent Crimes Liaison Unit, along with police officers, to interrogate the female Defendant. As the result of the interrogation, sixteen armed robberies, two Homicides and sixty-five burglaries were cleared. Ten separate Defendants were arrested and trials are pending at this time. A copy of an article which appeared in the News American Newspaper is attached, hereto, and entitled *Exhibit 4.*

Case No. 2

On October 2, 1972, Eugene "Tank" Allen was arrested by members of the Baltimore City Police Department and the Federal Bureau of Investigation in Baltimore City; at that time, Mr. Allen was wanted by the State of Maryland for the crimes of escape and armed robbery. As a result of his arrest, this Unit was contacted by the Baltimore City Police Department and an Assistant was immediately dispatched and became involved in the interrogation of Mr. Allen. A direct result of the interrogation of Mr. Allen was information leading to the charge of homicide against one Hercules Williams for the murder of one Alonzo Alston on July 27, 1972. Defendant Williams was no stranger to the Prosecutor's Office in Baltimore City, as he had been tried for homicide several times prior hereto, and in each and every case he had been found Not Guilty. In several of the cases against Mr. Williams prior to the instant case, the witnesses had been killed or intimidated.

As a result of interrogation in this case and the speedy work of the Assistants of this Unit, immediate steps were taken to insure the preserving of testimony against Mr. Williams. A deposition was scheduled and taken in open Court on October 13, 1972, thereby, preserving the testimony of a material witness who had been threatened. This witness was also secreted in a motel with the expense being paid by this Office to prevent any further intimidations or violence upon her. The case of Hercules Williams was scheduled for trial on November 13, 1972 (twenty-nine days after his indictment) and a conviction was gained on the first count of an indictment for murder and the first count of an indictment of conspiracy to commit murder.

This Unit assisted the Trial Division of the State's Attorney's Office and the results became obvious. A copy of the Motions, Affidavits, Stipulations and Order are attached, hereto, and entitled *Exhibit 5.*

Case No. 3

On October 23, 1972, one Goetz Dietrich Breynk was arrested by the Baltimore City Police Department, Homicide Squad for the murder of his wife, Viola Breynk, aboard the motor ship, Hagen; a German Flag Ship which was in the Port of Baltimore. One of the Assistants assigned to this Unit investigated this case along with Homicide Detectives and it was ascertained that all of the witnesses, the Defendant and the victim were German Nationales.

Our Assistant in this case immediately researched the law and ascertained that the jurisdiction of the prosecution of this case could have been in the State Courts, the Federal District Court or in the home port of the ship (Germany). It was immediately ascertained that since all witnesses and all parties to the crime were German Nationales, no purpose would be served by trying this case in the City of Baltimore and burdening the taxpayers of this State with the expensive task of trying, convicting and imprisoning the Defendant. The following international agencies were immediately contacted: Interpol; the District Attorney's

Office, Hamburg, Germany; the German Consulate in Philadelphia and the United States Treasury Department. These agencies were contacted in addition to the Baltimore City Police Department, the State's Attorney's Office in Baltimore City and the Hamburg, Germany Police Department. As a result of negotiations between the various agencies, the Supervising District Attorney of Hamburg, Germany, W. Richter, obtained a warrant of arrest issued in the District Court of Hamburg, Germany before the Honorable Judge Kollwitz. On December 6, 1972 two German Police Officers arrived at Friendship Airport, Baltimore, Maryland, where they were met by Baltimore City Police Department Detectives and arrangements were made to transport the prisoner back to Germany, thereby, saving the taxpayers for the City of Baltimore, approximately $100,000.

It must be noted that the entire Grant for this Unit for the first calendar year was approximately $100,000 and this case (Case number 3), resulted in savings to the taxpayers of this State of more than that amount of money.

In addition to the above details, arrangements were made by this Office with the Sky Marshals, the New York City Detectives Bureau, Friendship Airport Security and John F. Kennedy Security in New York for the proper security for this prisoner to be transported back to Germany. Copies of correspondence from Interpol, the District Attorney's Office, Hamburg, Germany and warrants of arrest are attached, hereto, and entitled *Exhibit 6*.

In addition to the above cases which have been listed as examples of the work this Unit is doing, the Assistants assigned to this Unit have been involved in such things as death-bed confessions, drafting of search warrants for police, attending line-ups, advising police on the law in applicable situations and many other unusual situations.

SUMMARY

The experience of the past few months in operating this Unit would seem to indicate that the future of the Violent Crimes Liaison Unit is bright. As the result of the ever increasing complexities which the police officer must face, the assistance available to him by trained lawyers is a necessary tool.

There is, at this time, a pending application for additional Assistants and secretarial help to expand this Unit. It would seem that the effectiveness of this type program could be increased many fold by providing Assistant State's Attorneys around the clock physically on the premises of the Police Department. At this time, Assistants are available on call twenty-four hours a day, but this is not the best type of procedure.

There is certainly a definite need for secretarial and administrative manpower which the present Grant does not allow. In spite of some of the problems listed above and further, in spite of the shortage of manpower, there is no question as to the success of this Unit in the short time it has been working.

[The exhibits referred to were retained in the committee files.]

(Excerpt from a recent opinion by Judge Moylan in Miller versus Warden, Maryland House of Corrections, — Md. Ct. of Spec. App. — (Jan. 1973), which relates to waiver of jury trials in Maryland.)

Maryland Rule 741,[7] "Jury Trial—Waiver," provided:

"An accused may waive a jury trial and elect to be tried by the court. If an accused elects to be tried by the court the State may not elect a jury trial. An election to be tried by the court must be made before any evidence in the trial on the merits is taken unless otherwise provided by local rule of court."

It is axiomatic that a criminal defendant in Maryland has the right to a trial by jury. This right is conferred by Article 5 and Article 21 of the Maryland Declaration of Rights. It is also conferred by the due process clause of the Four-

---

[7] The Rule was amended, effective September 1, 1971, to read:
"Rule 741. Jury Trial—Election.

"An accused may elect to be tried by jury or by the court. Such election shall be made by the accused in open court when first called upon to plead after he is represented by counsel of record or has waived counsel. If an accused elects to be tried by the court, the State may not elect a jury trial. The court may, in its discretion and for good cause shown, at any time prior to the trial permit the accused to change his election."

The amendment was double-edged. It provided that the election should be made by the accused in open court, mechanics as to which the predecessor rule had been silent. The other change was one of deliberate semantics. It deleated all reference to "waiver" of the jury trial and pointedly emphasized "election" between court trial and jury trial. The critical verb became "to elect" and not "to waive."

teenth Amendment to the Federal Constitution, which has been held by *Duncan* v. *Louisiana*, 391, U.S. 145, to incorporate the jury trial provision of the Sixth Amendment. Our problem is to decide how one elects to exercise that right or, alternatively, how one waives that right. The recognition of the right under the Maryland Declaration of Rights being fifteen years senior to the recognition by the Federal Bill of Rights, we are confident that our experience in implementing that right will not lightly be disregarded.

Our preliminary problem is to isolate the precise issue before us. In the language of the artilleryman, we shall "bracket the target." Initially, it is settled that the decision as to mode of trial (however made) must be the decision of the accused himself. Counsel may not "make" (as opposed to "announce") that decision for him. *State v. Howard*, 7 Md. App. 429. Our issue lies beyond that.

At the opposite extreme, it is settled that the decision of the accused in this regard, albeit of necessity made by him, need not be "announced" by him or[8] shown upon the face of the record. It is sufficient that the decision, even though announced by counsel, have been in fact made or acquiesced in by the accused. It is the true state of the defendant's mind which ultimately must be ascertained. No catechism a la *Boykin* or *Miranda* has been constitutionally prescribed. Even our holding in *Zimmerman v. State*, 9 Md. App. 488, overruled in other regards by *State v. Zimmerman*, 261 Md. 11, did not impose such a ritualistic obligation upon the State or the court.[9] Our issue lies short of this.

It being settled then that the decision must be personal to the accused, on the one hand, but that it need not personally be announced by the accused,[10] on the other hand, we pinpoint our present issue intermediately between those two fixed points—what was the quality of the decision, in fact, made by accused, even if made in the silence of his own thoughts?

In making that determination, we are making an independent constitutional opinion judgment. *Dillingham* v. *State*, 9 Md. App. 669, 714 (concurring opinion by Orth, J.). In doing so, we give great weight to the findings of Judge Mathias as to the specific, first-level facts (such as what was said and by whom, the demeanor and the courtroom experience of the applicant, the course of the trial itself, the strategic situation facing the applicant, etc.). We must, of course, make our own independent judgment as to what to make of those facts. We must resolve for ourselves the ultimate, second-level fact—the existence or non-existence of an effective waiver. *Walker* v. *State*, 12 Md. App. 684, 695.

The findings of Judge Mathias are contained in the Opinion and Order of Court:

"The Court finds from the record [that] . . . there was an affirmative indication on the morning of the trial that it would be a Court trial. It is concluded from Mr. Bryan's testimony the petitioner was in the courtroom. . . .

Further, it is imperative that the Court review the facts in this case. It is very obvious that there were two technical questions in this case; whether it was dark or daylight, and the question of whether a penknife in his pocket was, in fact, a dangerous and deadly weapon. It is rather obvious Mr. Bryan was successful in having a judgment of acquittal in Count Two, the penknife. It was the defendant's testimony that gained him that judgment of acquittal in explanation of how he got the penknife.

The Court further finds from the testimony of Mr. Miller and the record that he is not dull and did understand the nature of what was transpiring. Conversely,

---

[8] The applicant does, indeed, advance this argument as a second line of defense. His references to *Wayne v. State*, 4 Md. App. 424, and *Moore v. State*, 7 Md. App. 330, are not directly relevant, since they deal with the constitutional "right to counsel." Both cases use the broad language of the Supreme Court in *Johnson v. Zerbst*, *supra*, and *Carnley v. Cochran*, *supra*, both of which are also "right to counsel" cases. The applicant's reference to rulings in this regard in Illinois, in California, in Michigan and in the Federal system is not helpful, since in those jurisdictions the trial by court is not the time-honored and prestigious alternative to trial by jury which it is in Maryland, but rather occupies inferior status resorted to only when the superior mode is foregone. Indeed, in the Federal system, an accused does not even have the unfettered right of trial by court if the Government insists upon trial by jury. *Singer v. United States*, 380 U.S. 24.

[9] In *Zimmerman*, the election of a court trial was announced by Zimmerman's lawyer. It was impossible to ascertain from the record whether Zimmerman had acquiesced in the decision or not. We attempted to remand the case to the trial court for a further evidentiary finding in order to determine whether there had, in fact, been a knowing and voluntary acquiescence in the decision announced by counsel.

[10] *State v. Zimmerman*, *supra*, a 25-26, the Court of Appeals wisely points out that "the preferable practice in accepting an election of trial by the court from an accused is for the trial judge at that time to determine on the record whether this is a knowing election on the part of the accused of a court trial in lieu of a jury trial." It make clear, however, that the suggested guideline is "calculated to reduce litigation" and is not an absolute requirement, the breach of which would be fatal error. It is a suggestion for judicial husbandry and not a constitutional mandate.

the Court is convinced that Mr. Miller is very streetwise and courtwise. From his testimony and his record he very well knew what was going on in that trial that day, and if he, in fact, did not concur with Mr. Bryan in that trial he certainly would have indicated at that time that he did not concur in it. Therefore, the Court will deny the contention that he did not knowingly and intelligently waive his right to a jury trial in Criminal Trials No. 10,585 for the reasons given and the testimony."

Giving great deference to the first-level findings of Judge Mathias and then making our own independent judgment thereon, we determine the applicant here did knowingly and voluntarily acquiesce in his lawyer's election of a court trial, thereby effectively waiving his right to a jury trial. Nothing in *Zimmerman* v. *State*, *supra*, or in *State* v. *Zimmerman*, *supra*, persuades us to find otherwise. Although in *Zimmerman* v. *State*, we tended to emphasize unduly, in the light of *State* v. *Zimmerman*, the waiver of the jury trial vis-a-vis the venerable Maryland practice of electing between two equally valued modes of trial, we still did not hold that that waiver must be expressed by the accused personally, on the face of the record. In that case, counsel had elected a court trial. We were unable to conclude whether Zimmerman had or had not knowingly and voluntarily acquiesced in the decision of his counsel. We attempted to send the case back for a further factual finding to resolve that issue. The Court of Appeals, in reversing that decision, held that the appropriate forum for such further factual finding is a post conviction petition hearing and not the trial court upon remand. In either event, there was a factual hearing by Judge Mathias in the case at bar. He determined that the applicant did knowingly and voluntarily waive his right to a jury trial. He supported that finding, in the oral opinion of the court, by pointing out how such an election was the only strategically intelligent decision for this court-wise defendant to have made:

"A reading of the testimony in the transcript, which I recessed to accomplish, would certainly indicate that his testimony was rather intelligent too, after what transpired. He knew what kind of trial he was confronted with. He knew that the police officers found him in the apartment. They walked in and he was in there. There was a bunch of clothes stacked up in the dining room. His buddy was hiding in the closet and when the officers told him to come out he said he came out. Why? Because he was afraid the police were going to shoot through the door.

He exercised good judgment. That may very well have been what would have happened. He knew that he was caught. In his opinion Judge Bowie said 'red' and did not use the word 'handed', but I think he meant that the defendant was caught red-handed in the apartment. Mr. Miller knew what he was confronted with. Counsel, if you please, knew what he was confronted with with a jury. Those facts have a definite bearing on who might I believe as to whether he intelligently and knowingly waived."

Judge Mathias pointed out, quite astutely, that where an accused has been caught red-handed and where his only defenses are of a technical nature,[11] sound strategy dictates the election of a court trial:

"At the time he and Bryan both thought it was a good idea that with the kind of evidence that they had in looking at the transcript, to have a Court trial. It is one of those cases that no sensible lawyer would present to a jury . . ."

We note, moreover, that the applicant here has, to this day, never indicated that he desired a jury trial. He relies exclusively on what he hopes to be a deficiency on the face of the record. We feel as did the Court of Appeals in *State* v. *Zimmerman*, *supra*, at 23:

"In the state of this record we do not perceive a factual dispute. There was before the court an election of a court trial by counsel in the presence of the accused, the exact situation which appeared in *Rose*. There is nothing in this record to show that Zimmerman ever wanted a jury trial. Even now he does not say he desired a jury trial. If he in fact did want a jury trial, it is odd that he did not express himself when the election was made and did not raise this point in his petition for right to appeal as an indigent, although, as the record indicates, he was not bashful in expressing himself in that petition on other points he regarded as worthy . . .'"

We hold that the intelligent and voluntary election of a court trial, announced by applicant's counsel and acquiesced in by the applicant, was an effective waiver of trial by jury. As the Court of Appeals said in *State* v. *Zimmerman*, at 12: "We

[11] See Bond, *The Maryland Practice of Trying Criminal Cases By Judges Alone, Without Juries*, 11 A.B.A.J. 699 (1925), at 702: "Trial before the court alone is sometimes preferred when a defense is based mainly on a point of law . . ."

do not consider whether an accused may elect a court trial, thereby waiving a jury trial. That is established. *Rose* v. *State*, 177 Md. 577."

If the specific holding of *State* v. *Zimmerman* was that cases will not be remanded to the trial court for further evidentiary findings, the broad import of *State* v. *Zimmerman* was to place the waiver question in its proper conceptual context as to modes of trial in first the Colony Palatine and now the Free State of Maryland. The Court of Appeals quotes generously from Chief Judge Carroll T. Bond in both *Rose* v. *State*, 177 Md. 577,[12] and in his article, "The Maryland Practice of Trying Criminal Cases by Judges Alone, Without Juries" in 11 A.B.A.J. 699 (1925). It points out that from the founding of this colony until the present day,[13] the court trial has been a qualitatively and quantitatively valuable and valued part of the criminal trial practice of this sovereignty. In the words of Judge Bond:

"So in this State the practice is one of respectable age, and it seems to Maryland lawyers to be fully as natural a feature of the administration of criminal justice as does the jury trial. They have been quite unaware that there was anything extraordinary in it, and are always surprised when they learn that in other jurisdictions an accused cannot have a trial without a jury if he wishes it.

A docket of jury trials only is something of which Maryland lawyers can hardly conceive; and it would dismay them." 11 A.B.A.J. 701.

Unlike virtually every other American jurisdiction,[14] we have traditionally not even considered the phenomenon in terms of waiving a normal or superior mode of trial by jury for some lesser or abnormal trial by court. We have spoken rather of election between two equals. The precautionary skepticism which, therefore, quite properly, circumscribes such decisions as 1) tendering a guilty plea or 2) proceeding to trial without counsel, would have no place in the routine election of a court trial in Maryland—a tactically dictated selection of forum for a fully contested trial. In this sovereignty, an intelligent and voluntary election of one trial mode is, *ipso facto*, an appropriate waiver of the alternative trial mode.

The waiver of trial by jury in many states is tantamount to a plea of *nolo contendere*—a virtual throwing in of the sponge—a "submission" to the court - and, therefore, a drastically more severe relinquishment of rights than is the waiver in Maryland, which is but the free election of an equally attractive mode of trial.[15] It would be exalting form over substance to impose the same waiver standard upon two such disparate relinquishments. Whatever may have been the broad language of the Supreme Court when dealing with the generality of states, we cannot imagine that that Court, if called upon to focus in on our unique history, would declare Maryland's experience of several hundred years, with no cry of injustice having been raised, to be beyond the pale of "fundamental fairness" or incompatible with "the concept of ordered liberty." Yet such would be the import of insisting upon trial by jury as the preferred, the superior, the normal mode of trial, which must be knowingly relinquished or abandoned before

[12] *State v. Zimmerman* made it clear that *Rose v. State* was still in full vigor and that our partial inhumation of it in *Zimmerman v. State, at* 495, n. 4, was, at best, premature.

[13] The trend of recent years has remained true to that analyzed by Chief Judge Bond from pre-Revolutionary times to 1925. The records of the Baltimore City State's Attorney's Office reveal that between 1952 and 1970, between 4,000 and 9,000 criminal indictments were disposed of each year. An average of approximately 14% were disposed of by way of the negotiated guilty plea. The great bulk of the indictments went to trial and were fought out upon the merits. During that eighteen-year-period, the percentage of jury trials fluctuated between 1% and 3%. The percentage of court trials fluctuated between 97% and 99%. The court trial in Baltimore, as in other parts of Maryland, is a stern contest each step of the way. Capital cases are frequently tried before panels of two or three judges and may consume weeks of trial time. As far back as 1872, *League v. State*, 36 Md. 257, recognized that in a multi-judge court trial, majority rule, and not unanimity, would prevail. It is not in diminution of the vigor of the contests that they are played out before faster referees, who do not have to be taught the rules afresh for each new game. See *Sherrill v. State*, 14 Md. App. 146, 157.

[14] Of the common law jurisdictions in North America, it is understood that the Maryland experience in this regard is shared only by the Province of Ontario.

[15] See *Bond, op. cit.*, at 702:

"The reasons which prompt the choice of a trial before the Court in one case and another are, of course, many and various. Every imaginable reason for thinking that a particular prisoner would stand a better chance of acquittal on the particular charge by a judge presiding than by the jury, must sometimes come into play. Small advantages in strategy, the personality and disposition of the judge, or the makeup of the jury panel—all such considerations must influence the choice and incline counsel now one way and now another. But there are more important reasons. Fear of the effect of popular prejudice upon a jury, either because of the nature of the charge, or because of something connected with the accused personally, is a very frequent ground of choice. It is common for defendants with known bad records to prefer trial before the court alone. And when the crime has aroused anger in the community from which the jury is chosen, trial before the court is frequently preferred."

resort may be had to a lesser and second-class mode of trial. Indeed, in the healthy laboratory of varied state experiences, others may yet follow where the Maryland experiment has led. In macrocosm, three hard fought court trials may represent more fundamental fairness than one hard fought jury trial plus two negotiated guilty pleas.[16] It is an unrealistic appraisal which ignores the total operation of a criminal justice system.

Trial by jury, in the ascendant since the Assize of Clarendon in 1166, has banished from the field such time-honored rivals as trial by ordeal of fire, trial by ordeal of water, trial by compurgation of witnesses and even the more recent Norman innovation of trial by battle. It has not banished from this realm trial by court. Whatever the direction in which our sister sovereignties may wish to travel, we see nothing in the notion of due process which would compel relegating to the attic of practice in this commonwealth, a trial mode which has served us expeditiously, fairly and well since our forefathers planted the common law of England upon these shores.[17]

Chairman Pepper. The committee will adjourn until 2 o'clock tomorrow afternoon.

[Whereupon, at 2:25 p.m., the committee adjourned, to reconvene at 2 p.m., on Wednesday, May 9, 1973.]

---

[16] See Moylan, *The Trial of a Criminal Case Before The Court Without a Jury*, 17 Neb. State B.J. 138 (1968), at 139:

"Because of this heavy reliance in Baltimore on the Court trial, there has been little necessity for plea-bargaining as a method for relieving the criminal docket. In recent years in Baltimore, approximating 14 per cent of all the cases coming to trial in the Baltimore Criminal Courts resulted in pleas of guilty. This is in sharp contrast with most other parts of the country where plea-bargaining is a major factor in the disposition of criminal cases. . . . [I]n New York only about 2.5 per cent of the indictments ever actually go to trial and . . . the other 97.5 per cent are worked out on a negotiated plea basis. Sometimes armed robbery indictments are compromised not simply down to unarmed robbery, but even all the way down to one year simple assault pleas. By carrying our cases to trial, this type of plea-bargaining . . . simply does not have to exist."

[17] As an avidly wooed analogy, *Boykin v. Alabama* is currently very much in vogue with criminal defendants. In the case at bar, of course, the applicant sought to impose *Boykin's* catechism upon the constitutional right to trial by jury. In *White v. State*, No. 308, September Term, 1972, filed this day, the defendant there sought to bring the withdrawal of a plea of insanity under its broad umbrella. In an excellent analysis, Judge Scanlan gave the effort short shrift and demonstrated the utter inapplicability of the *Boykin* strictures to the ongoing tactical decisions of the trial table.

STREET CRIME IN AMERICA

(Prosecution and Court Innovations)

WEDNESDAY, MAY 9, 1973

HOUSE OF REPRESENTATIVES,
SELECT COMMITTEE ON CRIME,
Washington, D.C.

The committee met, pursuant to notice, at 2:20 p.m., in room 2261, Rayburn House Office Building, Hon. Claude Pepper (chairman) presiding.

Present: Representatives Pepper, Mann, Murphy, Rangel, Wiggins, and Winn.

Also present: Chris Nolde, chief counsel; Robert Trainor, assistant counsel; Thomas O'Halloran, assistant counsel; and Leroy Bedell, hearings officer.

Chairman PEPPER. The committee will come to order, please.

We are very pleased to have with us this afternoon, one of our distinguished and revered colleagues in the House, who comes from the great city of San Antonio. We will ask him if he will be kind enough to introduce our first witness this afternoon, an eminent jurist from the San Antonio area.

Our distinguished friend and colleague, Mr. Henry Gonzalez.

STATEMENT OF HON. HENRY B. GONZALEZ, A U.S. REPRESENTATIVE FROM THE STATE OF TEXAS

Mr. GONZALEZ. Thank you very much, Mr. Chairman.

I especially am grateful to you and the members of the select committee for giving me the opportunity to be here to greet a very famous Texan, a most outstanding public servant and one who is very well-known and highly honored and recognized in our area, Judge Adrian Spears, who first went to the Federal bench in 1961. But prior to this, he was one of, if not the leading attorney, successful in the legal profession and his practice and had gained quite a bit of fame in the handling of some cases that had very much to do with such things as municipal employees, fire and police matters, that involved detail and also, on the part of the lawyer, an interest and an awareness of needs in the public sector.

But more importantly, Mr. Chairman, I think your committee recognizes the work that Judge Spears has done in one most significant respect, and I am sure that you will be hearing from him as to the particulars. I am sure this is the reason why, even in this area, out of all of the 50 States, the name of Judge Adrian Spears stood out.

95-158—73—pt. 3——21

There is a very good reason for it. When Judge Spears was appointed to the western district, he was the only judge in that entire area that had full caseload plus more. He was quick to see, being an agile-minded man, that the usual procedures which, incidentally, had been associated with Federal-level court procedures, would not suffice if justice were to prevail.

In the meantime, Judge Spears has compiled an incredible record, an accumulation of casework that on the record seems incredible and so successful that you seldom hear of any appellate court overruling his decisions. Yet, he has been innovative, he has instituted procedures that bring the court system to the ideal level that I have heard you discuss, Mr. Chairman, in connection with the question of criminal procedure.

It was Judge Spears that introduced a novel or unique approach in the handling of cases. Seeing the pressure as to the number of cases that were piling up, never losing sight of being an individual judge over an individual case, he, nevertheless, has instituted procedures that I think should have the benefit of national attention, and once they do, will be incorporated, and in the future people will wonder why it took so long to do what Judge Spears has been doing all along.

It is a real honor, Mr. Chairman, at this time to present this very notable San Antonian. We all love him, those of the legal profession to a man honor him, and I join with them in presenting to you a distinguished judge and public servant.

Chairman PEPPER. Thank you very much, Mr. Gonzalez. We are very much honored to have Judge Spears with us.

These hearings have sought out all over the country the police, the jurists in the various categories of courts, the various other officers having to do with correctional institutions, for example, who have been innovative and imaginative and creative and constructive in their approach to their administration of justice in our country.

So, Judge, you are one of the most highly mentioned judges that we had brought to our attention and we are very much honored and grateful to have you be with us this afternoon. I know you had to make sacrifices in order to be here. We hope your coming will give an example that others may follow in the courts of the country and promote even a better system for the administration of justice in our land.

We welcome you, Judge, and we will be glad to have you make your statement.

Mr. Counsel, what would your pleasure be?

Mr. NOLDE. Thank you, Mr. Chairman.

We would like to hear from Judge Spears and I would also like to introduce Mr. Gillespie, who came with Judge Spears.

Mr. Gillespie is a graduate of St. Mary's University School of Law, was in the Judge Advocate's Corps of the U.S. Army, was on the faculty of the Practicing Law Institute, and is a distinguished member of the San Antonio Bar. In fact, he has been an eminent practitioner there for the past 18 years. He will give us the defense side of the procedure which Judge Spears has so innovatively put into effect into his court.

We will be pleased to have you, Judge Spears, make an opening statement.

Chairman PEPPER. Mr. Gillespie, we are very much pleased to have you, too, and thank you very much for coming.

Judge, you may proceed if you will.

STATEMENTS OF HON. ADRIAN SPEARS, CHIEF JUDGE, U.S. DISTRICT COURT, WESTERN DISTRICT, SAN ANTONIO, TEX.; ACCOMPANIED BY JAMES GILLESPIE, ATTORNEY AT LAW

Judge SPEARS. Thank you, Mr. Chairman.

First, of course, I would like to acknowledge this fine introduction that our great Congressman has given to me. I don't have to tell you, because you already know, that he is honored by all segments of our community, not only in San Antonio, but in Texas as well.

I just attended, a few nights ago, an occasion at St. Mary's Law School where he was honored as the outstanding alumnus of St. Mary's University Law School. This is just one of the many, many honors he receives almost weekly.

Chairman PEPPER. Judge, he is certainly one of the most esteemed Members of the House of Representatives. We all love him.

Judge SPEARS. I know he is. We are proud of him. I could spend my whole time talking about Henry, but I am not going to do it.

Mr. Chairman, I think perhaps it might be in order for me to tell you something of the situation that we have in the Western District of Texas.

This district is as large, geographically, as the States of Pennsylvania and New York combined. It is 800 miles across it, not as the crow flies, but as you have to drive to go from one division point to another, from Waco to Austin, to San Antonio to Del Rio, up to Pecos, Midland, Odessa, and then into El Paso. So we have a tremendous geographical area to cover.

Congressman Gonzalez mentioned the fact that early in my tenure on the bench I was faced with some real problems. I will tell you what the primary problem was.

I was the third judge that was created in that district. Prior to the time I came to the bench, we had two judges, fine men, both of them, who had become elderly. One was 82 at the time I came on the bench; the other was 75 or 76 and both of them were reaching the point where they were thinking very seriously about retiring.

Shortly after I came on the bench, one of the judges did retire and, unfortunately, the other one became ill and died subsequently from this illness. So for a period of about 7 or 8 months I was the only judge in the district, covering the entire district. I don't have to tell you, with a border of some 450 miles between Mexico and Texas, that we have just about every kind of crime that is known to man, and some that no one else has to concern himself with.

In our border cities, particularly in Del Rio and El Paso, we had tremendous volumes of immigration cases, among others; narcotics cases were a part of our caseload. In San Antonio we have large narcotic caseloads.

Well, with the jails full all over the district and with one judge to empty them it was almost overwhelming. I knew that something had to be done, that I simply could not take care of this tremendous workload without some assistance.

One time during this period, I was down in Del Rio, which is on the border between Texas and Mexico. We had a U.S. attorney at that time who was a very fine gentlemen, an excellent lawyer, and a very compassionate type of person. I had set a large number of cases on the docket

in Del Rio. When I went in the courtroom it was full, and I wondered who these people were.

So I asked one of the court attendants who they were. He said, "They are witnesses." I said, "In what case?"

He said, "In the mail fraud case." I said, "What mail fraud case?" It was on the docket but I hadn't had a chance to look over the cases and see what they were. He said, "This is the first case on the docket and these witnesses are here to testify."

The government had brought some 50 witnesses and I don't know how many the defendant had. They told me that it would take 2 weeks to try this case.

Well, you can imagine the predicament I found myself in with all of the work that had to be done to take care of those people who were in jail and were entitled either to a speedy trial or to be released. In desperation, I said to the U.S. attorney, "Mr. Morgan, would you consider showing the defendant your file?"

He looked at me as though I had gone stark raving mad. Then he thought for a few moments and said, "No, I have no objection," whereupon, he picked up his file and handed it over to the defense counsel. At this point I said, "We will take a few minutes and let you have an opportunity to see what it is. You gentlemen get together and talk about this case and see if we can't do something to expedite it."

Thirty minutes later the lawyers came into my chambers and told me that the defendant had decided to plead guilty. In about 30 or 40 minutes, then, we disposed of a case that would have taken us 10 days to 2 weeks to try.

This got me thinking that the U.S. attorney could feel that way about it, his assistants might see the same advantages. So we instituted in our district a pretrial procedure in criminal cases, where the U.S. attorney, with his full acquiescence, would give to the defense counsel his complete file at or shortly after the arraignment.

Now, I don't want to be in the position of telling the committee things that you already know, but I have to do like I tell lawyers they should do—they should never argue to the court as though the court knows anything, because they might miss something they should have called to the court's attention. In the law, of course, we have the Jencks Act which provides, in effect, that after a witness has testified for the government, then defense counsel is entitled to demand and receive a copy of any statements the witness may have made.

A number of years ago, the Supreme Court decided a case called Brady versus Maryland, in which the Court said, in effect, that the prosecution should furnish to the defense all evidence in the prosecution's file that may be material to the defense or might lead to the discovery of material evidence.

Well, in that instance, the Supreme Court told us what to do, but they didn't tell us how to do it. This created problems for a number of reasons, but primarily because the judge was put in the position of having to determine upon an in camera examination of the file, after a prosecutor had given the defendant what he thought was material to his case, whether there was anything else in the prosecution's file that the defendant was entitled to have.

If the defendant demanded it, this had to be done.

Of course, the judge is not an advocate in the case and, certainly, before the case begins he wouldn't know what the theory of the defense was. Obviously, when a defendant comes in and pleads not guilty, that is it, and the prosecution is then faced with the burden of proving guilt beyond a reasonable doubt. So even though a defendant might come in and demand that the government produce evidence that was material to his defense, there was no way for the judge to determine whether the evidence in the prosecution's file was actually material until he had at least heard the government's case.

Even then the judge was at a disadvantage in trying to ascertain what documents, or statements, or other matters in the file might be beneficial to a defendant.

One time I tried a jury case over in Houston for one of the judges there. It was a tax fraud case. It took 10 days to try. I was in a quandary the whole time because we had an astute defense lawyer who was demanding, at every stage of the trial the defendant's rights under Brady versus Maryland. He wanted to know what the government had that was material to the defense of his client, but the prosecution would tell him on each occasion: "We have given you everything."

So, one weekend while the trial was in progress, Government counsel handed me, for an in-camera inspection, a file about a foot thick. I started reading those voluminous intraoffice communications and other documents, but I was at a complete loss to know what information might be beneficial to the defendant. The best that I could do was make an educated guess. An acquittal saved me from finding out whether or not I had guessed right.

Well, all of these things being in my mind and realizing that at some point in the proceeding the prosecutor has got to make a full disclosure, the only question remained was when.

Now, I could never see why in the vast majority of cases the prosecution would benefit substantially by waiting until after a witness testified before his statement was given to defense counsel, unless it would be because it might be thought that defense counsel simply wouldn't have time to digest the statement after it was given to them. In any event, since these incidents occur right in the middle of the trial—the court usually takes a 15- or 20-minute recess, during which the defense attorney is supposed to read the statement and digest it, and be able to cross-examine on it.

When the statement covers several pages additional time must be allowed. The upshot is that the jurors have to cool their heels in the jury room and the judge had to try to do other things while this study is being done.

In my suggestions to the U.S. attorney, and during the time that we were conducting our own type of pretrial, I got him to agree to furnish all of this material beforehand so that there would be no waste of time when the case came to court. Not only that, the cases that went to trial were tried more expeditiously and, in addition, they were more intelligently presented because the defendant and the prosecution knew more about what they were required to do and how to do it.

We operated under our local court rules on that basis for about 4 years with a great deal of success. Then in 1967 I heard by chance—and it really was by chance because I happened to be at a meeting where I sat next to a man who was acquainted with work that was

being done by a subcommittee of the American Bar Association—that Judge Carter from San Diego, who at that time was on the district bench, was beginning to experiment with what was called the omnibus hearing procedure.

Well, I immediately wrote to Judge Carter. I had known him before. In fact, he had been one of my instructors at the seminar I attended when I was a newly appointed judge. He promptly told me that he would be happy for me to participate in this experiment with him.

He sent me all the material that the subcommittee had worked out to provide for full disclosure between the prosecution and the defense, and we have worked with this procedure very effectively and very successfully ever since that time.

I am sorry that Mr. Harrison, who was in the U.S. attorney's office for about 8 or 9 years, 6 of which he spent as head of the criminal division in our district, is not here. I wish that he were here to give you some ideas as to how the prosecution feels about this, because prosecution attorneys are usually hidebound by the traditional concept of the armlength transaction between the prosecution and the defense. The prosecution doesn't like to tell the defense anything and, by the same token, if that situation persists the defense is not going to tell the prosecution anything.

[Mr. Harrison's prepared statement was received for the record and appears at the end of this testimony.]

In my judgment, the net result is that the administration of justice suffers. If we want to be altruistic, or if we want to be just plain fair in the administration of justice, a criminal trial must constitute a search for the truth, and what Judge Murrah refers to as "trial by ambush," or the "sporting theory of justice," in my judgment, ought to take a back seat.

This is not something new. As I understand it, they do it in England. The military in this country, I am informed, hands over their file in a court-martial case to the defense so they can be prepared to answer.

We start out first by sending a notice through the clerk's office whenever a person's case is set for arraignment, giving the attorney who was either appointed or employed by him an opportunity to ascertain whether or not he wants to participate. The procedure as presently utilized is strictly voluntary.

And let me say here, that even though in the beginning we met with some resistance from our bar, today I know of no lawyer in San Antonio who refuses to participate because he doesn't believe in it. Every now and then one will refuse because his client doesn't understand it, and he has no choice but to refuse if the client tells him to do it. But I know of no lawyer who voluntarily refuses to participate.

Mr. Harrison, the young man who was to be with us today, and couldn't because of the fact that his mother was seriously injured, had written a six- or seven-page single-spaced memorandum to his boss, the U.S. attorney, telling him that this was the worst thing he had ever heard of, that the administration of justice was going to take a back seat, that the lawyers would just play cagey with one another, and that it was a one-way street, and all of this sort of thing.

Needless to say, over the period of the last 4 or 5 years, he has appeared with us on a number of occasions before various groups in which he has admitted his error and has said that from the prosecution standpoint he is convinced this is the best procedure available to guarantee the proper administration of justice.

What does it do? It cuts down trial time, if you try a case. In a narcotics case, for example, we customarily get stipulations that the contraband involved is whatever the chemist says it is. Why? Because the lawyers know it is ridiculous to let the Government parade witnesses on the stand to prove things that they can't contest, because of the adverse psychological effect that it would have on the jury. This stipulation alone saves several hours of courtroom time.

Another thing we get now from the defendant is a stipulation that the contraband has been in the custody of Government agents from the time it was seized until the time of trial. This cuts down sometimes 3, 4, or 5 hours, depending upon how many agents have handled it in the process. Meticulous testimony reflecting the details of the chain of custody are usually without dispute and are really unnecessary.

Another thing that cuts down on the trial time is that defense lawyers already know what the statements are that the prosecuting witnesses have made since they know beforehand what the testimony is going to be, they are able to immediately cross-examine. But you know, better still, they are able to decide when they shouldn't cross-examine. And all of us know, or should know, that it is more often than not the questions you ask that hurt you, rather than the questions you didn't ask.

So the lawyers are more able to intelligently prepare their cases for trial.

But the best feature is from the standpoint of the administration of justice, that a defendant who comes into court can make an enlightened, intelligent plea. His lawyer doesn't have to tell him, "I think they are going to do this; I think they are going to do that." He can show him what the witnesses are going to testify to. Then he can look him square in the eye and ask, "What can you produce to refute this?"

Most of the time, the cases end up in pleas of guilty.

Now, some might say, well, is it a proper administration of justice simply because you get guilty pleas? I say it is, under the circumstances, because these are informed pleas of guilty. They are not made in contemplation of some deal or some plea-bargaining procedure engaged in by the attorneys, but not fully understood by the defendant. And then if the defendant is sent to prison, I think he makes a better prisoner because he knows that the prosecution did have the evidence against him.

Well, Mr. Chairman, I could go on and on about this. I want to give my young friend here, who was another one of those that objected strenuously to "Omnibus," an opportunity to talk. He had said it just wouldn't work, and I am not going to tell the prosecution anything, but after a while he began to realize that it was in the interest of his client and himself, too.

[The prepared statement of Judge Spears appears at the end of his testimony.]

Chairman Pepper. Judge, could you give us any more details of just how the Omnibus plan works?

Judge Spears. All right. The clerk sends out the form to the lawyer who is appointed or employed. Then the attorney sends back the form indicating whether he will or will not participate in Omnibus. In almost every case the lawyer does participate.

If he indicates that he wants to participate, he has 10 days during which he and the prosecuting attorney must get together for an attorneys' conference. At this conference they discuss the pros and cons. The defense attorney will try to determine whether any motions are in order, like motions to suppress, motions to dismiss, et cetera. If they are, he will indicate on the checklist form that goes to him.

Chairman PEPPER. Will you describe the checklist to us, please?

Judge SPEARS. Yes. The checklist form has on it every conceivable defense that a defendant can raise in a lawsuit. If it isn't here, those who had the job of preparing the checklist simply didn't know about it.

Now, some lawyers may find some things that we did not have noted on the checklist, but generally they are there. The lawyer who is not experienced in the criminal practice will find before him in this form a ready reference to whatever might be involved in his case.

Chairman PEPPER. Without objection on the part of any member of the committee, we would like to have that checklist in the record.

Judge SPEARS. All right. I will be glad to put it in the record.

[The checklist referred to appears at the end of Judge Spears' testimony.]

Judge SPEARS. This permits the attorney for the prosecution and the defense to indicate simply by circling a number, whether or not he wants to raise any particular issue. He doesn't have a file written "boiler plate" motions raising the same legal questions in case after case. Judges who hear the motions to suppress raising constitutional questions involving search and seizure and *Miranda* warnings usually know without detail motions and briefs whether there is any substantial basis for presenting them. It is only in the very unusual case that the judge needs a brief.

Now, anything that is on this form that either side wants to raise, they can do simply by checking the appropriate number without, as I say, going through the chore of preparing a written motion and a brief to accompany it, which is usually what is required by our local court rules in the ordinary case.

Mr. RANGEL. Excuse me, Judge. When you say "either side," what type of things would the government indicate that they would want to raise? Would that be on the checklist, too?

Judge SPEARS. It is on the checklist. Really, there are quite a few of them, but I will tell you some offhand. The government will want to know whether the defense of alibi will be raised. If it is to be, then the defendant checks it and the government is entitled to know who their witnesses are.

If the defense is going to raise the defense of insanity, they will check it on the list, and then the government is entitled to know the names of the witnesses who will appear.

If the defendant is going to put his character in issue, the government will be so advised and will be in a position to find out who those witnesses are, so they can not only talk to them, but go into the area and see if they can find any evidence that would refute the evidence these character witnesses might give.

So it is very comprehensive, very complete, in covering every aspect of a criminal trial.

Chairman PEPPER. Excuse me, Judge. Justice Clark, in telling me for the first time about your Omnibus plan, mentioned the alibi defense

as a possibility, and then the State's attorney, the prosecuting attorney, works very hard to check it out. If he found that the defendant did have a bona fide alibi he might dismiss the case without ever having to go on for trial.

Judge Spears. I think Mr. Gillespie will tell you of an incident of his own where the Government did dismiss the case when they found the alibi was complete.

It is really, Mr. Chairman and members of the committee, a two-way street. There isn't any question about it. The prosecution gets information that they wouldn't ordinarily get. Now, we can't require a defendant to testify against himself, and we don't attempt to, but any evidence that he is going to produce, or intends to produce at the trial, he can divulge ahead of time.

Chairman Pepper. This is somewhat the equivalent of a trial conference in a civil case?

Judge Spears. It is almost exactly the same. The only exception is that you can't take the deposition of the defendant. You can't require him personally to give any information. But anything that he is going to present as a defense the prosecution is entitled to know, and does know because they are told.

You know, at first, when this thing began the lawyers would come into court in what we call the omnibus hearing and I might spend an hour, an hour and a half, or 2 hours sometimes even longer, trying to prod them into telling each other these things, because they were bucking their experience and training and education over a period of many years. But now—and I think Mr. Gillespie will hear this out—omnibus hearings, as such, are a thing of the past.

I don't think I have had a so-called omnibus hearing in the last 3 years. We get into court at the arraignment, the lawyers have already met, the defendant knows the charges against him, he knows who is going to testify against him, and the Government knows what the defense is going to be. If there isn't a plea of guilty, then they are right down to the bedrock as to what the disputed fact issues are. If a motion to suppress has been indicated, they show on the form whether it is a Miranda question or whether it is a search-and-seizure question.

I will set those for a hearing at sometime in the future, just as soon as possible, and more often than not the case washes itself out on the motion to suppress.

If the court grants the motion to suppress, then, obviously, the evidence is out of the window and unless an appeal is taken and it is reversed, the defendant is home free. If he files a motion to suppress, however, which the court overrules, then counsel for the defendant will say, more often than not: "OK, let's take the record that was made on the motion to suppress, and let it constitute a part of the record on appeal."

And if there was a preliminary examination before the magistrate, that goes in as part of the record. The Government then offers whatever additional evidence they feel is necessary to show guilt beyond a reasonable doubt, after which the court makes a finding.

If his finding is one of guilt, they go up on this record with the legal question involved before the court of appeals. This saves a tremendous amount of time that the jury ordinarily would have to put in cooling their heels, because the normal way to do it would be

to wait until the case goes to trial, where you get into the area of motions to suppress at the time the evidence is offered. Then it is necessary to send the jury up to the jury room while you spend 2, 3, 4, or 5 hours pursuing the motion to suppress. The jury comes back down if the motion is overruled, after which they go ahead and hear the evidence. You may spend 2 days doing something you should have done in a half a day. The net result is the same, the finding is either guilty or not guilty, and if the motion to suppress is overruled the finding is usually guilty, because the defendant as a general rule is guilty if the evidence is properly obtained.

Mr. Wiggins. Judge, may I interrupt?

Judge Spears. Yes, sir.

Mr. Wiggins. Do I understand these omnibus hearings are not formal hearings presided over by a judicial officer?

Judge Spears. In my court they are presided over by a judicial officer. I understand some judges have been using variations of it, where they use a magistrate or where they might use some other court official. Personally, I don't think that is a good practice.

Mr. Wiggins. I understood you to say that in the last few years you haven't had any omnibus hearings, the counsel met informally and resolved all of this.

Judge Spears. We don't have any because they are not necessary any more. The lawyers know what they are supposed to do when they get to their conference and usually their problems are ironed out at this conference and there is very little, if anything, for the court to decide unless a motion is pending which must be heard on the evidence.

Mr. Wiggins. Is the conference presided over by a judicial officer?

Judge Spears. The lawyers' conference?

Mr. Wiggins. Yes.

Judge Spears. No, sir.

Mr. Wiggins. That is something apart from the omnibus hearing?

Judge Spears. Absolutely. The point I was trying to make was that originally, to try to get the lawyers oriented and sold on this, the judge—in my case, of course, it was my job to do this—had to persuade them that it was the thing to do. But it was usually a tug of war between them. However, now it is not that sort of tug of war, because they do it voluntarily.

Chairman Pepper. In the early days, you did preside over the omnibus hearing?

Judge Spears. Yes, sir, every aspect of it. And I think, Mr. Chairman—and this is my personal opinion, based upon—since 1967, that would be 6 years of using it—that if the judge considers this as a second-class type of procedure the lawyers might very well do the same thing. We have been over the country. I suppose we have spoken at 25 or 30 seminars that the American Bar Association and others have conducted, from one coast to the other, and the only ones who ever tell me they have had trouble with it are those who delegated the responsibility to a magistrate or someone else.

I just don't think it can be done that way, at least until after there has been an experience factor involved, and the lawyers know what they are supposed to do. I think it is something the judge has to do, certainly to start with.

Mr. Wiggins. Judge, isn't the trial judge the one who should conduct this hearing, or just an available judge?

Judge Spears. You know, we have never been able to enjoy the luxury of having another judge do our work for us. The case that I get in the beginning, I carry through to the end. My feeling about it would be that the judge who is going to try the case ought to conduct everything. I think this is desirable. I wouldn't say it is absolutely necessary. In our district we are so widespread, with seven divisions and only five judges, that we just have to do it all ourselves, because we can't get others to do it for us.

Mr. Wiggins. I take it there is a full right on the part of the defense to raise other defenses that have not been circled in advance; that he is not foreclosed in any way?

Judge Spears. Certainly, sure. And they understand this. This is made clear to them. One thing that I do when they come in for arraignment is to ask the U.S. attorney usually first, "Are you satisfied with the cooperation you have gotten from the defense"; and in almost every instance, he will say, "Yes."

I ask the defendant the same thing, and he will say, "Yes." And I ask them if there are any motions to be heard and they will tell me whether there are or not and, if so, those motions are set. If they enter into stipulations—and you notice the form requires it—the stipulations must be signed by the defendant and his attorney. I have the defendant stand in open court and I explain to him what he has stipulated to, and tell him that nothing he may say is binding upon him and nothing his attorney may say is binding upon him unless it is reduced to writing and signed by both the attorney and the defendant.

I explain in detail what the stipulation is, the fact the Government is not required to prove these things, and that it is accepted as proof, and then ask him if this is what he wants.

Chairman Pepper. When does the process begin with respect to arrest?

Judge Spears. Well, our process begins when the man is indicted and the clerk sends the notices of the arraignment.

You see, we have this plan to expedite criminal cases, which was promulgated pursuant to rule 50(b) of the Federal Rules of Criminal Procedure. Under this plan we must bring every defendant who is in custody to arraignment within 20 days. You can see that the time element there makes it necessary for us to handle all necessary preliminary procedures within a limited period of time.

So we set up a period of 10 days from the date of notice, until the date of the conference with counsel. With this time, plus the few days that is needed after that for the lawyers to resolve any conflicts that they may have, we find that is sufficient to get everything in order by the time the defendant is brought in for arraignment.

Chairman Pepper. The defendant, if you find the defendant doesn't have his own counsel, then, of course, counsel is named for him?

Judge Spears. Well, you see, this is done in the magistrate's court.

Chairman Pepper. I see.

Judge Spears. He comes into the magistrate for his first arraignment and the magistrate advises him of his constitutional rights, his right to attorney, and so forth. If he doesn't have an attorney, then the magistrate appoints one for him.

Sometimes he will tell the magistrate that he wants to employ his own attorney, but then it doesn't work out that way, and he will come

into the district court and say he doesn't have one. We just have to make allowances for that and give him additional time. But these instances happen very infrequently.

Chairman PEPPER. But what is the average length of time now which elapses before the indictment of a defendant in your court and the disposition of his case?

Judge SPEARS. The figure I am going to give you is the median time that the administrative office told us about for the last fiscal year. But it is a little misleading and I want to explain it. It is 3 days, but includes the period of time when the immigration cases were being handled by the district court.

Those cases generally were handled in 1 day, the arraignment and the sentencing were the same day. So you can see that having such a large number of those cases would overbalance the other cases on the docket. Actually, though, and I think realistically, it is about a month. The last figure that we had that would give us an indication was nine-tenths of 1 month.

Chairman PEPPER. Do you happen to have the percentage of cases that comes before you which are tried by jury?

Judge SPEARS. Well, it would have to be less than 3 percent. If it was any more than 3 percent, we just couldn't handle it. You get to dealing with percentages and you can almost prove anything, but someone came to the startling conclusion one time, and it is certainly true, that if the number were increased from three to six, then this would double the amount of work that the judges had to do in the courtroom.

And if you double the amount of work we had to do in the courtroom, we would be working, I think, 8-hour shifts almost around the clock. Hopefully, they would be only 8-hour shifts.

In this connection, Mr. Chairman, I might say for further amplification of our situation, the judges in our district have the highest weighted criminal caseload per judge in the United States. This may sound a little on the bragging side, but I think the point needs to be made that our performance record is among the four highest in the United States.

In civil cases, we have a median time of only 4 months between the time a case is filed and disposed of. I know our record in this regard is tops in the country.

We have wonderful, dedicated, hard-working judges, but that is not to say there aren't other dedicated, hard-working judges over the country. I think that Omnibus has helped us to do it. Even the judges who don't use it to the same extent that I do benefit from it, because the concept, the philosophy, is there. The Government attorneys now, just as a matter of course, turn their files over to opposing counsel and give them the benefit of this information whether there is full compliance with Omnibus or not.

Chairman PEPPER. Suppose we hear Mr. Gillespie and then we will ask further questions of Judge Spears.

Statement of James Gillespie

Mr. GILLESPIE. Thank you, Mr. Chairman.

As Judge Spears has told you, the Government prosecutor didn't have a monopoly on suspicion. We felt the U.S. attorney had available

to him all the prosecutorial agencies of the largest and most powerful country in the world—the FBI, the Federal Bureau of Narcotics and Dangerous Drugs, the Bureau of Customs Agency Service, the Secret Service, the Postal Inspectors—and our attitude was this: "Why should we turn over anything to these people? Let's see how we can get around it."

We met, had our little caucus about how we could get around this judicial pressure to get involved in Omnibus.

Judge Spears has told you there was some judicial cajoling. Mr. Harrison is not here today but he could have told you he opposed it vigorously, just as I did, except I didn't put it in writing. But finally it dawned on us of the defense bar if we move, from the defense viewpoint, if we could close a case faster, the sooner we could commence work on other matters. Then we decided to exchange a little bit of information. We gave lip service initially and I will confess this because they say confession is good for the soul.

Then things started happening. I keep time charts. We found Omnibus was a timesaver. It eliminated these horrible boilerplate motions, and routine briefs.

But what does this do for the defense lawyer? He has a secretary to pay, phone, rent, et cetera. So we eliminated unnecessary paperwork by using the form Mr. Wiggins has in front of him.

It also eliminated something else. We see, Perry Mason movies and we see it today in some courts in some jurisdictions, the two lawyers sparring around with their motions to suppress, motions to suppress confession, evidence, and everything under the Sun, and they are only doing one thing, they are sparring around, one to impress his boss, the district attorney or U.S. attorney, the defense lawyer trying to impress his client who doesn't understand anything going on, and the judge being bored because he knows what is happening. We don't have that in our court.

I think this system has made better lawyers out of our bar in San Antonio. It has done on thing, when you get into a lawsuit, boil it down to the critical issue. Don't play with it. Don't bother the judge with half a dozen different things. Get it down to the meat and nut of the coconut because there is the heart of your lawsuit.

The Omnibus boils down the case to the critical issues. Judge Spears commented about this.

My clients involved in narcotic transactions, most never tell me "Mr. Gillespie, I didn't have it, I have been framed." They almost never say anything like that. They will say, "That cop didn't have any reason to bust me, to arrest me." So what do we have? We have an unlawful search-and-seizure issue. There is the critical issue, nothing more, nothing less.

This checklist does one thing for the young lawyer. It acts as a tickler for a lawyer who does not practice criminal law, for the neophyte lawyer, and it brings back fond memories of his criminal law course he had in law school.

For the experienced trial lawyer in criminal cases, what it does it provides an "instant motion," if you will. It shortens the time needed to advise the assistant U.S. attorney and the court of the areas of complaint.

We then have a conference of counsel. Mr. Harrison and I have had a conference of counsel in 15 minutes and we both knew what each

wanted. Because we were used to it. But there has to be a rapport between these two individuals. There has got to be integrity between the two people and there has got to be trust.

If you reach a point, after the Government attorney turns over a list of information to you, you can go to your client—and I will come to an example in a minute—and you say that, based on the information the Government is going to present, that you are doomed at a trial and there is no way of convincing the jury that your client is innocent beyond a reasonable doubt. You can present this information to your client, and then he can make the determination of whether or not to enter a plea of guilty or not guilty at this point.

This is his determination, not the defense counsel. If you do enter a plea of not guilty, you know what you are being faced with. The defense lawyer is not sitting back like you saw on the television series; here comes the prosecution and in the door walks the surprise witness. We know who he is. So we don't have trial by ambush in the traditional sense.

One thing Judge Spears did not tell you, and Mr. Morgan experimented with this very famous case. This was the first overture toward omnibus. In El Paso, Mr. Morgan was so impressed with the initial concept he turned over 13 files to 13 different defense lawyers in the El Paso division. They were so stunned by it, so amazed, they all went to trial before their juries and there were 13 findings of guilty.

Mr. RANGEL. How does the Government handle its undercover agents or special employees?

Mr. GILLESPIE. I was coming to that, Congressman. He does it this way. In the FBI and Federal Bureau of Narcotics reports, they will have a code number for—they call them "cooperating individuals" now. Before they were called, I think, "special employees."

Mr. RANGEL. Special employees.

Mr. GILLESPIE. You are familiar with it. We have other names for them, of course, but they are not for the record. But one time, one case I will tell you about in a minute, the name of the confidential, or the cooperating individual, was mentioned. The defendant was a very dangerout man. He was semipsychotic, so Mr. Harrison and I did this and the court didn't know anything about it. We excised the name of the informant and cut it out and presented the balance of the report to my client. But the judge never knew anything about this procedure. This is the way we handled that and, again, this has to be within the spirit of cooperation with counsel for the Government.

Because you do want to protect—whether I might like the informer or not is immaterial, the fact is, he is an employee of the Government, and you don't want to see harm come to anyone, and that has happened many times in the past, as we all know.

Mr. RANGEL. What I was really talking about, Mr. Gillespie is those cases where the confidential or cooperative individual is actually the person that transacted the sale in order to make the case and where a defense lawyer couldn't possibly convince his client to plead guilty unless he saw who that person was that intended to testify against him. And, of course, the Government doesn't want to expose the undercover nature of its agent unless it really has to at trial. How do you handle that?

Mr. GILLESPIE. It depends on the type of situation. If we are talking about a sale, I am blessed, fortunately, with clients who know if you have—like going to a doctor, they don't tell me they have a headache when their toe is coming down with gangrene. And in a narcotics transaction, they will tell me whether or not they made a sale. I may ask: "Who did you make it to? How did it come about? Was it going to a third party?"

He will know what it is. And I send out my investigator and talk to that man. Or I confront the U.S. attorney: "John Smith is your CI, isn't he?" "Yes, he is."

"Where is he?" I don't do it for any other purpose but to get an investigator out to talk to that man to find out whether or not he was acting at that time as a confidential informer because there might be raised the defense of accomodation agent or, whether or not there is an entrapment involved.

Am I answering your question? Does that answer your question?

Chairman PEPPER. Excuse me, Judge, Mr. Gillespie. We have to run over and vote. You will have to excuse us. We will be back in just a few minutes.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

Mr. Gillespie, will you resume your statement?

Mr. GILLESPIE. Yes, sir.

I was commenting before the committee recessed that we don't have trial by ambush. As Judge Spears has stated we have many more pleas of guilty, which is quite true, but by the same token, you will have a client—and Congressman Rangel as a prosecutor knows that—you might have all of the facts available to you and the defendant still insists on going to trial.

One case particularly comes to mind where a defendant was charged with embezzlement from the Federal credit union where he swore he hadn't done it. We had a list of all of the Government witnesses. We were prepared for them; I questioned each one of them and used the Government witnesses as character witnesses for my client.

When the case was terminated, the jury was out for 8 hours and at 5 minutes of 5 p.m. the following day, the trial court said "If the jury doesn't come in by 5 p.m. I am going to declare a mistrial." They found him guilty after 8 hours, but at least we interjected reasonable doubt by the man's reputation from the Government's own witnesses in that particular case. We couldn't have done that, I wouldn't dare ask the Government's witness, president of the credit union, "Do you know the defendant; do you know his reputation for honesty and fair play, truth and veracity?" I wouldn't have dared ask that if I hadn't known the names of the Government's witnesses in the first place.

This is a saving not only for the defendant and protecting his rights, but a saving to the American taxpayer and, God knows, to the Federal district courts, who are overburdened throughout the country.

By way of further example, an individual came to me and in my questionnaire sheet I filled out on the defendant, I asked him very delicately, "Have you ever been under mental care?"—"No."

"Have you ever been seen by a psychiatrist?" And he said, "Just out of the State hospital." He had been hospitalized for 3 months.

I talked to the county psychiatrist. The defendant was a schizophrenic paranoid. I got the report from the county psychiatrist and also the district attorney's office. This was a credit-card fraud case. I immediately went to Mr. Harrison. The judge had no idea these back-of-the-scenes were going on. We presented the medical reports. We walked into court, and to spare the defendant's feeling, the Government said "Your Honor, we would like a psychiatric evaluation of the defendant."—"Granted."

It turned out the psychiatric report by the Government psychiatrist was stronger. We made arrangements to have the defendant rehospitalized in the State institution, because under Federal law, there is no provision when it is shown that a defendant was incompetent at the time of the commission of the offense. We rehospitalized him. The moment the case was dismissed he was back in the State hospital.

All of this came about through the Omnibus procedure. The whole time spent in court on this man's case took approximately 30 minutes. I think this is a tremendous saving to the taxpayers of this country and also it was beneficial to the client.

Chairman PEPPER. Excuse me. Judge, this is a vote on final passage.

[A brief recess was taken.]

Chairman PEPPER. The committee will come to order, please.

You may proceed, Mr. Gillespie.

Mr. GILLESPIE. I think the case I just finished with was the one on insanity, which saved us a great deal of time. The next case involved narcotics and machineguns. It all boiled down to several issues of a confession that led to the discovery of the fruits of other crimes. Very fortunately, we had very fine officers in the particular case in question who had elicited the confession and the young man had had two additional Federal charges placed against him as a result of the confession which was unlawfully induced, and two State charges.

As a result of our one hearing on the motion to suppress the confession, Judge Spears, who in this particular case handled this matter, granted the motion insofar as the confession was concerned and denied another motion as to another part of the case, and as a result, the defendant was convicted and we went up on appeal, and successfully, I might add, on the one issue, on the one motion.

On pleas of guilty, I had one defendant who adamantly told me he had not sold narcotics to any Federal agent. We excised the name of the informant from the police report. I turned it over to my client and he said, "Please try to negotiate something for me forthwith," and it was done.

Another situation that Judge Spears mentioned was alibi. It wasn't exactly a dismissal. It was a situation where a man was charged with uttering counterfeit notes and the Government had used a panel of pictures to show the victims. We prepared our own panel and, as a result of the case, while the jury didn't buy our presentation, on appeal it was found that the evidence was not sufficient to convict and reversed and ordered the indictment dismissed.

But also in that case, interestingly, we pled alibi, Mr. Harrison's investigators did check every one of the alibi witnesses and reported back to me, and said, "Your alibi witnesses are good." He said, we will have to concede that because I turned them over to him, just took them to his office.

Judge Spears mentioned something about the Jencks Act in a particular case. We had a Gun Control Act case which was of a very critical nature and we had an FBI report wherein it was stated the FBI had interviewed a sergeant who had testified or who had told them the weapon in question was an automatic firing weapon. Immediately we interviewed that sergeant and he advised us he never told the agent that at all.

As a matter of fact, he had to change each round and, therefore, it wasn't an automatic weapon. We obtained a judgment of acquittal, based on the fact we interviewed the sergeant, and this was all under Omnibus.

Chairman Pepper. That all would have come out later in court, but after a trial and the delay.

Mr. Gillespie. Mr. Chairman, in that particular case, the prosecutor who tried that case was a relatively new prosecutor, and he believed his FBI agent. He would not take the word of my witness who was actually his witness. We had to present it before a jury and the trial court granted the motion for judgment.

Chairman Pepper. Mr. Gillespie, do you have to leave at the same time the judge does?

Mr. Gillespie. No, sir.

Chairman Pepper. May we interrupt you as to if you permit the judge to leave at 4:20.

Do you have some questions, counsel?

Mr. Nolde. I want to ask the judge how he was able to get the defense bar as well as the prosecution to cooperate in participating in this program?

Chairman Pepper. You sent them all a Christmas card, didn't you, judge?

Judge Spears. You know, I decided that I was going to have to sell them a bill of goods, so I first called in the lawyers I considered were the leaders of the criminal bar, and I talked to them about it, and asked them what they thought about it. I said "the U.S. Attorney's Office now is willing to give this a trial and if you have the prosecutor willing to do it, that is about 85 percent of the job. Will you cooperate?" They said "Yes," and then I said, "Well, help me sell it to the other lawyers."

They did a good selling job themselves, but most of the real work was done in that courtroom. For instance, some said, "Why should I do this?" And I mentioned one a few moments ago about stipulating as to the chain of custody, and the argument I gave them was what I told you. I think the lawyers began to realize it was ridiculous to get into court and have the Government parade witnesses there they couldn't controvert in any sense of the word.

So the savings in time on that alone has been tremendous in the narcotics field. Most of our cases are narcotic cases. Fifty-six percent of our criminal docket in San Antonio are narcotics cases and they are increasing every day.

Mr. Rangel. What percentage are marihuana cases?

Judge Spears. You mean of narcotic cases? I'd say about 20–25 percent. Most of them are heroin cases. Most of our marihuana cases are handled in the State court. The only time we get the marihuana cases is when we are dealing with large suppliers, and some of them get pretty large. The last one we had was 4,000 pounds.

Mr. NOLDE. Speaking of the State courts, is there any reason why this procedure couldn't be applied to the State courts and, particularly, how do you answer the claim on the part of large city, busy prosecutors that their assistants never even know the first thing about the case until they walk in the court? Could this work in that kind of a situation?

Judge SPEARS. I think it could and I am sure it does. There are some States, I don't want to be specific about which ones they are, but the one that comes to my mind, the State of Washington, I believe, put in its rules provisions similar to the Omnibus procedure.

[Communications from Judge Spears, with enclosures concerning omibus procedure in State of Washington, appears at end of his testimony.]

Chairman PEPPER. Justice Douglas told me there were innovative programs in the Washington district.

Judge SPEARS. We were up there the last summer in Spokane and talked to the lawyers and judges in the State of Washington about it.

You are going to get some opposition, no doubt about that. But I think those who try it find it is worthwhile and continue to do so. Your question to me is how you are going to get busy prosecutors to do it. I don't know, unless the judges decide to be judges, and not automatons or robots or machine men, and use their influence to get them to do it. I don't see any reason why they can't do it if they exercise the power and authority they have to do it.

He can't make a defendant reveal those things that the Constitution protects him on, but he certainly could, I think, pressure defense counsel into providing information that the defendant himself is going to reveal at the time of trial.

Mr. NOLDE. And you see no sacrifice of defendant's rights?

Judge SPEARS. I see no sacrifice of his rights if these are things he is going to reveal in any event at the time of trial. As I say, you can't make him testify, but he doesn't have a constitutional right to refuse to reveal information that he proposes to reveal himself at the time of the trial.

Mr. NOLDE. Could this be made mandatory?

Judge SPEARS. I think to that extent it could be. And here, again, you know, I have been to so many places, I don't want to be specific, but I believe the State of Washington has similar requirements in its rules promulgated by the Supreme Court of Washington.

Mr. RANGEL. Is there any variation in the sentences that you can detect that are given to those defendants' with lawyers who cooperate with the system as opposed to those with lawyers that don't cooperate and go to trial?

Judge SPEARS. I can't answer the question because I don't have any lawyers who don't cooperate. We are a pretty large bar. We have a city of almost a million people, and I just haven't got any lawyers that don't cooperate.

Mr. RANGEL. After defendants mix with the general prison population, are there any habeas corpus motions that come out?

Judge SPEARS. Now, I am glad you mentioned this. Because the number of 2,255 motions we have now is about 10 percent of what they were before we started with this procedure. All of these latent constitutional problems are disposed of through the Omnibus hearing.

How is the man going to claim he didn't have effective counsel when he has got a checklist there with every conceivable defense set out for

him? And full opportunity is afforded him to discuss his defenses with his lawyer. This has been a God-send as far as 2,255 motions, which as you know is the Federal equivalent to habeas corpus, are concerned.

We just simply don't have them. Most of what we have now are section 1983 suits, in which prisoners claim they were mistreated in the local jail.

Chairman PEPPER. Judge, you have done such a fine job in explaining this to us. Are there other innovations you would recommend or care to comment on? We had here the suggestion that there be more use of video tape in trials. Are there any other? Can you tell us about any other innovations you would recommend to expedite and improve the administration of justice in the criminal system?

Judge SPEARS. Well, I think this helps us in order to conserve jury time, to utilize the juries more effectively. For a number of years we have been impaneling a jury and selecting as many as 8 or 10 juries at one time and having those juries come back at specified times to try cases, rather than bring an entire jury panel in and have a jury selected from that panel each time a jury is needed.

In other words, when we have 100 or 125 jurors in and we have 10 cases to try, we will select the 10 juries, or as many as we can at that time, and then tell those jurors when they are to come back. We feel we not only save much time and expense, but this is also more convenient to the jurors.

Chairman PEPPER. Can you estimate accurately enough when the cases that are certainly going to be disposed of, to be able to do that, tell them when to come back?

Judge SPEARS. We can tell because by the time a case has been omnibused it has been explored by both sides and they know pretty well whether that case is going to trial or not, and if so about how long it will take to try it. This is another advantage of the omnibus procedure. It just shakes it all out.

Chairman PEPPER. What have you, if anything, to say about how the appellate procedures with which you have had experience might be improved? We have had appellate judges here from State and Federal courts. Have you any suggestions about what can be done to expedite disposition of cases on appeal?

Judge SPEARS. Well, I would hesitate to try to tell appellate judges how to run their business, because I don't think they have any business telling us how to run ours. I don't think they know enough about our problems and I wouldn't propose to tell them how to solve theirs.

Incidentally, Mr. Chairman, I am on the Board of the Federal Judicial Center, and we have been exploring ways in which these matters can be expedited. I am sure the Judicial Center is going to have some answers to these. I hope they will.

Chairman PEPPER. One other question. We hear of proposals made that we need to increase the severity of sentences, length of sentences and the like. What, in your opinion, is the best deterrent to the commission of crime? It is long sentences, or likelihood of apprehension, speediness of trial? What would you say?

Judge SPEARS. I don't think it is necessarily long sentences. I think a speedy trial and the promptness of the punishment, if it is to come, are probably the best deterrents. Other than this, I just don't know what the answer is.

Chairman Pepper. Judge, let me stop now. I want my colleagues to have an opportunity.

Mr. Rangel?

Mr. Rangel. I don't have any questions.

Chairman Pepper. Mr. Winn?

Mr. Winn. I just have one question, Judge. It sounds to me that you have done a real fine job. How are you publicizing your program down there and how can you get further publicity out of it and have other jurisdictions take it over?

Judge Spears. This is a real problem because our court is busy and it is hard for me to get away. But last year I traveled almost 40,000 miles from one end of the country to the other, talking to various groups of the American Bar Association and to judicial conferences, in an effort to get the message across.

I can detect a change in philosophy. Five or six years ago, when I would talk to a group of lawyers and judges about this, they would look at me like I was crazy. Now they will come back and say we are doing this or we are doing that, which indicates they are having their prosecutors turn over their files, to a large extent, to defense attorneys.

The only fallacy there, I believe, is the fact they are not having it as a two-way street. They are not getting the cooperation out of the defense they ought to get and they could get if they implemented the entire program.

I think that is important. I think it is important for a defendant and his lawyer to participate to the point where they are giving up something substantial in return for what they get.

Mr. Winn. But there is more talk at your national meetings about swapping ideas?

Judge Spears. Yes. I was at a meeting of the metropolitan judges here in Washington a few weeks ago where I gave them my pitch about Omnibus. Afterward, as we went around the table for comments, each one, to my utter surprise and amazement, said they were doing a great deal of this themselves already. The U.S. attorneys in most of the courts were letting the defense have access to files.

I don't know, maybe I am naive, but it seems so simple to me, if you have got to do it, why wait? And it is fair. That is all there is to it. It is fair. The Supreme Court said it is, and Congress has said it is.

Chairman Pepper. Mr. Mann?

Mr. Mann. Judge, Mr. Nolde has expressed some of my concerns and questions. How many Federal judges in San Antonio handle the criminal cases?

Judge Spears. Two of us.

Mr. Mann. The other judge is getting the same cooperation?

Judge Spears. Yes.

I might say, and I want to be completely above board about this, he is not as sold on it as I am. But he does it.

Mr. Mann. And the San Antonio Criminal Bar—you mentioned the city of a million people—is how many lawyers?

Judge Spears. Everybody.

Mr. Mann. Everybody is on the list?

Judge Spears. Everybody is on the list. The first thing I did when I became a Federal judge was to dispense with the old practice of having about 15 to 20 criminal lawyers represent all of the indigent

defendants. I set up a rotation system and put each attorney admitted to practice in the Federal court on a separate card and we took them in rotation. That is the way we still do it.

Chairman PEPPER. You talked to some of these civil lawyers?

Judge SPEARS. I want to say this. I didn't try criminal cases when I was practicing law. I never was appointed in a criminal case, and I felt like I missed a lot. But every lawyer in San Antonio who now regularly tries cases in Federal court is a criminal lawyer, whether he calls himself that or not.

Mr. MANN. I have more of an assertion or statement than I do a question.

Given the atmosphere that prevails in San Antonio and the cooperativeness that exists between the judge and the lawyers and the rapport and the integrity and trust that was referred to, I can't help but be pessimistic about that same atmosphere prevailing in the contentions, multiple judge defense bar of many of the larger communities of this country.

I think in the small communities it might happen.

I command you highly for having developed the procedure and hope that it can be sold in other places, but I can't help but be pessimistic about it.

Judge SPEARS. I can understand your pessimism. I think it is going to be a gradual process of wearing it down. But I believe that lawyers in New York, Philadelphia, are just like lawyers anywhere else. If they find it is in their best interest and the best interest of their client to do it, they will do it. If it helps them make more money, they will do it. If it helps them to represent their clients better, they will do it. But they have to be shown.

It is going to take judges who are willing to exert the effort to do it. You can't do it by waving a wand and saying, "Change over now, boys." You can't do it by saying, "Everybody step in line" and march off one, two, three. You can't do it that way. You have to educate them and work at it. But it has been worthwhile as far as my court is concerned.

Chairman PEPPER. Judge, have you anything else to add?

Judge SPEARS. No, just to thank you and the members of this committee for the opportunity to come here. I hope we have been of some help in expressing what we believe to be solutions to some very vexing problems. We don't suggest this is a panacea; it is not the cure all, but I tell you it comes as close to being that as anything I know about.

And when you look at the Federal Criminal Rules of Procedure and what they are requiring now, and you look at the Jencks Act, and you look at the cases that have been decided by the Supreme Court, and the implementation by the courts of appeal all over the country, you can see we are coming to it anyway. Why not now?

I think that it will be a great day in our country when we do come to the point where, instead of handling cases on a piecemeal basis—I don't want to use "plea bargaining" in the wrong context, but the kind of plea bargaining I am talking about is the kind I don't think any of us will be very happy about—but when this is the way cases are disposed of and people are run through like cattle instead of human beings, then I think it is time for us to think in terms of the administration of justice being a human experience and an effort to see justice is done to everybody.

Mr. RANGEL. Judge, I would just like to underline another aspect of the problem we face in attempting to equalize the economic status of defendants who come into court trying to get justice. One of the sad things we find in the city of New York is that the poor cannot afford to retain counsel with experience in practice before the Federal courts and who is fully aware of Federal court procedures. The wealthier, more successful criminals are able to find people to make the necessary motions in order to protect the defendant's rights.

It just seems to me that this process of Government meeting defense halfway in assisting them as to what is available and looking for fair play on the part of defense counsel, even outside of the fact that it allows the judges to clear their calendar and all of the benefits that flow to the defendants from this, that in the first instance, it allows the defendant to believe that he can come before the bar of justice almost on equal standing with any other defendant.

Judge SPEARS. I think we have to recognize the fact the Government has to meet the defendant a little more than halfway, because the Government is in possession of the information that the defendant maybe doesn't have. I think it is a two-way street, but I don't mean each lane is 50–50. I think the Government or the prosecutor ought to give up more than he gets.

But I think in order to make it work, the defense should also be prepared to give up something.

Mr. RANGEL. Mr. Gillespie touched on it, but in many District Attorney's offices, they pay so little in terms of salary and provide no money for investigative resources, that the only thing the young lawyer can look forward to is the Perry Mason, hidden information type of thing. Given the handicaps imposed by limited budget, it is a remarkable job that is performed by most prosecutors offices.

Judge SPEARS. I can say, as the judge, God bless the lawyers. Without the lawyers the judges can't do anything. But if he has cooperative attorneys who are real professionals and who are interested and willing to do the right kind of job then the court can operate more smoothly.

Chairman PEPPER. Judge, the time you said you would have to depart has arrived. On behalf of the committee, we want to express our profound gratitude to you for coming here, to tell you how much we appreciate the contribution you made to the work of this committee. We are hoping that what we have discussed and put on the record is going to be helpful to the lawyers all over the country.

I am going to speak to the Florida Bar Assocation a little while later, in the month of May I believe it is. This is one of the things I am going to put principal emphasis upon.

So I would just like to say, if they were giving a medal of honor to judges for the performances of their services beyond the call of ordinary duty, you would be certainly entitled to it.

Judge SPEARS. You are very kind. Thank you.

Chairman PEPPER. We hope you have a pleasant trip home, Judge.

Mr. Gillespie, we appreciate your waiting. Now that the judge has finished, would you go ahead with any other comments you would like to make.

Mr. GILLESPIE. Yes, sir.

This follows something along with Congressman Rangel about the poor defendants. I had the unfortunate and unpleasant, and I hope never to be repeated, experience of being appointed in the Del Rio Division in a multiple conspiracy case—and I can cite the case right to this day—being advised that the case was going to take 2 weeks from motions to termination of trial on the merits.

I think the U.S. attorney founded the indictment in this district in this division because it was a border community of single-office lawyers.

The result was, things got so cantankerous we couldn't get any information out of the U.S. attorney and I personally prepared and filed over 142 motions for 21 defendants. I wasn't appointed for 21, just one. The last motion being a motion for change of venue. And when the local paper came out, it called it the "Federal Superbowl," and called the defense lawyers the "Dirty Dozen."

The case was then transferred, not to San Antonio, which would have been a central location for most lawyers involved in the case—some were retained, I might add—the transfer was to El Paso, 600 miles from home. In that case we had a situation under the Jencks Act where an FBI report came in at 4:15 in the afternoon, and I made a suggestion to his honor, who was not Judge Spears, if we could have a Xerox copy of the agent's report overnight, and then we would be in a position for the following day to pursue a meaningful cross-examination and thereby eliminate time.

Well, the judge said, "No, you will follow the Jencks Act, you will let the man testify and then the report will be turned over to each individual lawyer."

And, of course, the attitude of the defense lawyer is, "All right, Judge, if that's the way you want to play it, we can play it, too."

Each defense lawyer got up after the agent had testified, got before the podium, and started reading the 55-page, legal-sized document, single-spaced, margin-to-margin, 45 minutes, and answered, "No questions, Your Honor." That took 8 hours. That was a waste of taxpayers' money and we were just being onery.

But this did not have to be, had we used omnibus we would have to report prior to trial. This was a waste of time. Omnibus would have saved so much here.

Omnibus would have saved so much.

One of the things I think—something was mentioned about whether or not it worked in the State procedure. In Bexar County we have a monumental caseload. We have underpaid district attorneys, young chaps out of law school, the first time they see the case is when it comes up.

Now, what I have done, for example, I had a Preston versus California type of situation, and I could have walked into the courtroom and raised it for the first time after 3 days of trial, 2 days of voir dire examination of the jury, 1 week of the county's time, and it would have been a sensation in the papers. But instead, again (1) I was paid to try the case whether I tried it for a week or 5 minutes. I went to the prosecutor, I showed him the facts in the case from the police officer's report, a copy of the examining trial which he had never read, and last, a small brief, about 5 pages, the Preston-type research.

And he said, "My golly, I can't go on with this case. This is the end of the case." I said, "Well, I thought I would bring it to your attention."

The case was dismissed. It saved him embarrassment, the county money, and my client the trauma of a trial.

But this is known as omnibus by the back door. This was one-way omnibus by the defense.

In a recent murder case I was appointed on, I attempted to do something with the prosecution but he was trying to impress me with what a fine lawyer he was and he was well prepared, but he didn't know about two eyewitnesses, in what we call a misdemeanor murder case, a little bar affair. But we had two eyewitnesses. He wouldn't tell me the time of day. He hid out his witnesses in Houston, Tex., 200 miles from San Antonio. We were unable to obtain continuance. I let him put on his case and then brought in a deputy sheriff from another county, a very respected deputy, who had observed the incident with his date, who was not his wife, unfortunately, and as a consequence, the district attorney was stunned, and the jury rightfully found the young lady not guilty.

It was a waste of time, my office staff time, my investigator's time, and it embarrassed the district attorney's office because their investigation was poor.

Mr. RANGEL. What statutory authority do lawyers and judges and prosecutors have to do what you are doing down in Texas?

Mr. GILLESPIE. The omnibus?

Mr. RANGEL. Right.

Mr. GILLESPIE. The gentleman that just left, that is the authority. He makes a suggestion. He made a suggestion, Congressman, and he tried to show us how this could work and it does work. I can't begin to tell you with all my heart—and he is not here and doesn't know what I am saying—but it works so effectively on both sides of the street between us and there is no authority for it, there is no written mandatory statement—and I don't think Judge Spears left you with a sheet you get in the mail on every case, "Will you and your client cooperate in the omnibus procedure." You can answer, "No," and you proceed under the old Federal Rules of Criminal Procedure.

Mr. RANGEL. The fact it is effective has nothing to do with the fact that it flies in the face of long-established tradition?

Mr. GILLESPIE. That is correct. But traditions must sometimes yield to the changes of a fast moving world.

Mr. RANGEL. Something like the judge says, lawyers have to cooperate and there has to be a feeling that, it is a fair process among the lawyers before one, one would start venturing, walking into a prosecutor's office and leaving smiling, saying, "I have cooperated," and clients start looking at you a little funny.

Mr. GILLESPIE. You have to be very careful about that. There is a sense of tact and diplomacy in dealing with the clients. You know from actual experience there are people who are criminals and there are citizens caught in the commission of criminal acts. A man who normally would not commit, say an embezzlement offense, has gambling debts, steals and says "I will pay it back." You have seen that. These people are decent people caught and yielded to temptation one time, and then the other classification is the true criminals, who are going

to pursue a life of crime regardless and you have to be very careful on how you explain the Omnibus procedure to them. Very frankly, I tell my clients, "We are going to go through the Omnibus procedure," and the response of my client is, "Anything you say. You are the attorney." That is what I am hired for.

One thing, how does it work through the Nation? We talked in New Orleans one time to the New Orleans County Bar Association. Total rejection by both sides. "No, it will never work. I won't tell that prosecutor a thing."

I was in New Orleans for a sentencing in early February of this year, talking to a defense lawyer, who grabbed the prosecutor walking by and said, "Hey, Charlie, let's do a little Omnibus on that thing, on that Smith thing."

They don't have this procedure, but this is what he was saying. I said, "What do you mean? What is the Omnibus thing?" He said, "We exchange information, try to get to the bottom of the whole thing." He didn't know who I was at all, except as another defense lawyer.

Mr. RANGEL. You mentioned the hardened criminal. Wouldn't you say most of the hardened criminals who have been indicted by the U.S. Government recognize they have got to be convicted 99 out of 100 percent of the time?

Mr. GILLESPIE. I think the conviction rate by the Department of Justice is 98 percent.

Mr. RANGEL. Well, it seems to me, it has been my experience with narcotic cases, whether you told the defendant your case or not, he himself knows that it is direct sale or several direct sales, and that the only way he can possibly beat it is a jury trial. How are you able to avoid that?

Mr. GILLESPIE. To avoid the jury trial? That is his election. I will tell him what the facts are, make an outline of the summary of each witness' testimony, and he makes the election.

Mr. RANGEL. He agrees the Government has the case?

Mr. GILLESPIE. But if he wants to try it, let him try it.

Mr. RANGEL. This stipulation you may want to enter into about the chain of possession of the drugs. Some defense lawyers just stay on that for 3 hours, saying it was missing for half an hour somewhere, especially in New York where we lost $73 million worth of drugs, you know.

Mr. GILLESPIE. I heard about that.

But we have the business—remember Sam Leibowitz from your area once said a good defense lawyer is 90 percent sweat and investigation. The first thing I do if I go into a foreign jurisdiction, I learn who my judge is and find everything out about him, about the prosecutor, and the witnesses. And in the narcotics case, about the chemist. In my community the customs chemist is a classmate of mine from Tulane, majored in chemistry, has his masters degree. I have been through the testing procedure with him. To cross-examine him is truly a waste of time.

At Vandenberg Air Force Base in June of 1971 the Air Force hired a criminologist to give the test in a marihuana case. I found out before I went in on the 39a session, which is preliminary examination in the military, that he had never had any chemistry in college. He told me later he felt distressed because he never proved the contrabrand issue was marihuana. He couldn't conclusively say.

Mr. RANGEL. You have proved my point. You know your business and you know your community and you know the background and reputations of a lot of Government witnesses.

Mr. GILLESPIE. If I go to another community, Congressman, I will find out about the reputation of the chemist, the prosecutor, and the court.

Mr. RANGEL. But those things the Government is asking the defendant to stipulate to because it is just assumed that the Government can and will prove it, without going into the integrity or background of the chemist. Many times the contraband changes 10 hands before it reaches that court. And if this occurs, which is still another variable to work with, are you going to spend some time on each one of those sets of hands?

Mr. GILLESPIE. If that is all I have, I won't stipulate. If my client says, "Look, I don't care what you said, I read the report, I want my day in court." And we had a case like that in San Antonio. He didn't believe the undercover police officer. He said he was going to lie and he said, "I want to hear him lie."

Mr. RANGEL. Does he get more time if he is convicted than the person who goes through Omnibus?

Mr. GILLESPIE. I am glad you asked that question, because it depends on what court you appeared in front of. You can go before Judge Spears and spend a week before him, as I did in a Dyer Act case. My client was found guilty and given a suspended sentence. But other courts charge rent. If the client goes to trial in a plea of not guilty and is found guilty, we know you are going to be charged rent, and I think it is unfair.

Judge Spears' philosophy is every man is entitled to his day in court. I wish the other judges would follow that because then you come to the balancing of whether or not to go to trial.

You know, this nebulous idea of being charged for time in court if found guilty hovering over your head and you must tell your client this, if you bring it out in the open there is not a judge in the country would say he would do a thing like that. But you, as a prosecutor, know that is quite true. But that is a problem when you come with that.

Chairman PEPPER. Mr. Gillespie, you obviously are a very able and experienced defense counsel. You have had a lot to do with this sort of thing. Looking at it from the standpoint of this committee, and as you have been testifying here today, to improve the criminal justice system in the country, what innovations, other than that one you so well pointed out today, would you recommend that could and should be made?

Mr. GILLESPIE. All right, sir. The Federal Rules of Criminal Procedure, rule 5, which has to do with preliminary examination of persons charged with Federal offenses. In the Southern District of New York, there is no such thing as examining trial, is there, Congressman?

Mr. RANGEL. It has been a long time.

Mr. GILLESPIE. They don't have it. It is on the books, but in the Southern District of New York they have a continually running grand jury. As a consequence, no defendant ever gets an examining trial.

Mr. RANGEL. Are you talking about a pretrial hearing?

Mr. GILLESPIE. Yes, sir.

Preliminary examination, I think is the formal term for the rule.

Mr. RANGEL. They have it and they don't use it. They indict.

Mr. GILLESPIE. Congressman, my attitude is this. If Congress intended to give the defendant the right to preliminary examination then he ought to have a right to it. If we are not going to have it, like you do in the Southern District of New York, then go ahead and eliminate it so we don't quibble about it.

Mr. RANGEL. I agree.

Mr. GILLESPIE. I strongly feel if it is on the books it should be made mandatory. If the man says, "I want a preliminary examination," he should be entitled to it, and any defense lawyer who doesn't use the right to preliminary examination in the jurisdiction where it can be used is not worthy of his title as defense lawyer.

Mr. RANGEL. You are talking about prior to indictment, coming from the grand jury?

Mr. GILLESPIE. Yes, sir.

Mr. RANGEL. If defense counsel makes all the motions he wants in the southern district of New York like any other district, the D.A. goes in and asks for indictment.

Mr. GILLESPIE. Right.

Mr. RANGEL. You are saying to hold up the indictment?

Mr. GILLESPIE. No, sir. I am saying we have the rule on the books, let's use it. If we are not going to use it, like you do in the Southern District of New York, eliminate it from the rules. But don't put it like the carrot out to the defendant. Here is where we will know what probable cause or what evidence is going to be presented against an accused. Let's either eliminate it or make it something meaningful and not this fraud of having it on the books, where it looks good in writing, and is never used, like in your district.

Chairman PEPPER. What else, then?

Mr. GILLESPIE. I can't think of a thing.

Chairman PEPPER. Let me ask you about appellate procedures. You have appealed many cases, I am sure.

Mr. GILLESPIE. Yes, sir; unfortunately.

Chairman PEPPER. You have had a lot where you haven't appealed, I am sure of that.

Mr. GILLESPIE. Yes, sir.

Chairman PEPPER. You were reversed on a lot of them, I am sure, where you had the conviction below. But have you any suggestions as to how the appellate procedure may be simplified and expedited?

Mr. GILLESPIE. Yes, sir. The elimination of the appendix that we are required in any retained case. Let me make the differential, for example, between a retained employment and an indigent appeal. If we are employed to appeal, we have to prepare an appendix. You could just appeal a case and present everything to the appellate court. You wouldn't have this problem. You try to simplify it and make it more difficult to appeal. You go into a lot of machinery, instead of presenting the transcript, appellant's brief, and appellee's brief. That would make it simpler.

Chairman PEPPER. One of the judges suggested and the charge of the court in a Federal court—the judge's comments on the evidence.

Mr. GILLESPIE. Not in our district.

Chairman PEPPER. They don't?

Mr. GILLESPIE. No, sir. In California, in one court I watched a trial there, waiting to go to trial, and the judge did not comment up there. And in Chicago I attended trials there and the judge never commented.

Chairman PEPPER. Most of them don't, do they?

Mr. GILLESPIE. Most of them don't do it.

Chairman PEPPER. In England they put great store upon that in the appellate court. Sometimes they have a procedure by which the trial judge's charge to the jury contains a rather lengthy and elaborate comment on the testimony. It gives a pretty good review of what the evidence in the lower court was to the appellate court. They use that rather extensively in lieu of the complete transcript of record. At least in the preliminary application for the right of appeal.

Mr. GILLESPIE. I have one other suggestion, Mr. Chairman, before I forget it. That is in Federal court, the rule is that the charge is orally given to the jury. Even though in my district it is prohibitive, we cannot speak to a juror after the termination of a case, or forever and ever. I think if the complaint that I get through the grapevine, shall I say, is the fact, they can't remember all of the judge's charge and especially in a complex piece of litigation involving a stock fraud swindle. Most lawyers don't understand it, so how can the layman understand it when the judge reads it off? I would suggest it be done in writing and the jury have a copy of the court's instructions. In that fashion, the jury would have the law in front of it. It would help some. But just hearing it, they are not going to get anything out of it. They generally don't.

Chairman PEPPER. We had one judge, a court of appeals judge in one of the circuits, who recommended the use of video tape. He showed video tapes here of a confession, where a prosecuting attorney was questioning a defendant in the presence of a police officer, and in the presence of this video tape operator. Apparently, the question came up later as to whether or not that was a voluntary confession. And by giving the appellate court an opportunity to see and hear that defendant at the time he gave the confession, of course, would be very helpful to the court in making that decision.

Mr. GILLESPIE. I agree with that. I have attempted to sell to our local police that they put on in every possible investigation a small cassette tape recorder when taking a confession, especially in the crimes of violence. They could hand the cartridge to the prosecutor and here is the whole confession, the *Miranda* warning, read the statement to him, yes, yes, yes, you would not have any motion for suppression of that confession, but they won't do it.

Chairman PEPPER. Also, one of these judges who testified here recommended that it not be necessary to wait till the transcript of the record is all written up by the reporter, which takes sometimes 90 days or more. Do you think that most criminal cases could be disposed of on appeal without the necessity of the whole transcript of record being laid before the appellate court?

Mr. GILLESPIE. It would depend on the type of case, Mr. Chairman. I have a case on appeal at the present time. I think the whole record is 50 pages. It involves a motion to suppress, and Judge Spears was the hearing judge and the whole issue goes to the affidavit, to the complaint of the search warrant, which I think is wrong, the court says

it is right. I am appealing on that one point. I have already sent that to the court of appeals.

Chairman PEPPER. It would cost a lot of money and take lot of time to have all of the testimony about that case transcribed by the reporter.

Mr. GILLESPIE. Had I gone to a jury; but it went up on one point only. I think the appellate court on the particular case had to hear the testimony or see the testimony of the magistrate who issued the search warrant, the testimony of the officer who swore to the first page of the affidavit, but not to the second page where it was critical and of the cross-examination of the magistrate by "his honor" and the prosecuting attorney, which I think it was improper and it did not prove anything except the search warrant was improperly issued without probable cause.

Chairman PEPPER. Don't the rules permit the taking up just essential parts of the record?

Mr. GILLESPIE. Yes, sir, and that is what we are doing in this case. The court order, the hearing on the motion to suppress, and the finding. We agreed and stipulated everything in the hearing on the motion to suppress would be used on the merits and stipulated to jurisdiction and then appealed.

Chairman PEPPER. One other thing. What general observation would you make about what might be done to reduce crime in the country? Do you find that crime in general is committed by relatively few people, most of whom are repeaters, or a large number of whom are repeaters?

Mr. GILLESPIE. Sir, we are going through an era in this country and I don't know how to describe it. I practice any place where I am hired, you understand, but I went down to the southern district of Texas, Laredo division, presided over by the chief judge, the Honorable Ben Connally. I saw youngsters, doctors' sons, lawyers' sons, dentists' sons, professional people charged with possessions of such quantities of marihuana that years ago would have been unheard of. Yet, I don't think the severity of the punishment, for example, under 21 U.S.C. 174, 176(A), which I know Mr. Rangel is very familiar with, minimum-maximum type of sentences did any good. The reduction of the sentences hasn't done any good. What I am saying is I don't know the answer either. Unless it is education with youngsters in school.

Chairman PEPPER. We had testimony here the other day that in the city of Philadelphia—this was by one of their local judges—that young people under 18 years of age committed 25 percent of the murders, 40 percent of the robberies, and 39 percent of the burglaries. Imagine now, young people under 18 years of age. We have had the figure that, I believe, 25 percent in general of the country, 25 percent of the serious crimes or index crimes committed by people under 18; 40 percent, I believe, under 21; 51 percent under 25; and about 60 percent under 28. So that you get two-thirds of the crime of serious character in this country in general committed by people under 28 years of age.

Mr. GILLESPIE. Agreed.

Chairman PEPPER. I have seen the figures that in those who have long-term sentences in prison, that they average three periods of incarceration prior to the fourth one.

Mr. GILLESPIE. Where he can become well educated in other areas of sophistication.

Chairman PEPPER. One of the subjects we are very much concerned about is the penal system, or the correctional institution program. Have you any comment to make on that? What kind of sentences, what kind of action with respect to people charged with crime by the courts is most effective in dealing with the problem of crime?

Mr. GILLESPIE. Again, Mr Chairman, it depends whether you are asking about crimes of violence or hardened criminals.

Chairman PEPPER. I am talking primarily about serious crime. What can be done with what we call index crimes, burglary, robbery, and rapes?

Mr. GILLESPIE. I know since the abolition of the death sentence in Texas, assault with firearms in my State carried a minimum of 5 years and a maximum penalty of death, and we have had a monumental increase in our community in crimes of robbery by assault with firearms. Because, I consider a robber probably one of the most dangerous type criminals because he is violent, he is premeditated in his conduct, and he won't hesitate to kill if you resist him. This is one of the areas—I am a defense lawyer, but I feel I can't imagine any more penalty in our State than the death penalty. We don't have it now, of course, and I don't know what to do about it.

The Sigmon Service Station, Shamrock Service Station, and Stop-and-Go Ice Houses are constantly robbed. If I come home late at night and stop at the Stop-and-Go and buy a package of cigarettes they look at me with very jaundiced eyes at 11 o'clock at night, and they stay open until midnight. I don't think the severity of punishment is the answer.

You recall, Mr. Chairman, in England, to show an example, they would hang pickpockets and they had to stop the public hanging because too many people were having their pockets picked.

I can't give you the answer. I am sorry.

Mr. RANGEL. Didn't you say the penalty was a deterrent? I thought you were about to say that, and then we went back to England.

Mr. GILLESPIE. It doesn't deter. I don't know what deters. I certainly believe the statute deters narcotic transactions among young people.

Mr. RANGEL. Were you saying that since the abolition of the death penalty, you have found a sharp increase in armed robbery?

Mr. GILLESPIE. Yes, sir.

Mr. RANGEL. You do believe there is a connection?

Mr. GILLESPIE. There has got to be because of this sharp rise. Our district attorney, for example, won't negotiate a plea on an armed robbery because the publicity in the newspapers is so violently opposed to any negotiation involving a crime of violence, such as armed robbery, which is very prevalent. They are more prone to be kindly to a man charged with a barroom killing than an armed robbery. But those crimes are different than a robbery. Two people in a bar can get into an argument and one suddenly pokes the other one, who has a cardiovascular defect, and he dies. That is certainly not murder one. It's aggravated assault in my State. But robbery, I think, there is a definite indication the robber knows if he is caught he is not going to be facing a jury if they can impose a death penalty.

Chairman PEPPER. Mr. Winn?

Mr. WINN. No questions.

Chairman PEPPER. Mr. Mann?

Mr. MANN. No, thank you, Mr. Chairman.

Chairman PEPPER. Anything else, Mr. Rangel?

Mr. RANGEL. No.

Chairman PEPPER. Counsel?

Mr. NOLDE. You testified that the result of this procedure is to speed up the system and that defense attorneys can therefore represent more clients. I take it there is more to it than that. What incentive would the defendant's attorney have in participating in this omnibus procedure, particularly where the defendant is clearly guilty? What would he have to gain by full disclosure?

Mr. GILLESPIE. What he would have to gain, if your client, for example told you—in the embezzlement situation I discussed earlier, the man told me he was not guilty. He was assisted by the fact that we gave him his day in court as he desired. I was able to use the Government's own witness to paint him a little different color than that he was an evil person, and I used the Government's witnesses. I had to use whatever means available that were ethical and legal. His rights were protected, he insisted on testifying, and said he didn't do it. And until this day, he tells me he didn't take that money. I have known him for about 5 years now. He was given a very short sentence. But I was able to use the Government's witness and we gave them handwriting exemplars and in return that did not show he did do it.

But there is no giving up of any defendant's rights. If my clients don't want to participate, I just tell the court we don't participate in it and that is the end of it.

Mr. NOLDE. How did Judge Spears manage to persuade the defense lawyers to cooperate with him?

Mr. GILLESPIE. The same magic any Federal judge uses when he asks you to do something. It is merely a request. And when I was honored to appear before this committee, I was preparing an appeal brief and Judge Spears asked me, "You would like to go to Washington? I said, "Yes, your Honor." That is the magic.

Mr. NOLDE. Any judge with the desire?

Mr. GILLESPIE. It has to be a strong judge. If a judge says, "We are going to utilize this, and this is what we are going to do, gentlemen, I appreciate your cooperation," you will get it done.

Mr. NOLDE. Thank you very much.

Chairman PEPPER. Mr. Gillespie, we certainly thank you. You have given us most interesting and most helpful testimony. We appreciate it. We hope you haven't lost too much time in the preparation of that brief.

Thank you very much. I hope you have a pleasant trip home.

Mr. GILLESPIE. Thank you.

[The following checklist and prepared statement of Mr. Harrison, previously referred to, were received for the record:]

Form OH–3; 6–28–67; Revised 5–15–69.

UNITED STATES DISTRICT COURT, WESTERN DISTRICT OF TEXAS, SAN ANTONIO DIVISION

UNITED STATES OF AMERICA v. ————————

Defendant

Criminal No.————————

INSTRUCTIONS

If an item numbered below is not applicable to this case, then counsel will note the same in the margin opposite the item number with the letters "N.A."

A. DISCOVERY BY DEFENDANT

(Circle Appropriate Response)

1. The defense states it (has) (has not) obtained full discovery and (or) has inspected the government file, (except)

(If government has refused discovery of certain materials, defense counsel shall state nature of material: _____
_____.)

2. The government states it (has) (has not) disclosed all evidence in its possession, favorable to defendant on the issue of guilt. In the event defendant is not satisfied with what has been supplied him in response to questions 1 and 2 above then:

3. The defendant requests and moves for—(Number circled shows motion requested)

3(a) *Discovery* of all oral, written or recorded statements or memorandum of them made by defendant to investigating officers or to third parties and in the possession of the government. (Granted) (Denied)

3(b) *Discovery* of the names of government's witnesses and their statements. (Granted) (Denied)

3(c) *Inspection* of all physical or documentary evidence in government's possession. (Granted) (Denied)

4. Defendant, having had discovery of Items #2 and #3, (requests and moves) (does not request and move) for *discovery* and *inspection* of all *further* or *additional* information coming into the government's possession as to Items #2 and #3 between this conference and trial. (Granted) (Denied)

5. The defense moves and *requests* the following information and the *government states*—(Circle the appropriate response)

5(a) The government (will) (will not) rely on prior *acts* or convictions of a similar nature for proof of knowledge or intent.

(1) Court rules it (may) (may not) be used.

(2) Defendant stipulates to prior conviction without production of witnesses or certified copy. (Yes) (No)

5(b) Expert witness (will) (will not) be called:

(1) Name of witness, qualification and subject of testimony, and reports (have been) (will be) supplied to the defense.

5(c) *Reports or tests of physical or mental examinations* in the control of the prosecution (have been) (will be) supplied.

5(d) *Reports of scientific tests, experiments or comparisons and other reports of experts* in the control of the prosecution, pertaining to this case (have been) (will be) supplied.

5(e) *Inspection and/or copying of any books, papers, documents,* photographs or tangible objects which the prosecution—(Circle appropriate response)

(1) obtained from or belonging to the defendant, or

(2) which will be used at the hearing or trial, (have been) (will be) supplied to defendant.

5(f) Information concerning a *prior conviction* of persons whom the prosecution intends to call as witnesses at the hearing or trial (has been) (will be) supplied to defendant.

5(g) Government (will) (will not) use *prior felony conviction for impeachment* of defendant if he testifies,

Date of conviction_____ Offense_____

(1) Court rules it (may) (may not) be used.

(2) Defendant stipulates to prior conviction without production of witnesses or certified copy. (Yes) (No)

5(h) Any information government has, indicating *entrapment* of defendant (has been) (will be) supplied.

B. MOTIONS REQUIRING SEPARATE HEARING

6. The defense *moves*—(number circled shows motion requested)

6(a) To *suppress* physical evidence in plaintiff's possession on the grounds of—(Circle appropriate response)

(1) Illegal search and seizure

(2) Illegal arrest

6(b) Hearing on motion to suppress physical evidence set for :

(Defendant will file formal motion accompanied by memorandum brief within ____ days. Government counsel will respond within ____ days thereafter.)

6(c) To suppress admission or confessions made by defendant on the grounds of—(Circle appropriate response)

(1) Delay in arraignment
(2) Coercion or unlawful inducement
(3) Violation of the *Miranda* Rule
(4) Unlawful arrest
(5) Improper use of lineup (Wade, Gilbert, Stovall decisions)
(6) Improper use of photographs

6(d) Hearing to suppress admissions, confessions, lineup and photos is set for:

(1) Date of trial, or
(2) ---

(Defendant will file formal motion accompanied by memorandum brief within ____ days. Government counsel will respond within ____ days thereafter.)

The government to state:

6(e) Proceedings before the grand jury (were) (were not) recorded.

6(f) Transcriptions of the grand jury testimony of the accused, and all persons whom the prosecution intends to call as witnesses at a hearing or trial (have been) (will be) supplied.

6(g) *Hearing re supplying* transcripts set for

6(h) *The government to state:*

(1) There (was) (was not) an *informer* (or lookout) involved;
(2) The informer (will) (will not) be called as a witness at the trial;
(3) It has supplied the name, address and phone number of the informer;

or

(4) It will claim privilege of non-disclosure.

6(i) *Hearing on privilege set for*

6(j) *The government to state:*

There (has) (has not) been any—(Circle appropriate response)

(1) Electronic surveillance of the defendant or his premises;
(2) Leads obtained by electronic surveillance of defendant's person or premises;
(3) All material will be supplied, or

6(k) Hearing on disclosure set for

C. MISCELLANEOUS MOTIONS

7. The defense *moves*—(Number circled shows motion requested)

7(a) To *dismiss* for failure of the indictment (or information) to state an offense (Granted) (Denied)

7(b) To *dismiss* the indictment or information (or count ——— thereof) on the ground of duplicity. (Granted (Denied)

7(c) To sever case of defendant ——————— and for a separate trial. (Granted) (Denied)

7(d) To severe count ——— of the indictment or information and for a separate trial thereon. (Granted) (Denied)

7(e) For a *Bill of Particulars.* (Granted) (Denied)

7(f) To take a *deposition* of witness for testimonial purposes and not for discovery. (Granted) (Denied)

7(g) To require government to secure the *appearance* of witness ——————— who is subject to government direction at the trial or hearing. (Granted) (Denied)

7(h) To *dismiss* for delay in prosecution. (Granted) (Denied)

7(i) To inquire into the *reasonableness of bail.* Amount fixed ————. (Affirmed) (Modified to ————.)

D. DISCOVERY BY THE GOVERNMENT

D.1. *Statements by the defense in response to government requests.*

8. *Competency, Insanity, and Diminished Mental Responsibility*

8(a) There (is) (is not) any claim of incompetency of defendant to stand trial.

8(b) Defendant (will) (will not) rely on a defense of insanity at the time of offense;

If the answer to 8(a) or (b) is "will" the

8(c) Defendant (will) (will not) supply the name of his witnesses, both lay and professional, on the above issue;

8(d) Defendant (will) (will not) permit the prosecution to inspect and copy all medical reports under his control or the control of his attorney;

8(e) Defendant (will) (will not) submit to a psychiatric examination by a court appointed doctor on the issue of his sanity at the time of the alleged offense.

9. *Alibi*

9(a) Defendant (will) (will not) rely on an alibi;

9(b) Defendant (will) (will not) furnish a list of his alibi witnesses (but desires to be present during any interview).

10. *Scientific Testing*

10(a) Defendant (will) (will not) furnish results of *scientific* tests, experiments or comparisons and the names of persons who conducted the tests.

10(b) Defendant (will) (will not) provide the government with all records and memoranda constituting documentary evidence in his possession or under his control or (will) (will not) disclose the whereabouts of said material. If said documentary evidence is not available but destroyed, the defense (will) (will not) state the time, place, and date of said destruction and the location of reports, if any, concerning said destruction.

11. *Nature of the Defense*

11(a) Defense counsel states that the general nature of defense is—(Circle appropriate response)

(1) Lack of knowledge of contraband
(2) Lack of specific intent
(3) Diminished mental responsibility
(4) Entrapment
(5) General denial. Put government to proof, but (will) (may) offer evidence after government rests.
(6) General denial. Put government to proof, but (will) (may) offer no evidence after government rests.

11(b) Defense counsel states it (will) (will not) waive husband and wife privilege.

11(c) Defendant (will) (may) (will not) testify.

11(d) Defendant (will) (may) (will not) call additional witnesses.

11(e) Character witnesses (will) (will not) be called.

11(f) Defense counsel will supply government names, addresses, and phone numbers of additional witnesses for defendant _____ days before trial.

D. 2. Ruling on government request and motions

12. Government *moves* for the defendant—

12(a) to appear in a *lineup.* (Granted) (Denied)

12(b) to speak for *voice identification* by witness. (Granted) (Denied)

12(c) to be *finger printed.* (Granted) (Denied)

12(d) to pose for *photographs.* (not involving a re-enactment of the crime) (Granted) (Denied)

12(e) to *try on articles of clothing.* (Granted) (Denied)

12(f) *Surrender clothing or shoes* for experimental comparison. (Granted) (Denied)

12(g) to permit taking of specimens of material *under fingernails.* (Granted) (Denied)

12(h) to permit taking *samples of blood, hair, and other materials of his body* which involves no unreasonable intrusion. (Granted) (Denied)

12(i) to provide *samples of his handwriting.* (Granted) (Denied)

12(j) to submit to a physical *external inspection of his body.* (Granted) (Denied)

E. STIPULATIONS

If the stipulation form will not cover sufficiently the area agreed upon, it is recommended that the original be attached hereto and filed at the omnibus hearing.

(All stipulations must be signed by the defendant and his attorney as required by Rule 17.1, F.R.Cr.P.)

13. It is stipulated between the parties:

13(a) That if _____ were called as a witness and sworn he would testify he was the owner of the motor vehicle on the date referred to in the indictment (or information) and that on or about that date the motor vehicle disappeared or was stolen and that he never gave the defendant or any other person permission to take the motor vehicle.

_____ _____
Attorney for Defendant Defendant

13(b) That the official report of the chemist may be received in evidence as proof of the weight and nature of the substance referred to in the indictment (or information).

_____ _____
Attorney for Defendant Defendant

13(c) That if _____ the official government chemist were called, qualified as an expert and sworn as a witness he would testify that the substance referred to in the indictment (or information) has been chemically tested and is _____ and the weight is _____.

_____ _____
Attorney for Defendant Defendant

13(d) That there had been a continuous chain of custody in government agents from the time of the seizure of the contraband to the time of the trial.

_____ _____
Attorney for Defendant Defendant

13(e) Miscellaneous stipulations:

_____

_____

_____

_____

_____

_____ _____
Attorney for Defendant Defendant

F. CONCLUSION

14. Defense counsel states:

14(a) That defense counsel as of the date of this conference of counsel knows of no problems involving delay in arraignment, the *Miranda* Rule or illegal search and seizure or arrest, or any other constitutional problem, except as set forth above. (Agree) (Disagree)

14(b) That defense counsel has inspected the check list on this OH–3 Action Taken Form, and knows of no other motion, proceeding of request which he desires to press, other than those checked thereon. (Agree) (Disagree)

15. Defense counsel states:

15(a) There (is) (is not) (may be) a probability of a disposition without trial.

15(b) Defendant (will) (will not) waive a jury and ask for a court trial.

15(c) That an Omnibus Hearing (is) (is not) desired, and government counsel (agree) (disagree)

15(d) If all counsel conclude after conferring, that no motions will be urged, that an Omnibus Hearing is not desired, they may complete, approve and have the defendant sign (where indicated) Form OH–3, and submit it to the Court not later than five (5) days prior to the date set for the Omnibus Hearing, in which event no hearing will be held unless otherwise directed by the Court.

15(e) If a hearing is desired, all counsel shall advise the Court in writing not later than five (5) days prior to the date set for the Omnibus Hearing *whether* or *not* they will be ready for such hearing on the date set in the Order Setting Conference of Counsel and Omnibus Hearing.

STATEMENT OF REESE L. HARRISON, JR., SPECIAL ASSISTANT U.S. DISTRICT ATTORNEY, WESTERN DISTRICT OF TEXAS

Mr. Chairman and members of the committee: What is Omnibus? Some of my fellow prosecutors have termed it "Omnious". Black's Law Dictionary defines it as "embracing the whole of a complex subject matter by uniting all parties in interest having adverse or conflicting claims, thereby avoiding circuity or multiplicity of action." It simply means that issues in criminal cases which normally would be raised at the trial are fully explored prior to trial in a formal pretrial conference in open court in a manner similar to that contemplated by the Federal Rules of Civil Procedure.

The problem with the initiation of the Omnibus Hearing Project is that it is different and "goes against the grain", so to speak, of a prosecuting attorney. When I first became a prosecuting attorney the prosecution told the defendant very little and the defendant told the prosecution even less. Some argue that the Omnibus Hearing Project is inconsistent with the adversary system. If "trial by ambush" is what is meant by the adversary system, then I think it is outmoded and should be discarded for our objective is a "search for the truth", and not the defeat of an enemy by a clever surprise. Preparation for trial should not be purely a guessing game. However, it has been my personal experience that I am more of an adversary under the project than I was prior thereto for the reasons hereinafter explained. For one to be an effective advocate he must have initiative and resourcefulness. These attributes will lead to avenues never before dreamed of by the prosecution.

Under the Omnibus Hearing Project it is not inappropriate, nor does it violate the Fifth Amendment privilege, for the defendant to disclose all real and documentary evidence he intends to introduce into evidence prior to the time of trial, so that the prosecution will not be surprised. A statement of testimonial evidence that will be offered from the defense witnesses, other than the defendant, is also supplied for like reasons. Diligent and reesourceful prosecutors can obtain this information when the defendant enters into the project where formerly the prosectuors had no idea what evidence, if any, would be offered by the defendant. Of course, you will say to yourself, "a defendant never has any evidence to offer!" That may be true in a great number of cases, but there is an increasing number of criminal cases where a defendant offers a full and sophisticated defense, which prior to the initiation of the project was unknown to the prosecution. The prosecution now learns the names and addresses of defense witnesses in advance, thus enabling it to send prosecution officials to interview them and pin down their testimony.

Under the project, the defendant furnishes written reports of expert witnesses in advance of the trial. The prosecution may call in prosecution experts to assist in developing a plan of cross-examination of defendant's experts, and to assist in finding areas of vulnerability in the report of the defense's expert witnesses.

Under the project, the prosecution secures a list of character witnesses and their addresses, from which it can adduce information resulting in the dis-

qualification of those witnesses, thereby prohibiting said witnesses from testifying relative to the character of the defendant. In addition, knowing who the character witnesses are, and from what locality or institution they come, produces a source from which the prosecution is able on occasion to find witnesses whose testimony with respect to the defendant's character is unfavorable to the defendant.

Alibi witnesses and their addresses can be secured by participation in the project. This gives the prosecution an opportunity to explore the alibi, and in many instances assemble facts which show that the claimed alibi is not, in fact, an alibi at all, and that the act resulting in the offense could still have taken place in spite of the alibi defense.

The project requires that all motions to suppress confessions and admissions, as well as those with respect to searches and seizures, must be heard in advance of trial. The effect is twofold. First, long and costly delays where the jury is retired from the courtroom while an intrial hearing is held on the motion to suppress are eliminated. Secondly, in many narcotic cases the principal issue is not whether the defendant was in possession of the contraband, but on the contrary, the issue is the legality of the search, i.e. probable cause for the warrant, the manner of execution of the warrant, etc. Many times we have found that the defendant who wants his day in Court is satisfied with a hearing on a motion to suppress. Following the hearing, if the Court denies the motion, the defendant will oftentimes agree to try the case before the Court without a jury. This allows the Court to consider the evidence already received at the hearing on the motion to suppress, and for the prosecution to offer, and the Court to receive, such other evidence as the prosecution considers necessary to bring about a conviction, whereupon the Court makes a finding of either guilt or innocence. This results in the defendant preserving his record on the question involving the motion to suppress so that he can take his appeal on this issue, thus eliminating the delay and cost of empanelling a jury and having witnesses stand around in the halls two to three days waiting to be called to testify during the trial.

One of the most important advantages of the project is the elimination of the written motion practice, whereby counsel are required to file written motions accompanied by briefs in support thereof and the substitution of the pretrial order "check list" of motions. The written motion and memorandum brief in support thereof is a wholly desirable practice, in and of itself, where the question is unique and one of first impression, but it is a time consuming problem resulting in a backlog in the steno pool when the prosecution is required to answer motions of a "plain vanilla" nature. Motions in the latter category have in all probability been heard and considered on many occasions by the trial judge, and written motions and briefs are simply not that helpful to the Court. The project eliminates this practice and utilizes a pretrial order "check list", except in those instances where the Court feels that the issue is such that it should be explored more fully and completely in written memoranda briefs offered by counsel for both sides. These instances are rare and because of this fact, so-called "plain vanilla" motions requiring written briefs have been eliminated. Further, due to the elimination of the written motion practice just described, the prosecution can more effectively use and allocate the time which normally would be spent to research and brief motions of the "plain vanilla" nature, to brief and research the more difficult and unique questions of law in connection with which the Court requests written memorandum briefs from counsel on both sides. The hearings on all motions written or checked off on the pretrial order are held at the pretrial conference, referred to as the Omnibus Hearing, at which time the issues are resolved, the defendant makes his record, and the error, if any, in the trial court denying the written motions is preserved.

The Omnibus Hearing Project, by resulting in a full disclosure of the prosecution file, reduces, if it does not entirely eliminate, the problems involved under the rule of *Brady v. Maryland*, and its progeny. With full disclosure of the prosecution file, the defense is not surprised and no one should be able to convince a judge that the prosecution has withheld evidence favorable to the defendant on the issue of guilt, when *all the evidence* in the prosecution file has been furnished to the defendant prior to trial.

Finally, and perhaps the greatest advantage of the Omnibus Hearing, is that it results in more pleas of guilty than we have ever experienced in the past. This is brought about by making full disclosure of everything in the prosecution file to the defendant. At first blush, the prosecutors will be wholly skeptical and perhaps incensed, as I was. Many will say that the result of such disclosure of

the prosecution file will result in more acquittals and dismissals. However, the figures in the San Antonio Division of the Western District of Texas are to the contrary.

Why the increase in pleas of guilty? I have had many of the outstanding criminal defense lawyers of the San Antonio Bar state that they are apprehensive about advising their client to plead guilty if they do not know the merits of the prosecution's case. When the defendant has the opportunity to see the prosecution's case and discuss the same with his lawyer, and both are fully informed concerning the same, the criminal defense lawyers tell me that their clients are more receptive to pleading guilty then prior to the implementation of the project. One reason for this is that the defense attorney and his client are able to base their discussion concerning a plea of guilty by what is contained in the prosecution's file.

The success of the Omnibus Hearing Project depends upon strong leadership from the Bench, an imaginative and resourceful prosecutor, and a defense bar that responds in a highly professional manner.

Chairman Pepper. I have a staff synopsis and prepared statement from Prof. Etzioni of Columbia University which will be placed in the record.

[The material referred to follows:]

Staff Synopsis of Prof. Amitai Etzioni

Professor Amitai Etzioni obtained his Ph. D. at the University of California in Berkley in 1958. He is a professor of sociology and Chairman of the Sociology Department at Columbia. The Professor has been a consultant for government agencies at the Federal, State, and Municipal level and has written widely for professional and other journals here and abroad including the New York Times and the Washington Post.

Professor Etzioni presents three policies to reduce crime by one third in twelve months and substantiates his theories with considerable statistical data all of which I have enclosed. The policies investigated by the Professor and his associates are: the decriminalization of victimless crimes, which would result in a reduction of annual arrests of 31 per cent; a program of full employment—meaningful and decent paying—of young people that would result in a 9 per cent reduction of violent crime; and domestic disarmament that would result in a decrease in murder from 40 per cent to 45 per cent and an estimated decrease in armed robbery of 23 to 26 per cent. Professor Etzioni also calculated secondary reduction in crime that follows the freeing of police personnel as a result of the above reductions.

We are all aware of the court congestion problem presented by victimless crimes. Not only does the Professor suggest methods of alleviating the conditions but he statistically substantiates his assertions.

Professor Etzioni is concerned with domestic disarmament and asserts that if this could be achieved there would be a decrease in murder from 40 to 50 per cent and an estimated decrease in armed robbery from 23 to 26 per cent. He does not advocate the type of gun control that has met so much legislative resistance but feels if guns were removed from private hands as in Canada, Britain, France, West Germany and Israel that 85 per cent of all guns could be removed. A person who wanted the use of a gun would have to remove the same from a gun bank and return it after he had gone hunting or used it in some other lawful manner.

The third attack that Professor Etzioni would make on crime is meaningful employment for youth because he points out statistically that crime is very much a youthful occupation and that unemployment which is itself disproportionately associated with crime is disproportionately high among the youth.

Using 1970 as a base year the Professor presents statistics which shows that more than half of all arrests are persons under 25. He relates this to the high unemployment rate for persons in that age bracket and concludes that meaningful employment of the young would bring about a reduction in crime.

Three Policies To Reduce Crime by One-third in Twelve Months

(By Amitai Etzioni)

(Research Assistance: Joshua Freeman)

GENERAL CONCLUSION

So called "liberal" crime-reduction policies, which have not been implemented so far, would reduce crime *significantly* and *quickly*, our projections show that if really given a chance we would see a decline of crime between 36 & 39% within twelve months.

The three policies we have investigated are: the decriminalization of victimless crimes, which would result in a reduction of annual arrests of 31 per cent; a program of full employment—meaningful and decent paying—of young people that would result in a 9 per cent reduction of violent crime; and domestic disarmament that would result in a decrease in murder from 40 per cent to 45 per cent and an estimated decrease in armed robbery of 23 to 26 per cent.

We further calculated the secondary reduction in crime that would come with the freeing of police resources as a result of the above reductions; this amounted to another 3.3 per cent to 3.4 per cent annually.

In sum, we project a total reduction in all crime, as measured by arrests, of from 35.9 per cent to 38.8 per cent annually. The three policies that would effect this reduction could be implemented within the next twelve months and they are vastly more effective than any reduction even advocates of the death penalty could hope for.

METHODS OF COMPUTATION

Our projections are based on 1970 data, the most complete currently available data on crime. When relevant, both a pessimistic and an optimistic projection, as regarding the effects of the suggested policies, were made. Note that while the pessimistic projections are very cautious, the optimistic ones are not excessively so. The reasons we used such conservative projections is that we wished to bend over backward, to be extra careful in our conclusions. Nevertheless, even the more pessimistic projection suggests that more than a third of the crime in the U.S.A. (35.9%) could be eliminated within the next twelve months, if the Congress, the Executive and the courts saw fit to implement, in conjunction, the following three policies often discussed but never implemented in this country.

THE MEASURE OF DECRIMINALIZATION OF VICTIMLESS CRIMES

Again and again the national debate about crime conjures up the image of the mugger, robber, rapist and assassin. Often overlooked is that a sizeable part of the crime wave is made up of crimes which have no harmful effect on anyone other than the perpetuator and even the harmful effects on him are not fully established. A staggering 2,066,035 arrests, of the total of 6,570,473 reported in 1970[1], a full third, were for victimless crimes. (These victimless crimes include prostitution, gambling, drunkenness, runaways, and marajuana violations.)

Some of these victimless crimes, such as prostitution and gambling, involve moral issues. In effect then, our police are punishing people who misbehave by the code of established members of the community, or by a code of behavior that is no longer responsive to the community, rather than protecting body or prop-

[1] Unless noted, all arrest statistics are from the FBI, U.S. Department of Justice *Uniform Crime Reports—1970* (Washington, D.C.: U.S. Government Printing Office, 1970), hereafter cited as UCA. 5,270 agencies, representing a 1970 population of 151,604,000 (or 75% of the country), reported the arrests under their jurisdiction according to standardized FBI procedures. If a person is arrested and charged with several offenses, this is counted as only one arrest (which is listed under the most serious charge involved). If an individual is arrested on several separate occasions, or several persons are arrested for the same offense, each arrest is counted separately. Traffic offenses are not included in these statistics. For a fuller discussion of the *UCR* see Marvin E. Wolfgang, "Uniform Crime Reports: A Critical Appraisal," University of Pennsylvania Law Review, p. 721 (1963), and *Crimes of Violence*. A staff report submitted to the National Commission of the Causes and Prevention of Violence. Washington: U.S. Government Printing Office, December 1969, Part I Chapter 2.

erty from violence. However, the most common arrest in the area of victimless crimes is for a "crime" which only a minority consider more than a breach of good manners, namely drunkenness. 1,512,672 arrests, or 23%, of the total arrests reported were for this charge. This does not include those arrested for drunken driving (432,522 arrests), liquor violations (222,464) or alcohol related crimes. (In line with our cautious approach, we included *none* of the 9% of all arrests which involved a simple "breach of the peace" at least some of which surely involve victimless crimes, e.g. boisterous drunk.) Computing only those arrests concerned with drunkeness alone locates this as the leading victimless crime: over twice as many arrests are reported on this charge as for the next largest cause for arrest, larcency.

Sex offenses, *other than forcible rape*, account for 1.5% of all arrests. There were about 49,000 arrests for prostitution and commercialized vice, and an equal number for other sex offenses,[2] for a total of 98,722 arrests. Practically all of these "criminals" are consenting adults, who in other countries, for instance in Britain, would not have been arrested. Police sources, who indicate that the policemen often are quite happy to get out of the social work and "moral" business, and focus on chasing criminals, occasionally suggest that prostitution should be controlled because it "leads" to other crimes, especially theft (or "rolling"). But the arrests reported here include only those in which charges no more serious than prostitution are also involved.

Gambling accounted for another 1.3% of all arrests, with 84,804 arrests made on this charge in 1970. The extent to which communities still view gambling as a sin varies, but this seems to be on the decline. Virtually nobody now seriously views it as a "crime," other than in the tautological sense, i.e. "because the law says so."

These crimes also raise a constitutional issue. Only a very small fraction of all gamblers, homosexuals, or prostitutes are arrested: when only a minute proportion of those committing a crime are punished, the punishment might legally be considered "arbitrary", and as such be unconstitutional. On these grounds the Supreme Court might be able to relieve the society from the obsolescent grip of laws prohibiting victimless crimes by striking them off the books.

As for drunkenness, expert after expert has testified, that drunks should be turned over to medical, rather than police authorities; the latter merely lock them up for the night, release them the next day, without the benefit of any long-term treatment, and then, simply rearrest them shortly thereafter.

If runaways as well as drunkards, were to be handled by authorities other than the police, in this case, social work agencies, the number of arrests would fall by another 179,073 a year.

While the treatment of marijuana is much more controversial, the evidence shows that this is not more but less harmful than alcohol. Moreover, it pacifies and does not cause aggressive behavior. A Presidential commission has recommended that it be decriminalized. This would reduce the annual number of arrests by another 190,764 (by 1970 figures) or 2.9%.[3]

All said and done, if the categories of victimless crimes listed above were decriminalized, 31.4% per cent of all arrests, or 2,066,035, would be eliminated.[4]

It may at first seem that this crime reduction is strictly semantic i.e., some acts, which are not harmful to body or property of others or the community, were once called crimes, we cease to call them crimes, and—we report less crime. But there is a corollary, very real, crime reduction effect: a giant pool of police resources would be freed to focus on the crimes which do have victims.[5] And, hundreds of thousands of people, many quite young, who are legally labelled "criminals" and taught to see themselves as such, and are thus forced into contacts with criminal sub-cultures and organizations, would themselves no longer so pushed by the society and its obsolescent laws.

EMPLOYMENT OF THE YOUNG, AND CRIME PREVENTION

Crime is very much a youthful occupation. Many young offenders "retire" by the time they reach 25, even if they were not caught or arrested. More than half of

[2] Included in "other sex offenses" are statutory rape, offenses against chastity, morals-common decency and so forth.

[3] *Marijuana: A Signal of Misunderstanding*, First Report of the National Commission on Marijuana and Drug Abuse, Washington: U.S. Gov't Printing Office, March 1972, P–106–7.

[4] This is simply the summed total of arrests, for the above listed "victimless crimes."

[5] This effect is discussed in the final section of this report.

all arrests, 52.4%, are of persons under 25. (25.3%—under 18.) 77% of all robbers arrested are less than 25 years old.[6]

Second, unemployment which is itself disproportionately associated with crime, is disproportionately high among the young. Using 1970 as a base year, we find that while the un-employment rate for all males was 4.4%, the rate for males aged 16 and 17 was 16.9%, for males aged 18 and 19, 13.4% and for those 20–24 years old, 8.4%. Likewise, while the overall rate for women was 5.9%, for those 18 and 19, 14.4%, and for those 20–24 years old, 7.9%. For non-white persons the rates are even higher than the overall rates, reaching a peak of 36.9% unemployment for non-white females, age 16 and 17.[7]

Finally, it should be noted that unemployment rates are still higher when we look specifically at urban poverty neighborhoods. Thus, while the overall unemployment rate for the entire population was 4.9% in 1970, it was one and one half times as much (7.6%) in urban poverty neighborhood.[8]

TABLE 3.—*Unemployment by sex, race, and age, 1970*

	Percent
Total	4.9
Male	4.4
Age:	
16 to 17	16.9

[6] *Uniform Crime Reports, 1970*, p. 126–27. Table I presents a summary of the relevant data.

An independent study of 17 cities, using 1967 data, supplied directly by the local authorities came up with very similar findings, as shown in Table 2. See Crimes of Violence, Vol. II, A Staff Report Submitted to the National Commission on the causes and prevention of Violence, Washington, D.C.: U.S. Government Printing Office, December, 1969, PP 267, 271, 275, 279, 283.

[7] *Manpower Report to the President*, U.S. Department of Labor, March 1972, (U.S. Government Printing Office) p. 177–179. Table 3 gives a complete summary of the relevant data.

The rates calculated by the Dept. of Labor are based on a monthly survey of households, in which the number of persons actively seeking work is ascertained. It has been widely stated that this method of calculation significantly underestimates the true unemployment rate, since those unable to find work, and so discouraged that they have ceased active search, are not counted as being unemployed, but rather as not being in the work force. Furthermore, those seeking full-time work, but presently employed involuntarily on a part-time basis only, are counted as fully employed. In a study of long-term Civilian Labor Participation Rates, and forced part-time employment, Paul Sweezy has estimated that real unemployment is about 1.5 times the Dept. of Labor figure. (See Paul Sweezy, "Economic Stagnation and the Stagnation of Economics", *Monthly Review*, 22:11 (April 1971).

As will be seen later, we have therefore made projections based both on the official rates and rates 1.5 times as high as the official ones.

[8] "The poverty neighborhood classification used is based on a ranking of census tracts according to 1960 data on income, education, skills, housing, and proportion of broken families. The poorest one-fifth of these tracts in the Nation's 100 largest metropolitan areas are considered poverty neighborhoods. As such some persons above the poverty level are probably included and some poor persons living in other urban neighborhoods excluded." From: U.S. Dept. of Labor, *Manpower Report to the President*, March 1972, U.S. Government Printing Office, p. 251.

While there do not seem to be any recent national statistics on the socio-economic status of criminal offenders or their occupational status,[9] there are several studies which allow us to estimate the proportion and number of crimes committed by unemployed young persons, and the effect of full and meaningful employment of the young on crime. The most comprehensive study of the occupational status of offenders was the study of major crime in 17 cities in 1967, conducted by the National Commission on the Causes and Prevention of Violence.[10]

Using the data in that study, we can calculate the rate at which unemployed and employed persons commit crimes.[11] We calculated these rates in two ways, once using the unemployment rates for these cities presented by the U.S. Department of Labor, and once using rates one and a half times as great, in order to compensate for official unemployment rates undercounting the chronically unemployed, particularly among the young. (They include only those who actively seek employment.)[12]

Assuming that those currently unemployed would, if employed, commit crimes not at the rate they currently do so, but rather at the rate of those currently employed (if only because the hours spent at work, or resting from it, are not spent stalking the street in search of a "mark"), we can calculate the percentage decrease in crime that would result from conditions of full employment of all persons.[13]

---

[9] A local study of the District of Columbia found that 44% of Black and 40% of White offenders in major violent crimes were unemployed. See *Report of the President's Commission on Crime in the District of Columbia*, Washington, D.C., United States Government Printing Office, 1966, pp. 131–132.

[10] This study, and the raw data collected for it, comprise Chapter 5 and Appendix 11 respectively, of Volume 11, *Crimes of Violence*, of the Commission's Report, op. cit.

[11] We calculated the rate at which unemployed and employed persons commit crime as follows:

The 17 city study gives the total number of offenses in 1967 in these cities for criminal homicide, forcible rape, aggravated assault, and armed and unarmed robbery. It also gives the percentage of offenses in each category committed by each occupational group, which can be subtotaled into offenses committed by unemployed persons, offenses committed by employed persons, and offenses committed by persons not in the work force (i.e. students, housewives, etc.). Table 4 column 1 presents the percentages for unemployed and employed persons. Unless some occupation was stated, all persons 17 or under were listed as students, and therefore not in the work force. Thus a proportion of crimes committed by persons under 17 who were actually unemployed, that is neither students nor employed, were listed as being committed by students. (Presumably those minors *with* a job were listed under that occupational grouping as well). The effect of this bias is to *decrease* the amount of crime reported to have been committed by unemployed persons.

By multiplying the *number* of offenses in each category by the *percentage* committed by employed and unemployed persons respectively, we calculated the actual number of crimes committed by each group in these cities in 1967. (For this and other calculations see table 4).

We used the 1967 employment data for these same 17 cities (from the *Manpower Report to the President*, April 1971) to determine the total number of individuals who were employed and who were unemployed. By dividing the number of offenses for each crime committed by unemployed and employed persons respectively, by the number of persons in each of these categories, we determined the number of offenses committed per thousand unemployed persons and per thousand employed persons, that is the *rates* of crime for unemployed and employed persons. These rates are shown in Table 4, column 4.

[12] Since it is widely asserted that many persons actually unemployed are categorized by the Department of Labor as being out of the work force (see footnote 6), we recalculated crime rates increasing by 50% the number of persons reported as unemployed in the 17 cities in 1967. (See Table 4).

[13] First we estimated the number of offenses in each crime category committed nationally by unemployed persons by multiplying the total number of offenses nationally by the percentage of the specific offenses committed by unemployed persons, as determined in the 17 city study (see Table 5 for full data and calculations). We then projected the number of crimes that would be committed by those currently unemployed if they committed crime at the employed person rate by dividing the number of crimes they currently commit by the ratio of the relevant unemployed crime rate to the employed crime rate (again as determined from the 17 city study). By subtracting the projected number of offenses that would be committed by those currently unemployed if fully employed, from the number of offenses currently committed by the unemployed, we have the reduction in the number of offenses that we could expect to result from full employment. Dividing this figure by the total number of offenses for that crime category, we can express the reduction as a percentage of current crime levels.

TABLE 4.—CRIME RATES: EMPLOYED VERSUS UNEMPLOYED; 17 CITIES, 1967[1]

	Percent committed by employment status	Number committed by employment status	Total number of persons (thousands) in employment status category[2]	Rate of crime/thousand persons by employment status[3]	Ratio unemployed vote/employed votes[4]

[3] Col. 1 times col. 2.
[4] Col. 3 divided by table 4, col. 5 (the ratio of unemployed crime rate to employed crime rate).
[5] Col. 3 minus col. 4.
[6] The percentage decrease in total crime, if unemployed committed crimes at employed rate. Col. 5 divided by col. 1.
[7] The parenthetical figures are for a 2d calculation, using increased unemployment estimate, as discussed in footnote 11.
[8] The UCR does not directly give armed-unarmed statistics for robbery. However, it states that 60 percent of robberies were armed and in total there were 87,687 robbery arrests.

This decrease, using the official unemployment rates, (which averaged 3.4% for the 17 cities) varies from 5% for unarmed robbery to 28.3% for armed robbery. Using the higher unemployment rate, the range is from a 4.7% to a 27.6% decrease. Since however our figures are based only on the easier-to-achieve full and meaningful employment among those 25 and younger, we have to apply these decreases only to the percentage of each crime committed by persons in that age category. Projecting data for the percentage of crimes committed in the 17 cities by young offenders (which are very similar to national data from a separate source),[14] we find that full employment for those 25 and younger would result in a decrease of from 4.3%–4.5% of all murder (depending on the unemployment rate estimate used), from 5.4%–5.6% in aggravated assault, from 8.6%–9.4% in forcible rape, and from 20.8%–21.3% in armed robbery.[15] The decrease in unarmed robbery would be from 4.2–4.4%.

[14] Although the 17 city and the national data are very similar, only the former is subdivided for robbery into armed and unarmed robbery. For this reason we chose to use this data. However, it should be noted that this data is for those *25 and younger*, while the national data, previously discussed, is for those *under 25*. See tables 1 and 2 for comparative data.

[15] These figures are simply the decrease in crime expected from full employment of persons of all ages, multiplied by the percentage of crimes committed by persons 25 and younger (as shown in Table 2).

Because the National Commission survey included only violent crimes, we cannot calculate a precise projection of the reduction in property crime, such as burglary, larceny, and auto-theft.[16] However, given that the percentage of young property crime offenders is higher even than for robbery,[17] we can assume that the reduction here would also be higher. However, to maintain our conservative approach, we estimate only that it will be in the range of reduction of those crimes we were able to make precise projections for, that is between 4.4% and 21.3% or 4.2%–20.8% using the higher unemployment estimate. (The large range is due to the lack of more precise data.)

In toto, while the relationships between unemployment and criminal behavior are rather complex and not well studied, we estimate that full decent-paying employment of young persons, would reduce violent crimes by 9% a year.[18] The size of the effect on crimes against property is difficult to pin point but certainly will be considerable.

DOMESTIC DISARMAMENT

What effects on criminality would be achieved if most firearms would not merely have to be registered, but were removed from private hands, as in Canada, Britain, France, West Germany, Israel and practically all other democratic, economically-developed societies. Drawing on the experience of other countries, we assume and this is our pessimistic estimate—that 85% of all arms could be removed: optimistically, this figure could reach 95%. What would be the effect of such domestic disarmament, we ask, knowing full well that not all those deprived of arms will also drop their criminal intent?

MURDERS: THE MOST SERIOUS OFFENSE

In 1970, 66% of the 13,649 murder victims were killed by the use of a firearm.[19] Firearm elimination would decrease this high rate of murder in two ways: in some cases faced with the lack of firearms, the potential murderer will abandon his intent altogether, and no crime will take place, for reasons soon to be explained. Secondly, in a greater number of cases, some less deadly weapon will be substituted for a firearm, and what otherwise would have been a lethal attack will be in many cases, a non fatal one.

Certain murders by their very nature require a firearm.[20] It is impossible to climb a tower and murder persons a mile away without using a rifle. Similarly, it is very difficult to attack a guarded bank without using some sort of firearm. Weak persons, children, cowardly assailants would all find attacks on others, particularly physically strong victims, difficult if not impossible without firearm availability. As Robert Coles puts it: "Every psychiatrist has treated patients who were thankful that guns were not around at one time or another in their lives. Temper tantrums, fights, seizures, hysterical episodes all make the presence of guns an additional, and possible mortal, danger".[21]

An informal examination of actual cases indicates that in about 25% of all murders committed with firearms, the absence of the firearms would have resulted in no crime at all being committed.

What does this mean in terms of the overall murder rate? 66% of all murders use firearms, and after domestic disarmament firearms would not be available in these cases. Our estimated reduction by 25% of murders in such cases would therefore mean a total decrease of 15.9% in all murders (if domestic disarmament is 95% effective), the reduction would be by 14.0%, if it is 85% enforced.[22]

---

[16] Other, more costly property crime, such as embezzlement, fraud, and false advertising, is usually committed by older, employed persons and would not likely be decreased by full youth employment.

[17] 80.1% of "major" property crime (larceny, burglary, auto-theft) is committed by persons under 25 compared to 77.0% of robberies. See Table 1.

[18] Here we simply totaled up the expected reduction in the number of offenses for each of the five violent crimes (homicide, rape, assault, armed and unarmed robbery), and expressed the total reduction as a percentage of all offenses in these categories. Using the low unemployment estimate, we project a reduction of 9.1%; using the higher estimate, 8.8%.

[19] *UCR*, 1971, op. cit., p. 118.

[20] This is particularly true for assassinations, which are almost always committed with firearms.

[21] Robert Coles, "America Amok", *The New Republic*, 155:8 (August 27, 1966) p. 14, as cited in Marvin E. Wolfgang and Frances Ferracuti, *The Subculture of Violence*, New York: Travistock Publications, 1967, p. 189.

[22] 15.9% is 25% (murder reduction) of 95% (effectiveness of disarmament) of 66% (number of murderers involving firearms). Similarly, 14.0% is 25% of 85% of 66%.

However, the benefits of firearms elimination does not stop here. In the attacks that still do occur, the substitution of less deadly weapons for firearms will result in a large saving of lives, even if the number of incidents as such remains the same.[23] It is well documented that murders fall into two categories: those characterized by a "single minded intend to kill",[24] and those which are "Slaying in the heat of passion, or killing as a Result of the intent to do harm, but without specific intent to kill." [25] We will assume pessimistically that all the remaining murders of the first type will be successfully carried out, even in the absence of firearms. However, in the latter cases this will not be true. These attacks, far more numerous, almost always grow out of quarrels or arguments, usually among family or friends.[26] The typical case involves someone grabbing the most potent weapon around—and using it. If it is a gun the effect is usually fatal. As the head of Chicago Homicide put it, describing one such case: "There was a domestic fight. A gun was there. And then somebody was dead. If you have described one you have described them all." [27] But what happens if a gun is *not* there? On the basis of the aforementioned survey we assume that in three out of four of the cases, an attack still will take place, and the next most lethal weapon, a knife will be used. It has been shown that fewer fatalities in the case of knife attack will result by a ratio of 4 out of 5, i.e. only one fatality where firearms would have left five dead.[28] In other words, in such attacks, when knives instead of guns are used, the death rate goes down by 80%. (Of course when other weapons are used, as they would be, whether fists, coke bottles, or baseball bats, the reduction will be still greater, but we will stick to our conservative estimations).

To calculate the effect of this "substitution" effect, we first calculate the number of attacks that would still occur when firearms are eliminated. Since 66% of murders are by firearms and in 95% of these cases firearms would have been eliminated, and knowing that 75% of these previously firearm attacks will still occur, we find that 47% of all murders are attacks in which another weapon will be substituted for a firearm.[29] With 85% elimination, our pessimistic projection, such cases are 42% of the total. A study of Chicago murders showed that 78% were of the type characterized as "deadly attacks", not "single minded" murders.[30] (It is among these attacks that the 80% reduction in fatalities will take place). All told then, as a result of the substitution of other weapons for firearms, we will expect a reduction in the overall murder rate of from 26.3% to 29.3% (depending on the effectiveness of the elimination policy).[31]

Combining the two effects, i.e. the elimination of some firearm attacks altogether, and the use of less deadly weapons in others, we find that the overall reduction in murder would optimistically be 45.0% (at 95% elimination) and pessimistically 40.3% (at 85% elimination). In 1970 this would have amounted to a saving of from 5501 to 6142 lives.

FIREARM ACCIDENTS

In 1968 there were 2,394 deaths from firearms accidents.[32] The rate of firearms accidents varies regionally in line with the rate of firearm ownership. In other words, the more firearms—the more firearms accidents.[33] We would therefore expect that the reduction in firearms would result in a parallel reduction in accidental deaths, or an annual saving of 2232 (or 2035) lives.[34]

---

[23] For this section, we based our general argument on that presented in Frank Zimring's "Is Gun Control Likely to Reduce Violent Killings," a mimeograph report of the Center for Studies in Criminal Justice, University of Chicago, (republished in the University of Chicago Law Review, 35 : 721 (1968).

[24] Ibid. p. 3.

[25] Wolfgang and Ferracuti, op. cit. p. 189.

[26] See Zimring, op. cit. p. 23, also *UCR*, 1970, op. cit. p. 9.

[27] Commander Francis Flanagin, in a television interview about Chicago's 600th homicide of 1968, quoted in George Newton and Frank Zimring, *Firearms and Violence*, A Staff Report submitted to the National Commission on the Causes and Prevention of Violence, Washington, United States Government Printing Office, 1969.

[28] This ratio was determined by Frank Zimring, based on a study of 510 homicides, reported to the Chicago police in 1966, and 480 serious assualts involving knives or guns reported in the 5th period of 1968. In Zimring, op. cit. pp. 4–5.

[29] 47% is 75% (murders still occur, without firearms) of 95% (effectiveness) of 66% (% of murders using firearms).

[30] Zimring, op. cit. pp. 2–3. Wolfgang and Ferracuti estimate that "Probably less than 51% of all known killings are premeditated, planned, and intentional." op. cit. p. 189.

[31] i.e. 78% of 42% to 78% of 47%.

[32] U.S. Bureau of the Census, *Statistical Abstract of the United Statess 1972*. (93rd edition). Washington, D.C. 1972. p. 61.

[33] Newton and Zimring, op. cit. p. 29.

[34] $2232 = .95$ (effectiveness coefficient) $\times 2394$. $2035 = .85 \times 2394$.

It should be noted that the average life expectancy in the U.S. is about 72 years, the average age of death from *all accidents is 41 years, and the average age of victims of firearms accidents only 24 years.* 40% of the victims are children and teenagers (under 20).[35] Disarmament would then save the most tragic victims, the young and the innocent.

Firearms elimination will also lead to the avoidance of some 19,000–95,000 at 95% elimination (or at 85% effectiveness, 17,000–85,000) non-fatal injuries annually, that result from firearm accidents.[36]

Combining the reductions in murder and accidents, we find that 95% firearms elimination would result in an annual savings of 8,374 lives; or if 85% effective, a savings of 7, 536 lives.

ROBBERY

In 1970 there were approximately 500,000 robberies,[37] 60% of which were armed, and 37%, or 185,000 of which involved firearms.[38] (Several studies show that these robberies involving firearms caused a disproportionate amount of harm both in property loss and fatalities, but we will not focus our attention on these.[39]

Evidence shows that the firearm is an essential element in many armed robberies. In its absence, many robberies would not be committed at all, both because of the increased difficulty (i.e. it is difficult to rob a bank protected by alarms and armed guards without a firearm),[40] the increased risk to the robber (e.g., that the victim might fight back), and the psychological obstacles. On this last point Dr. Donald Newman, in a study of convicted robbers, commissioned by the National Commission on the Causes and Prevention of Violence, noted:

"Robbery appears to be a crime made infinitely more possible by having a gun. To rob without one requires a degree of strength, size and confidence which was lacking in many of the men with whom I spoke. . . . For the most part the men involved in robbery were not very aggressive. Some of these men could not possibly carry out a robbery without a gun. In short, there was a clear reality element in the need for a gun once a man made the decision to rob. . . . Although the men needed a gun to rob, the converse was also true: they needed to rob in order to use a gun . . . it was the gun which provided the power and the opportunity for mastery."[41]

A very cautious way to estimate the proportion of firearm robberies "saved" in a disarmed America, lacking direct data on this, is to use the same proportion of murders avoided, namely under optimistic assumptions, 45%, pessimistically, 40%. There are some reasons that argue that it might be lower (for instance, robbery is more often pre-meditated than murder and hence the "appropriate" tools can be related), and there are some reasons to think it might be higher (e.g. many robbers now armed would not dare climb into a house, let alone face

[35] Newton and Zimring, op. cit. pp. 27–28.

[36] Estimates of non-fatal firearm accidents range from 20,000–100,000 annually. (See Ibid, p. 28). The "savings" is calculated as 95% (or 85%) of the range.

[37] The *UCR* indicates that in 1970 there were 348,000 robberies. (UCR, 1970, as reported in Stat. Abst., 1972, op. cit. p. 143).This is probably considerably below the actual figure, since many robberies are not reported to the police, or by the police to the FBI. A national survey of 10,000 households conducted by the National Opinion Research Center for the National Commission on the Causes and Prevention of Violence, indicated that the real numbers of robberies was probably about 1½ times the reported figure. (*Crimes of Violence*, op. cit., p. 19). For 1970 this would indicate approximately 500,000 robberies.

[38] 6 out of 10 robberies reported to the *UCR* were armed. In turn 63% of the armed robberies involved firearms. (UCR, 1970, op. cit., p. 15). Thus 37% (63% of 60%) of all robberies involved firearms. This means that in 1970 there were roughly 129,000 *reported* robberies involving firearms. If *unreported* robberies followed similar patterns, the actual number of robberies involving firearms was closer to 185,000.

[39] The percentage of robberies involving firearms is far greater for indoor robberies (which are more dangerous and lucrative) than for outdoor robberies. See Newton and Zimring, op. cit., p. 47; also *Crimes of Violence*, op. cit., p. 302. Furthermore, firearms are involved more often when a commercial establishment is the location of the robbery. See *Crimes of Violence*, op. cit., p. 302.

The fatality rate for robberies involving firearms is considerably higher than that for unarmed robberies, or robberies involving some other weapon. One study showed that in New York City the fatality rate for firearm robberies is nearly 4 times that of other armed robberies. See Newton and Zimring, op. cit., p. 47. However, it should be noted that while the *fatality* is higher, the *injury* rate is lower in armed robbery than in unarmed robbery. Presumably the presence of a weapon intimidates the victim, and he or she is less likely to resist. See *Crimes of Violence*, op. cit., p. 370.

[40] The National Commission on the Causes and Prevention of Violence survey of 17 cities included in its weighted sample 649 armed and unarmed robberies. 3% of all armed robberies were bank robberies, but *not a single case of unarmed bank* robbery was reported. See *Crimes of Violence*, p. 302.

[41] Newton and Zimring, op. cit., p. 47. The complete report is Appendix E of the same volume.

a guard in a bank, without a weapon). Hence, we will take 5% off from our low estimate of murder depressent rate, making it a 38% reduction, and add 5% to our high one, making it 47%, to give us a reasonable range.

Thus, the reduction in firearm robbery would lead us to expect a decline of from 70,300 to 77,000 robberies annually, or 23.4% to 25.9% of all armed robberies.[42]

CUMULATIVE AND SECONDARY EFFECTS, AND RESOURCE ALLOCATION

To be able to judge the combined effects of all three policies, we deal with arrest figures. We have already calculated the reduction in annual arrests that would result from the decriminalization of victimless crimes. For other crimes, by simply assuming that the number of arrests are proportional to the number of crimes, we can express their reductions in terms of the projected reductions in the number of arrests. We can then calculate the cumulative reduction from these three policies combined, *modifying the individual reductions* to take into account previous reductions from the other policies. (e.g. if there are fewer younger offenders because they are at work, this reduces the benefits one can expect to gain from gun elimination and vice versa.) The cumulative results are shown in table A. They are expressed in terms of a range, the lower figure based on the most pessimistic assumptions, the higher on more optimistic ones.

The table shows that we can project a reduction in the number of arrests, here used as an indicator of the number of crimes committed, using the most pessimistic assumptions, of from 4.2% for unarmed robbery, to 29.3% for armed robbery, and 24.9% for murder. The total reduction in arrests would be 32.6%, a reduction of over 2 *million* arrests annually. Using more optimistic assumptions, the reductions would range from 4.4% for unarmed robbery, to 47.5% for murder, and 40.5% for armed robbery. The total reduction in annual arrests would be 35.4%, or 2,322,758 arrests.

The large reduction in both crime and arrests will free a large amount of police resources presently devoted to the investigation of these crimes, the arrest of the offenders, and the post-arrest procedures of detention, trial, and punishment. Since the reductions are in all types of crimes, including both crimes demanding a great deal of resources, such as murder, and crimes involving few resources, such as drunkenness, we can assume that the average resources currently devoted to these reduced crimes is proportional to the resources used for all crimes in general. We can thus say that there will be a freeing of between 32.6% and 35.4% of the police resources devoted directly to patrol, investigation and arrest as a result of the three measures outlines. These resources will now be free to deal with the prevention, and investigation, of the remaining criminal violations. Even assuming that crime declines proportionately only 15% as much as police resources will increase, this will mean an additional 4.9–5.3% reduction in crime rates, after the initial reductions. This would amount to a reduction in terms of the current crime rate of another 3.3–3.4%. The total reduction, including primary and secondary effects, would thus amount to 35.9–38.8% of the current arrests annually.

While throughout these projections we were as cautious as possible in estimating their benefits, we are the first to point out that any such projections are subject to a margin of error. But it must also be clear that even if the crime reduction achieved would be lower than expected, the benefits of the suggested policies would be very substantial.

---

[42] 70,300 (reduction) = 38% of 185,000 (number of firearms robberies).
77,000 = 47% of 185,000.
23.4% = 70,300/300,000 (number of *armed* robberies annually).
25.9% = 77,000/300,000.

STATEMENT BY NATIONAL COUNCIL OF JEWISH WOMEN, INC., NEW YORK, N.Y.

The National Council of Jewish Women, an organization established in 1893, and with a membership of over 100,000 in local Sections throughout the United States, has concerned itself with justice for children for a number of decades.

Since its inception, our organization has provided help for children in trouble. In our very first decade Sections provided remedial work in connection with juvenile and other courts. A Council probation officer for Jewish delinquent children was accepted in a Municipal Court in 1906, and by 1911 several other Sections were providing this service. At present an estimated 35 Sections are active in the juvenile justice system. Some are active in social action programs—sponsoring public meetings, testifying on proposed state legislation. Many are providing services—education, tutoring, vocation, recreation—in detention centers and training schools. One Section sponsors three residences for teenage girls who have been in trouble with the law.

In the Spring of 1972, in over 125 communities across the country, members of the National Council of Jewish Women began their year long study of Justice for Children. They have review their local laws, interviewed judges, lawyers, policemen, administrators, social workers, educators, friends and critics of the juvenile justice system. They have visited courts, detention centers, training schools and other institutions and have sponsored forums, debates and public discussions.

On the basis of their research they have recommended the following program of action for the National Council of Jewish Women. The program, endorsed at the NCJW's National Convention, includes children's right, group homes and justice for children coalitions for action.

While detailed tabulation of the study continues, the basic findings which prompted these choices can be summarized as follows:

CHILDREN'S RIGHTS

One of the major problems both in terms of the number of children affected and the harm outweighing the benefits is the area of status offense. The statutes involved are discriminatory and vague. They make it a crime for a child—and only for a child—to be "incorrigible," or "unruly," or "stubborn," or to "habitually idle away his or her time." The crime of truancy is frequently committed by youngsters when their reading ability is four or five years below grade level. We are more likely to jail a runaway child than deal with his intolerable home situation.

In some jurisdictions, we may call these children Pins, Chins, Mins or Jins, instead of delinquents, but we are deceiving no one. We still jail them, give them records, and send them to training schools. Many training school administrators have been quite candid about the children in their care "who really don't belong here." We agree. As one report noted, "It can be said that the biggest help an institution gives a Pins is help in moving upward in the penal system."

Commission after commission has urged that these laws be changed. The President's Commission on Law Enforcement in 1967: "Serious consideration should be given complete elimination from the court's jurisdiction of conduct illegal only for a child . . . We must bluntly ask what our present power achieves and must acknowledge in answer that at the most we do not really know, and in at least some cases we suspect it may do as much harm as good." The White House Conference on Children in 1970: "Children's offenses that would not be crimes if committed by an adult—such as runaway, truancy, curfew violation and incorrigibility—should not be processed through the court system, but diverted to community resources." And most recently the National Advisory Committee on Criminal Justice Standards and Goals in 1973 summarized: The standards prescribe (consistent with other recent national studies) that only those youths who have committed acts that would be criminal if committed by adults should be subject to the delinquency jurisdiction of the courts.

It is time our laws reflected these recommendations.

Preventive detention of children is common with few detainees meeting the criteria of being either potential dangers to the community or possible runaways.

They are frequently held for periods considerably longer than those recommended in any guideline. Three month stays in detention are not unusual. Some children have been held up to two years awaiting placement. Since detention is supposed to be short term the programs provided are minimal, particularly in education. Long stays are truly lost time.

There are still many areas of this country where children are detained in adult jails. Since the jails are usually required by law to separate children from adults, and since jail facilities are limited, this means that a detained child is practically in solitary confinement. We don't believe the solution lies in further construction of large maximum security juvenile detention centers. Most of these communities could do the job with small residential-type facilities and more discriminating detention policies.

The Supreme Court *Gault* decision is commonly understood to have established the child's right to be represented in court by counsel. However, we find that in a number of communities children appear in court without a lawyer. One judge told us that while 75 percent of the children who appeared in his court weren't represented, the figure in surrounding counties was about 10 percent. We find judges suggesting the child waive his right to counsel; some say they provide counsel "if the child asks for it." We doubt that a child is competent to make this decision. Of course, the problem of providing adequate counsel to indigent children is further complicated by the termination of neighborhood OEO legal services programs.

A further matter of concern is the transfer of children from juvenile to adult criminal courts. As we oppose juvenile courts eagerly assuming the responsibilities of schools and parents, so do we oppose those courts which with equal willingness give up what we believe are their appropriate duties.

If a child is removed from his home and community it is theoretically to provide him with a level of care and treatment which he did not otherwise receive, but if he is having problems with the family—the most common crime children commit—the chances are quite good that his training school will be inaccessible to his parents and at least as good that no counseling will be provided the family to pave the way for his return. For older children who are not likely to return to school upon release, vocational training is inadequate. The child with emotional problems will find therapeutic services limited. Despite acknowledged widespread addiction, narcotics programs are rare, although in some instances 20 or 30 percent of the children may be officially on prescribed drugs to make management easier.

Children requiring intensive mental health services have additional difficulties. Hospitals, unaccustomed or unwilling to accept disruptive children turn them back to the correction facility as quickly as possible. Indeed, we feel all procedures which shuttle children back and forth in this manner deserve scrutiny.

Other procedures we have found within the institutional system which concern us include the use of solitary confinement (even if it is called "meditation room" or "intensive treatment unit"), the transfer to more secure facilities without hearings, censorship of mail, etc.

Ombudsmen programs may provide one solution but these are still experimental and their progress should be followed.

As for children's arrest and court records, it seems general practice that they are officially confidential but unofficially accessible. We have been told of their availability to colleges, prospective employers and the armed forces. They are not only subject to local misuse, but to the extent they become part of a national records system, the problem increases. The need for adequate assurance of confidentiality and expungement procedures is clear. Furthermore, police records on juveniles may group serious criminal offenses leading to arrest with minor street encounters leading to no further action. Thus the fact that a child "has a police record" tells us less than it implies. We think safeguards are needed in relation to: what matters merit inscription, what kind of notice parents receive of such inscription, and what opportunity is provided to answer allegations which otherwise may repose for years unchallenged in police files.

GROUP HOMES

The inappropriate use of detention and training school facilities is due not only to the laws but to the alternatives. We have seen children in detention for weeks and months because they had "inadequate homes or no place to go." Police have told us of the need for temporary housing for youngsters having problems at home, "sometimes we have no one else to call except a family they are already in trouble with." An administrator spoke about the girls in one institution. "Some are erroneously placed here because no other facility exists. This includes some whose primary problem is a bad family situation or pregnancy."

The need for group homes, particularly for teenagers, is almost universal. Children whose personal or family problems are at the crisis point are not criminals and should not be deported from their communities. They do not need institutions; they are frequently harmed by institutions. They just need a different place to live for a few days or perhaps a couple of months.

Communities must be helped to understand these children's needs so that they can accept them as "neighbors." The provision of such non-punitive facilities for runaways has been threatened in some areas by opponents who characterized these facilities as "contributing to the delinquency of a minor." Obviously an intensive effort is necessary to provide a receptive climate.

Group home programs should also make appropriate services available to both the children and the families during the period of separation.

JUSTICE FOR CHILDREN COALITIONS FOR ACTION

Obviously both children's rights and group homes require community support and cooperation if they are to be established. There is much that interested and concerned groups working together can accomplish to provide justice for children. Such coalitions could:

Monitor the implementation of existing legislation in their communities and encourage passage of better laws where necessary.

Insure that children have available to them the health, guidance, family counseling, educational and employment services they need.

Coordinate and expand the delivery of these services to provide a prompt and effective alternative to channelling problems into the judicial system.

Few communities provide adequate service systems now. Such services as exist are frequently scattered uncoordinated and understaffed. The problem is being compounded as some federally-financed programs are cut and the battle for revenue sharing funds must be waged if they are to survive.

We have been told in one state "the sad fact is that many of our children in need of social services must actually be arrested before any attempt is made to deal with their needs."

If we care about our children, and if we care about justice, it is time to prove it.

[The following letter was subsequently received from Judge Spears:]

U.S. DISTRICT COURT,
WESTERN DISTRICT OF TEXAS,
San Antonio, Tex., May 29, 1973.

Hon. CLAUDE PEPPER,
Chairman, Select Committee on Crime, House of Representatives, Congress of the United States, Washington, D.C.

DEAR CONGRESSMAN PEPPER: You will recall that I stated during my testimony before the Select Committee on Crime that I thought that the State of Washington had adopted some aspects of the omnibus hearing project.

Enclosed herewith are copies of several pages from the Official Advance Sheets Washington Reports, dated May 11, 1973, which contain Rule 4.5 of the recently adopted Criminal Rules for the Superior Court of the State of Washington.

With best personal regards, I am

Sincerely,

ADRIAN A. SPEARS,
U.S. District Judge.

RULE 4.5—OMNIBUS HEARING

(a) When required. When a plea of not guilty is entered, the court may set a time for an omnibus hearing.

(b) Time. The time set for the omnibus hearing shall allow sufficient time for counsel to (i) initiate and complete discovery; (ii) conduct further investigation of the case, as needed; and (iii) continue plea discussions.

(c) Checklist. At the omnibus hearing, the trial court on its own initiative, utilizing a checklist substantially in the form of the omnibus application by plaintiff and defendant (see section (h)) shall:

(i) ensure that standards regarding provision of counsel have been complied with;

(ii) ascertain whether the parties have completed discovery and, if not, make orders appropriate to expedite completion;

(iii) make rulings on any motions, other requests then pending, and ascertain whether and additional motions, or requests will be made at the hearing or continued portions thereof;

(iv) ascertain whether there are any procedural or constitutional issues which should be considered;

(v) upon agreement of counsel, or upon finding that the trial is likely to be protracted or otherwise unusually complicated, set a time for a pretrial conference; and

(vi) permit defendant to change his plea.

(d) Motions. All motions and other requests prior to trial should ordinarily be reserved for and presented orally at the omnibus hearing unless the court otherwise directs. Failure to raise or give notice at the hearing of any error or issue of which the party concerned has knowledge may constitute waiver of such error or issue. Checklist forms substantially like the memorandum required by section (h) shall be made available by the court and utilized at the hearing to ensure that all requests, errors and issues are then considered.

(e) Continuance. Any and all issues should be raised either by counsel or by the court without prior notice, and if appropriate, informally disposed of. If additional discovery, investigation or preparation, or evidentiary hearing, or formal presentation is necessary for a fair and orderly determination of any issue, the omnibus hearing should be continued from time to time until all matters raised are properly disposed of.

(f) Record. A verbatim record (electronic, mechanical or otherwise) shall be made of all proceedings at the hearing.

(g) Stipulations. Stipulations by any party shall be binding upon that party at trial unless set aside or modified by the court in the interests of justice.

(h) Memorandum. At the conclusion of the hearing, a summary memorandum shall be made indicating disclosure made, rulings and orders of the court, stipulations, and any other matters determined or pending. Such summary memorandum shall be in substantially the following form:

Copy received and date filed by clerk:

Superior Court of Washington for_____County, State of Washington, Plaintiff, versus _____, Defendant.

No. _____, Omnibus application by plaintiff and defendant.

Date:

Notice to:

Purpose: To prepare for trial or plea and to determine the extent of discovery to be granted to each party.

I

MOTION BY DEFENDANT

Comes now the defendant and makes the applications or motions checked off below:

1. To dismiss for failure of the indictment (of information) to state an offense. Granted_____Denied_____.

2. To sever defendant's case and for separate trial.

3. To sever counts and for a separate trial.

4. To make more definite and certain.

5. For discovery of all oral, written or recorded statements made by defendant to investigating officers or to third parties and in the possession of the plaintiff.

6. For discovery of the names and addresses of plaintiff's witnesses and their statements.

7. To inspect physical or documentary evidence in plaintiff's possession.

8. To suppress physical evidence in plaintiff's possession because of (1) illegal search, (2) illegal arrest. Hearing set for _____.

9. For a hearing under Rule 3.5.

10. To suppress evidence of the identification of the defendant.

11. To take the deposition of witnesses.

12. To secure the appearance of a witness at trial or hearing.

13. To inquire into the conditions of pretrial release. Affirmed _____ Modified to_____.

To Require the Prosecution

14. To state—
(a) If there was an informer involved;
(b) Whether he will be called as a witness at the trial; and,
(c) To state the name and address of the informer or claim the privilege.
15. To disclose evidence in plaintiff's possession, favorable to defendant on the issue of guilt.
16. To disclose whether it will rely on prior acts or convictions of a similar nature for proof of knowledge or intent.
17. To advise whether any expert witness will be called, and if so supply—
(a) Name of witness, qualifications and subject of testimony;
(b) Report.
18. To supply any reports or tests of physical or mental examinations in the control of the prosecution.
19. To supply any reports of scientific tests, experiments, or comparisons and other reports to experts in the control of the prosecution, pertaining to this case.
20. To permit inspection and copying of any books, papers, documents, photographs or tangible objects which the prosecution—
(a) Obtained from or belonging to the defendant, or
(b) Which will be used at the hearing or trial.
21. To supply any information known concerning a prior conviction of persons whom the prosecution intends to call as witnesses at the hearing or trial.
22. To inform the defendant of any information he has indicating entrapment of the defendant.

Attorney for Defendant

II

Motion By Plaintiff

The plaintiff makes the application or motions checked:
1. Defendant to state the general nature of his defense.
2. Defendant to state whether or not he will rely on an alibi and, if so, to furnish a list of his alibi witnesses and their addresses. Granted ----------Denied----------.
3. Defendant to state whether or not he will rely on a defense of insanity at the time of the offense.
(a) If so, defendant to supply the name(s) of his witness(es) on the issue, both lay and professional.
(b) If so, defendant to permit the prosecution to inspect and copy all medical reports under his control or the control of his attorney.
(c) Defendant will also state whether or not he will submit to a psychiatric examination by a doctor selected by the prosecution.
4. Defendant to furnish results of scientific tests, experiments or comparisons and the names of persons who conducted the tests.
5. Defendant to appear in a lineup.
6. Defendant to speak for voice identification by witnesses.
7. Defendant to be fingerprinted.
8. Defendant to pose for photographs (not involving a reenactment of the crime).
9. Defendant to try on articles of clothing.
10. Defendant to permit taking of specimens of material under fingernails.
11. Defendant to permit taking samples of blood, hair and other materials of his body which involve no unreasonable intrusion thereof.
12. Defendant to provide samples of his handwriting.
13. Defendant to submit to a physical external inspection of his body.
14. Defendant to state whether there is any claim of incompetency to stand trial.
15. For discovery of the names and addresses of defendant's witnesses and their statements.
16. To inspect physical or documentary evidence in defendant's possession.
17. To take the deposition(s) of witness(es).
18. To secure the appearance of a witness at trial or hearing.

19. Defendant to state whether his prior convictions will be stipulated or need be proved.

20. Defendant to state whether he will stipulate to the continuous chain of custody of evidence from acquisition to trial.

RULE 4.6—DEPOSITIONS

(a) When Taken. Upon a showing that a prospective witness may be unable to attend or prevented from attending a trial or hearing or if a witness refuses to discuss the case with either counsel and that his testimony is material and that it is necessary to take his deposition in order to prevent a failure of justice the court at any time after the filing of an indictment or information may upon motion of a party and notice to the parties order that his his testimony be taken by deposition and that any designated books, papers, documents or tangible objects, not privileged, be produced at the same time and place.

(b) Notice of Taking. The party at whose instance a deposition is to be taken shall give to every other party reasonable written notice of the time and place for taking the deposition. The notice shall state the name and address of each person to be examined. On motion of a party upon whom the notice is served, the court for cause showing may extend or shorten the time and may change the place of taking.

(c) How Taken. A deposition shall be taken in the manner provided in civil actions. No deposition shall be used in

---

Chairman PEPPER. The Congress has sought through its omnibus crime control legislation to encourage the States to approach the problems of crime control on a comprehensive basis. Our hearings, particularly these hearings on the various aspects of street crime, have emphasized the need for an overall approach to the criminal justice system.

I am pleased, therefore, that the Governor of my own State, the Honorable Reubin O'D. Askew, has adopted this approach and has recommended to the 1973 Florida Legislature a comprehensive program for reform and improvement of the criminal justice system of the State. I believe his message would be of interest in other States and I request that it be included in these hearings.

[The message referred to follows:]

"There is much of which to be proud. But much more remains to be done..."

Governor
Reubin O'D. Askew

Special Message on Criminal Justice
to the Florida Legislature, April 16, 1973.

Governor's Supplementary Message on Florida's Criminal Justice System

The Constitution of Florida reposes in the office of Governor a profound public trust. It invests the office with broad powers and charges the holder with solemn duties. I am not unmindful of the great privilege which is mine to hold—in passing, as it were—at the sufferance of the electorate of this great state. Neither am I unmindful of the singular and correlative duty imposed upon me as the Chief Magistrate of this State "to take care that the laws be faithfully executed." But, as I am sure you will agree, this executive duty was not cast nor does it now exist in the solitude of a constitutional vacuum.

To the contrary, it is a duty to the citizens of Florida which cannot possibly be fulfilled without the cooperation and assistance of the Legislative and Judicial Branches; without the aid and advice of my colleagues in the Executive Branch, most notably, the Cabinet; without the untiring service of thousands of dedicated governmental officers and employees; and finally without the interest and support of the citizens themselves.

With these thoughts in mind, I take this opportunity to share with you my views regarding the deficiencies which beset Florida's criminal justice system and my recommendations of the means to improve the system to the end that our laws may be more faithfully executed and the lofty goals of our forefathers may be fully realized.

SPECIAL MESSAGE ON CRIMINAL JUSTICE

In the area of criminal justice over the past few years, we have met new challenges and achieved significant results. There is much of which to be proud. But much more remains to be done if we are to have a system of criminal justice that is not only effective but also just, and not only concerned about statistical accomplishments but also committed to upholding the dignity of persons it serves.

During this session, the Legislature has a unique opportunity to address problems that for too long have gone untreated and to continue the reform which you have initiated in the recent past.

A source of gratification to all is the report of crime trends in Florida which is soon to be released by the Florida Department of Law Enforcement. The report will show an appreciable *downturn* of 5.3% in the rate of violent and property crimes in Florida. Along with this improvement, we can also take comfort in knowing that last year the percentage of crimes cleared by arrest *increased* by over 9% in Florida. For

this accomplishment we owe tribute to the hundreds of dedicated law enforcement officers who serve throughout our State.

While these statistics are encouraging, the absolute number of crimes is still intolerable. The cost of crime in dollar and human terms is far too much for the health of Florida. Last year, for example, victims of property crimes in Florida suffered more than $77 million in unrecovered property losses. More than 900 persons were murdered, and thousands of Florida residents were permanently traumatized as victims of rape, robbery, aggravated assaults, and other serious crimes.

Drug abuse continues to be a serious problem in our state. Arrests for sale of narcotics and dangerous drugs increased by more than 26% in 1972 over the previous year, while arrests for possession increased by more than 53%. We must continue and improve our treatment, rehabilitative and enforcement programs in this area.

To provide agencies in these areas and others in the criminal justice system with the necessary resources, I have proposed in my recommended budget for fiscal year 1973-1974 an overall *increase* of more than 25% in appropriations for criminal justice operations. By function, the recommended budget calls for more than a 53% increase in appropriations for programs dealing with the actual reduction of criminal activity, a 27% increase for programs dealing with the prosecution and defense and nearly a 23% increase for institutional and community-based rehabilitation programs.

We cannot succeed in our efforts to control crime and improve our system of criminal justice if adequate resources are not provided. For that reason I urge you to approve the recommended budget which I have submitted.

In addition to providing adequate resources, we must also review the adequacy of our laws and make changes where circumstances warrant. Only through such a comprehensive approach will we improve our chances of successfully meeting the changing challenge of crime in Florida.

ORGANIZED CRIME

Organized crime is a disease that feeds on the weakness of man. It affects each one of us in many direct and indirect ways.

By its illegal gambling operations it earns millions of dollars which serve as the "seed money" for its other illicit activities. Estimates of organized crime revenue from gambling are staggering. In 1967 the President's Crime Commission es-

timated that illegal gambling nationwide provides organized crime with between $7 billion and $50 billion in gross annual proceeds. If we assume that *$7 billion*, as the low figure in that range, is a realistic estimate of organized crime's gross "take" from gambling, we are saying the organized crime has gambling revenues amounting to more than $800 thousand *every hour of every day*. It is not unreasonable to assume that organized crime revenue from illegal gambling in Florida amounts to at least one-fiftieth of those national figures—or a gross annual revenue from illegal gambling in Florida of $140,000,000. Because Florida is the ninth largest state, it is likely that this gross figure may be greater.

While gambling may be organized crime's major source of income, it is by no means the sole source. Organized criminal rings, some of which operate with the support of hard core organized crime groups, are responsible for a large part of the drug importation and distribution activities in the nation and in Florida. From this enterprise it is estimated that hundreds of millions of dollars are generated for the coffers of organized crime.

But the financial consequences to our society from this vicious racket pale by comparison to the human consequences. While we should be disturbed by the large sums of money which organized crime derives from its drug importations, we must not lose sight of the incalculable harm caused to society by the ravages of drug abuse and its consequences. These consequences include shattered lives and dreams of thousands of families and billions of dollars in property crimes committed by addicts who must feed their expensive habits on a daily basis. The addict generally does not meet that expense from legitimate means but resorts instead to theft, and here again organized crime serves as a willing partner by providing fencing outlets for the conversion of stolen property into cash for the purchase of drugs.

Loansharking—the lending of money at criminally usurious rates—is another of the lucrative illegal activities of organized crime which affects each of us. The loanshark preys on the poor and rich alike, and the consequences of his activities cause ripples and waves throughout our economy. The loanshark victim, upon failure to repay, may lose his business to the loanshark or be forced into the crime of embezzlement out of fear of the retribution he knows may be inflicted. Once in control of a captured business, a loanshark may fleece the concern of its assets and subsequently take refuge under our bankruptcy laws. Nationwide, the loanshark racket is estimated to generate at least $300 million annually to organized crime, and again it is not unreasonable to assume that at least one-fiftieth of that amount is derived in Florida.

These illegal activities of organized crime not only provide millions of dollars in untaxed profits, but also establish avenues toward "respectability" for the racketeer element by enabling the infiltration of legitimate business through outright purchase. Few if any types of business are immune to these incursions. A study by the Internal Revenue Service a few years ago revealed that of 113 publicly identified racketeers investigated, 98 of them had control of or a significant interest in 159 different enterprises. There is strong evidence to indicate that organized crime infiltration of legitimate business in Florida is a problem of growing magnitude.

But of all the consequences of organized crime the most devestating is the official corruption it causes. The late J. Edgar Hoover accurately stated that "organized crime cannot exist in a community without the protection of corrupt officials and the blessings of an apathetic public whose sense of morals has been dulled to blindness." No effort to deal with organized crime can be complete without a concomitant program to assure integrity in government.

STATEWIDE GRAND JURY

Much more can be said about organized crime than is contained in this short listing of abuses it inflicts on the people of Florida. It is sufficient to say that a highly sophisticated, diversified and widespread force operates in our state today. Loud voices and good intentions will not eliminate it. Only carefully conceived, sound, and well-executed plans will. The burden of finding solutions is on those of us who have been elected to lead.

Having evaluated the status of our effort against organized crime, I have concluded that more than anything else our evidence-gathering process is in need of improvement. While, in most respects, our substantive laws may be adequate in their coverage of illegal activities of organized crime, the laws are not self-executing. As you know, I have recommended a statewide grand jury which would provide us with an effective evidence-gathering tool and immeasurably improve our ability to detect organized criminal activity and indict members of organized crime.

The activities and consequences of organized crime are matters of statewide significance and concern. County and circuit boundaries are not respected by an organized crime group which conducts bookmaking or other gambling operations with selling, collection and "lay-off" contacts in many counties; or by a drug ring which imports narcotics in one county, processes them in another, sells them in a third and maintains its head-

quarters in a fourth; or by an organized criminal group which receives from another state the proceeds of an illegal operation and invests those funds in a number of our counties in attempts to "launder" the money and provide "legitimate" fronts for illegitimate operations.

Consequently, we need a mechanism that is able to investigate these activities on a statewide basis since they unquestionably have state wide impact.

When one considers that our 67 counties range in size from the smallest, with 301 square miles, to the largest, with 2,578 square miles, and range in population from approximately 3,000 residents to nearly 1.3 million, it becomes clearer that the single county approach to dealing with multicounty criminal activity is inadequate.

The proposed bill establishing the statewide grand jury not only has great promise of achieving significant results, but also contains numerous checks, balances and safeguards against abuse and manipulation. In fact, the statewide grand jury I propose has added safeguards which are not contained in either the Federal law which authorizes special grand juries or in the laws of other states which have statewide grand juries.

We have been cautious in drafting the proposed bill to prevent vulnerability to manipulation and abuse, and have created what some might call a "cumbersome" mechanism.

Two of our sister states—Colorado and New Jersey—have instituted statewide grand juries within the past few years. In each state the results have been salutary and the evaluation positive. For example, since 1968 when a statewide grand jury system was established in New Jersey, that state has empaneled nine statewide grand juries. As of May, 1972, the New Jersey statewide grand jury had returned 204 indictments resulting in 110 convictions. In the first two months of this year an additional 14 indictments have been returned. The types of multijurisdictional offenses covered by the indictments include gambling, large scale narcotics operations, extortion, loansharking and bribery.

The experience of these states clearly underscores the fact that as an institution for gathering evidence in organized crime investigations a grand jury is without counterpart. But to be truly effective in such cases a grand jury must have a geographic jurisdiction which is capable of adequately exploring multicounty activities of organized crime. Currently, our law only authorizes grand juries with jurisdiction to inquire into offenses which are triable within the boundaries of a county. Under certain circumstances a grand jury may be moved from

the county where the triable offense allegedly occurred. In an organized crime operation covering a number of counties and judicial circuits, separate grand juries must be empaneled in each of the counties where offenses are committed.

A dramatic example of how this situation can cause a serious hindrance to the enforcement of state laws is presented by the recent case involving key figures in a Central Florida based gambling conspiracy. After extensive investigation by Florida law enforcement and prosecutive agencies in Central Florida, it was a Federal grand jury and not a Florida grand jury which returned indictments. One of the basic reasons for this was that a Federal grand jury had the geographic scope to investigate into the entire matter and to return indictments irrespective of the county or circuit where offenses were committed. Despite the expenditure of thousands of dollars and hundreds of man-hours by state agencies in developing this significant organized crime gambling case, the state deferred to the Federal Government for purposes of prosecution of Federal crimes due, in large measure to our fragmented and patchwork grand jury structure.

Inter-governmental cooperation as evidenced in this case and others should be applauded. At the same time, however, we must bear in mind that Federal prosecutive and investigative priorities may not coincide with those of our state. Matters investigated and developed by Florida agencies and referred to Federal grand juries often may stand in line while Fedral agencies accomplish their primary mission—the enforcement of Federal laws. We have a legitimate interest in assuring that state laws are enforced and the only way to assure that is to have a self-sufficient capability.

What does it profit us to have law proscribing certain conduct and setting penalties for violation if our investigative and prosecutive mechanisms are not equipped to effectively enforce them? There should be no need for our state to forego prosecutions for reasons that are well within the power of the Legislature to correct.

Under the bill I shall propose, a statewide grand jury could be empaneled only with approval by the Supreme Court upon a petition filed by the Governor seeking such empaneling and setting forth good and sufficient reasons for the empanelment.

The term of the grand jury would be delineated by the Supreme Court for a period of up to twelve months, subject to extension for up to six months by the Supreme Court upon petition by a majority of the grand jurors or by the grand jury's legal advisor.

The statewide grand jury would have geographic jurisdiction extending throughout the state. Its subject matter jurisdiction would be limited to the investigation of organized crime which is defined in the bill as "matters involving incidents which occur or have occurred in two or more counties as part of related transactions."

An indictment returned by the statewide grand jury would be certified for trial in the county where the offense was committed, thus safeguarding the defendant's constitutionally guaranteed right of venue. To preserve the independence of the grand jury, the bill provides that the foreman and deputy foreman shall be elected by the grand jurors themselves.

The legal advisor to the statewide grand jury would be a state attorney designated by the Governor, subject to the approval of the Supreme Court.

The statewide grand jury would be composed of eligible potential jurors randomly drawn on a population basis from certified jury lists of the several counties. To assure that the grand jury is composed of a cross-sampling of residents from different parts of the state, the bill restricts to one-quarter of the entire composition the number of grand jurors who may residents of any one judicial circuit.

Under this bill, judicial supervision of the statewide grand jury would be exercised by a judge of the circuit court assigned for that purpose by the Chief Justice of the Supreme Court.

All of these are important safeguards which will effectively guarantee that the statewide grand jury will properly be used, and in addition, serve as a symbol of our State's tough posture against organized crime.

The statewide grand jury would not expand the substantive powers now reposed in county grand juries. Rather it would merely have an expanded geographical jurisdiction and be limited to inquiry into organized crime matters which are not confined to a single county.

It would be a valuable mechanism in dealing with complex and lengthy investigations requiring the undivided attention of the statewide grand jury. It would be a valuable tool in combating organized crime which respects no county boundaries. It would be an important vehicle for dealing with organized crime activities of statewide impact and concern.

The severity of the organized crime problem requires and the people of Florida deserve no less than the realistic approach embodied in this proposal. I urge you to enact, at this session, legislation creating the statewide grand jury described above.

COUNTY GRAND JURY

Creation of a statewide grand jury does not obviate the need to improve our law dealing with county grand juries. In most respects, Chapter 905 of the Florida Statutes which deals with county grand juries has not been revised since 1939. During the intervening thirty-four years, the complexity of crime has increased and the complexion of our criminal justice system has drastically changed.

In keeping with the spirit of criminal code revision, I believe that we should take this opportunity to streamline and clarify Chapter 905 along the lines that I shall set forth in a proposed bill.

IMMUNITY

In complex and wide-ranging investigations, few evidence-gathering tools are as effective as the grant to a witness of immunity from prosecution in exchange for testimony initially refused on the basis of the privilege against self-incrimination. As a tool of evidence-gathering, immunity dates back to 18th Century England. It is founded on the premise that the privilege against self-incrimination, as the well-known expert on evidence, Dean Wigmore, noted, is "merely an option of refusal not a prohibition of inquiry."

Particularly in complex investigations, notably those involving organized crime, a "wall of silence" is created by key potential witnesses. The wall is constructed of two materials. First is the internal discipline of organized criminal groups which make their members well aware of the fate that awaits them if they testify. Second is the privilege against self-incrimination. What many jurisdictions, including the Federal Government, have recognized is that the wall of silence can be penetrated by affording adequate protection to witnesses and by enacting laws which guarantee, by the provisions of immunity statutes, that testimony compelled will not be used against the witness in a criminal proceeding.

Florida now has what is known as a "transactional" immunity statute which cloaks a witness with an absolute insulation from prosecution for any transaction or matter about which he has testified. This immunity from prosecution has been construed to be applicable even if law enforcement investigation subsequently uncovers totally independent and unrelated evidence of the witness' complicity in the offense about which he was compelled to testify, and even if the witness's statement is not used against him.

95-158 O - 73 - pt. 3 -- 25

The problem with transactional immunity has been that if it is applied erroneously or without knowledge of the witnesses' offenses in other jurisdictions, it can seriously impede effective law enforcement and prosecution.

To improve the evidence-gathering capabilities of our State Attorneys, to assure that grants of immunity are made with full knowledge of a witness' background and possible violations in other circuits, and to safeguard the privilege against self-incrimination, I shall propose that you enact a measure that will continue the granting of transactional immunity by State Attorneys, but only after prior approval is obtained from the Governor, as the Chief Magistrate of the State under the Constitution. The Office of Governor would serve primarily as a "clearinghouse" for the necessary information to insure that blankets of immunity are not used to thwart other jurisdictional interests in the defendant.

CRIMINAL CODE REVISION

One of the most far-reaching opportunities before this Legislature is the opportunity to modernize our body of substantive criminal law. We are now in the third phase of Criminal Code Revision. We have already seen the adoption of new rules of criminal procedure by the Florida Supreme Court, and the Legislature recently made great progress in enacting uniform penalties for substantive crimes and in repealing some needless criminal statutes. I commend the Supreme Court and the 1971 Legislature for those great strides. But the major task in Code Revision is still ahead—the revision of Title 44, the Florida Criminal Code.

In recent years, there has been a nationwide, state-by-state effort to modernize the criminal law. According to the latest statistics compiled by the American Law Institute, 18 states have modernized their criminal laws. Delaware, Pennsylvania, North Dakota and Utah have acted within the past year. Sixteen other states, including Florida, have revised criminal code proposals yet to be enacted. Eight states have criminal code projects well under way. In addition, Congress is presently considering two proposals for the revision of Title 18, U. S. Code, the Federal Criminal Code.

In Florida, we have criminal offenses spread throughout the Florida Statutes. Title 44 abounds with inconsistencies and useless anachronisms. It is a conglomerate of separate statutes that are top-heavy with archaic references and short on effectiveness. If one would take time to examine the legislative history of many of the present provisions of Title 44, he would

find that most of these provisions were drafted in 1868, and only minor changes have been made since. It seems almost unbelievable that in 105 years, Florida has never mounted a full-scale revision of these statutes. We have the opportunity now to re-establish the credibility of the criminal justice system by adopting a modern criminal code tailored to the challenges of the 1970's.

There are some criminal statutes which may be outdated, not because society condones the moral conduct proscribed, but because experience has taught us that such laws are selectively enforced and many times too expensive to administer. Some of these statutes, moveover, constitute an unjustified burden on the criminal justice system itself. They crowd police blotters and clog court dockets. I am referring to the what have been called "victimless crimes."

In dealing with the "victimless crime" issue, the essential question is whether society has a prevailing interest such as would justify the continued imposition of *criminal* sanctions. Care should be taken to distinguish between crimes which are clearly without a victim and those in which the family or society itself is the victim. I believe that Florida should continue to strengthen its laws prohibiting gambling and prostitution, especially in the case of those who promote such activities as an illicit business. I believe that Florida should strengthen its laws prohibiting sex crimes, particularly those which involve the youth. Sexual offenses committed by force upon children should be subject to severe penalties.

There are certain improvements in the law contained in the "Third Tentative Draft" of the Criminal Code Revision which deserve special mention. For example, the chapter dealing with child abuse and neglect of dependents substantially broadens and strengthens our coverage of this area. The proposed chapter on bribery, corrupt influence and abuse of office sets a new standard in the area of official misconduct which is greatly needed. This coupled with changes previously recommended will improve our entire system of government. The provisions relating to obstruction of justice will effectively aid better law enforcement and give us the tools to combat those who would impede the orderly administration of justice.

Over the years there has been a proliferation of penal statutes because every minor offense, or violation of an administrative statute has been classed as a second degree misdemeanor. Decriminalization of such statutes by providing for a fine, forfeiture, or other adequate civil remedy would effectively relieve the criminal justice system of a huge, unnecessary, and expensive burden, and result in a more effective disposition and thus

serve as a more effective deterrent. The Myers Act is an excellent beginning.

An essential goal of Code Revision is to eliminate provisions which do not clearly prescribe criminal conduct. Criminal statutes should be in *plain language;* they should be written so that everyone can understand them. At a time when societal restraints are increasingly complex, so much so that citizens and law enforcement officials alike have great difficulty in correctly interpreting the requirements of law so as to conform their conduct to "acceptable standards," this Legislature could perform a great service by spelling out the basic standards of our state in clear terms.

Among other things, Criminal Code Revision has recommended an overhaul of statutes relating to bribery, corrupt practices, and official misconduct. I recommend this effort. One of the single most important, and yet one of the most fragile, assets that a government can have is the trust of the people it serves. Nothing can shatter that trust as quickly and thoroughly as corruption in public office. We should strengthen these laws.

To make equal the standards applicable to the average person and to the public official, I urge you to enact a bribery and corrupt practices act which is stronger than the one that is presently under consideration by the Code Revision Committees.

The bill which I will propose is modeled in part on the excellent beginning made in Criminal Code Revision, but it borrows from the landmark law enacted by the State of West Virginia in 1970.

The measure I propose would:

(1) expand the coverage of the bribery statute to include principal political party officials;

(2) clarify the definitions of "bribery;"

(3) include threats and retaliation in official and political matters under its terms; and

(4) make it unlawful for a public servant to solicit or accept a reward or compensation for past behavior.

For these reasons, it is imperative that decisive action be taken this year to modernize our criminal code. The piece-meal approach to reform of years past is no longer adequate. The Criminal Justice Committees, chaired by Senator Richard Pettigrew and Representative Jack Shreve are to be commended for their extremely valuable work towards this goal.

FLORIDA LAW ENFORCEMENT ACADEMY

I urge this Legislature to establish a law enforcement academy program to upgrade the capabilities of law enforcement personnel throughout our state.

A national standard recommended by the National Commission on Criminal Justice Standards and Goals underscores the importance of training and education of law enforcement officers:

> "Every state should, by 1978, guarantee the availability of state approved police training to every sworn police employee. Every state should encourage local, cooperative, or regional police training programs to satisfy state training requirements, and, when these cannot satisfy the requirements, criminal justice training centers including police training academies should be established by the state."

The State of Florida cannot, in my judgment, wait until 1978 to provide our law enforcement officers with adequate training.

J. Edgar Hoover, who repeatedly stressed the need for improved police training, said, "The efficiency of law enforcement today is commensurate with the degree of training of its officers. Only through modern police training can we keep abreast of the times in the unceasing fight against lawlessness."

The proposed Law Enforcement Academy will have two basic functions: (1) a field instruction program, and (2) a resident instruction program.

The field instruction staff program will assist local law enforcement agencies by providing a pool of instructional support for local recruit and specialized training. This field training will complement the efforts of local criminal justice institutes and academies. It will not supplant those efforts. Basic recruit and advanced training programs will continue to be held at the local level for city and county agencies.

The resident instruction program will provide basic recruit training for all state law enforcement agencies, except the Florida Highway Patrol. Moreover, specialized training will be available to all law enforcement agencies in the State.

Cities and counties have gone to great expense and effort to establish local training facilities and programs in coordination with the Florida Police Standards Board. The pro-

posed programs of the Florida Law Enforcement Academy will complement those efforts and capitalize on their experience. Significantly, the Academy will consolidate and improve the state's training capabilities for state law enforcement agencies such as the Florida Highway Patrol, Marine Patrol, Beverage Division, Game and Fish Commission, Florida Department of Law Enforcement, and State Attorney investigators.

Florida is not alone in this approach. According to a 1972 report of the International Association of Chiefs of Police, thirty-four state law enforcement departments have state training facilities which train state and local officers.

In accordance with the certification program of the Police Standards Board, the Florida Law Enforcement Academy will help fill many gaps in our present approach to law enforcement training. It will make available to the state and local agencies: an expert, full-time instructional staff, a resident facility for specialized training and research, a mobile training capability, a staff to support local programs, and a vehicle which will foster standardization and quality control in the state's law enforcement training efforts.

We recognize that the Academy, as with most innovative proposals, has been a cause of controversy. But in its present form, there appears to be significant support for its immediate implementation. The Executive Board of the Florida Police Chiefs Association voted unanimously in favor of the proposed Law Enforcement Academy. The Florida Sheriffs Association in executive session voted in favor of the proposed academy. A recent survey conducted by the Florida Department of Law Enforcement of all sheriffs and police departments in the state indicated that 90% of those departments support a law enforcement academy program which would be staffed and equipped to prove specialized "skills training" for all law enforcement officers.

Because law enforcement effectiveness hinges greatly on training and ability, to send a law enforcement officer forth without providing him with the expert knowledge and skills needed constitutes disservice to the public and to the officer himself.

I urge this Legislature to appropriate the necessary funds, as outlined in my budget recommendations, to implement the proposed Florida Law Enforcement Academy program.

HANDGUN CONTROL

The use of handguns in the commission of crime has become a problem of such magnitude that it can no longer be ignored.

While we must consider the individual's right to bear arms, we must also consider the rights of victims against whom these arms are all too frequently used.

In 1971, 51% of all homicides committed in the United States involved the use of handguns. During the same period in Florida, handguns played the major role in 54.6% of all homicides. This percentage of occurrence has risen to 58.1% during the 1972 reporting year. Significantly, the percentage of times handguns used in the commission of robbery, aggravated assault, assault on police officers and the killing of police officers in Florida is equal to, or higher than, the national averages for those crimes.

In addition, so called "Saturday Night Specials" are readily available for purchase and immediate use in Florida for prices ranging from $12 to $20, which in many cases includes the cost of ammunition.

Since the shooting of Governor George Wallace and Senator John Stennis, many have felt the need to do something about attempts on the lives of public figures, not to mention the 20,000 less publicized shooting deaths in the United States each year including more than 900 in Florida last year. The National Commission on the Causes and Prevention of Violence estimated that, as of 1968, there were 35 million rifles, 24 million handguns and 31 million shotguns in civilian hands. These weapons were used to commit 65% of all murders and more than 100,000 robberies annually. Moreover, guns are a common cause of accidental deaths and a favorite weapon in suicides.

In 1971, a million shortbarreled handguns were made in America, similar to the ones that were used to kill Senator Robert Kennedy and shoot Governor Wallace, and over 4,000 other citizens. Many of these weapons were fabricated from foreign parts. The Federal Gun Control Act of 1968, enacted in response to the murders of Senator Kennedy and Dr. Martin Luther King, Jr., banned the importation of handguns. As a result, parts are now imported for assembly in our country.

More people have died of civilian gunfire since the year 1900 (800,000) than in all wars since and including the American Revolution. Since 1835, there have been 41 documented assassination attempts against Presidents, governors, senators and representatives. All too many of these attempts have been successful.

While some form of handgun control is needed, a security measure that would protect persons and property from all harm is unattainable. The truth of that is conceded by The National Commission on Violence: "[I]t is difficult to prevent a determined assassin from killing, particularly when a men-

tally or emotionally distraught person acts alone to avenge some real or imagined wrong."

Accordingly, it has not been seriously proposed that the estimated 90-million firearms in private possession be confiscated. Certainly that is not a responsible position, but one nevertheless which is the apparent fear of the National Rifle Association which opposes any legislation as a step in that direction. The 1968 Gun Control Act banned interstate mail order sales, provided for the recording of purchases so as to trace owners and to limit imports. The Gun Control Act did not prevent Arthur Bremer from legally purchasing a snub-nosed revolver even though he had been arrested previously for carrying a concealed weapon. Last year the United States Senate passed a bill that would restrict sale of easily concealable small handguns to police agencies, the military and to those with lawful sporting purposes.

Our efforts in Florida are now in need of repair. In March of this year, Florida's "Saturday Night Special" law was declared unconstitutional by the Florida Supreme Court. The effect is that the unregulated importation of weapons parts from foreign sources for assembly, distribution and sale in our state is now permitted. We are without an enforceable law to control cheap handguns.

FBI Director J. Edgar Hoover said, "[W]e must eliminate 'Saturday-night specials' if we are to reduce the incidents of homicide". A carefully drafted statute in this area is needed. Additionally, I strongly recommend the enactment of legislation requiring a "cooling off period" between the time of purchase and the time of possession by the buyer.

CONCERN FOR VICTIMS

This year, more than ever before, government has become increasingly aware of the plight of those who are victims of serious crime. I share this concern. According to the President's Crime Commission Report, one of the most neglected subjects in the study of crime is its victims; it is the individual, his household and his business that bear the brunt of crime in the United States.

The United States Senate recently passed a bill which would provide monetary compensation to victims of certain serious crimes. The Florida Legislature will also be considering legislation for victim compensation. Although I have some philosophical reservations regarding the concept of victim compensation, I recommend that a meaningful effort—perhaps a pilot effort—be initiated this year.

PORNOGRAPHY

The rights of free speech and expression are cherished liberties guaranteed by the United States and Florida Constitutions. These cherished liberties must not be compromised. Our efforts to curtail the distribution of hard-core pornography are premised on the generally accepted fact that those rights are not absolute. And as we can be sanctioned for yelling "fire" in a crowded theatre, so may we be proscribed from conduct that could reasonably be expected to result in an increased threat to the personal safety on citizens and well-being of society.

Many Floridians have expressed indignation at the pandering of obscene materials in our State. The availability of hard-core pornography has increased drastically. Lurid advertisements and announcements daily assault the sensibilities of Floridians, young and old. Some drive-in theatres are exhibiting obscene movies in view of surrounding residents or passing motorists.

The primary reason for this proliferation is that Florida has no enforceable statute to control the distribution and sale of hard-core pornography. Enforcement of Florida's present statute has been stayed by the Supreme Court until its constitutionality is determined. When the Supreme Court will act is unclear. The case has been on appeal for almost three years. Meanwhile, Florida has been helpless against the deluge of pornography which has been openly and aggressively pandered in our state.

To stop this deluge, the Legislature should enact legislation that will give our law enforcement officers an effective tool against those who promote, distribute, and pander obscene matter. Such legislation would be a futile gesture, however, without some assurance that it would pass constitutional muster. Careful analysis should be made, therefore, to determine the constitutionally permissible latitude in this area of the law so that cherished constitutional rights are not abridged.

I will propose legislation that would effectively curtail the dissemination of hard-core pornography. It would be supplemental to the statutes now under court challenge. The major thrust of this legislation is aimed at those who promote obscene material. Carefully drawn definitions from other successful state statutes, such as those of Georgia, have been included.

The proposed legislation consists of three bills.

(1) A criminal statute enforceable against wholesalers, distributors, retailers, promoters, and manufacturers.

(2) A civil statute enabling a citizen to obtain injunctive relief or civil compensatory damages.

(3) A statute by which a prior adversary hearing would be held if it is finally determined that such a hearing is a constitutional requirement.

This program is designed to include a comprehensive, but enforceable criminal statute consistent with the Constitutions that will be an effective tool against the hard-core pornography in Florida. Under these proposals, the private citizen would be authorized to initiate civil action (either by injunction or by a suit for damages). In this way, each citizen would be able to assist in the control of obscene material in their own community.

BAIL REFORM

The present system of "money bail" in Florida discriminates against the indigent and poor.

The bail system is intended to assure an individual's attendance at trial, but the manner in which it is administered does not take into account the pertinent social, family or character traits which may indicate the probability of a person's appearance at trail. The present system simply measures one's ability to pay without regard to the potential threat to society which may be presented when the accused is returned to the streets, to his home or his job.

It is estimated by the Florida Department of Administration, from recent studies on bail and detention, that in 1971 at least 48% of the accused who were charged with bailable felonies and 20% of those charged with misdemeanors could *not* post the required money bail. This resulted in the pretrial incarceration in 1971 of approximately 38,255 persons in Florida jails at an average cost of $4.04 per day, per person.

The cost is staggering. The utility of the system in its present form is questionable, at best. Although it is not known how many of these persons were incarcerated on any given day, it is evident that substantial savings could result from changes in the system. This, of course, does not take into account the dollar cost to the public for welfare support to assist the dependant family or the economic and psychological cost to the families affected. This problem is further exacerbated by the damage done to the accused's work record and to his employability while he is awaiting trial.

The Department of Administration estimates that an adequate "release on recognizance investigation" costs approximately equal to the cost of incarcerating the individual for two weeks in the county jail. Considering the fact that accused persons are not infrequently incarcerated for periods of 8 to 12 weeks prior to trial, or other disposition, a tremendous savings of public money could potentially be derived by releasing on their own recognizance those accused who are found to be a potential threat to society. Bail reform would not only represent a savings in tax dollars, but it would also help to eliminate the serious overcrowding in Florida jails.

National studies conducted in areas where bail reform programs have been enacted demonstrate that of all those persons released on recognizance less than 1% have failed to appear for their court hearing or trial. Furthermore, those studies show that the rehabilitative process is significantly enhanced for those offenders who are ultimately convicted and placed on probation and who do not spend the time prior to trial, in jail. Finally, for those innocent persons who were accused and later acquitted of a crime, the release on recognizance system does not impose irreparable damage to their lives, families and occupations and sometimes forcing these families onto the welfare cycle. It is essential, therefore, that we modify our bail system in order to require the trial judge to release an offender on his own recognizance unless it is shown that the offender's employment record, family ties or past experience indicate a strong probability that he may not appear at trial or hearing.

In summary, reforming the bail bonding system in Florida would (1) eliminate the injustice imposed upon indigent and poor offenders, (2) save substantial tax dollars, and (3) maintain an assurance that the accused person will appear in court. such reform is overdue.

One final comment on bail reform. The President's President's Crime Commission advises that more "strictly enforced criminal penalties for willful non-appearance should provide a deterrent to flight." I agree. Bail reform in Florida should include swift and sure penalties for those who fail to appear.

PRE-TRIAL DIVERSION

The unmanaged flow of offenders through the state corrections system is the most critical problem facing Florida's correction system.

One of the reasons for the present overcrowding problem is that approximately 27.6% of the felony dispositions result in a prison commitment. That rate exceeds by approximately

one-half the prevailing rate throughout the country. The Division of Corrections is currently housing in excess of 10,000 inmates, and it has had to "close its doors" to new admissions twice during recent months. Many county jails are overcrowded, court dockets are congested, and in many areas no relief is in sight.

Based on a preliminary analysis of the 1972 Florida Uniform Crime Reports, Crime in Florida, nearly 46% of all Florida offenders are under the age of 25; this represents approximately 180,000 individuals. With recidivism rates ranging anywhere from 60% to 90%, it is obvious from these rates that the cost in wasted human lives, in property, and in tax dollars is appalling.

One alternative to the traditional approach rehabilitation is "pre-trial diversion". Pre-trial diversion affords for treatment immediately following apprehension, at the time when rehabilitative efforts should begin. A pre-trial diversion program makes available services such as comprehensive diagnosis and evaluation, intensive counseling and supervision, psychiatric treatment, vocational training, and job placement. These services are provided immediately after arrest and continue usually for periods of from three to six months. Satisfactory completion of the program results in the final discharge of the offender without the damaging stigma of a criminal record.

A survey of pre-trial diversionary programs indicates that present efforts in other states are demonstrating their value. A limited experience of seven major U. S. cities indicates a "success rate" ranging up to 87% when working with youthful offenders.

Based on a cost-benefit analysis of a pilot pre-trial program in Dade County, the costs of handling 125 cases by the method of diverting an offender to a pre-trial program in comparison to the traditional means of incarceration, trial and disposition may be summarized as follows:

Pre-Trial Intervention Costs (125 cases)	$ 86,925
Incarceration Costs (125 cases)	$309,443

Based on this limited comparison, it can be concluded that it may be significantly less costly to divert a case to a pre-trial program than to process it, in the traditional manner, through disposition in the criminal courts.

Circuit Judge Ben F. Overton, Chairman, Conference of Circuit Judges, advised a report on the recent National Conference of Criminal Justice, that of the "proposed standards affecting the courts, this (pre-trial diversion) should be examined

closely for possible full implementation in Florida." Clearly, then, new approaches working within recognized standards and goals for rehabilitating offenders, such as pre-trial diversion, should be thoroughly considered without delay.

Having recognized the importance of the pre-trial intervention treatment approach, my budget recommendations includes $156,000 from the U. S. Department of Labor and $377,500 from Law Enforcement Assistance Administration to be utilized for pre-trial diversionary programs. I invite the Legislature to study these proposals for possible expansion of this useful concept.

YOUTH CRIME AND DELINQUENCY

Nearly six years ago, the President's Commission on Law Enforcement and Administration of Justice stated that "... America's best hope for reducing crime is to reduce juvenile delinquency and youth crime. . ." It said that the best preventive medicine to the problems encountered in the adult correctional system was a more viable and effective rehabilitation services to youth.

In Florida the problem of delinquency and youth crime is particularly significant. School age youth, of ages between five and eighteen, represent less than one-fourth of our population, but account for more than one-half of all arrests for serious crimes.

Recognizing these facts, we must continue to strengthen our juvenile justice system, not only because neglect of the problem fosters careers of crime, but also because our youth are our most valuable natural resource. The juvenile justice objectives of this administration include policies and programs:

1) To proceed to implement a state-operated system of juvenile detention services.

2) To prohibt the use of jails in detaining children and to administratively restrict the detention of children under 12 years of age, except in the most rare and justified circumstances;

3) To expand the juvenile jurisdiction of circuit courts to include 17 year olds, phasing out this age group from our adult institutions to help reduce overcrowding and to provide more individualized treatment for youth of that age;

4) To establish a "youthful offender" statute, improved probation and parole supervision, and to increase the use of diversionary alternatives for non-capital offenders of ages between 18 and 25;

5) To continue development of community-based treatment facilities including foster-family group homes for delinquent children in order to offer more individualized attention, and to provide for more flexible transfer procedures within the Department of Health and Rehabilitative Services from one division to another to assure the most appropriate treatment of juvenile offenders.

6) To increase our attention to the needs of school-age youth, by encouraging citizen interest and involvement and developing preventive and diversionary alternatives and innovative programs to reduce juvenile delinquency and youth crime;

7) To undertake assessment of program accountability and cost effectiveness of our correctional efforts. Quality of service is as important as quantity of service, and efforts should be commenced to provide for maximum staff development and training, research, evaluation, and coordinated long-range planning for a more effective and just system.

Finally, we should also explore the advisability of revising the jurisdiction of circuit courts over school truants, runaways, incorrigible children and other "children in need of supervision" (CINS) and placing these children under the supervision of an administrative body that would prescribe appropriate preventive and diversionary action. I believe it is desirable to develop the capacity where only those "delinquent" acts considered a crime if committed by adults should require formal judicial action.

ADULT CORRECTIONS REFORM

In March, 1972, I initiated the Governor's Adult Corrections Reform project as an interagency planning effort involving the Department of Health and Rehabilitative Services, Parole and Probation Commission, Governor's Council on Criminal Justice and Department of Administration. The purpose of this effort was to focus on the long-range need for an effective and efficient adult corrections program and design a model system which would be capable of meeting those needs.

The "model" correctional system was developed over a one-year period through examination of nearly all major studies, other state systems, and commission reports, incorporating the best known evidence and practices into a viable and cohesive system. The model defines in detail what the goals and objectives of our correctional system should be as well as the activities and structure necessary to satisfy those goals and objectives.

Our approach to be employed will be a well developed, agency-based planning and evaluative mechanism which will

continue to improve on the model system by deferring its activities and thoroughly testing and evaluating its programs and concepts, as a prerequisite to improvement of corrections programs. This mechanism will provide the basis for an improved management process which integrates the planning and budgeting activities into a two-stage annual decision-making process, whereby we can examine plans on their contributive merit, prior to a detailed analysis of cost. Consequently, we will be in a stronger position to examine the growth and development of offender rehabilitations programs and monitor the long-range reform effort.

The corrections reform project has also produced a Problems and Needs Report, which is a complete analysis of where we are in corrections today, including our major problem areas, why they exist, and what to do about them. This document served as a guide for our FY 73-74 Budget recommendations, which were specifically directed at three major problem areas.

First, the ever-present problem of an unmanaged flow of offenders through our system, manifested by the fact that decisions as to who will enter the system, what will happen to them while they are there, and when they will leave the system has in the past escaped accountability, forcing us to merely accommodate ever-increasing populations rather than manage them.

To this end we have recommended that we attempt once more to accommodate our corrections population in a humane manner and provide the funds necessary for temporary facilities to ease institutional overcrowding immediately as well as funds to construct new facilities for future needs which will conform to the guidelines of our model system. However, the major emphasis within this problem area will continue to rest on our community-based programs and the alternatives they offer to mass incarceration. To this end I am recommending pilot projects in intensive supervision and pre-trial diversion with stringent evaluation in order to explore the actual benefits of such programs. We must also continue our Community Correctional Center program and expand its concept to one of small, community-based treatment centers as alternatives to full-scale imprisonment.

In the "State of the State" address to the 1971 Legislature, I stated that:

> ". . . [C]riminal Justice has suffered in this state because of a lack of coordination between the professional staffs of the Division of Corrections and the Probation and Parole Commission. I urge you to explore the possibility of

removing the field staff from the Parole Commission and placing it within the Department of Health and Rehabilitation Services."

The removal of the field staff was explored, but no definitive action was taken. Opponents to the concept suggested that the management problem could be resolved by increased funding. Each year since 1971 I have recommended substantial budget increases in the field services component of the Parole and Probation Commission, not only to keep pace with the ever-increasing workload demands but, more importantly, to foster the development of the rehabilitative and efficiency potential of our community-based supervision programs.

Efficiency and cost-savings are not insignificant considerations. The design of the present system breeds, if not requires, unnecessary duplication because of the maintenance of separate management and field staffs. The duplication of records and information systems maintained by the two agencies is reason alone to further explore the possibility of transferring the Parole Commission field staff or otherwise integrating the functions of these important agencies.

In view of the foregoing, I would support full consideration by this Legislature of all alternatives available which would more effectively coordinate our fragmented adult corrections services, with particular emphasis on the offender-flow problems of the system.

Second, is the critical need to develop a capability to evaluate our correctional programs and plan effectively toward future needs. We have been neglectful of this task in the past and as a consequence are confronted each year with spending vast amounts of money without knowing what the benefits will be, or even if there will be any. To this end I am recommending the creation of a basic planning and research capability within our corrections agencies to perform the much needed task of program evaluation and planning. Furthermore, I am recommending the transfer of the Governor's Council on Criminal Justice to the Department of Administration to function within the total state planning responsibilities of the Department. This will ensure the establishment of a comprehensive planning program for criminal justice by coordinating and supporting the planning activities of criminal justice agencies.

Third, is our tremendous task of providing an effective treatment program to offenders in order to ensure that upon release from our system, they do not again resort to crime and violence. In the past we have not fully recognized that a large percentage of offenders are people with serious problems

which either deny them the means to pursue legitimate goals or incline them toward abnormal behavior generally. We cannot pretend to understand the complex psycho-social dynamics of criminal behavior, but if criminals are to be effectively dealt with, then our programs and services must reflect a conscientious attempt at redirecting their lives toward legitimacy and self-sufficiency. Consequently, our programs must address the pyschological, social, and vocational needs of offenders and be measured by their ability to correct criminal behavior. To this end I am recommending the establishment of special treatment facilities on a pilot basis to explore these means as potentially more effective ways of delivering services to offenders and dealing with their problems. It is also necessary that we begin to separate offenders with severe psychological problems so as to more effectively bring treatment resources to bear on that potentially dangerous group.

The incarceration and treatment of the "criminally insane" inmate causes unique security problems. Recently, these problems have become acute in some segments of the corrections-mental health system. To alleviate this problem, I have submitted a supplemental budget recommendation calling for an appropriation of $3 million to construct a facility in which to maintain these inmates in a custodial environment which will minimize the possibility of escape or similar security breach, and also enhance the rehabilitative treatment of these inmates. I urge your support of this appropriation.

Summary of Recommendations
Areas of Major Concern
Parole and Probation

1.	To implement a pretrial intervention program and continue expansion of the Multi-Phasic Diagnostic and Treatment Program	$ 357,131
2.	To improve the current staffing ratio by excluding certain supervisors from the staffing formula	424,516
3.	To continue operation of the Intensive Supervision Programs (Parole and Probation) and reduce staffing ratio	530,011
4.	To provide a planning and research capability	110,324
5.	To provide a centralized Staff Development Center	110,443

6.	To develop and improve management information systems and interface with FCIC	279,473
7.	To provide attorneys' fees for parole violators (as required by the courts)	25,000
8.	To maintain current client/staff ratio and provide for increased workload	1,973,160
	TOTAL	3,808,058

Summary of Recommendations
Areas of Major Concern
Division of Corrections

1.	To increase discharge allowance from $50 to $75	$ 94,800
2.	To expand planning and research capabilities	152,034
3.	To improve recreational and food services	367,434
4.	To establish a pre-release training program	282,732
5.	To establish one Special Client Treatment facility and four special vocational training centers	1,742,123
6.	To maintain current client/staff ratio and provide for increased workload	2,572,945
7.	To provide for a comprehensive staff development program	555,074
8.	To provide temporary facilities for 1200 additional inmates	6,000,000
9.	To improve inmate housing capability (renovations and repairs - bed space related)	9,788,000
10.	Lump sum allocation for 1200 new beds by 1976	24,000,000
11.	Renovations and new construction for voc/ed facilities	2,349,000
12.	Additional Appropriation for criminally insane program	3,000,000
	TOTAL	50,949,142

I have made additional recommendations within the areas of staff development and management information systems,

as well as necessary increases in staffing to keep pace with rapidly growing workloads. These recommendations, combined with other requests for continuation funding, I believe, provides a very balanced attack on the problems confronting our adult corrections system and sets the stage for an all out effort of reform.

I urge each of you to study the Adult Corrections Reform document; it is available to you and to your committees upon request. I hope you will work with us in realizing not only its implications for reform but the continued utilization and development of the interagency, knowledge-based planning mechanism.

STATE ATTORNEYS AND PUBLIC DEFENDERS

In January of this year, Florida's judicial system began operating under a revised judicial article which made drastic and innovative improvements over the judicial system which had existed previously. Under our new judicial structure, Florida can be second to no other state in fair and prompt administration of justice. Indeed, Florida may be studied as a model by those states who hope to achieve excellence of structure in their own judiciary.

The Florida Supreme Court furnished great leadership not only in assisting in the adoption of our revised judicial article, but in implementing the new court system with a vast and progressive revision of the criminal rules of procedure. The new criminal rules complement the other judicial reform improvements.

The new challenge which you have before you is to allow this great system to achieve its ultimate potential by properly funding those who are directly charged with the responsibility of implementing the new procedures.

In an effort to determine the total impact of these changes on our state atorneys and public defenders, we are in the process of creating a new management information data system based upon case information reports submitted by each state attorney and public defender. This reporting system was developed as a result of a series of meetings of a committee composed of representatives from the Governor's Council on Criminal Justice, the Department of Administration, the Florida Department of Law Enforcement Data Center, the Auditor General's Office, the State Court Administrator's Office, and representatives of the state attorneys and public defenders.

A reporing system will be operational, on a test basis, April 16, and the system hopefully will be fully operational by June 1st of this year.

One of the greatest additional responsibilities which was not considered in the original budget request for state atorneys is that of total responsibility for all criminal justice intake. Criminal justice intake is at the "threshold" of the entire system. Criminal intake involves a thorough screening of all citizen complaints and reports of offenses to determine whether there is an adequate basis upon which to proceed. This intake function was previously done by the justices of the peace and county judges.

The new rules of criminal procedure mandate many functions which were previously not performed by the state attorney and public defenders. Under the new rules, advisory or "first appearance" hearings must be held daily, necessitating prosecutors and public defenders staffing these hearings on Saturdays and Sundays as well as during the week.

Under the revised system, state attorneys are now charged with the responsibility of prosecuting in the juvenile courts. The intake and prosecution in these courts has increased significantly the volume of work performed by each state attorney's office.

As a result of a recent Supreme Court decision (Argersinger v. Hamlin), indigent defendants charged with any offense for which conviction could result in imprisonment are entitled to legal services provided by the state. As a result the state now has the responsibility of representing those who are charged with most misdemeanors.

The complexities of handling any given case from its inception until its conclusion have also increased significantly. The prosecution and defense functions have been unusually dynamic in recent years, and they stand today as one of the most sophisticated functions of state government.

When my budget recommendations were submitted for state attorneys and public defenders, they were based upon budgets prepared with reference to the demands as they existed under the old system. State attorneys and public defenders did not, and could not have anticipated the tremendous change and increase in work load wrought by the revisions of Article V and the Florida Rules of Criminal Procedure.

As a former Chairman of the Senate Appropriations Committee, I am not unmindful of the many years of hard, conscien-

tious work of past Legislatures and their staffs in an attempt to devise an equitable basis for funding state attorneys and public defenders. Since being Governor, I have encouraged the Department of Administration, working in conjunction with the offices, to explore all reasonable funding formulae. The Management Information System, referred to above, is an attempt to devise an objective, data-based rationale for funding purposes. I am advised that the state attorneys and public defenders have made significant progress toward these goals and have presented workable formulae to the respective legislative committees. I sincerely hope that a formula can be agreed upon within the next few weeks for the funding of these important offices which would make a more equitable distribution of funds to the various circuits than has been possible under the per capita based formula used in past years.

APPELLATE REVIEW OF SENTENCES

One of the most striking ironies of the law is the manner in which sentences are imposed. The guilt-determining process of our criminal justice system is safeguarded by many procedural rules, by many rules of evidence, and by a carefully structured system of appellate review designed to expose error and injustice. However, in the great majority of criminal convictions in this country, the issue of guilt is not disputed. What is disputed, and what is becoming an ever increasing problem in our criminal justice system, is the question of the appropriate punishment.

After determination of guilt or innocence, an issue stipulated in more than 90% of criminal cases, the most important decision for the criminal offender, and the public itself, is the sentence. However, by comparison to the care with which the less-frequent problem of guilt is resolved, the protections afforded in the majority of jurisdictions to the sentencing process are indeed disproportionate. In short, the intricate protections and safeguards afforded to offenders during the pre-trial and trial stages, give way to the widest latitude of judicial discretion at the point of sentencing. In the majority of jurisdictions, the sole responsibility for this vital function rests in a single judge. Arbitrary sentencing decisions can be detrimental to the entire rehabilitation or correctional process. An offender who believes he has been sentenced unfairly in relation to other offenders will not be receptive to reformative efforts on his behalf. Additionally, as sentencing decision-making becomes more complex, the likelihood of disparate sentence increases.

In a recent study conducted by the Southeastern Correctional and Criminological Research Center, it was found that black men adjudged guilty of forcible rape are sentenced to terms of seven years longer than white men convicted for the same crime. For armed robbery, the disparity between blacks and whites is almost four years, for unarmed robbery, it is two years and for aggravated assault, one year. On the other hand, whites receive longer sentences than blacks for the crimes of grand larceny, auto theft, burglary and escape. In these cases, however, the discrepancy is *never* more than *one* year. When age is the comparative factor, the study found that, in general, blacks of all ages receive higher sentences than whites for crimes of personal violence.

Several jurisdictions, in an attempt to provide better safeguards at the sentencing stage, are implementing sentencing review techniques to reduce disparate and irrational sentencing. The American Bar Association Project on Minimum Standards for Criminal Justice examined the major ends to be served by a sentence review process. The project concluded that the most apparent benefit of sentence review is that it would provide the criminal justice system with a means by which the grossly excessive sentence can be corrected. Additionally, sentence review would force the sentencing decision much more into the open, thereby exposing for correction many of the mistakes that need not be made. Finally, sentence review would also induce respect for law in that a convicted offender who has an opportunity to air his grievance is much more likely to approach rehabilitation with a positive attitude than an offender who is convinced that one man did him wrong and concludes that he can do nothing about it.

Presently, a defendant in Florida cannot have his case reviewed if he feels that he is the victim of a legal, but excessive sentence. Absent legislative authority, the Florida Supreme Court has held on at least four occasions that an appellate court is not concerned with the term of the sentence imposed so long as it is within the lawful limits set by the Legislature. Additionally, the Supreme Court has held that the appellate court should refuse to consider whether the jury should have recommended leniency. Accordingly, it is within the province of the Legislature to initiate a sentence review procedure to address disparate and/or irrational sentencing.

A number of our sister states have instituted and maintain sentence review procedures. For example, in Hawaii the state supreme court may affirm, reverse or modify the order, judgment or sentence of the trial court. If in its opinion the sentence is illegal or excessive it may correct the sentence to

correspond with the verdict or finding or reduce the same, as the case may be. Massachusetts has an appellate division of superior court for review of sentences which consist of three judges. The appellate division has jurisdiction to consider an appeal with or without a hearing, review the judgment so far as it relates to the sentence imposed when the sentence appealed from was imposed and has jurisdiction to amend the judgment by ordering a different appropriate sentence or sentences or any other disposition of the case. No sentence can be increased without giving the defendant an opportunity to be heard.

New York statutes empower the appellate court to reverse, affirm or modify the judgment, or sentence and order a new trial. The appellate court can reduce the sentence imposed to a sentence not lighter than the minimum penalty provided by law.

The American Bar Association has recommended that, in principle, judicial review should be available for all sentences imposed in cases where provision is made for review of the conviction. This is specifically meant to include review of sentences imposed after a guilty plea, and of a resentence in the same class of cases.

Although review of every such sentence ought to be available, it is recognized that it may be desirable at least for an initial experimental period to place a reasonable limit on the length and kind of sentence that should be subject to review. I encourage your review of this subject with the hope that progress can be made this year toward implementing an effective review process.

COURTS

Florida enjoys an enviable position among other states. Thanks to the recent revision of the judicial article of our state constitution, our court system is unified and the administration of criminal justice streamlined and reformed. All of those who labored so hard for the reform of our court system are to be commended.

But, as pointed out in the preceding section, the effort and commitment to improve our judicial system cannot stop with the adoption of Article V. The new court system must be implemented and adequately funded if we are to keep our pledge to the electorate whose vote gave birth to the new system.

My budget message acknowledged these considerations by recommending increases in general revenue funding of 87.3% for the Supreme Court, from 12.8% to 30.2% for the District Courts of Appeal, approximately 50% for circuit courts, and 99.8% for county courts. I am confident that these recommendations, coupled with those of Chief Justice Vassar Carlton as set forth in his recent address to this Legislature, adequately demonstrate the needs of the Judicial Branch. I commend these recommendations to your thoughtful consideration.

I would like to express my appreciation to the House and Senate Criminal Justice Committees and their staffs and to Attorney General Robert L. Shevin for their advice and assistance in the preparation of parts of this message.

In conclusion, if we are to make our homes and our streets safe and if we are to be able to meet the myriad other challenges wrought by crime and delinquency, we must take bold and positive steps to improve our criminal justice system. The views and recommendations set forth in this message are not the *sine qua non* of meaningful reform and improvement in the system. These recommendations, with few exceptions, are intended as a catalyst and a point of departure, if you will, for further legislative consideration. As Governor, I pledge the continued cooperation of the Executive Branch so that meaningful improvements in the criminal justice system, as outlined above—and others which you have under consideration—will be enacted at this legislative session.

GOVERNOR'S COUNCIL ON CRIMINAL JUSTICE
307 East Seventh Avenue
Tallahassee, Florida 32301

Chairman PEPPER. This hearing is now adjourned.

[Whereupon, at 5 p.m., the hearing was adjourned, subject to the call of the Chair.]

[The following resolution, passed by the House of Representatives created the Select Committee on Crime in the 93d Congress:]

93D CONGRESS
1ST SESSION

H. RES. 256

[Report No. 93–31]

IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 27, 1973

Mr. PEPPER, from the Committee on Rules, reported the following resolution; which was referred to the House Calendar and ordered to be printed

FEBRUARY 28, 1973

Considered and agreed to

RESOLUTION

Resolved, That effective January 3, 1973, and until June 30, 1973, there is hereby created a select committee to be composed of eleven Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the select committee shall be filled in the same manner in which the original appointment was made.

SEC. 2. The select committee is authorized and directed to conduct a full and complete investigation and study of all aspects of crime affecting the United States, including, but not limited to, (1) its elements, causes, and extent; (2) the

preparation, collection, and dissemination of statistics and data; (3) the sharing of information, statistics, and data among law enforcement agencies, Federal, State, and local, including the exchange of information, statistics, and data with foreign nations; (4) the adequacy of law enforcement and the administration of justice, including constitutional issues and problems pertaining thereto; (5) the effect of crime and disturbances in the metropolitan urban areas; (6) the effect, directly or indirectly, of crime on the commerce of the Nation; (7) the treatment and rehabilitation of persons convicted of crime; (8) measures relating to the reduction, control, or prevention of crime; (9) measures relating to the improvement of (A) investigation and detection of crime, (B) law enforcement techniques, including, but not limited to, increased cooperation among the law enforcement agencies, and (C) the effective administration of justice; and (10) measures and programs for increased respect for the law and constitutional authority.

SEC. 3. For the purpose of making such investigations and studies, the committee or any subcommittee thereof is authorized to sit and act, subject to clause 31 of rule XI of the Rules of the House of Representatives, during the present Congress at such times and places within the United States, including any Commonwealth or possession thereof, whether the House is meeting, has recessed, or has ad-

journed, and to hold such hearings and require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary. Subpenas may be issued over the signature of the chairman of the committee or any member designated by him and may be served by any person designated by such chairman or member.

SEC. 4. The select committee shall report to the House as soon as possible with respect to the results of its investigations, hearings, and studies, together with such recommendations as it deems advisable and shall submit its final report not later than June 30, 1973. Any such report or reports which are made when the House is not in session shall be filed with the Clerk of the House. The select committee shall cease to exist on June 30, 1973, and its records, files, and all current material in its possession shall be transferred to the Committee on the Judiciary.
